The general design of the vesel is a departure from the ordinary cargo type, which is usually arranged with the No. 3 hatch abaft the saloon house. In this vessel the owners have grouped all the accommodation round the machinery casings, thus not only giving an excellent promenade for the few passengers carried, but also leaving an exceptional stretch of clear space on the fore deck ideal for the carriage of trams, railway carriages, and other bulky cargo which it may be found impossible to ship below the hatches.

The arrangements for handling cargo are on the usual Ellerman Lines' high standard, large open hatches being installed served by ample winches and derricks, the winches as well as all other deck auxiliaries being electrically driven. In addition the steering gear has also an auxiliary engine operated by compressed air.

The oil fuel will be carried in the double-bottom and in suitably aranged deep tanks, and all piping will be led through a duct keel. Oil fuel capacity is provided to an extent sufficient to enable the ship to sail round the world without refuelling.

For the carriage of edible oils, a specially designed deep tank is fitted, and the forepeak is also specially adapted for the carriage of latex, oil cargo, or water ballast, whilst arrangements have been made for water ballast to a total extent of 3,500 tons in sub-divided deep tanks and in double-bottom and peaks to enable the ship to be suitably immersed so as to cross the Atlantic in ballast only if required.

The main propelling machinery consists of a four-cylinder single-screw Barclay Curle-Doxford Opposed Piston Airless Injection Oil Engine. The cylinders are 26¾ in. in diameter and each piston has a stroke of 53⅛ in. In the middle of the engine a reciprocating scavenge pump is arranged for supplying the necessary air to the cylinders, and this pump is directly operated from the crank-shaft. Balance weights are provided on the main crank-shaft, and it was found during the test-bed trials that the engine could be run up to very much higher speeds than the service speeds of revolution, which is 87 per minute, without the slightest vibration. The total S.H.P. on service is about 5,000, from which it should be noted that 1,250 S.H.P. is developed per cylinder. The efficiency of this type of engine is very high owing to the absence of high pressure injection air compressors, the fuel system being of Doxford's patent airless injection type.

Barclay Curle and Co. have completed and on hand oil engines of this type of an aggregate of almost 20,000 brake horse power.

The machinery is placed amidships in the vessel, and in addition to the main engine, three direct-coupled four-stroke cycle Diesel engine driven dynamos are provided in the machinery space. Each of the generator sets has an output of 110 k.w. at 250 to 275 revolutions.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, May 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, May 3).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 2).

British India Line.—S.s. Warfield for Colombo, Madras, and Calcutta (London, May 5); s.s. Dumana for Bombay and Karachi (London, May 19).

Cunard Line.—S.s. Bactria for Patras, Piræus, Salonika, Volo, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea, April 28); s.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume (Liverpool April 28, and Swansea May 1).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 5); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 26).

P. and O. Line.—S.s. Macedonia for Bombay (London, April 27); s.s. Tresillian for Malta, Port Said, Suez, Port Sudan, Aden, Colombo, Madras, and Calcutta (London, April 28).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, May 5); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, May 9); s.s. Syrian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, May 17).

Ellerman and Papayanni Lines.—S.s. Malatian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 2); s.s. Bavarian for Algiers*, Patras, Piræus, Volo*, Salonika, Constantinople, Bourgas, Varna and Constantza (Liverpool, May 12); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool May 12, Swansea May 17). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE
LIVERPOOL TO BOMBAY.
KARACHI via Bombay, calling at Gibraltar and Egypt.
LARGE STEAMSHIPS UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.
Indian Government Vouchers accepted.
Passenger sailing dates:—

*ELYSIA	... May 11	*CIRCASSIA	... July 3
*CASTALIA	... May 25	*†MASSILIA	... July 10

*First class passengers only. Specially low fares. †Calls Port Sudan

SPECIAL NOTICE.
NEW T.S.S. CALIFORNIA, 17,000 TONS,
carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.
This vessel has exceptionally fine 3rd class accommodation.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 24.

The event of the week has been the decision of the New York Stock Exchange to quote on Wall Street the British Funding Loan. This, in spite of criticisms raised in certain quarters, must be regarded as an entirely satisfactory step. The yield on American Liberty Bonds is substantially lower than that obtained on British Government stocks, and the latter, as the rise in quotations in the past fortnight shows, are likely to approximate towards the former. British credit will thereby be enhanced, and it will become easier than it would otherwise have been for the Treasury to carry out debt conversions on terms favourable to the taxpayer. If this experiment proves to be successful, the quotation of other British Government stocks in Wall Street may possibly follow; but the Funding Loan is the most suitable for the purpose owing to the fact that interest is paid without reduction of tax to foreign holders.

Activity in the industrial markets has continued, but there has been a great deal of irregularity in movements. After their big rise gramophone shares have fluctuated severely, and the time has come for holders of such shares to remember the growing competition of cheap producers. Home rails have emerged a little from their recent eclipse —and deservedly so.

The Rubber Position.

Th rubber share market continues to attract a good deal of attention. Taking the short view, developments have hardly been favourable to rubber shareholders. But, taking the longer view, encouragement has not been entirely lacking. Sir Eric Geddes, in his speech at the Dunlop meeting, helped to restore perspective. He pointed to the failure of restriction, declaring that "restriction has failed to give manufacturers anything like stability in price of rubber." Therefore, he welcomed "the promised death of restriction and hoped that it will never be resuscitated." But all will not be immediately plain sailing. "A period of anxiety will undoubtedly intervene," which will bear very heavily upon the least efficient estates, "but I have no doubt at all that the rubber industry as a whole will be sturdier and stronger and more stable if allowed to manage its own affairs." If he had any criticisms at all it was that the restriction scheme might have been terminated more gradually. In the main, Sir Eric Geddes' views are undoubtedly sound and should do something to restore confidence among shareholders in the best managed plantation companies. Incidentally, Sir Eric also dealt with the situation as it affects his company, and here he spoke in terms of unqualified satisfaction.

The Growth of Industrial Profits.

The quarterly analysis of the profits of British industrial joint-stock companies made by the *Economist* discloses a substantial advance in earnings, this being in contrast with the decline returned twelve months ago owing to the industrial troubles of 1926. The accounts of some 504 companies show net profits totalling £61,822,534, an increase of 15.2 per cent. as compared with the net profits revealed by the same companies last year. In the main the figures reflect the experience of 1927, and are therefore evidence of a satisfactory recovery in earnings from the set-back of 1926. The majority of industries shared this greater prosperity, the only exceptions being tea and rubber plantation companies and breweries. As for the increases, iron, coal, and steel head the list with an increase of no less than 131.3 per cent., but this is qualified by the extremely depressed conditions ruling in this section of industry in 1926; textiles to which this qualification also applies are second, followed by gas, and electric lighting and power companies. An encouraging feature of the reports is the increase in net profits allocated to reserves, including sums carried forward. Indeed, the percentage is almost identical with that of two years ago. Clearly these figures suggest that the present activity in the industrial share market of the Stock Exchange does not entirely lack justification, but the precise degree in which they justify it cannot be determined with equal confidence.

Promising Brewery Investments.

During the recent activity in the industrial share market brewery shares, though not lacking support, have been comparatively neglected. A number of brewery shares, however, are by no means without attractions. The shares of Ind Coope are now in the neighbourhood of the highest price yet reached, but they cannot be regarded as overvalued. For some years past a dividend of 25 per cent. has been paid and an issue of shares on bonus terms was made last July. The current return is approximately £6 13s. per cent. Meux ordinary shares, comparatively new-comers to the Stock Exchange, also merit attention. The ordinary shares have appreciated to the region of 11 following the declaration of the final dividend, making 70 per cent. for the year. It will thus be seen that the current yield is liberal, while there are reasonable prospects of a windfall sooner or later. The company earned nearly 100 per cent. on its share capital, and since this is of the modest amount of £173,000, it is not improbable that a scheme will be evolved for bringing the capital more into line with earning capacity. It has been rumoured that Distillers shares are to be quoted in New York, and this has served to redirect attention to their merits. The company is pursuing a policy of vigorous expansion in the Dominions and the current year's trading reports are not unsatisfactory. An increase in the dividend would not take the market by surprise. At present the shares return £5 19s. per cent.

The importation of potatoes into Roumania from certain countries, including the United Kingdom, where potato disease (black gall) exists, has been prohibited by a Ministerial Decision, unless consignments are accompanied by a phytopathological certificate, showing the region in which the potatoes were produced, the country of origin, whether the disease exists or has existed in the place of production or within a radius of 20 to 25 milometres therefrom, and whether the consignment in questions consists of sound potatoes. The certificates must be issued by an authorised official of the phytopathological service of the exporting country.

Engineering Topics.

By G. B. B.

The recent developments in connexion with linking-up electrical power generating stations in this country has caused more than usual attention to be given to the question of high tension overhead transmission, and, as that part of the world is likely to depend largely on overhead conductors, the Near East generally is keenly interested in the work which is taking place. I understand that very shortly tests will be made on one of the new steel transmission towers which have been designed for use in the Central Scotland Power Transmission scheme. The Glasgow engineers will erect the tower in sections to see that everything is in order, and, later, electrical tests will be carried out at the testing station at Erith. A new method of anchoring, known as the "Malone" system, will be adopted for the towers, and it is claimed that not only is this a thoroughly sound method, but that its adoption will reduce the cost of erecting the structures. It is not easy, however, to see wherein it is superior, except perhaps in the item of first cost, to other methods that have been carried out with success in the past.

New Motor Road.

The scheme for the provision of a motor road from Birmingham to Birkenhead seems to have progressed a stage or two further. The proposal was made some time ago that a concrete road from 30 to 40 yards wide between boundaries should be constructed by private enterprise solely for the use of commercial and private motor vehicles who should pay a toll or a mileage tax towards the upkeep, standing charges, and revenue. The scheme seems to have been alternately welcomed and cold-shouldered, and at times it has seemed almost as though the promoters would be prepared to abandon the idea. A few days ago, however, a meeting of representative commercial and industrial interests was held at Birmingham and support for the scheme was promised by business concerns in Wolverhampton and the big town of the Potteries as well as from Liverpool, Birkenhead, and Birmingham, and I have an idea that this promise of support is what was being waited for. The road, which will be about 90 miles in length, would cost, I estimate, somewhere in the neighbourhood of £6,000,000.

Oil From Coal.

The distillation of oil from low-grade coals has passed well beyond the experimental stage and its importance lies in the fact that there are seams of low-grade coal in this country, as well as in the United States, which it may be profitable to work by the new method, profitable both from the economical and the political standpoints. Australia has vast deposits of low-grade coal and the establishment of a big oil industry in that country would be a distinct advantage from the Imperial point of view. Actually a much higher degree of success has been obtained in Germany by the low temperature distillation of low-grade coal and lignites than is generally known, and were we able to obtain exact information, no doubt we should be able to profit considerably from what they have done.

COMPANY NOTES AND REPORTS.

INDO-EUROPEAN TELEGRAPH.

The report of the Indo-European Telegraph Co., Ltd., for the year ended December 31, 1927, states that the company's lines have continued, during the year, to work in a highly efficient manner. There were no cases of serious interruption. The average times of transmission between Karachi and London were satisfactory and the carrying capacity of the system is equal to a much larger volume of traffic. Communication over the Black Sea (Odessa-Constantinople) cable was restored in November. The company's revenue from all sources amounted to £318,139 18s. 1d. as compared with £314,007 8s. 1d. for 1926, showing an increase of £4,132 10s. The expenses were, on commercial and general account £130,211 0s. 2d., and on maintenance account £82,351 2s., making a total of £212,562 2s. 2d. as against £196,409 19s. 9d. for 1926, an increase of £16,152 2s. 5d. The revenue account accordingly shows a balance of £105,577 15s. 11d., which sum is carried to profit and loss account, and after deduction of income tax is reduced to £85,821 16s. 11d. To this is added the balance brought forward from 1926, £11,669 2s. 7d., making a total of £97,490 19s. 6d. The interim dividend already paid absorbs £10,625. The directors have provided £20,000 for writing down expenditure on reconstruction of line in Russia and Poland, leaving a balance available for distribution of £66,865 19s. 6d. They now propose to declare a dividend for the year ended December 31, 1927, of £1 2s. 6d. per share (making with the interim dividend, already paid, 7 per cent. for the year) and a bonus of 15s. per share, both free of income tax. They also propose to hand over £15,000 to the trustees of the retirement trust fund, leaving a balance to be carried forward to 1928 of £19,990 19s. 6d.

NATIONAL BANK OF EGYPT.

Position at January 31, 1928, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,243,125; current, deposit and other accounts, £E16,253,541; Egyptian Government, £E15,640,126; Sudan Government, £E217,842; Mixed Tribunals, £E1,850,993; bankers accounts, £E258,439; cheques and bills payable, £E260,480; sundry other accounts, £E1,419,999—£E41,532,045. CONDITIONS IN PALESTINE IN 1927.

The following extracts are taken from the annual report of the Department of Customs, Excise, and Trade in Palestine for the year ended December 31 last.

The net revenue derived from customs, excise, and port dues was £P976,952, compared with £P1,017,008 in 1926; the decrease was mainly in respect of import duties, which produced £P53,502 less than in 1926, partly owing to the exemption, for the benefit of local industry, of many raw materials, including cotton and yarns of linen, jute, hemp and flax, corkwood, offaling of olive oil, gold-plated wire, and felspar.

Receipts from tobacco and cigarette banderolles and licences were £P136,629, and from the sale of salt (during the first ten months of the year) £P23,404. An excise duty on salt was imposed with effect from November 4 and £P3,090 was collected from that source by the end of the year. Excise duties on wines and spirits produced £P15,172, compared with £P11,392 in 1926.

In November a new import tariff came into force, in which a *specific* largely replaced an *ad valorem* basis of duty. It is framed so as to give more protection to the important and growing Palestine manufactures of cement, oil and soap, wine and spirits, confectionery and chocolate, biscuits and cakes, salt, leather, furniture and matches, and to reduce the duties on certain staple foodstuffs.

In 1923, 2,770 cases of matches, valued at £E11,990, were imported and £E1,420 was collected in duty at 12 per cent. *ad valorem*. In August, 1924, the import duty was increased to P.T.20 per gross of 10,000 matches, but smuggling took place on a large scale and the receipts from import duty were only £E5,432 in 1925. At the end of 1926 the banderolling of matches and playing cards was made compulsory by law. Smuggling was thus checked, and, under the protection of the high duty, match factories were opened. It then became necessary to impose an excise duty of 50 mils per gross of 10,000 matches.

In November the Palestine Government abandoned its monopoly of the sale of salt; an excise duty of 1.5 mils per kilogramme was imposed on salt collected or manufactured in Palestine, and an import duty of 3 mils on foreign salt. The price of salt has in consequence fallen appreciably. Salt is now quarried from Jebel Usdum.

A new Ordinance governing the sale and manufacture of intoxicating liquors came into force at the beginning of December. Local distillers are helped by the abolition of the excise duty on exported liquors and the higher import duties under the new tariff.

Trade conditions generally show an improvement and there were fewer business failures than in 1926. The number of persons employed in industrial undertakings has increased and many factories worked at full capacity night and day to meet the demand of home and foreign markets, in which, thanks not a little to the liberal exemption of raw materials from Customs and a protective import tariff, Palestine manufacturers are gaining a foothold. It is estimated that at least 7,500 persons are now working in factories.

The area of land under tobacco cultivation is 10,197 dunums, with an estimated yield of 624 tons. The planting of tobacco has been limited to areas of not less than a half dunum ($\frac{1}{8}$ acre).

New enterprises were launched, with products ranging from metal goods to macaroni. Three hundred workpeople are engaged in the manufacture of cardboard boxes; and there are besides not fewer than 800 workshops for making, *inter alia*, furniture, mirrors, corks, metal utensils, leather goods, perfumery and toilet preparations, curios, mother-of-pearl work, and religiousi articles.

The cost of living, calculated on the basis of retail price movements, fell by 22.6 per cent. compared with 1922 and by 4.7 per cent. compared with 1926; the index number of wholesale prices fell by 4.7 per cent. compared with 1926.

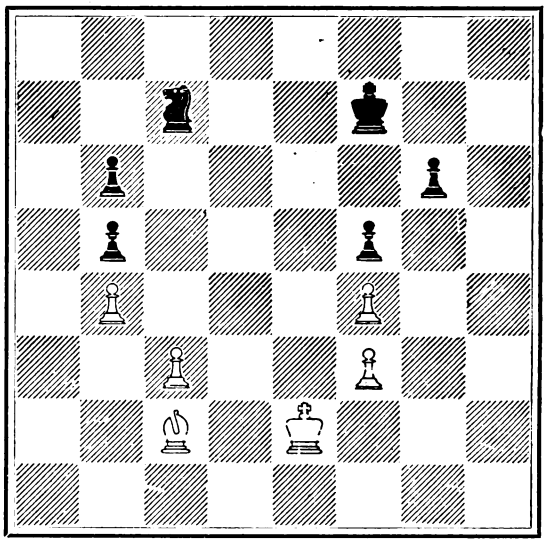
CHESS.

By "CARO-KANN."

The feature of the annual Whitsuntide Congress at Scarborough will be the presence of Dr. Alechin, chess champion of the world. Besides taking part in the chief event, he will give simultaneous displays and play consultation games. I think I am right in saying that this will be his first appearance since winning the championship, and, needless to say, his presence will occasion the greatest interest.



White to play. What result?

The annual Federation Congress will take place this year early in July at Tenby, this being, I believe, the first time that this event has been held in Wales.

I give this week an end game of a type which is not infrequently encountered.

RECOVERY OF DEBTS IN TURKEY.

A new Turkish Law, which came into force on April 15, supplements existing Turkish legislation in regard to the recovery of debts. The provisions of this Law are of direct assistance to creditors in taking action against debtors in Turkey. In the first instance the creditor can obtain an injunction against his debtor from the "Bureau Exécutif" without the necessity of bringing an action and obtaining an injunction from the Courts themselves. The creditor will thus be able to take legal proceedings without delay and expense. Upon receipt of a notification from the Executive Office, the debtor is obliged to meet his obligation within a maximum period of 15 days, though he, of course, retains the right to deny the existence of the debt, or, alternatively, to dispute the amount claimed. The creditor is protected against frivolous protests on the part of the debtor by the provisions of the last two paragraphs of Article I, which prescribe that, in cases where the protest is not upheld by the Court, the debtor shall be condemned to pay, in addition to his debt, an indemnity of not less than 10 per cent. of the amount claimed.

The directors of the Anglo-Egyptian Oilfields recommend the payment of a dividend of 17½ per cent., less tax, on the "B" shares for the year 1927.

CYPRUS EXPORTS INCREASING.

The report on Cyprus trade in February shows that the value of imports was £129,685, a total which not only exceeded that for February, 1927, but was above the average for the last five years. The principal increases were in machinery, flour and cotton goods. The export trade continued to be good, the figures being £91,926. This total was £22,000 more than the average for the corresponding month over a period of five years. The most notable increases in exports are in dried and fresh fruits, asbestos, and copper pyrites.

The price of carobs dropped from 25s. to 24s. per kantar during the month, but is still satisfactory. Raisins continued to realise the high price of 2s. 6d. the stone, and considerable quantities were exported.

Shipping during the month maintained its recent high level.

CYPRUS CROP PROSPECTS.

The following report has been issued on Cyprus crops in March:—

Cereals.—Barley suffered owing to unfavourable weather and shortage of rain. Wheat and oats are in better condition but require ample rain. Prices (per kilo): wheat 8s. to 10s.; barley 5s. to 5s. 6d.; oats, 3s. 4d. to 4s.

Vetches.—Chickling vetch, ochrus vetch, lentils and chick peas. Sowing completed. The growth of leguminous plants is at present normal and a good crop is expected provided that sufficient rain falls during April. Prices (per kilo): vetches 6s. to 7s.; chickling vetch 5s.

Broad Beans.—The early crop has been affected by the heavy frost.

Onions.—Growth normal. The price of onion seed was exceptionally high, 6s. 8d. per stone, while that of onions reached 2s. to 3s. 2d. per stone.

Cumin.—The weather has been favourable, and growers are very busy weeding the crop.

Potatoes.—A promising crop which should yield good prices.

Carobs.—The production is estimated to be small, 20 to 30 per cent. less than that of last year. Price 23s. to 24s. per kantar.

Oranges.—Flowering has begun and the crop is promising. Export continues at 52s. to 55s. per 1,000.

Almonds.—Flowers have suffered a great deal from frost and the crop is anticipated to be poor.

Vines.—Cultivation of vines continues. The price of wine is steady.

Flax.—Cold weather has checked growth and the straw may be short.

IVORY IN GOOD DEMAND.

Messrs. Hale and Son report that the quarterly ivory sales, held on April 17 and 18, comprised 30¼ tons (against 41½ tons same time last year and 42¾ tons in January last), viz., 10¾ tons Zanzibar, Bombay, Mozambique, East African and Siam, ¾ ton Abyssinia, 4¼ tons Egyptian (Alexandrian description), 7½ tons Congo and West Coast African, and 7¼ tons land carriage; also 2½ tons mammoth tusks, and ¼ ton rhinoceros horns and boars' tusks; total, 32¾ tons.

There was a moderate attendance of buyers and a good demand throughout. The quality offered was small of all descriptions. The bulk of the new offerings found buyers, and although prices were a little irregular, on the whole there was little change from the previous auctions, soft large tusks being firm to £1 to £2 per cwt. higher and hard was steady to occasionally a little easier. The exception was ball ivory, which was very scarce and advanced £5 to £10 per cwt. America took a fair quantity, the Continent bought freely, and the home trade about their usual proportion.

The small Abyssinian quantity offered was again nearly all bought in, with the exception of ball scrivelloes, which realised an advance of £5 to £10 per cwt.

The small Egyptian supply sold irregularly, soft being firm to £1 to £2 per cwt. higher, and hard brought previous rates to a little easier. Ball scrivelloes were £5 to £10 per cwt. higher, soft scrivelloes steady, and hard dearer.

AGRICULTURAL MACHINERY MARKET IN INDIA.

The combined value of agricultural implements and machinery, including tractors, imported into India hardly exceeds £200,000 a year, and there is little evidence that imports of this class of equipment are on the increase (says the American Trade Commissioner at Bombay in a recent report). Under the circumstances, manufacturers have a real problem in working out a sales policy for India which will prove most effective. Some authorities on agricultural conditions in India have expressed the opinion that the country is so vast in area and the cultivators so conservative to change that implement manufacturers would probably obtain greater sales by concentrating their efforts in one province at a time rather than spreading their efforts over the whole territory. For this reason an outline of the progress made in introducing modern farm implements and machinery into the Punjab is of interest, for it is in this province that the most encouraging advance has been made.

The activities of the Department of Agriculture in the Punjab have been largely concentrated at the Punjab Agricultural College and Research Institute at Lyallpur. An area of only 50 acres was originally given to the college for an experimental farm, a nucleus to which additions have been made from time to time and which now comprises an area of 761 acres. Half the total area is leased to tenants, while the other half, which is better land, is under direct cultivation and experiment, and incidentally furnishes fodder for all the working bullocks on the estate.

The experimental work done on the farm includes tests and experiments in variety and rotation of crops, experiments in use of manure, hydraulic experiments, and agricultural implement and machinery tests. The students are made to grow plots of different crops and do all connected operations with their own hands. They are given demonstrations of various native and modern farm implements and receive training in agricultural operations too extensive to be carried out on their own plots. An agricultural engineer gives a course in land surveying, handling of tools, working in wood and iron, the use of machinery, and similar activities of which modern farmers should have a working knowledge. The students are also put in touch with problems connected with the evolution of improved implements, water lifts, tube wells, etc.

The equipment at the experiment farm includes a fodder cutter capable of cutting over three tons of green fodder per hour, and a grain crusher handling 4-hundredweight of grain per hour, both driven by a 5-horse-power kerosene engine. Some American types of bullock-driven cane crushers are under trial and comparison with locally made mills. There is also a large power-driven cane crusher of American design and an American ensilage cutter for cutting green fodder prior to ensilage.

A small shop is in operation to manufacture simple implements, such as bar-harrows, seed drills, and hoes, which can easily be copied by village mechanics. An implement shed contains a large number of imported machines and implements under trial or in use on the farm, such as ploughs, cultivators and hoes, reaping machines, threshing mills, self-binders, cotton drills, ensilage cutters and tractors.

The engineering section of the Punjab Department of Agriculture has done valuable work in designing modified designs of implements to suit the peculiar conditions of the province, and in developing irrigation by means of water lifts. The workshop at Lyallpur is equipped to test various water-lift appliances and to manufacture special types of harrows and cultivators. The special feature of the cultivator or horse hoe designed by the agricultural engineer is that no bolts or

Digitized by Google

nuts have to be manipulated to change the angle of the cutting tines; also, parallel motion is provided in adjusting the width of the implement, thus reducing the power required in operating it. Wells of 60 to 70 foot depth are so common in the Punjab that the Persian wheel lifting 250 gallons an hour has been found more popular and economical than centrifugal pumps for equal output. An iron Persian wheel has been designed in which the three wheels are interchangeable and are built with tangent spokes to combine lightness with strength and rigidity. An expensive form of roller bearing has been devised and added to this machine in order to reduce friction and permit of automatic lubrication.

Demand for Well-Boring Work.

There is an active demand for well-boring work in the province and a staff of 72 borers has been provided with three improved power-boring plants and 72 hand-boring plants for this service. An American rock-drilling plant has recently been purchased and developments contemplated for the next five years will work up to 140 hand-boring plants, 10 power-boring plants, and two rock-drilling plants. It is anticipated that nearly 2,000 borings will be made per annum as a result of this development.

The area which can be irrigated by an ordinary masonry well in the Punjab is from 10 to 20 acres per annum, depending on the size of the well and subsoil conditions. A tube well is capable of irrigating from 100 to 300 acres per annum and is from 15 to 20 per cent. cheaper than bullock-lift irrigation from ordinary wells. If a battery of several tube wells is worked from one central power station, the costs are correspondingly reduced, and the Department of Agriculture proposes to instal at an early date a trial battery of 16 tubes to obtain data regarding subsoil water movement and to investigate its use generally on an area not governed by canal irrigation.

There is considerable scope for this system of irrigation in the Punjab in areas where the subsoil water is reasonably close to the ground surface, and many applications are received annually from landowners who desire advice in connection with this and various types of lift irrigation. Since 1915, 21 tube wells have been installed in this province at a total cost of £14,000, the total area covered by these wells being 6,000 acres. Most of the tube wells are operated by compressed air, the whole of the working plant being above ground surface, and only an air pipe being carried down below water level.

Indian statistics show sales of about 10,000 implements in the Punjab in 1926, exclusive of a large number of spare parts. Imported implements numbered approximately 4,500, of which 1,800 were Meston ploughs manufactured in England. A smaller number of American ploughs were imported. Other items imported were fodder cutters, harrows, cultivators, chaff cutters, reapers, oil engines, and miscellaneous small implements and spares. About 5,500 implements were manufactured in India, a large part of which were the Meston and other type of native ploughs, as well as fodder cutters, cane crushers, Persian wheels, and small implements. In addition to the implements produced locally, about 2,000 were manufactured by the Punjab Agricultural Department, including bar harrows, drills, cotton sowing implements, hoes, etc. Of the implements sold over half were furrow-turning ploughs of various makes. The imported English Meston type is a small 4-inch plough.

Next to ploughs the most popular implement sold is the chaff cutter and a considerable number of them are now to be seen at work throughout the province. Cultivaters, harrows, cane crushers, Persian wheels, and fodder cutters are also growing in popularity. Actual sales of implements in the Punjab are much greater than those recorded by the Government, for as farmers gain more confidence in the use of improved implements they purchase them in greater numbers direct from dealers, instead of through the Agricultural Department. Manufacturers are concentrating on the production of furrow turning ploughs of the Meston type, chaff cutters, and other implements suited to the Punjab, for which a good demand is springing up. Tractor and threshing machines sales have not increased to any extent in this province, but it is thought that continued demonstration work will gradually create a demand from farmers and large land owners working on a co-operative basis.

With the spread of agricultural education and the fact that farmers have made good profits from one or another of the many lines of work taken up by the Agricultural Department in the Punjab, it appears that implement manufacturers might obtain a more encouraging return from sales efforts in this province than elsewhere in India. Wheat and cotton are the principal money crops. The co-operative movement has made greater headway in the Punjab. Individual land holdings are larger than those found generally in India and the Punjabee is a sturdy and intelligent worker.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

TURKEY.

Water-carrying and other Lighters.—A Constantinople company invites tenders for the supply of water-carrying and other lighters, as follows: 4 steel motor-driven water-carrying lighters, two of 80 tons capacity and the remaining two to contain 35 cubic metres of water each; two 100-ton lighters; two 50-ton lighters; two 25-ton lighters; two 15-ton lighters. May 3. (D.O.T.)

GREECE.

Steel Schooners.—An Athens firm desires offers in respect of four steel schooners of between three and four hundred tons, fitted with auxiliary motors. The vessels should not draw more than ten or twelve feet of water. (D.O.T.)

EGYPT.

Fertilisers.—Tenders are invited by the Ministry of Agriculture, Cairo, for the supply, *inter alia*, of the following:—32,000 tons nitrate of soda; 10,000 tons nitrate of lime; 1,200 tons sulphate of ammonia; and 5,000 tons lime super-phosphate. June 5.

Fish Plates, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders: 1.—(a) For 230, 500, 700, or 850 metrical tons deep angled fish plates and angled stops. May 15. (b) For 90, 150, or 180 metrical tons bolts and nuts for fish plates. May 15. 2.—For 5,000, 10,000, or 13,000 metrical tons flat bottom rails. May 16.

Tin Ingots.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 15,000 kilos tin ingots. May 23.

Various.—The Stores, Egyptian States Railways, Telegraphs and Telephones, Saptia, Cairo, invites tenders for the supply of 60 loco. and tender tyres (May 15), and 5,000 metres cable submarine 1 pair, 4,000 metres 2 pair and 1,000 metres 28 pair to specification. May 22.

Diesel-driven Alternator.—The Ministry of the Interior, Egypt, invites tenders for the supply and erection of a 30 h.p. Diesel-driven engine direct coupled to a 250 k.v.a. alternator, being the first extension of the Damanhour power station. June 16. (D.O.T.)

Chemical Fire Extinguishers, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of chemical fire extinguishers; fire canvas hose, 2½ in., 100 feet lengths; fire buckets; stands for buckets and for fire extinguishers, etc., required for the Schools during the year 1928-1929. May 5.

Hose Pipes.—The Egyptian State Railways, Telegraphs and Telephones, Stores, Saptia, Cairo, invites tenders for the supply of 2,000 hose pipes I.R. 2 in. by 24 in. without couplings. May 5.

INDIA.

Sea-going, Steel, Steam Launch.—The Indian Stores Department, Simla, invites tenders for one sea-going, steel, single screw, single deck steam launch complete in all respects. Length approximately 87 feet and of suitable beam. Mean draft up to 6 feet. June 4. (D.O.T.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 18:—

Egyptian Futures.—Sakel Contract.—Erratic fluctuations have been experienced in this market during the past week, and at times a decidedly unsettled and nervous undertone has been in evidence. During the earlier days a denial of the reports that had been previously circulated to the effect that the water situation had improved resulted in a fresh outburst of local speculative activity. At the same time, Alexandria reports showed a strong tendency; thus the combination brought prices to the highest of the movement, at the peak Novembers here just failing to reach 22d., and the same position in Alexandria going to 44.40 dollars. Immediately after this a reactionary tendency developed, due in the first place ot a renewal of advices to the effect that the Upper Sudan Nile levels were improving and also probably in part to the continued absence of active trade support. At the first sign of a retrograde movement the weaker "bull" element here started to liquidate their holding; this was particularly the case yesterday, when a sharp break occurred, uncovering a good deal of "stop-loss" cotton at 21d. To-day pressure from the above source has continued, but not on the same scale, and it appears probable that the bulk of the weaker-held cotton has now been thrown overboard, as the market is beginning to show signs of greater resistance and has recovered somewhat from the lowest point touched. Values on the week show little change, declines of 23 to 26 points for near positions and 7 to 9 points for new crop months being recorded. After the almost uninterrupted advance that has taken place since the early days of February, erratic price movements such as we have witnessed during the past few sessions are only to be anticipated, and probably the technical position of the market is now much sounder, owing to the shake-out which has taken place both here and in Alexandria. Trade reports indicate a much curtailed offtake for counts produced from cotton covered by this contract, and whilst spinners are undoubtedly anxious regarding the supply position for the remainder of the season, their policy of only purchasing for their immediate requirements until they are able to determine more precisely the effect of present prices on the offtake for the finished article, appears to be sound and justified. In the meantime, the inquiry for actual cotton has latterly shown signs of broadening, and we are rather inclined to anticipate that this will lead to an improved business as soon as the market shows a more settled tendency. Only minor alterations have taken place in the differences between old and new crop positions; with our market at such a heavy discount with Alexandria, we are rather of the opinion that Mays will close up with both July and November, as it does not appear probable now that the cotton taken up by certain interests in March will be re-tendered next month. We still consider that the position will be very susceptible to further speculative activities, and whilst, no doubt, those who purchase at the ruling levels will have to be prepared to face heavy fluctuations, we think that conservative purchases will later prove able to be liquidated at a profitable basis.

Upper Contract.—Apart from a sympathetic reaction owing to the weakness in the Sakel market yesterday, values in this contract have shown a steady undertone throughout the week. Reports from Alexandria indicate that some good commercial buying has been in process; there has also been a better offtake for cotton out of the local stock. Trade support has been fairly consistent throughout the week and the selection of medium grades is beginning to become more restricted. We still maintain our "bullish" views and consider that purchases of old crop months are to be recommended.

Egyptian Spot.—A fair inquiry has been noted for Egyptian cotton with moderate results, and a very good business has been done in Sudan Sakels. For Egyptian Sakel the demand has been either for the "off" cotton at from about 200 off contracts downward, or else for Strictly F.G.F. to Good cotton at from 150 to 250 on. The selection of the latter available here is of a most indifferent character. Cotton at from 25 to 100 on, that is to say, cotton which used to be regarded as the "bread-and-butter" quality of the Egyptian trade, continues to be almost neglected. Interest in the top qualities has been confined within the narrowest of limits.

In Uppers, a steady trade has been maintained, and although prices have fluctuated somewhat during the last two days, the undertone is very steady and the basis for the "docket" cotton which is being offered here has begun to harden. White and Pilion have excited a little interest. Sudan Sakels have moved off well, and the basis for the best quality has been advanced by 25 points. Considerable inroads on the available stock have recently been made, and we fear that some consumers who have deferred making their purchases are likely to be disappointed when they do eventually decide to buy.

C.i.f. business has been transacted in a very quiet way, and forwardings to spinners for the week ending the 13th inst. were returned as 5,366 bales Egyptian and 1,243 bales Sudan. Estimated sales for the week, 1,600 bales Egyptian and 5,350 bales Sudan. Quotations of Sakel show a net decline of 45 points for Extra Fine and 20 points for other qualities. Quotations of Upper are 15 points lower, and those of Pilion 10 points lower on the week. F.G.F. Sakel to-day, 21.05d. F.G.F. Upper to-day, 15.25 d. F.G.F. Pilion to-day, 15.70d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 12, state:—

The optimistic feeling which prevailed in the futures market when last we wrote has continued throughout the past week and prices show a further considerable advance. The week's summary of price movements is as follows:—Sakellaridis: May, 42.82 dollars, 2.02 dollars up; July, 43.28 dollars, 2.18 dollars up; November, 43.88 dollars, 2.41 dollars up; January, 43.30 dollars, 2.18 dollars up. Ashmouni: April, 28.33 dollars, 0.88 dollars up; June, 28.50 dollars, 0.80 dollars up; August, 28.55 dollars, 0.45 dollars up; October, 28.55 dollars, 0.80 dollars up.

Sakel.—Owing to the Easter holidays, the business week has consisted of three days only, but these three sessions have sufficed for Sakel prices to gain 2 dollars to 2½ dollars. The market is still in the hands of the speculators and this rise is a direct result of further speculative purchases. November, being the option favoured by the speculation, has monopolised most of the business, and prices of this delivery show the best advance on the week, the near months being left behind to the tune of from ¼ dollar to ⅓ dollar. The movement continues to be based upon the factors mentioned in our previous reports, of which the two most important are: That the 1927 Sakel crop will, in all probability, turn out to be less than 2,500,000 kantars, a figure well below that anticipated; that the 1928 Sakel crop, now being sown, has not been, so far, favoured with other than ordinary weather, whilst the prospects for the summer water supply are rather bad; coupled with this, indications are for a slight reduction in the Sakel acreage this year.

In addition to the above real factors, one should mention another point which has recently been mooted, viz., as to whether, in view of the less satisfactory result of the Gezira Sakel crop this year, a rapid and continuous increase in Sakel cultivation in the Sudan is so much in prospect. On the other hand, with Sakel standing at about 43 dollars against 26½ dollars at this date last year, the expansion of the artificial silk industry (the products of which come into competition with the goods made out of Sakel) is a factor which may, to a certain extent, offset a falling off in the production of Sakel; however, speculation prefers, for the time being, to ignore this new factor as not being worthy of consideration with present feeling so bullish.

The demand from spinners during the week has been only moderate, but, all the same, the spot market has been exceptionally firm and to find cotton of good style and staple is becoming a problem. The statistical position does not show any great change on the week. The ginning factories will soon be closing down and arrivals during the next two or three weeks will accordingly, of necessity, be on the large side.

Uppers.—This market has been rather neglected, but, in sympathy with Sakel, prices show an advance of about ¾ dollar. The straddle difference between Sakel and Ashmouni has widened considerably during this week and for the near positions now stands at 14.49 dollars against 13.35 dollars last week. Business with spinners has not been large, but, on the other hand, it has been fairly regular.

At the second April tended 4,250 kantars dockets were issued, bringing the total for the month to date up to 24,000 kantars.

Spot: The spot market was closed on Good Friday and Easter Monday, thus leaving only four working days. The demand in general has remained fairly steady, but the lack of suitable cotton has restricted the turnover. Total sales amount to about 7,800 bales, of which we estimate 3,300 bales Sakellaridis, 3,700 bales Ashmouni and Zagora, 700 bales Pilion, and 100 bales other varieties.

Sakellaridis: There has been very little business done in the good grades during the week. Cotton of good style round about Fully Good Fair is extremely difficult to find, and premiums in these grades have somewhat hardened. Rather less interest has been shown as compared with previous weeks in Good Fair and below, but spot differences have not altered to any extent.

Ashmouni and Zagora: The demand has covered all grades, but has rather decreased for cotton below Fully Good Fair. Spot differences remain unchanged.

Pilion: There are still many buyers for this variety of Fully Good Fair and above. The diminishing stocks of Good to Fully Good and Fully Good have caused a distinct hardening in the premiums; for other grades, spot differences are about the same as last week.

Other Varieties: A small business continues to be done in Nahda and Fouadi, but these varieties are both very scarce.

Up-country: Spot business has been negligible during the week, and exorbitant prices have been paid for the few lots which have changed hands.

Crop, 1928.—Weather conditions have again been somewhat changeable, and the fields show from slight delay to normal. Sowing continues in the Northern districts of the Delta, but will probably be completed within the next week or so. Present indications are for an acreage about equal to last year. Varieties sown will probably be in the same proportions as last year, with the exception of Sakel, which will probably lose ground slightly to Nahda and Zagora.

The condition of the river is about unchanged on the week. The discharge from the Assouan Reservoir on the 11th inst. was 624 cubic metres per second against 673 cubic metres last year and 648 cubic metres in 1926. The level of the Reservoir to-day was 110.04 metres against 113.36 metres last year and 112.71 metres in 1926.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following telegram from their Alexandria office:—"The Statistical Department of the Ministry of Finance announces that total imports for Egypt for month ending March 31 were £3,884,993 against £3,702,772 for the corresponding month last year, and exports totalled £4,367,717 against £4,898,175. Of this total cotton exports accounted for £3,387,909 against £3,804,238."

Notes of the Week.

Difficulties in Egypt.

The Public Assemblies Bill was due to be submitted to the Egyptian Senate on Monday last. With its final adoption by that body the issue between the Egyptian and British Governments, which turns on this particular measure but in reality covers the whole sphere of Anglo-Egyptian relations, would have been brought to a head. At the same time, as the next step in the history of the Bill would be the affixing of the Royal signature, the effect would have been to bring King Fuad into the dispute, and it was, perhaps, with the desire to avoid this development that the British Government issued a fresh warning to the Egyptian Government against the passage into law of the Bill in its present form. In the face of this unequivocal action Nahas Pasha has had to withdraw the Bill from further consideration in the Senate, and a respite is thus provided for a settlement of the point at issue. There can be little doubt that, from its own point of view, the Egyptian Government has chosen peculiarly unfavourable ground for the trial of strength, if only because the introduction into a Bill of legal penalties, relatively severe, for a possible error of judgment on the part of a policeman, for whom disciplinary considerations might be regarded as a sufficient deterrent, constitutes an anomaly that cannot easily be justified or explained away. It could be wished that the British contention regarding the Bill had been pressed upon the Government in office when the salient clause was submitted to the Assembly, as the omission to do so has provided the present Prime Minister with the argument on which most stress is laid, that there is no precedent for interfering with the constitutional progress of a Bill when once it has passed one of the Houses of Parliament. On the subject of not raising the point before, the British Government has already stated that it refrained from doing so from a desire not to jeopardise the treaty then in course of negotiation with Sarwat Pasha, but that it was left with no alternative when the draft treaty was rejected. The subsequent course of events, there can be no doubt, has been determined by the resolve of the Egyptian Government to "stand up to" the British Government; for the reason that any other action might prove the undoing of the Cabinet.

To Be, or Not to Be.

The issue, it may be pointed out in the interest of an amicable solution, has not the same significance for the two disputants. Nothing will happen in England, if the British Government accepts a compromise. The Cabinet of Nahas Pasha, on the other hand, had convinced itself that surrender before the Public Assemblies Bill had been submitted afresh to the Senate must entail a Ministerial crisis. Now, the over-riding nature of a claim to live on the part of a Ministry is rarely conceded outside its ranks, but its efficacy as a motive in any given action can at least be recognised. As things are, Nahas Pasha can plead that he has been confronted with *force majeure*, and there is no need for him to allow the extremists of the Wafd to take complete charge of his Government. No objection can be raised by Great Britain to a Wafd Ministry that can avoid bringing to a head the latent issues between the two countries. It is indeed better for both that responsibility should rest where there is the political power. The virtue of the draft treaty lay in the fact that it would represent a friendly agreement accepted wholeheartedly by each party; any other form of settlement will be of little permanent value. So long, therefore, as the Wafd can claim to speak with the voice of Egypt, Great Britain's choice is between a settlement forced in the Wafd's despite and a makeshift arrangement as at present, until such time as Egypt is prepared to accept a treaty of friendship and alliance. In these circumstances the question arises whether it is not better that a Wafd Ministry should continue in office than that there should be a Government which cannot carry the country with it or that Great Britain should add to her responsibilities in Egypt.

Digitized by Google

Patching Up the Breach.

A compromise in the present state of the relations between the two countries will not be an easy matter. Some suggestions, however, may be ventured. Great Britain's point will have been gained, if the safety of foreigners and foreign interests, threatened by an unwise Law, is not further imperilled; the Government of Nahas Pasha will, presumably, be content, if it can say to Wafd extremists: "We carried on as far as we could, but there are limits to our defiance of Great Britain." In these circumstances a way out of the difficulty might be found in an amending Bill, which would eliminate the crudities of the present Public Assemblies Bill and promote by tried and more trustworthy methods the maintenance of public order. It would be better still if the offending measure, the passage of which into law was exaggerated into a face-saving indispensability for the Nahas Ministry, could, when, amended, be linked with the ratification of the draft Treaty, modified perhaps by the substitution of an adjustable time-table, conditional upon good behaviour, in the place of a hard-and-fast period of ten years. No doubt, in some quarters it will be urged that the easiest course of all is for Great Britain to descend like a ton of bricks upon the Wafd. If she does, the débris will be an obstacle to Egyptian progress and an eyesore to both peoples, and valuable years will be wasted in the sole effort to clear away the mess.

The Balkan Earthquakes.

The earthquake disasters that have overtaken Bulgaria and Greece have been made the occasion of striking testimony to the existence of a sense of a Balkan community of interests. In no other way can be explained the spontaneous action of the Yugoslav people, through the Government and Skupshtina, in voting a sum of money for the relief of the sufferers in the neighbouring countries. Even to-day the straitened circumstances of the national exchequer could be pleaded by any State in defence of the plea that charity must be confined to home needs; but the splendid gesture of the Yugoslav Parliament in increasing tenfold the grant first proposed by the Government should do more for the recognition of the basic solidarity underlying Balkan relations than official conversations extending over many months. Here is an opportunity for the Macedonian Revolutionary Organization to show whether it has any existence as a body in touch with popular feeling or is merely a junto serving personal interests by terrorist methods.

Yugoslav Politics.

In spite of the fulminations of his adversaries it is probable that the Yugoslav Prime Minister will face the Skupshtina this session in a stronger position than he was before the Easter vacation. There has been considerable activity on the part of politicians in the interval, and the attack on the Government has been made both from without and from within. In the non-Serbian provinces the honours rest probably with the Peasant-Democrat group led by M.Raditch and M. Pribitchevitch, as the efforts of the Government to establish a Croat following have not met with any conspicuous success, and the attempt to bespeak the support of the Croat business world in favour of the Government's financial policy came near to being a failure. On the other hand, the so-called Central group of the Radicals, which challenges the position of M. Voukitchevitch both as head of the Government and as head of the Radical Party, has so far entirely failed to shake the Prime Minister's position, and is even threatened with the prospect of being excluded itself from any share in the Government by having its place taken by a working agreement between M. Voukitchevitch and a small Opposition Group. The new session of the Skupshtina can hardly fail to be eventful, as all parties are beginning to appreciate the advisability of a wider coalition with a view to facilitating the conclusion of a foreign loan and to distributing throughout the country responsibility for the ratification of the Nettuno Conventions, if Yugoslavia has to yield to Italian pressure.

The Egyptian "Mahmal" and the "Haj."

Devout Egyptian Muslims will this year be making yet another unofficial pilgrimage to the Holy Cities of Islam, for the advisers to the Cairo Government have decided against the sending of the Mahmal. How widely, in view of this absence of customary protection, Egyptians will be present in Mecca about the end of this month, it is difficult to predict; our Jidda Correspondent has mentioned the figure of five thousand as a possible number; and there appears no obvious reason why Misris should not attend at least as abundantly as they attended in 1927. There is no question, from the side of the present Guardian of the Holy Places, of Egyptian troops ever being dispatched to the Hijaz to perform the work which he considers the proper duty of Wahhabi policemen, and it is a pity that Shaikh Hafidh Wahba, when recently in Cairo, was, apparently, unable to convince the Egyptian authorities of the reasonableness and the correctness of this view. There is no point at this moment in raking up the circumstances of the quarrel in 1926 between the Egyptian military escort to the Mahmal and the Wahhabis, for that quarrel, though not resolved, is now scarcely a vital matter. From the point of view of the development of Islam, however, it is of great interest to observe in which direction Egypt is tending, whether in the direction of conserving her national prestige at the expense of a universal institution, namely, the *haj*, or in the direction of strengthening and of relying, even if unofficially, upon that main bond which unites all Mussulmans, belong they to an "advanced" Islamic State or not. For Egypt, in which both the so-called "reactionary" and the so-called "revolutionary" elements in Islam are well represented, is a peculiarly good State from which to gain some idea of the two and opposing currents now observable in the Muslim world. Such signs as the recognition by Egypt of the present régime in the Hijaz would be, perhaps, a manifestation of a political rather than of a more important spiritual resolve.

The Turco-Syrian Frontier.

Readers of these "Notes" will not be surprised to learn that Tewfik Rushdi Bey, Minister for Foreign Affairs, speaking at Angora on April 23, said that, on the question of the delimitation of the Turco-Syrian frontier, there was still "a regrettable difference of opinion." For we dealt with this frontier problem in our issues of January 19 and February 2 last, when it was pointed out that the Turks had refused to accept the findings of the International Commission, under the presidency of the Danish General Ernst, upon that section of the Turco-Syrian frontier between Nisibin and Jazirat-Ibn-Omar. It is true that the Turks had beforehand promised to accept the findings of the Mixed Commission, but, if the experience of Iraq in the matter of the Turco-Iraqi frontier is any criterion, Syria may have to wait some months, may, perhaps, even have to make another direct agreement with the authorities at Angora, before the findings of the Commission become international law. In one sense, however, this frontier question is a more pressing matter than it was with Iraq, for smuggling across the border is often indulged in and brigandage occasionally reported. That the Mandatory Power for Syria is in the right over this particular strip of frontier is obvious to the worst Francophobe; in the Middle East, however, theoretical right is not regarded with that degree of reverence which it sometimes attains in Western Europe, and it may be the most practical course for Paris directly to re-approach Angora in this matter. But that step, admittedly, would depend, for its timing, upon the exact state of Turco-Italian relations, for the friendlier Turkey may become with Italy, the less anxious, presumably, will the Angora authorities be to accommodate themselves to the claims of Syria.

Iraq and Wahhabis.

Not only Iraq but also the rest of the world interested in Islam, including, particularly, Great Britain, is awaiting with keen attention the results of the conference, now in process, between King Ibn Saoud of the Wahhabis and

Digitized by Google

Brigadier-General Sir Gilbert Clayton. As we write, Sir Gilbert will no doubt be listening, in the familiar atmosphere of Jidda, to the impetuous, burning arguments of the ruler of the Wahhabis upon the iniquity of the Baghdad authorities in erecting police posts on desert soil and upon the transgressions of the Royal Air Force in bombing Akhwan on the soil of Najd. The Uqair Protocol to the Treaty of Muhammarah of 1922 will doubtless be involved; nor will less play, we imagine, be made with the Bahra Agreement of 1925. Now we have already in previous issues dealt exhaustively with this question, and do not intend to recapitulate the various points. The fact should be remembered at this peculiar moment, however, that Great Britain intends unreservedly to fulfil her obligations in the mandated territories in Arabia, that she proposes to control as strictly as she can the deserts which were agreed in 1922 by the ruler of the Wahhabis as being for the future the territory of Iraq, that, in a word, she is resolved to respect scrupulously both her internal and external duties in respect of her charges in Arabia. Whether Ibn Saoud is adjudged wise, by his Akhwan, to have surrendered, in 1922, and to Iraq, deserts that were formerly the temporary homes of most nomadic tribes in that region, is a matter on which Sir Gilbert may well be receiving some interesting sidelights, but, the Treaty of Muhammarah and its subsequent Protocol having been made, it is difficult to see how the Wahhabis can with any reason entertain suspicion of British motives in Arabia. But it will be profoundly disappointing, and, indeed, surprising if sufficient adjustments in the respective points of view are not made this week in Jidda, and if a *modus vivendi* is not established which will enable the peoples of the various countries concerned to envisage their futures as free men and not as puppets at the mercy of individual ambition. A certain restraint on both sides would be the most mollifying factor.

The Elections in Syria.

The elections in Syria, which began on April 10, have proved, although their results are not yet completely known, that the Nationalists are in the ascendancy. But when one talks of Nationalists, one does not mean the Syrian Nationalists, of say, 1925, for Nationalism in Syria in 1928 is definitely committed to the continuance of the French Mandate. It is hoped by M. Henri Ponsot, the High Commissioner, that these new Nationalists—whether or not they be merely the old ones in new clothing—will co-operate loyally with the Mandatory Power for the progressive prosperity and, be it not forgotten, for the unity of Syria. And, indeed, it does seem, on the surface, at any rate, that the French authorities in Syria have at last succeeded in winning over, if not to their views, at least to a working agreement with them, a minimum of staunch Syrians who had hitherto shown themselves irreconcilable. In so far as this is an advance it should be welcomed. Of the actual conduct of these elections—the nature of which in the Middle East is known to most observers, who are unlikely to compare them, in the moral aspect, with elections in Western Europe—details are lacking, but it is fairly certain that whatever degree of liberty was accorded in them, it was an unprecedented degree. If the Nationalists play their cards correctly, they may well be in a stronger position than they could possibly have achieved by merely blank opposition to the Mandatory Power, for in recognising the Mandate they will avowedly be working to end that Mandate, whereas their former attitude could but have the effect of riveting even faster the French control on their country. It is certainly too soon yet to assert that Syria is on a normal basis, but some of the elements of a normal basis are already present, and if the Nationalists do not fritter away their time and abilities in local disputes, a Syrian citizenship such as will cover all the various States into which the French have divided the country may be nearer of realisation than is sometimes imagined.

THE BULGARIAN EARTHQUAKES.

A correspondent writes from Philippopolis on April 25:—

I arrived in Philippopolis two days after the earthquake had rendered some 5,000 persons homeless and destitute. The first thing I noticed on arrival was that the earthquake had taken toll particularly of the buildings over two storeys high. In nearly every case these higher bulidings (used chiefly as tobacco warehouses) have suffered in the upper floors. In some cases the roof has fallen in, in others the fourth floor and wall have tumbled into the street. The smaller houses and workmen's dwellings are in nearly every instance cracked, split open, or broken in two from top to bottom. Everywhere one goes the same tale is unfolded over and over again. It is estimated that 75 per cent. of the buildings of the town are uninhabitable; in fact it seems impossible to find a building in the whole town which is not wholly or in part ruined. Curiously this does not apply to a portion of the main street containing a number of large shops and houses. This part of the town seems to have been saved by the fact that it is flanked and supported by three small hills, which are supposed by some people to have broken the shock.

The inhabitants have fled away to any convenient open space. Thus the local gardens are the scene of encampment for several thousand persons. Wooden shacks, wigwams made of branches and faggots, tents and sackcloth hut are being run up as fast as it is possible to make them. Everyone to-day is an amateur carpenter. Carpets and linoleum are much in evidence as roofing material.

The Government have opened a bakery, to which local villages take flour, the resulting bread being afterwards distributed amongst the many who have now nothing left in the world. Outlying villages which have not suffered bring daily loads of bread to the town as a free gift to the starving. It is estimated that it will need at least 18 months to demolish and repair damaged buildings, provided always that the Government has sufficient funds to carry out the work.

To add to the suffering of these poor people rain has been falling heavily for three out of the last four days, rendering the street wellnigh impassable, and the plight of the homeless is pitiable indeed. Minor shocks continue two or three times daily.

TURKEY AND ITALY.

An interesting stage has been reached in Turco-Italian relations. Conversations have been taking place between the two Governments, first at Milan, where the Turkish Foreign Minister met Signor Mussolini, and subsequently at Angora where the Italian Ambassador has seen Tewfik Rushdi Bey on several occasions; and the Turkish Government is making no attempt to conceal its desire that a pact of friendship and non-aggression between the two countries should result. As Italy has been for so long the only real cloud on the horizon of Turkey's foreign relations, in view of Angora's conviction that the Italian Government harboured designs on the territorial integrity of Asia Minor, it is not unnatural that the Turks should welcome any suggestions that promise to relieve them of what they have regarded as a constant and serious menace. The first overtures must clearly have come from the Italian Government. It could not have been chance that gave Signor Mussolini within a short space of time the opportunity of conversations with the Foreign Ministers of Greece, Turkey, and Hungary. Having gained the reputation of being, whether by design or by the force of circumstances, the chief potential disturber of the world's peace, Italy is now concerned to give concrete proof of the pacific nature of her foreign policy. Treaties or pacts with Rome, or at least suggestions to this end, have, therefore, become the order of the day, and as if to rob them of any particular Balkan sting they have been made to embrace the Yaman as well as Albania; Hungary as well as Greece, Bulgaria and Roumania; France as well as Turkey. In this galaxy of international brotherliness it would be invidious to look for anything more than a desire on Italy's part to live at peace with the universe. If until quite recently the main preoccupation of the Italian Government was to find outlets for a superfluous population, and, if for this reason it was compelled to cast covetous eyes on seemingly suitable spheres for Italian colonisation, the attempt is now made to establish a new factor, that Fascism sets more store on cultivating international good will than on maintaining the rôle of an international Ishmael. Treaties of friendship and non-aggression can be made useful auxiliaries in the promotion of trade, and it is possible that the Fascist Government has decided that Italy's cause can be served better by the immediate furthering of economic interests at home than by running risks of international complications in an attempt to provide forcibly for Italian settlement abroad.

For Turkey the Italian overtures will have been made most opportunely. The Angora Government has long insisted upon the essentially pacific nature of its foreign policy. There was no reason to doubt the genuineness of its protestations; but if there was any tendency for them to fall flat, it will have been because other States were more concerned with the nature of Turkey's domestic legislation, in so far as it affected foreign interests in the country, than with any external aspect of Turkey's handling of foreign affairs. Hitherto the pacts of friendship and non-aggression which Turkey has concluded have had an Eastern orientation—with Soviet Russia, Persia and Afghanistan. A treaty with Italy will serve the double purpose of supporting Turkey's claim to a Western orientation and of a possible lever in the protracted negotiations with France over the Turco-Syrian frontier. So far, however, the suggestion that Signor Mussolini's action in engaging in conversation with Tewfik Rushdi Bey is to be regarded as heralding a Turco-Italian pact has only the enthusiasm of the Turkish press —albeit well-disciplined—to support it. We may hope, in Turkey's interests, that the optimism is justified. It will certainly not be lost on Angora that the value of any act of renunciation on Italy's part will be lessened so long as the over-population of the Italian Kingdom remains an unsolved and critical problem, and so long as Italy retains possession of the islands of the Dodecanese, which have been shown to be able to play no part in the alleviation of that problem. On the other hand, little blame would attach to the Angora Government, if it sought to invest with an aspect favourable to itself suggestions from Italy which looked for a *quid pro quo* that Turkey could never bring herself to concede. It is not difficult to see what the Turks have to gain from a self-denying ordinance on Italy's part. The main interest, therefore, attaching to any overtures from Signor Mussolini lies in the return that the Turkish Government will be expected to make. On this point Angora maintains silence.

Of all Western countries Italy under the present régime will be regarded in Angora as affording the best model for the administration of the Turkish Republic. It is to be hoped, however, that Mustapha Kemal Pasha will not mistake the simplification of the process of government for the attainment of its ends. Fascism set out not only to introduce order and discipline into Italy, but also to bring the Italian people prosperity in the place of an economic collapse. Italy has experienced some satisfactory years since the Fascist march on Rome, but it is far from an established fact that the general conditions identified with Fascism are making for the permanence of economic prosperity. Turkey's position, again, is far from being on all fours with that of Italy. The financial recovery of the latter country has, at least on paper, been secured. Turkey, in spite of a balanced Budget, can hardly be said to have begun the process, for she has done little or nothing as yet to encourage the co-operation of foreign finance. Obsessed with the conviction that in the past history of the country foreign capital has been synonymous with political intrigue, she has failed to reflect that responsibility for this state of affairs, where it was the case, may not have rested solely with foreigners, but was mainly due to conditions for which the Turks themselves were to blame. To the failure to deal with the latter side of the question is attributable in large part the delay in the economic recovery of the country. From one source or another temporary help has been secured; but the history of concessions granted and subsequently cancelled tells its own tale of the dubious shifts to which the Turkish Government has been reduced in its attempt to do without the more reliable channels of foreign capital. It remains to be seen whether in the political sphere also Turkey is endeavouring to rehabilitate herself by back-door methods instead of adopting a more open policy which would secure her a spontaneous welcome to the comity of nations.

The Near and Middle East*

From Our Own Correspondents.

Cairo, April 21.

Sham El Nessim.

Last Monday was Sham El Nessim, the August Bank Holiday of Egypt, when all offices, Government and commercial, are closed and every self-respecting citizen spends the day out in the open with his family. This year the crowds in the streets and at points where it is customary to foregather were unusually large and, for some reason difficult to explain, there seemed to be a much more joyous spirit abroad than has been manifested for a long time.

Al Azhar.

Another attempt is being made to introduce reforms into the University of Al Azhar and to bring it more into line with modern developments. Various efforts have been made in the past, but, except for what the great Mohamed Abdu was able to do some thirty years ago, little change has taken place in that world-famous institution, which remains an "Eastern Oxford of the Middle Ages." Everyone, however, except certain *ulama*, is agreed that Al Azhar is hopelessly behind the times and that, if it is to play its proper part in the intellectual and social development of the country and to continue to exert its old influence on the outside Muslim world, it must be brought up to date and put in a position where its graduates can go out into the world and hold their own with colleagues from other institutions. There have been considerable complaints of late, moreover, from the side of the inmates of Al Azhar concerning employment on leaving that institution, and it was recently decided that the time had come for a complete investigation into the condition and the possible reforming of the University.

A Commission has been formed, presided over by Ismail Pasha Sidky, who was at one time Minister of Wakfs, and, with Sarwat Pasha, was member of the Commission which studied reforms in Al Azhar in 1910. His presence at the head of this new Commission affords a guarantee that its work will be thoroughly done, and that the results will not be allowed to languish in the archives of the Government, as has been the fate of previous reports, without some fruitful action being taken to put them into effect. The terms of reference of the Commission are to define the exact object for which these religious educational establishments are being run from the point of view of the Shari law and the Muslim traditions with a view to bringing them all up to date, to regulate the relations between these institutions and other educational establishments in the country, to propose the reforms which will infuse life into these religious seminaries, at the same time safeguarding their dignity and enhancing their prestige and giving to the diplomas which they grant a value which will enable the services of their graduates to be utilised in a manner consistent with their qualifications when they leave.

Sakkara.

King Fuad paid a visit last week to Sakkara, where he was taken round the monuments by Mr. Cecil Firth, who has been working there for some time on behalf of the Egyptian Government. The King was most interested in the latest discoveries and in what Mr. Firth had to say of the possibilities lying beyond the point where he has reached. It may be some little time yet before it is possible to get down behind the great granite slabs which are believed to cover a Royal burial, for the whole structure is most precarious, and a false move might bring everything down like a pack of cards. But there is little doubt that we are on the eve of epoch-making discoveries. Mr. Firth has indeed done of late years more than anyone else, with perhaps the exception of Dr. Reisner at the Pyramids, to add to archæological knowledge. In fact, what he has unearthed already has made it necessary to rewrite the whole of the history of architecture of the early Ancient Egyptian period.

The American University.

This week there took place in the presence of Said Zulfikar Pasha, the Grand Chamberlain, representing the King, Mustapha Nahas Pasha, Prime Minister, and Aly Shamsy Pasha, the Minister of Education, the inauguration of the new amphitheatre called the Ewart Hall at the American University. The hall was given by an American lady who has remained anonymous in memory of the restoration of health which a friend of hers, the late William Dana Ewart, gained through his visit to the country; and the inaugural conference was fittingly given the following day by Dr. George Reisner, the Director of the Boston-Havard Expedition at Giza, whose archæological work in Egypt and the Sudan generally and at the Giza Pyramids in particular has done such credit to the American nation. His lecture, which was on the subject of the discovery of the tomb of Queen Hetepheres I, was attended by a large cosmopolitan concourse, among whom were a considerable number of Egyptians.

Education in Alexandra.

Mr. Heathcote Smith, H.B.M. Consul-General in Alexandria, as Chairman of the General Committee, has issued letters in connexion with the appeal for funds to create further British schools in Alexandria, where they are greatly needed. It will be remembered that the High Commissioner about six weeks ago addressed a mass meeting of the British community in Alexandria in regard to this scheme, which has the support of the British Government, and characterised it as being of Imperial interest.

The demand for further British schools in Alexandria is very great and is urgent. There is a large element of the British colony which is at present compelled, by lack of facilities in obtaining locally British education for their children, to send them to schools which are under foreign auspices and thus provide an education on lines entirely alien to British lines. There is also an increasing demand in the local, and particularly the Egyptian, community for British education, and the manner in which Victoria

College is patronised by this element and the high opinion which the educational authorities in the country hold of that institution, are clear indications that the scheme now before the public will meet an immediate requirement.

As Mr. Heathcote Smith says in his letter of appeal, by these schools will be created new and permanent British cultural links in a land where sympathetic contact is a fundamental necessity and can produce far-reaching results, for, in conjunction with those already existing, these new schools—a Boys' primary school and a Girls' secondary school—will foster English thought and language in a manner that must permanently redound to the advantage of all British and pro-British interests in Egypt. The appeal is for £E150,000. Already £E60,000 has been received, including subscriptions from establishments in England which are interested in Egypt. Barclays Bank (D.C. and O.), Alexandria, will accept and acknowledge subscriptions, and it is much hoped that the appeal will receive a good response in England.

ROUMANIA.

Bucharest, April 24.

The Parliamentary Recess.

Parliament having closed for the summer vacation, the political situation is at present quiet. The National-Peasants Party have postponed their Congress until May 6. In spite of the respect which their principles enjoy in many quarters, they do not seem able to impose themselves, as they have not a strong enough man or sufficiently experienced politician to lead them, and moreover they have a very powerful organisation to oppose. It is officially stated that a special session of Parliament will be called, if a loan be obtained in the near future.

Loan Negotiations.

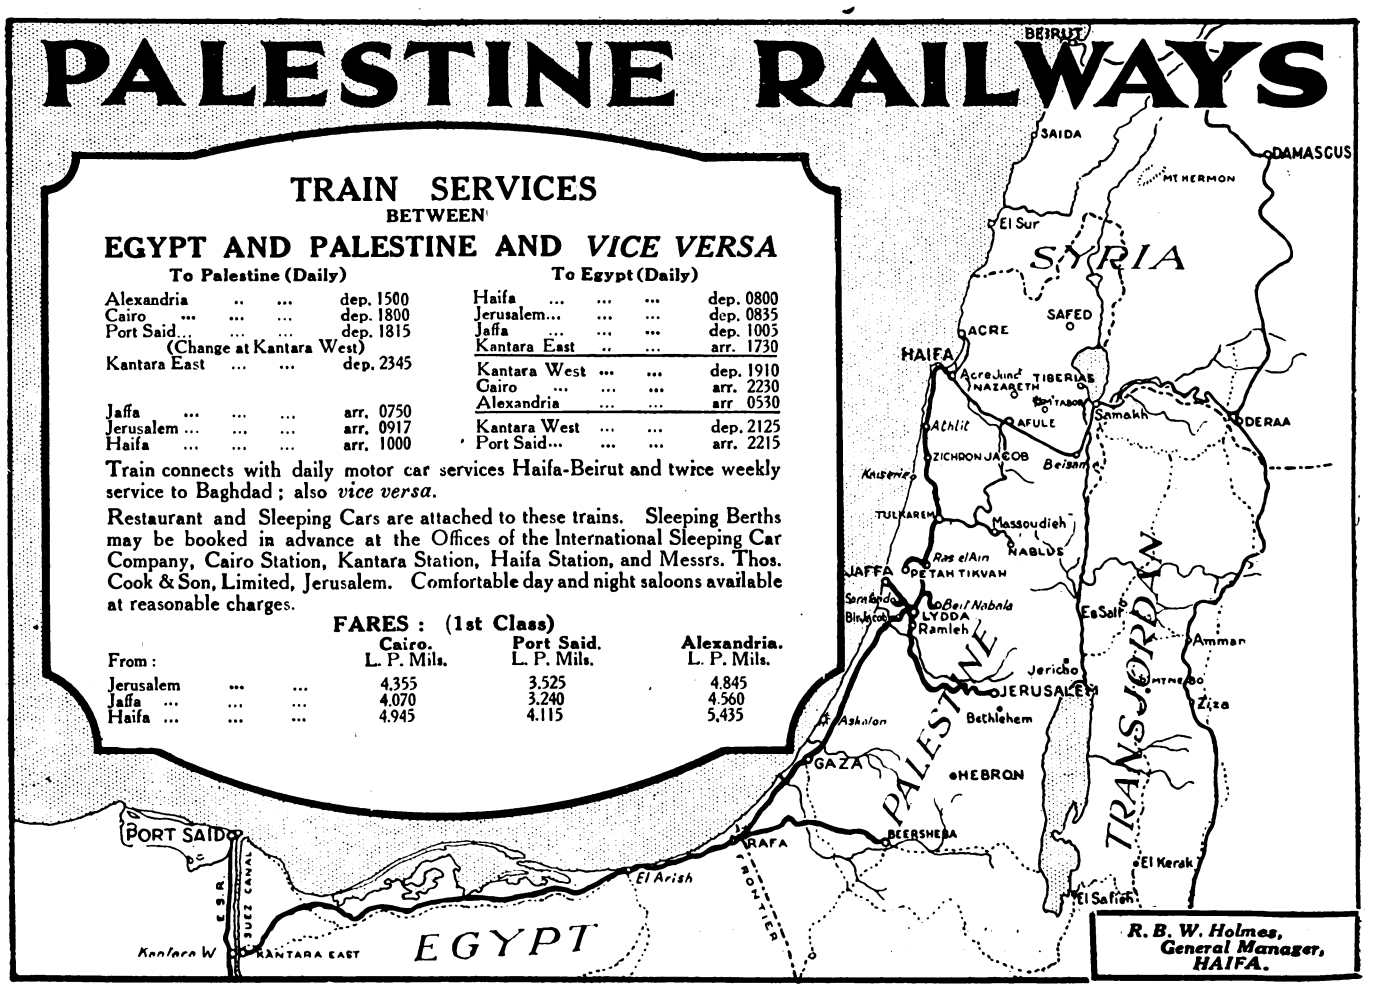
The Press is satisfied that the arrangements for a loan from France are almost completed, and it is rumoured that large quantities of material will be purchased, including railway material and steamers for the Maritime Service. In all probability some important ground has yet to be covered. Tenders for four steamers were invited last year by the Averescu Government, and a British firm's offer was announced to be the most favourable; but, if the loan is now obtained from France, no doubt all such orders will go to that country.

Business men who have been established in this country for many years are firmly of the opinion that Roumanian stocks and some of the more important Roumanian industrial shares may well prove a sound investment at the present time. Some of these shares have already begun to rise in anticipation of the stabilisation of the leu, which will follow as soon as a loan is obtained. Many people are sceptical as to the ability of France to provide a loan large enough to meet the present requirements of Roumania, but it is understood that she will be backed by other foreign capital.

The question of the electrification of the State Railways has recently been revived again, and representatives of an important American firm now in Bucharest are supposed to be discussing the subject with a view to negotiations for a contract.

Politics and Business.

Is it possible that British enterprise has been influenced by certain tirades of a newspaper proprietor against this country? In that case a disservice has been done to Great Britain, for nothing can be more certain than that Roumania offers a wide field for enterprise, which will one day be exploited by one or other of the industrial countries of Europe to the great advantage of itself and of Roumania. What is the matter with Roumania? as the Americans would say. Her economic and administrative organisation is, perhaps, a hundred years behind that of the older countries, but that, after all, is little shame to



Digitized by Google

a country which has developed in sixty years from a Turkish province to a wealthy independent State with over 18 million inhabitants and an area almost equal to that of France. Only a hundred years ago British emigrants to America were keeping slaves under the conditions so eloquently described by Mrs. Beecher Stowe in her well-known book; and half a century ago the parliamentary elections in England were carried out on principles little higher than those now prevailing here. It is true that Roumania has had the advantage of seeing other countries adopt worthier methods, but she must be given time to educate her population.

It is, moreover, grossly unjust to claim that Roumania treats her minorities badly. According to her lights she treats them much better than did the Hungarians, and the latter only suffer in common with other Roumanian citizens from the maladministration which is universal owing to the lack of educated officials. Apart from this the Hungarian minorities suffer chiefly from the fact that they are now at the mercy, politically speaking, of their former subordinates, who have many old scores to pay off.

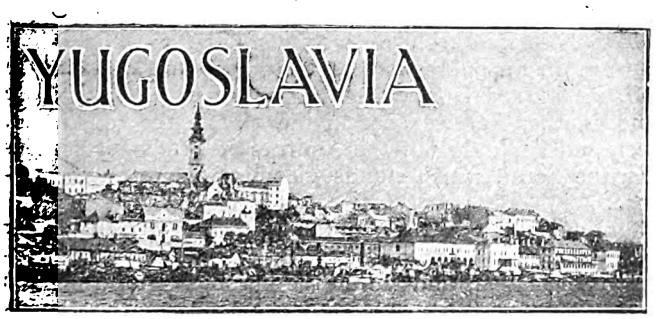
Earthquakes.

The earthquake shocks which have caused such desolation in Bulgaria were felt in Bucharest with sufficient severity to cause considerable alarm. Windows rattled, walls and furniture swayed and doors sprang open, but no real damage was done. The uncertainty as to what may happen is, however, a most uncomfortable feeling, and many families spent sleepless nights, while others shivered for hours in the cellars.

Queen Marie.

Her Majesty Queen Marie and Princess Ileana have returned from their visit to Cyprus and have gone to stay at Balchik in the Dobruja. This little village on a bay facing south enjoys a delightful climate and has a much better bathing beach than Constantza, but so far there is practically no accommodation for visitors. The Queen's summer residence there was a former mosque and is most picturesquely situated on a rocky eminence in the midst of bowers of roses and other flowers arranged with characteristic ingenuity and originality by Queen Marie.

Proposals are on foot to build a large hotel at Balchik, but there appears to be no immediate prospect of the plan being carried out. Transport facilities are at present inadequate, but no doubt before many years have passed a new summer and bathing resort will have sprung up on this rustic and beautiful spot.



Belgrade, April 26.

The Balkan Earthquakes.

One of the most hopeful signs for the future of the Balkan peoples has been the spontaneous and deep-felt sympathy which has been shown by the people of Yugoslavia for the victims of the earthquakes which have wrecked parts of Bulgaria and Greece during the last few days. Immediately on hearing the first news from Bulgaria the Yugoslav Red Cross sent 60,000 dinars as first aid, while the Belgrade and Zagreb papers published articles appealing for help for "our Bulgarian brothers," and making clear the distinction which should be drawn between the peasant people of Bulgaria and the handful of political adventurers who control the Macedonian Revolutionary Organisation. At the same time the Yugoslav Government gave orders for the re-opening of the frontier between Yugoslav and Bulgaria which has been closed since the Shtip outrage. The only exception made is that the frontier between South Serbia and Bulgaria remains closed. This instant action was taken in order not to inconvenience further a people disturbed by a great tragedy, to enable the quick transport of food for the starving population of the stricken provinces and to show Yugoslav good will and desire for friendship. To-day, at its first meeting since Easter, the Skupshtina voted the sum of 5,000,000 dinars for the sufferers, 3,000,000 for those of Bulgaria and 2,000,000 for those of Greece.

A Komitaji Incursion.

Even Easter failed to bring a truce in the activities of the Bulgarian *komitajis*. On the Orthodox Good Friday a *troika* crossed the frontier near Rujha and penetrated some distance into Yugoslav territory before they were observed by a police patrol. The police opened fire, killing one of the *komitajis*, and gave chase to the others. It was believed that both escaped into Bulgarian territory, but some days later a frontier patrol found the dead body of a second *komitaji* who had been seriously wounded. It seems that his companion carried him for a considerable distance, but finding him to be dead left him about one kilometre on the Serbian side of the frontier and made good his escape. The Yugoslav Government instructed its Minister in Sofia to protest against this renewal of raids from Bulgarian territory, and the French, British and German Governments were informed of the details of the incident.

Italy and Albania.

For some time now reports from various sources have been current in Belgrade that Italy intended to declare a Customs Union with Albania as a further step towards eventually establishing an open protectorate over her. The

frequency of these reports led the leaders of the Opposition, M. Raditch, M. Pribitchevitch and M. Yovanovitch, to send a written question to the Minister of Foreign Affairs, M. Marinkovitch, who returned yesterday from two months' stay abroad. They inquired whether Italy really has the intention of forming a Customs Union with Albania and declaring a protectorate over her; whether the Great Powers who signed the treaty of November 9, 1921, guaranteeing the independence of Albania, agree with Italy's activities; and whether it would not be a good thing for Yugoslavia to take steps to free Albania once and for all from Italian designs and to clear up her position before the League of Nations, which might take her in her charge and so free the Albanians and all the Balkan peoples from the influence of Italy, which produces disturbances and uneasiness.

Political Currents.

Before the Easter recess there was much talk of changes in the Government and of the formation of a Concentration Government with a more authoritative leader than M. Voukitchevitch at its head. But difficulties arose owing to the failure of the different groups to agree as to who should replace the present Prime Minister and owing to differences between the two sections of the Radical Party. Easter brought a short truce, but now the question has arisen again. The dissatisfied Radicals, headed by many members of the Radical Central Committee, were said to be preparing a memorandum attacking the Government's work, and especially condemning its policy in the Voivodina, where they were accused of replacing Serbian officials by Hungarians and allowing Hungarian to be used as an official language in defiance of the Constitution. M. Voukitchevitch was preparing a strong counter-offensive which was to begin with a great meeting at Veliki Bechkerek, Dr. Nintchitch's constituency. A real breach might have occurred, had it not been for the pacific activities of M. Aca Stanoyevitch, Vice-President of the Radical Central Committee, a contemporary of Nikola Pashitch and a great historical figure in the party. M. Stanoyevitch was received in audience by King Alexander and held conferences with the Radical leaders of both groups. As a result the memorandum of the Central Committee was not published, and a meeting that they had arranged at Novi Sad was postponed, while M. Voukitchevitch's tone at the Veliki Becherek meeting was almost conciliatory, instead of being strongly provocative as had been expected. The Government's supporters still declare the Government to be quite stable and do not anticipate changes until the autumn at the earliest. Yet the Belgrade papers, which are predominately Radical, seem to believe that preparations are already being made for the formation of a Concentration Government and that the present Government will simply carry on until these preparations are completed and then hand over the reins. M. Pribitchevitch re-affirms that his party can never join the present Government nor work with M. Voukitchevitch, and M. Raditch claims that the only parliamentary solution would be a Government led by M. Voya Marinkovitch, but that since the Radicals would never agree to this, the only real solution is the appointment of a non-parliamentary person, probably a General, as head of the Government.

Conditions in South Serbia.

Dr. Koroshets, the Slovenian leader, now Minister of Interior, was noted in his Opposition days for his interest in South Serbia and his attacks on the Radical régime in that province. During the past week he has been visiting the district and has spent some days in Shtip and Skoplye and passed through the whole province. When questioned by journalists as to his impressions, he declared that all the stories he had heard in Belgrade of terror and maladministration were quite unfounded and that he was very satisfied with his civil servants and with the police organisation.

AQABA: WHERE FOUR STATES MEET.

By "Viator."

Aqaba! "The very name is like a bell" to call to romance, to the fleets of King Solomon and of Renaud de Chatillon, and to the wonderful feats of Lawrence of Arabia. And the scene is worthy of its romantic association. Our first sight of the Gulf was from the rocky crags of Sinai whence we overlooked the mystic sea of deepest blue, framed between its walls of pristine mountains and, beyond, the inaccessible "island of the Arabs." We had come from Palestine, and were reversing the passage of the Children of Israel. We had passed through the Wilderness of Zin, and had gazed wonderingly at the little trickle of water flowing from Ain Kades, the Kadesh of the wanderings of the Hebrews, which now gives water and pasturage to a few goats. We had come thence across the northern plateau of Sinai, passed the Egyptian frontier station of Kuntilla, and had finally driven over one of the greatest highways of commerce and history, the pilgrimage road from Egypt, along which for 1,400 years the bands of the faithful passed to the Holy Cities, and the merchandise of the East passed to the Mediterranean.

That road is marked to-day not by any army of pilgrims, but by telegraph posts which suddenly end on the top of the pass, the Nagab of Aqaba. Here Egypt ends and Palestine, which we had left the day before, again begins. The pass, which descends to the shore of the Gulf, is all in Palestine, and the strip of the Gulf at its mouth gives Palestine its outlet to the Red Sea. It is one of the ironies of history that in 1904 England and Turkey nearly came to war over an attempt of the Sultan Abdul Hamid to advance the Ottoman frontier further into Sinai, and to cut off Egypt's access to the Gulf. The Turks seized the Egyptian post of Taba in an oasis a few miles south of the pass; and it required the firmness of Cromer to make them retire and to restore the eastern shore of the Peninsula of Sinai to the Khedive. Had the British Pro-Consul not persisted, half the Sinai Peninsula might now be within the British mandated sphere.

There was a time when the pass and the village of Aqaba itself were included in the Egyptian province of the Sultan. The road through the defile, which now tumbles over rocks and boulders, shows here and there the masonry of the highway which Ibrahim Pasha, the greatest of the warrior rulers of Egypt, built to carry his guns; and a bridge at the end of the defile spanning the Wadi bears witness to the thoroughness of his work.

From the bottom of the pass to the village of Aqaba is a run of half an hour; and in the middle of the way, crossing the vast sandy Wadi of the Arabia which stretches in an unbroken line from the Dead Sea to the Gulf, we passed from Palestine to Trans-Jordan. There is no frontier barrier; but in the village the red, black, green and white flag of the Amirate of Trans-Jordan flies from the Serai, which stands gleaming white on the seashore.

Continuing our way along the shell-strewn seashore for another three miles, we found that we were in the Kingdom of the Hijaz, and within the jurisdiction of King Ibn Saoud. Again there is no barrier between the States, and the frontier is marked only by a ruined Turkish blockhouse perched high on the cliff. We should not have known that we had entered another kingdom, had not the Qaimaqam of Aqaba sent out two camel police to bring us back lest we be molested for trespass. Within one hour we had driven along the shore of the Gulf through four territories, Egypt, Palestine, Trans-Jordan, and Arabia; and we were thankful that the Orient does not yet rival Central Europe in its consecration of Customs Houses.

The village of Aqaba itself seemed, at first sight, an ordinary mud village set by the sea and fringed by palm groves. To-day it has some six or seven hundred inhabitants. Before the War, and, indeed, until recently, the

Digitized by Google

population was larger, but commerce has now fixed its centre at Maan, some 70 miles to the north-east, where the Hijaz Railway has its temporary terminus. But Aqaba, though lowly in its present state, has its insignia of history, so that the traveller feels he is treading on one of the scenes in which human destiny has been forged. For here, or hereabouts, was Ezion-Geber—meaning the Spine of the Giant, and so-called, perhaps, from the rocky crags that come down almost to the water's edge—from which King Solomon and King Jehoshaphat sent forth their ships to Tarshish to bring gold. Here, or hereabouts, was the Aila of the Roman Province of Arabia Petræa, where the Tenth Legion was stationed to impose peace on the tribes of the desert; and bits of Roman columns are still strewn on the plain to the north of the village. Here in the Byzantine and the Middle Ages was a great castle on the trade route which passed from Europe to the East, and the traveller may yet see fragments of Byzantine sculpture in one of the rude houses of the village. Here the Crusaders had one of their amazing footholds, where European feudalism entrenched itself against the Saracen valour, and you may yet gaze at the solid towers of the fortress which was disputed between the Cross and the Crescent. Here Renaud de Chatillon fitted out a fleet which sailed the Gulf and brought terror to the coasts of Araby; and from the shore you can see the little Island of Craye that was the invincible fortress of the Sea Barons. And here, in more modern times, Lawrence drove the Turks in rout, and established a base from which, in two years of devastating guerilla warfare, he broke once for all the connection of the Ottoman Empire and Arabia. Of his army some trace still remains in the iron bands which enclosed the tibn bales of his camels and are scattered along the beach to the south of the village. Moreover, the jetty built for fun by the men of H.M.S. Euryalus, though half ruined, may still be seen.

A new jetty has taken its place as a shelter for the few fishing vessels which go out when it is calm to catch the flying-fish and the tunny that swarm in the land-locked waters. It was built by King Husain of the Hijaz during the days when he held his final Court at Aqaba, while his son Ali tried to defend Jidda against the Wahhabi invader. There are other survivals of the royal residence in Aqaba. The Serai itself, in which the Trans-Jordan Government has its offices, was the palace, and a fountain opposite bears an inscription recording the piety of King Husain. And the portal of the Saracen-Crusader castle is strangely decorated with a coat of arms indicating a fortress set on a field of swords, guns, and flags, which likewise records the generosity of His Hashimite Majesty. That castle, which bears also the record of the Mameluke Sultan who built it, is now the barracks of the Arab Legion who represent the forces of law and order of the Trans-Jordan Government.

We had thought to find Aqaba isolated from material civilisation and modernity. But as we sat on the jetty, sipping Mocha coffee with the Qaimaqam and watching the flying-fish at play, we were not a little surprised to have a message from the office of the Arab Legion asking if we would like to hear a concert at Paris. Returning to the Serai, we found that there was, indeed, a wireless receiver of which the instrument could be manipulated to connect us with Moscow or Paris, or still more frequently with atmospherics, which the young operator apparently understood to be another, and that the most popular, capital. We heard part of a lecture at Moscow clearly and incomprehensibly enough; and the music came through somewhat blurred from Paris. The atmospherics were noisy as a brass band. But we were disappointed that we could not be connected with London and hear Big Ben striking two hours previously; the more so that we were told that at Maan, on the plateau 80 miles away to the east, the men had danced to the music of the Savoy Orchestra.

One other touch of modernity we received that evening when our host, the Qaimaqam, told us that his two sons and his daughter were students at the American University of Beyrout, and the daughter was training for a medical degree. Equal rights for women has made its way even to Arabia.

THE REPORTS FROM LURISTAN.

The Persian Legation in London states that the recent Press reports concerning a rising in Luristan, the nomination of the Crown Prince as Regent, and the taking over of the command of a so-called punitive force by His Majesty the Shah in person, are without foundation, that the Shah frequently travels to various parts of the country, and is at present visiting districts in the west, and that law and order prevail in Luristan.

NEWS IN BRIEF.

Wreaths of Australian and New Zealand flowers, sent over in ice, were laid on the Cenotaph on Anzac Day, April 25.

M. Ilias Vrioni, Albanian Minister for Foreign Affairs, gave a farewell luncheon party at Tirana on April 24 in honour of Mr. William Seeds, the British Minister, and Mrs. Seeds.

Brigadier-General Sir Gilbert Clayton spent a few days at the Residency, Cairo, before leaving for Jidda at the end of last week with Colonel Cornwallis and Mr. George Antonius to meet the King of the Wahhabis.

The Shah of Persia returned to Teheran on April 26 from Khorammabad, whither he went three weeks earlier on the receipt of news that the Minister for Public Works, who was on a tour of inspection in Luristan, had been shot near Khorammabad in a skirmish with Lurs.

Mr. J. W. Crowfoot, while excavating recently at Jerash (Gerasa) in Trans-Jordan, on behalf of the British School of Archæology jointly with Yale University, uncovered the remains of a Byzantine church. A Greek inscription indicates that it was built in 492 and was dedicated to St. Theodore of Amasia, the soldier martyr of 306.

A Constantinople message states that, commemorating the thirteenth anniversay of the British, Australia, and New Zealand landings at Gallipoli, the local representative of the Imperial War Graves Commission on April 25 laid wreaths on the national memorials at Helles, Lone Pine, and Chunuk Bair.

In response to the expressed wishes of members of the Greek Community in London the Hellenic Minister has opened an Earthquake Relief Fund, and appeals to Greek resident in this country to support it. Donations may be sent to His Excellency at the Legation, 5*, Upper Brook Street, W.1, and cheques should be made payable to the Ionian Bank, Limited, in favour of this special fund.

Major-General Sir Charles J. Melliss, V.C., at the head of a party of ex-prisoners of war from all parts of the country, laid a wreath on the plinth of the Cenotaph on April 29, the anniversary of the relief of the siege of Kut. Earlier a memorial service for those who died during the siege, and those who died afterwards in captivity, organised by the Ex-Prisoners' of War Association, was held in St. John's Church, Waterloo Road, and was conducted by the Rev. T. Savage, the Rev. R. O. Phillips being the preacher. Major-General H. A. Vane Cummins, who was at the defence of Kut, was among those present.

THE WEEK AT HOME

London, Tuesday Morning.

The Budget.

So far as one can gather at present, Mr. Churchill's Budget, which he presented to the Commons a week ago, is being very well received indeed, and it is not too much to say that the Conservatives' stock has obtained a fillip that did not seem likely to derive from any other quarter. All the minor details—except the tax on petrol, out of which a temporary attempt to make political capital is being indulged by the Labour and Liberal Parties—have been sturdily, if not enthusiastically, accepted. There remains the vast question of Rating Reform.

This is so large a problem that I am not competent to discuss it. The danger exists, of course—and the Government has naturally foreseen it—that local authorities will be given by Mr. Churchill's proposals encouragement to new extravagances. The theory favoured by the Government is one of block grants, subject to quinquennial revision—an arrangement which, it is thought, would force increased expenditure to come from the local rates. Whether this safeguard is sufficient to prohibit an extension of Poplarism is at the moment uncertain, but it certainly should not be beyond the wit of Mr. Churchill's advisers to devise some scheme by which one of his most brilliant conceptions may be brought to fruition.

Crime.

But the Budget, although it excited very wide interest and comment, held second place last week to the trial of two men ultimately convicted of a murder of a policeman which occurred so long ago as last September. There is in England never any gloating over convicted criminals; rather is the reverse tendency often seen, of sympathising with, and attempting to obtain a reprieve for, men found guilty of revolting crime; but in this case of the Gutteridge murder, as it has been called, acquiescence in the jury's verdict appears to be unanimous.

Perhaps the most remarkable outcome of the trial has been the satisfaction everywhere expressed with the ability of Scotland Yard to deal with apparently baffling crimes, and Englishmen are priding themselves on the fact that, although Continental and other foreign nations may be overtaking them in some directions, in the detection of crime they still lead the world.

The Prayer Book.

Doubt grows deeper and wider upon the wisdom of proceeding with the re-revised Prayer Book. The Church Assembly last week gave its final approval by a majority of 243 votes—a reduction of 141 on the majority last year. The most ominous feature of this gathering was, however, the very large number who abstained altogether from voting. In a matter of, so to speak, life and death, it will now be placed on record that a large number of members of the Church of England had not courage to say either Yea or Nay. If Parliament rejects the Measure—and he is a most optimistic Churchman who thinks that it will accept the Measure—the fat will be in the fire with a vengeance.

The present position of the Church of England is, in fact, pitiable. Nobody knows better than it the prospects of a house divided against itself; yet unity seems even remotely unattainable. The spectre of Disestablishment is one before which few men will not shudder; but cannot that ghost already be heard muttering on the outside stairs?

The Premier and Literature.

At political functions Mr. Baldwin might conceivably be compared with other Prime Ministers, and suffer in the comparison; at non-political functions he is incomparable. There is stuff in what he then says, his own, individual stuff, the product of a Worcestershire man, a man of the West Country, an Englishman. Sincerity, insight, and sympathy are impressed into all Mr. Baldwin's non-political speeches.

So it was the other night at the 138th anniversary dinner of the Royal Literary Fund. He then paid a tribute of a kind which Prime Ministers very seldom indulge, a tribute to a writer upon whom he had formed his own judgment, and whom he had found not wanting. Mary Webb—the world knows her name now which had hardly heard it whispered before—had been for some time known to the discerning, rather than to the connoisseurs, in literature; but despite this posthumous fame one scarcely thinks that her novels will attain even such popularity as the product of one of her countrymen—"The Shropshire Lad," to which Mr. Baldwin referred—can boast. Yet to the few—and it is always the few who count in literature, as in art and in music—the testimony of the Prime Minister has come very gratifyingly.

King Willow.

Once more the good sun is shining on us, and the sweet-smelling green fields ring with the sound of the bat against the ball. Last Saturday Club Cricket really began, together with County cricket, although there are still clubs conservative enough to postpone matches until May. But before Saturday the visitors of the year, from the West Indies, had shown the way to the cricket field; and they led the way very well too.

It is, of course, early days yet to prophesy, but the West Indians have struck form at once, and look as though they were easily capable of causing trouble to the strongest county sides.

Hagen Defeated.

The crushing defeat of Hagen by Compston has brought infinite joy to the hearts of the golfers of England. Hitherto they could but fume impotently at the superior mechanism of the American golfing machine, but now that a despised British golfer has beaten the exemplar from the States—and by 18 holes with 17 to play—all will be well in the Club Houses. The inferiority complex is vanished; confidence is re-established. Incidentally, the benefits that will accrue from this overwhelming victory may not be monopolised by the British.

ALTER EGO

Bulgaria is this year issuing a military stamp to mark the thousandth anniversary of the death of Czar Simeon, who reigned in Bulgaria from 893 to 927.

PERSONAL AND GENERAL

TO-DAY

May 3, 1928 (New Style).
April 20, 1928 (Old Style).
Dulkaada 13, 1346 A.H., of the Muslim Calendar.
Iyar 13, 5689, of the Jewish Calendar.

Prince Hahib Lotfallah arrived last week at Claridge's Hotel from the Continent.

Sir John and Lady Stavridi will return to London from Florence to-morrow (Friday).

Viscount and Viscountess Inchcape are breaking their homeward Journey by a short stay at Aix-les-Bains.

Sir Maneckjee and Lady Dadabhoy have arrived in England and have taken up their residence at their home, Kingsnympton Hall, Kingston Hill, Surrey.

Captain Richard Bevan, R.N., had the honour of being received by the King at Windsor Castle on April 25, upon his appointment as his Mjaesty's Naval Attaché at Rome.

The Gaekwar and Maharani of Baroda arrived at Marseilles on April 26 in the P. and O. s.s. Razmak from Bombay, on their way to England.

Lady Constant Milnes Gaskell and Miss Milnes Gaskell, who have been staying at The Residency, Cairo, expect to return to 47, Pont Street, about May 10.

Brigadier-General and Mrs. Rotton and Miss Jewell Allcroft returned last week for a short stay to Stokesay Court, Onibury, from India, before leaving for May Fair Hotel, Berkeley Street, for the season.

Mr. and Mrs. Dana Gibson, who have recently been in England after a visit to Palestine and Egypt, are returning to the United States this week.

The Right Hon. Sir John Simon, M.P., and Lady Simon, and Lieut.-Colonel Sir Francis and Lady Humphrys, who arived at Windsor Castale on April 27, left the following day.

The Council of the Royal Geographical Society have awarded the Gill Memorial to Mr. C. P. Skrine, I.C.S., for his exploration of the Qungar area and his work on Chinese Central Asia.

The Roumanian Chargé d'Affaires will hold a reception at the Legation in Cromwell Place for members of the Roumanian colony from four to seven p.m., on May 10, the anniversary of the Independence Day of Roumania.

A service in memory of the landing of the 29th Division on the Gallipoli Peninsula on April 25, 1915, was held on April 25 at Holy Trinity Church, Eltham, which contains the Division's Memorial. The Vicar, the Rev. H. A. Hall, was chaplain to the Divison. Field-Marshal Sir Claud Jacob unveiled a carved walnut panel in memory of the Indian Brigade of the 29th Division. The panel was presented by officers now serving in the 14th King George's Own Sikhs, 1st Battalion of the 5th Gurkha Rifles, the 1st Battalion of the 6th Gurkha Rifles, and the 2nd Battalion of the 20th Gurkha Rifles. General Sir Ian Hamilton was among those present.

Sir William H. Clark, K.C.S.I., C.M.G., Comptroller-General of the Department of Overseas Trade, who has been appointed High Commissioner in Canada for his Majesty's Government in Great Britain, went to India in 1910, where he remained until 1916, as Member for Commerce and Industry of the Council of the Viceroy. It was during this period of service that Sir William was awarded the K.C.S.I., having previously received the minor decorations of C.S.I., and C.M.G.

The Maharaja of Rajpipla, who arrived at the Savoy Hotel for the season, will spend some of his time at his country home, Manor Cottage, Old Windsor.

Sir Guy and Lady Rutledge, Lady Godfrey, Lady Petit, Lady (Charles) Alston, Sir Jagadis and Lady Bose, and the Hon. S. R. and Mrs. Das arrived on April 26 at Marseilles in the P. and O. liner Razmak, from Bombay.

Field-Marshal Lord Allenby presided on April 24 at the annual dinner of the Egyptian Expeditionary Force at the Trocadero Restaurant. Among those present were Generals Sir E. Bulfin and Sir Philip Chetwode, Lieutenant-Generals Sir W. Campbell and Sir P. C. Palin, Major-Generals G. F. Davis, E. S. Girdwood, Sir S. Hare, Sir R. Luce, and Sir A. Money; Brigadier-Generals B. T. Buckley, G. V. Clarke, Sir J. Longley, W. B. Emery, Sir F. Gascoign, R. Hoare, A. H. Leggett, E. M. Morris, Sir G. Macauley, and E. M. Paul, Colonel Lord Roundway, and Captain W. B. Macdonald, R.N.

THE ARAB HORSE SOCIETY.

At the Council Meeting on April 18, at the Grosvenor Hotel, London, the following new members were elected:—Mrs. H. D. Brierley, c/o The Ionian Bank, Athens, Greece; Henry Brittain, Westleigh, Wallington, Surrey; A. H. Kay-Williams, Glen Usk, near Caerleon, Monmouth; Lt.-Col. M. F. McTaggart, D.S.O., 83, Duke Street, London, W.; Alexander Phillipi, Crawley, Winchester; Hon. Henry H. S. T. Tufton, Castle Hill, Englefield Green, Surrey; and Lady A. H. Yule, Hanstead House, Berchet Wood, Herts.

The appointment of Lord Plumer to be High Commissioner for Trans-Jordan is gazetted.

THE HISTORY OF ISLAM.

Under the auspices of the Near and Middle East Association a lecture on the History of Islam was given by Sir Denison Ross on April 25 at 18, Park Lane, the residence of Mrs. Eckstein, who was the hostess of the evening. Sir John Prescott Hewett presided, and among those present were :—

The Maharajadhiraja of Burdwan, the Maharajakumar of Burdwan, the Siamese Minister, the Egyptian and Albanian Chargés d'Affaires, Herr Karl Zeileissen, Marquis Pallavicini, Dr. Feine, Prince and Princess Soumbatoff, Lord Danesfort, Dowager Lady Boyle, Hon. Lady White-Thomson, Hon. Sir James and Lady Burt, Sir Frederick and Lady Graham, Lady Hewitt, Sir William Clark, Lady Ross, Lady Tighe, Sir Thomas and Lady Strangman, Lady Warren, Brig.-General Baird, Major Arthur Bentinck and Miss Naomi Bentinck, Air-Commodore and Mrs. Borton, Mrs. L. Cobham, Miss Eckstein, Mr. and Mrs. Charles Rey, Mr. and Miss Montague Bell, Dr. Ernest Griffin, Major and Mrs. Beldy, Colonel and Madame Uggla, Miss May Mond, and Mr. Roland Michell.

In the course of his lecture Sir Denison Ross said :—

I do not propose to recite the whole annals of Islam, which cover over 13 centuries in time, and half of Asia and part of Europe in space. I shall merely attempt to give some idea how Islam received its first impetus and how it spread westwards and eastwards.

The great movements of peoples across Central Asia had always been in a westerly or southerly direction; not till the Arabs began their career of conquest do we find a big movement of people in an easterly direction, unless we include the glorified raid of Alexander the Great.

Arabia has no rivers, no high mountains, only a few towns of importance, three-fourths of its frontier is seaboard, and the greater part of it is desert. One of the contributing causes of the exodus of the Arabs under the banner of Islam in the 7th century was, no doubt, the increasing barrenness of the peninsula. Scientists have tried to show that similar wholesale migrations had occurred in former ages, when the Assyrians, the Arameans, and other Semitic peoples, leaving Arabia, came and settled in Mesopotamia and Syria.

You all know, at any rate roughly, the story of Muhammad the Prophet who was born in A.D. 571. From the age of 24, when he married the widow Khadija, down to the age of 40, he made caravan journeys into Syria and South Arabia and possibly small sea journeys, perhaps to Cyprus. Of his six children the best known is his youngest daughter, Fatima, who married his cousin and adopted son, Ali. At the age of 40 he received a call, through the Angel Gabriel *in a vision*, to preach the unity of God, and after suffering much persecution with his small following in the year 622 he fled to Madina, this becoming the date from which the Muhammadan Era starts. For the next ten years he was engaged in constant warfare with the recalcitrant Arabs, and, when he died in A.D. 632, practically all the Arabs had been compelled to accept Islam. It was his successors who first carried Islam outside the Arabian peninsula, and within the next 20 years Egypt and the Syrian provinces of the Byzantine Emperors and the great kingdom of the Persian Chosroes had been finally conquered. The Arabs spread rapidly westward over North Africa, and finally entered Spain in A.D. 710; in 720 they began to make inroads in Southern France, and were only finally driven out of that country by Charles Martel in 732, exactly 100 years after the death of the Prophet. During this time many attempts were made to capture Constantinople both by land and by sea, but it was reserved for the Turks in the middle of the 15th century to achieve this object which the Muslims had always had in view.

In their westerly campaigns the Arabs had always asserted their national spirit on the conquered people. This was, of course, to be expected in Syria and Egypt, but in North Africa they had to deal with the Berbers, and in Spain with European Christians. They succeeded, nevertheless, in making these countries essentially Arab. In their easterly progress it was far otherwise, for in Persia they encountered people of high culture, long tradition, and strong national pride, who were quick to make their intellectual gifts appreciated by the half-cultured Arabs, and soon found themselves holding important positions in the State and giving a Persian stamp to the Arab régime. Although it was not till the beginning of the 9th century that anything like a national movement occurred and that in the distant province of Khurasan, all through the early years of the Abbasid Caliphate of Baghdad Persian influence had been very strong. By the 10th century a Persian dynasty was established in Bokhara and the real rule of the Caliphs in the East had come to an end, though they continued to be acknowledged by all who ruled in the name of Islam until the destruction of Baghdad in the middle of the 13th century. The Persians were not, however, for long to enjoy the rule of a national dynasty, for the Turks, who first come to our notice in the shape of Pretorian guards to the Caliphs of Baghdad, began in the 10th century to produce great generals with ambitions higher than that of serving the Persians and Arabs, and with the rise of Mahmud of Ghazna and later of the great Seljuk Turks the power of the Persians and Arabs began to wane, and the whole of middle Asia was to remain in Turkish hands until the establishment of the great national Persian dynasty of the Safavis in the 15th century.

Islam in India had at first a chequered career; as early as the beginning of the 8th century an army had crossed the Indus and marched through Sind, but the leader was shortly after recalled, and it was not till the end of the 11th century that she was again invaded in the name of Islam by the redoubtable Mahmud of Ghazna. In India, as in the middle of Asia, it was the Turks who were the leaders, and with the exception of a few Afghan rulers it was kings of Turkish race that ruled Hindustan down to the final eclipse of the Moghuls by the British.

Let me turn now to a brief survey of the exodus of the militant Arabs from Arabia.

At the beginning of the 7th century Yaman and part of the Hadramaut were in the possession of the Persians, while the Syrian frontier was ruled over by the Gassanids under the suzerainty of the Byzantine Emperor. The whole peninsula was inhabited by Arabs, but the Hijaz contained large Jewish colonies which had been driven out of Palestine. Some of the Arabs were Christians, but the majority were heathen. They believed in a supreme God called Allah, who had created and who ruled the world. He had no temples in his honour, and no priests to serve him. Next to Allah came the *jinns*, who had fixed habitations in stones, trees or statues. Each Arab tribe had its special *jinn* or *jinns*. Mecca was the principal religious centre of Central Arabia, and possessed an old temple called the Kaaba (or Cube), round which the tribe of Quraysh had built a city in the 5th century of our Era. The Kaaba did not belong to the Quraysh, but was the common pantheon of many tribes and contained 360 idols. The most sacred object it contained was the Black Stone, which is still venerated by the Muslims. Hence the importance of the city of Mecca and of the tribe of Quraysh which had the guardianship of the Kaaba.

The religion of the Arabs at this time was little more than a degraded fetishism, when there suddenly appeared an Arab named Muhammad, of the tribe of Quraysh, inspired with the idea of reducing the number of Arabian gods to one, and of compelling his fellow-countrymen to recognise his mission as divine. The new Prophet, being a townsman and a merchant whose business had taken him into foreign countries, had often had opportunities of meeting Jews, Christians, and Zorastrians. Islam owed much of its success to the fact that so large a part of its doctrines were derived from these three great religions. The Prophet is instructed by God to say : " I am no apostle of new doctrines, and I do not know what will happen to me or to you. I follow naught save what has been revealed to me. For I am only a public admonisher." (Quran xlvi. 8.)

The pagan Arabs had no " book " and very few monuments. The Kaaba was their only shrine and the Black Stone their only relic. All these other nationals with whom Muhammad came in contact had a " book " and temples, but they had no idols. It is possible that Muhammad, impressed with the feeling that in these respects the Arabs were inferior and that idols were undignified, determined to provide his fellow-countrymen with a " book " of their own and to exterminate all the gods but one. But in order to justify the preaching of a new religion he must prove its superiority to all others and try to convert to his way of thinking the Jews and the Christians. He was determined to make Islam the one religion of the Arabian Peninsula. He was, however, unable to satisfy either the Jews or the Christians, and thus one of his first objects was to turn

the Jews out of Arabia. His feelings against the Christians as such were, no doubt, somewhat modified by the fact that the Christian King of Ethiopia gave sanctuary to many of his persecuted followers. This same circumstance may possibly account for the fact that Abyssinia was never invaded by the Arabs.

When Islam was carried outside Arabia as an established religion, the Muslims were more tolerant, and apart from the risk of eternal damnation the conquered had only to chose between Islam and the payment of an annual fine.

Whatever opinions we may hold regarding the message of the Arabian Prophet, we may rest assured that Muhammad always had complete faith in himself. It would be difficult to imagine any man starting on such a career as his at the age of forty for other than a spiritual motive. Whether Muhammad at the outset conceived the idea of making Islam a universal Religion—and texts have been quoted from the Quran to show that he did—is still a matter of debate, but he certainly could not have entertained any thoughts of temporal leadership, still less of sovereignty over all the Arabs. During the ten years of the Prophet's life that remained to him after his flight to Madina he took part in no fewer than twenty-seven battles and organised forty-seven expeditions. It may be imagined, therefore, that he cannot have had much inclination to think of converting the outside world. Tradition speaks of letters addressed by Muhammad to the Byzantine Emperor and to the Chosroes of Persia demanding their acceptance of the new Faith, and a force of some size for a punitive expedition over the Syrian frontier had been collected in Madina just before the Prophet's death; but beyond this there is nothing recorded which points to a determined propaganda outside Arabia. Muhammad gained his lordship over the Arabs by force, and while his devoted generals were wielding the sword on his behalf he himself was laying the foundations of the Faith which, though it found so little favour in Arabia, was ultimately to be accepted by peaceful preaching in so many countries outside the Prophet's own land. We may take it that the Arabs as a whole felt very little drawn towards either dogmatic beliefs or ritual practices. This indifference was largely responsible for the intransigent form given by the Prophet to the Creed he preached. But propaganda in the truest sense only makes its appearance in Islam in connexion with the parties and sects that arose among the Muslims, factions which, though bearing a religious semblance, were purely political in aim, such as propaganda of the Abbasids in Khurasan, of the Fatimids in Egypt and of the Ismailis in Persia. Behind most of these movements, notably the great schism between the Sunnis and the Shiahs, lie the disputed claims of inheritance. It is interesting to recall that no such questions were at the back of Christian schisms, which were all dogmatic. Whereas Christian schisms arose on questions which had reference to the preaching of Jesus Christ, Islamic schisms nearly all related to the question of succession to the Caliphate on which Muhammad has made no pronouncement at all.

The hold of the new Faith over the Arabs was of the slightest, and it is highly probable that, if chance had not at an early stage filled the Muslims with a desire for foreign conquest, the whole of Arabia would have reverted to its primeval state. For the Arabs above all love independence, and the Bedouin resents all forms of control and authority beyond that of his tribal chief, and that sits lightly enough.

It was the civil war necessary for the conversion of the Arabs which gave the warlike character to Islam; and it was the successes of Muslim generals like Khálid ibn Walíd which tempted the faithful to try issues with foreign nations.

There are hardly any passages in the Quran which can be regarded as prescribing war against all infidels, though there are many which promise rewards in Heaven for all who die fighting for Islam. It was the political power that lay behind Islam that was propagated by the sword and not the Religion of Islam itself.

It is difficult to explain how a Creed became a World Power, or how what was outwardly merely a Religion with a Book and a Confession of Faith became an excuse for world conquest by force of arms. It is interesting to try to picture the attitude or the sentiments of such people as the Persians, the Egyptians, the Berbers, or the Spaniards when they found their home lands being overrun by strange armies which, in the guise of mere invaders, were really demanding acceptance of a new religion or, as an alternative, the payment of a poll tax for the privilege of retaining their own traditional beliefs. No other conquering force either before or since has made such demands, and it must have struck all these people as very strange—especially the Greeks and Romans—that these invincible hosts should be so deeply interested in the spiritual welfare of those they had vanquished. Of Christianity it has been said that the Flag follows the Cross; of Islam it was certainly true that the Quran followed the Sword. The resort to arms for the fulfilling of his mission was forced on Muhammad from the moment that he was compelled to flee with his slender following from his native town; and thus the reforming religion was given at the outset a militant character which it retained so long as there were countries too weak to withstand the arms and prestige of Islam. The national weapon of the Arabs was the sword, used either on horseback or on foot. The lance had been imported from India and enjoyed a secondary popularity to the sword. Arabia was famous for its bows and arrows, but the early Arabs rather despised these long-range weapons, just as to-day they dislike the rifle.

It was a collision of the Muslims with the Arab tribes on the northern border that ultimately led to conflict with the Byzantines and the Persians. Both these Powers were in a state which rendered them ill-fitted to cope with a new enemy. The Emperor Heraclius, who had just gained a victory over the Persians after an exhausting struggle, had many troubles to deal with at home and in the north of the shrunken Eastern Empire; while the Persian Empire of the Sásánians was in a state of disruption. We must, of course, distinguish between the invasion of infidel countries under the direction of the Arabian Caliphs and the conquests of non-Muslim nations by non-Arabs who were either brought up as Muslims or found it expedient to accept Islam.

In the West the Arab invasion was arrested at Constantinople and on the plains of Tours. In the East a halt was called on the borders of Chinese Turkestan—the Jaxartes—and on the Indus.

Although the Persians managed to established a national dynasty in Khurasan within two centuries after the battle of Nihávand (A.D. 641), they did not carry their armies into non-Muslim countries. They were too busy reasserting their national spirit in Persia itself, while recognising *pro forma* the supreme authority of the Caliph in Baghdad. It was the Turks who were destined to continue the work begun by the Arabs and to carry the Quran into India, Russia, Anatolia and the Balkan provinces. It is interesting to recall that within forty years of the capture of Constantinople (1453) the Moors were finally driven out of Spain (1492); and that while the Turks were extending the arms of Islam up to the gates of Vienna, the True Believers were being driven out of their first footholds in Europe.

The Turks and the Mongols spread with the same celerity as the Arabs, but unlike the Arabs they had no slogan. The Arabs probably cared more for warfare than for religion, more for loot than for salvation, but they had Islam at the back of their minds and the confession of faith was their battle-cry. The Turks and Mongols were frankly out for "pastures new" and neither offered any justification for their irruptions nor any conditions from the conquered beyond submission. Except in this one respect the Holy Wars of the early Arabs and the invasion of the Turks differed not at all.

Two strange phenomena have now arisen simultaneously. On the one hand, the Turks have abolished the Caliphate, the Muslim Civil Code and the fez. On the other, the Puritan Arabs known as the Wahhabis have made themselves masters of the Holy Cities. The question presents itself: which way will Islam as a whole incline? It seems to me quite likely that both movements may have their repercussion, but in different countries. In India there will be a strong feeling against secularisation, because of the rivalry with the Hindus.

CORRESPONDENCE.

THE BULGARIAN EARTHQUAKES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is now possible to estimate with some approach to accuracy the extent of the disaster which has overtaken a large area in Southern Bulgaria. The earthquakes have continued for several days, up to and including Saturday last, and there can be no certainty that they are yet at an end.

Whole villages have been destroyed and many other rendered uninhabitable. Plovdiv (Philippopolis), the second city of the country, the centre of the tobacco trade, has suffered heavily. The large industrial suburb developed since the War is utterly ruined. The number of the dead, missing, and injured is not yet known, but the damage in that region alone is estimated at four and a half million pounds. Meanwhile, though the shocks have continued to be felt throughout the greater part of the country, relief work is already on foot, though gravely hampered by heavy and continuous rain.

The Save the Children Fun (London Headquarters, 26, Gordon Street, W.C.1., General Secretary, L. B. Golden, Esq.) is on the spot administering funds which have been sent direct to that organisation; and in view of the urgency of the circumstances, they are ready to be responsible, through their experienced representative, for the administration of any further funds which may be forthcoming from this country for general relief.

We believe that there are many who will sympathise with and wish to help those suffering from the results of so overwhelming a catastrophe, especially in view of the fact that the resources at the disposal of the Bulgarian Government and people are totally insufficient to enable them to meet the heavy demands with which they are so suddenly faced.

A Bulgarian Earthquake Fund has accordingly been opened, and cheques, etc., may be sent either to the Dowager Lady Boyle, 64, Queen's Gate, S.W.7 (crossed "Bulgarian Earthquake Fund"), or direct to the Westminster Bank, 25, Sussex Place, London, S.W.7.—We are, etc.,

THE STATUTORY COMMISSION AND THE INDIAN STATES COMMITTEE.

Now that the Simon Commission has returned from its preliminary visit to India, and the Indian States Committee has completed the first stage of its inquiry, the question of how the work of these two bodies is to be co-ordinated must surely arise, seeing that they are investigating matters which are closely connected together. "It is impossible to deal with the constitutional position in British India without also considering the problem presented by the Native States," said Lord Chelmsford and the late Mr. Montagu in their report on Constitutional Reforms. It is true that they did not contemplate the examination of these problems by the Statutory Commission which they recommended should be appointed after an interval of ten years. And the Government of India Act was consequently so framed as definitely to limit the Commission's investigation to British India. On the other hand the authors of the report did not content themselves by merely giving expression to the opinion which we have quoted. On the contrary, it was at their suggestion that the Chamber of Princes was created. They refrained, however, from hazarding a forecast of what would be the nature of the relationship between the States and a self-governing British India. In their picture of the India of the future there was "a place" for the States who, they thought, might possibly "wish to be associated for certain purposes with the organisation of British India in such a way as to dedicate their peculiar qualities to the common service without loss of individuality."

For the time being this not too definite statement probably sufficed. But now that experience of the working of the revised constitution has been gained it is clear that further constitutional changes cannot be adequately considered unless the problems of the States are also investigated. It was for this reason that the appointment towards the end of last year of the Indian States Committee was regarded in many quarters as the natural corollary to the nomination of the Statutory Commission. In accordance with its terms of reference the Committee is examining the relationship which exists between the paramount power and the States with special reference to the rights and obligations arising from the treaties, sanads, and other similar documents. It is likewise discussing the financial and economic relations between the States and British India as regards matters such as customs, currency and exchange, postal, telegraphic and railway rates and so on. These matters are, of course, of profound interest to the States whose affairs are, it must be remembered, daily becoming more and more deeply interwoven with those of British India. It is easy to see that this must be so for the commercial and industrial development of the country is not restricted to the territories directly under British rule. And even the attempt to establish representative institutions in British India has re-acted on the States, for example, in Mysore, where an experiment in the same direction is in progress. Other States have likewise made a similar beginning, and all have watched and are watching with the keenest interest the progress of the constitutional changes in British India. Another aspect of the problem to which the States must be fully alive is the effect of these changes upon the Government of India. The Government of India holds charge of their relations with the paramount power, and they see it passing more and more under the influence of a legislature elected in British India. The example of Mysore suggests that the States are by no means unsympathetic to the aims and aspirations of the political classes in British India. But as we pointed out last December they are not likely to be content to remain in any degree of subordination to a Government dependent on and responsible to a British-Indian electorate. This would be a Government entirely different from that with which they concluded their treaties; and they naturally would not be disposed to accept it. In the circumstances they want their position to be clearly defined, and their rights properly safeguarded, not only in the present but for the future. In fact, according to the latest available information, they seem to be agreed that their whole position must be considered in view of possible developments in British India resulting from the recommendations of the Simon Commission.

These are manifestly questions of the highest importance and complexity and they are, it may be assumed, engaging the closest attention of the Indian States Committee to which body the views of the States are being submitted. Similarly questions of equal complexity and importance regarding the constitutional development of British India are now and will be for a considerable time under examination by the Statutory Commission. These two series of questions are so intimately related each to the other as to make it necessary that they should be considered together. But they are in point of fact actually under enquiry by two separate and distinct Committees. Possibly the whole enquiry would have been entrusted to the Statutory Commission but for the restriction imposed by the provisions of the Government of India Act. And as we have said it was for this reason that the Indian States Committee was regarded at the time of its formation as a necessary consequence of the appointment of the Commission. But it appears to us that it will be essential to find means whereby the work of these two investigating authorities may be satisfactorily co-ordinated. Perhaps it may be feasible so to widen the terms of reference to the Commission as to enable it to deal, in consultation with the States Committee, with questions affecting the States. Or if this is impracticable the appointment of still another Commission may be a possible way out of the difficulty. But whatever method may be adopted it will be in our opinion impossible for any authority to deal adequately with the question of further constitutional changes in British India without giving earnest consideration to the problems presented by the Indian States. We had no hesitation in expressing this view last December, and subsequent events show that it is well founded.

CURRENT TOPICS.

An Interesting Appointment.

The appointment of Sir William Clark as the first High Commissioner in Canada will be of considerable interest to many people still in the East. He passed the Home Civil Service Examination in 1899 and was almost immediately thereafter sent out as secretary to Lord Inchcape's commission which negotiated the Commercial Treaty with China in 1901-2. On his return to England he was successively private secretary to Mr. Winston Churchill and Mr. Lloyd George as Chancellor of the Exchequer: and in 1910, at the age of 34, he was appointed to the Viceroy's Council as Member for Commerce and Industry.

The new High Commissioner did extremely useful work in India, especialy in connection with the railways, but the appointment of so very young a man was naturally criticised, and he did not, at that time, carry as much weight as most of those who have joined the Viceroy's Council from England. His tenure of office is, therefore, not likely to be so well remembered as that of his successor, Sir George Barnes, or of Sir Fleetwood Wilson and Sir Basil Blackett, as Finance Members. Practically ever since his return to England, Sir William Clark has been Controller of the Department of Overseas Trade, and has thereby maintained a close, though not very conspicuous, connection with the trade between India and the East. He has, therefore, a very long and intimate acquaintance with the conditions of Indian trade, and on his promotion to an altogether different sphere of activity, the influence of his guidance will be missed by thousands of Eastern merchants to whom his name is probably unknown, but who have every reason to wish him prosperity in this new development of a remarkable career.

The Trouble in the Cotton Industry.

The re-enactment of scenes at Bombay recently similar to those which took place a few weeks ago at Lilloah, and last year at Kharagpur, is greatly to be deplored. The difference is that in the case of the mill dispute the results of the firing have not so far, fortunately, been so serious as on the two earlier occasions. Even to the return of the Governor and the Home Member from their sylvan retreats at Poona, or in this instance Mahableshwar, for a conference with the millowners, there is little to differentiate the present strike from the almost annual visitations of a similar nature which have marked the post-war history of the cotton mill industry. The only marked difference possibly is that this time the unwisdom of the men's attitude, adopted from the beginning in absolute defiance of their self-constituted leaders, is beyond dispute. The trouble has been brewing ever since the publication of the Government of India's decision on the Textile Tariff Board's report. Briefly stated, the cause, so far as can be ascertained, is the attempt upon the part of an increasing number of mills to raise the standard of efficiency of the operatives on the lines recommended by the Tariff Board. Whatever may be said of the methods employed by the millowners to increase the efficiency of their labour force there can be no question as to the necessity of the object they have in view. As Sir Frank Nelson pointed out in a recent issue the oft-repeated fallacy that Indian mill labour is comparatively cheap has been refuted by no less an authority than Mr. Tom Shaw, who, in the debate on the plight of the Lancashire industry, explained that while a man in this country is in charge of from four to six looms, a weaver in one of the best equipped mills in India only looks after one loom. And the Tariff Board itself showed that unless the Bombay mill industry was able to reduce its production costs the position was grave, if not hopeless. "The only alternative to a reduction of wages (to reduce costs)" the Board stated, "is increased labour efficiency, and it is in this direction that the true line of advance lies."

The measures which the Bombay millowners are now introducing in order to increase productivity in the spinning and weaving departments of the mills concerned are resented by the operatives, partly because they do not understand them and partly because of the innate conservatism of the Bombay millhand. In actuality they entail no real hardships upon the men. Those immediately affected, it is true, will have more work, in that they will be required to attend to more spindles and looms, and consequently increased responsibilities. On the other hand, they are being offered extra help in the way of assistants and a rise of roughly, 50 per cent. in their wages. Experience in other parts of India has proved that the Indian mill worker is easily capable of undertaking the duties proposed; and the objection that the result will be a great increase in unemployment is not really tenable, as the tendency of increased labour efficiency and higher wages is rather to reduce absenteeism —that bugbear of the Eastern employer—to a minimum. If the millowners are sincere in their desire to carry out the Tariff Board's suggestions, no other course is open to them except a substantial cut in wages, the consequence of which might well prove to be even more disastrous, and cannot in any case be contemplated with equanimity either by the employers or by a Government responsible for the maintenance of law and order and, what history has shown to be no less important, the health of the city. Mr. J. B. Petit, the newly-elected Chairman of the Millowners Association, has the reputation of being somewhat reactionary towards labour, but there is no room for compromise on an issue of this kind.

Plywood Tea Chests.

Indian tea is chiefly packed in plywood chests, the majority of which are imported from Europe. But plywood chests are made in India also, and recently the Indian manufacturers pressed for protection. Their case was examined by the Tariff Board who found that they ought to have protection to the extent of 9 as. 10.6 pies per standard chest for five years. The protection should, the Board thought, take the form of a special export duty on all tea packed in chests other than those made in India. To this scheme the Government of India objected. They feared that it would lead to undesirable complications; and they did not approve of the idea of imposing export duties for protective purposes. They decided to recommend the Legislative to give the necessary measure of protection by means of an import duty at the rate of 30 per cent. on all forms of imported plywood; and to abolish the drawback which is now given on the re-exportation of imported chests.

The request made by the Indian manufacturers was that the drawback should be abolished: and in addition that either a bounty of 4as per chest should be paid to them; or that the duty on imported chests should be increased from 15 to 25 per cent. But, as the Bengal Chamber of Commerce has pointed out, the proposal which the Government have made goes far beyond this. A duty of 30 per cent. on imported chests is equivalent on the figures of imports to a revenue of Rs. 6¼ lakhs annually. But it is estimated that during the five years period of protection the number of Indian manufactured chests will not exceed half a million yearly. And it follows that if protection were given by a bounty on production it would not cost more than Rs. 3⅛ lakhs, calculated at the rate of 10 annas per chest, against the Board's figure of 9 as. 10.6 pies. It appears, therefore, that the Government contemplate taking from the tea industry Rs. 3⅛ lakhs more than they require to take. No explanation is forthcoming as to why they seek to impose this unnecessary burden on the industry; and we are not surprised that the Bengal Chamber should have protested strongly against it. For whatever view may be taken of the need for protection it cannot be right to make the consumer pay more than is required for the purpose of protection.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 12.

The Statutory Commission.

The Assam Legislative Council is now added to the number of the Councils which have decided to co-operate with the Statutory Commission. It has even appointed its Committee. There are now three Councils that have decided for co-operation; those of the Punjab, Burma, and Assam, and it must be admitted that they represent, taken together, a great weight and variety of opinion and of interests. Madras has gone so far along the same road, that whereas of the three Ministers only one was in favour of co-operation, the other two being decidedly hostile, now all three are for it. The Bengal and Bombay Councils are thought to be more likely to decide in favour of co-operation than against it; ultimately, the Council of the United Provinces, too. The session of the Legislative Assembly has been brought to a legal close; so when it meets again it will be a new session, and, if the proposal should be brought forward, that the Assembly should appoint a Committee to work with the Commission, it will not be one to rule out as not allowed under the rules of the house. It would have been that—after the adverse vote of six—had the Assembly only been prorogued. On the whole, the prospects for a fair working of the British Parliament's plan are much brighter than they were some little time ago.

Bengal Provincial Conference.

That annual deluge of washy argument that is known as the Bengal Provincial Conference has this year been poured out at Basirhat, a sleepy little place at most times. Mr. J. M. Sen-Gupta presided. This is the kind of thing that he imagines ice can be cut with:—

> Though I do not attach any undue importance to the Hindu-Muslim question from the standpoint of politics, and though I sincerely believe that in this national crisis it is now a thing of the past, yet I must say that it has provided the Government with a very handy excuse and opportunity. It must not be forgotten that it was on account of this Hindu-Muslim difference that the Britishers got into India and secured control over her, and again on account of this difference they are now tightening their grip. With that end in view they have sent the Simon Commission before its time. India did not ask for the Commission. But the British Government has sent it with such hurry with the object that, taking advantage of the communal differences, the Commission in the name of conciliation may tighten the fetters round India's feet.

Just examine that. The Hindu-Muslim differences, on Mr. Sen-Gupta's own showing, began before the British-Indian Empire was founded: they were what gave the British their chance. These differences persisted, again in Mr. Sen-Gupta's own showing, until the other day; from before the time of Robert Clive, that is, until a day in 1927. Mr. Sen-Gupta sees the British Government on that day, saying astutely: "These Hindu-Muslim differences are over, or on the very point of it. If we do not act immediately, we shall lose the political advantage of them. Hurry out, then, the Commission quick!"

Weaker argument there could not be. It reminds me of a scene in the Imperial Legislative Council of 1904, when I was present and heard Lord Curzon (the story is too long to tell in full) tear to ribbons the argument, or what they thought one, that speaker after speaker against the Government had relied on. One often wonders what defect it is in the Indian mind, that makes the average Indian quite unable to see what he jubilantly puts forward as an argument why something should be done is a better argument that it should not be. They can no more judge of an argument than a child can. A great part of their charm as human beings is that they are as children; but that becomes a danger, when they turn to statesmanship. It inevitably would.

Mr. Sen-Gupta does not sincerely believe that the Hindu-Muslim differences are "a thing of the past." They are not, of course, and everyone knows it. What should have made a century-old thing vanish suddenly in the night? He knows, also, that the present is not a time of national crisis, but only a time when, after investigation, it may be seen fit to alter a great many parts of the administrative machine. That they are very important parts is true, but that does not make a crisis. Mr. Sen-Gupta, living in this sheltered country (as there are sheltered industries, so are there sheltered countries), does not know what a crisis is. He would be dreadfully afraid, if there was one. He might be advised not to use the word "crisis" until the day when he feels dreadfully afraid.

Calcutta Improvement Trust.

A Report has been published by the Chief Engineer to the Calcutta Improvement Trust, with a note on it by Mr. J. A. L. Swan, the Chairman. Mr. Swan says:—

> The North and South road in Burrabazar or the Strand Toad widening north of Harrison Road must wait till the question of the Howrah Bridge is settled. We may, however, reasonably expect that this will be definitely decided within a year or two, and in the meantime we are proceeding with the extension of Central Avenue and the Maydapatti scheme. To meet the needs of the displaced population we should take up the development of a suburban tract, and public opinion will demand this. I, therefore, think that schemes for Maniktala should not be deferred, and that the Board should press the Corporation to come to a decision on the points mentioned in the Chief Engineer's note.

Calcutta's difficulty, as those know who are familiar with its history, has always been to come to a decision upon any matter of great importance. Its habit, said a jibing Anglo-Indian author of a bygone day, is to spend fifty years talking about the thing. How long have we talked about a new bridge over the Hughli?

Taxila.

A museum has been opened at Taxila, where Sir John Marshall and his colleagues have made such important discoveries. In asking Sir Mahomed Habibullah to open it, Sir John explained the necessity of having such a museum near the site of the ruins. All will agree that there should be a museum, and that Taxila itself is the place for it. Sir John added a brief description of the part played by Taxila in the ancient history of India. He paid a tribute, too, to all the officers who had assisted him in the excavations of the past fourteen years. One cannot but wish that Lord Curzon was alive to hear of it all.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, April 14.

The Hindu Maha Sabha.

This week the Maha Sabha met in conference at Jubbulpore and unceremoniously rejected an important decision of the All Parties Conference, which recently met at Delhi, at which delegates of the Hindu Maha Sabha were present. It was on the question of forming a separate province of Sind—an important condition imposed by the Muslim leaders for the substitution of joint for separate electorates. The All Parties Conference had failed to arrive at a decision in the matter and had appointed a committee to report at an early date whether a separated and new province of Sind would be financially self-supporting. This implied that all other obstacles to the separation of Sind had been surmounted; but this implication has been without foundation. The Maha Sabha, before the All Parties Conference Committee could report on the matter, had rejected the proposal on grounds other than financial. The reason given is that the creation of new provinces primarily or solely with a view to increase the number of provinces in which a particular community shall be in a minority is fraught with danger to the growth of sound nationalism in the country, and will divide India into Hindu India and Muslim India. There is no room for ambiguity in the explanation given. The proceedings

Digitized by Google

show that Pandit Malaviya, who was one of the prime movers in the All Parties Conference, moved an amendment protesting that the Delhi proposals were just and equitable and appealed to the Maha Sabha not to embarass those leaders and representatives of the Sabha who were a party to the Delhi pact; but this amendment enlisted the support of only three members. While it is regrettable that the Delhi proposals, which were formulated after protracted discussion, should be thus summarily rejected, one cannot help observing that the leaders responsible for those decisions should have convinced their followers of their reasonableness before accepting them on behalf of a whole community. Had this elementary precaution been taken the present difficulties would not have arisen.

Women's Indian Association.

When political activities cease, as is customary at this time of the year, social activities come to the forefront. The Women's Indian Association held its seventh annual meeting at Madras early this week. This Association has during the seven years of its existence established seventy-one branches and twenty-one centres with a membership of four thousand. The Association has exerted itself in the social sphere with great effort, particularly in the agitation to raise the age of consent and to abolish the *devadasi* system (a system of dedicating young girls to temples). The Associatian organised during the year under report the Women's Home at Mylapore, which was one of its main activities. On the political side an incessant agitation has been carried on for the extension of franchise to women and Bihar is the only province to-day where women have no franchise. Seven women are now members of the legislatures and over eighty are members of local bodies, or the Senates of Universities, or are Honorary Magistrates. The women's movement is slowly but steadily gaining strength, which is a clear indication that the progress of the country is moving apace.

The Agricultural Commission.

The Agricultural Commission, which has receded so much into the background that it has almost been forgotten, is expected shortly to issue its report. Lord Linlithgow and his colleagues were entertained to dinner by the members of the Bombay Government at Mahableshwar, when the Chairman made an important pronouncement. He expresed gratitude at the unstinted co-operation that had been accorded to the Commission at all stages of their inquiry from all classes and conditions of persons. Lord Linlithgow indicated very clearly how the prosperity of the country depended on agriculture. The prosperity of industries was linked indissolubly to the productivity of the field and a prosperous industrial population will be an ever-increasing market for the produce that the cultivator grows. There is, however, one important fact which cannot any longer be ignored if the incalculable harm that has been done to the agriculturist during the past hundred years is to be remedied—that is, the need for education. India cannot keep abreast of the nations in the West in the matter of agriculture, or anything else, unless the people are in a position to keep in personal touch with the march of progress in the most advanced countries. Agricultural shows and demonstrations will only serve to bring home to the cultivator that agricultural methods are employed in other countries which he can never hope to learn himself. Side by side with these demonstrations arrangements should be made for educating the cultivator so as to enable him to keep in touch with the progress of the world. I am firmly convinced that the future of India is dependent entirely on educational progress, as that alone can remedy the various ills that the country suffers from to-day.

The Oil Rates War.

The terms of reference of the Tariff Board to inquire into the application for protection made by certain companies engaged in the production of petroleum in India has been the subject of an interesting controversy. It is alleged that Government have shown unnecessary anxiety in appointing the inquiry at such short notice because the firms concerned are British with British capital (as opposed to Indian). It is further stated that the question of the cost of production has been deliberately excluded from the terms of reference and that the inquiry has been extended to petrol with the object of preventing the Indian consumer from benefiting from the competition of Soviet petrol in the Indian market. Whatever the reasons may be, it is clear that the Tariff Board, which has discharged its duties with characteristic thoroughness, except perhaps in the case of the cotton mill industry inquiry, will not be swayed by any special considerations in dealing with so important a problem.

THE STATUTORY COMMISSION.

The Indian Statutory Commission will reassemble next week for consultation at its offices at the Royal Courts of Justice.

The invitation issued in India for the submission of written statements from representative associations, local bodies and responsible individuals is applicable *mutatis mutandis* to organisations or persons in this country. Memoranda forwarded in a representative capacity should contain a clear statement of the nature, extent, and membership of the organisation submitting them. When a statement is put forward on behalf of a class of persons the Commission wishes to have a sufficient indication of the number of individuals who actually authorise it. In cases (not expected to be numerous in this country) in which it is desired to tender oral evidence in support of any memorandum, the document should end with a clear statement giving the name and address of the witness who will be ready to come forward if required. Those forwarding their views are not expected or required to deal with all the subjects coming within the terms of reference to the Commission, but only such of them as specially concern the case they are bringing forward.

In the announcement made in India, June 1 was given as the latest date for the submission of written memoranda, and delivery at the offices in the Law Courts should be little, if any, later. Twelve copies of each memorandum are required in the first instance, and further copies may be called for when the proposed Indian committees are set up.

It was intimated in India that a special announcement would shortly be made as to the inquiry into "the growth of education" required under the Act. Documents dealing specifically with this topic should be marked "Growth of Education" in the top left-hand corner.

BOMBAY AND PROHIBITION.

The Government of Bombay have, by their recent resolution on the subject of Prohibition, indicated that they have bowed to the inevitable and abandoned Prohibition as a practical proposition. While the loss involved, including the cost of additional staff, would have amounted to not less than six crores of rupees, or nearly 40 per cent. of Bombay's exiguous revenue, the additional taxation that could be imposed would not have exceeded two crores. It is hardly necessary to add that such additional taxation would have been extremely unpopular, and, if it could be imposed, would be more usefully used in educational development which, the Bombay Government now recognise, is a necessary precedent to true temperance. They adhere in principle to their policy of rationing: but the lawlessness to which it has already given rise, evidently makes them chary of extending it. It is satisfactory to find that common sense has prevailed; but it may be asked whether the costly display of virtue, or eyewash, should ever have been made.

SIR BASIL BLACKETT.

An Appreciation.

By P. R. Cadell, C.S.I., C.I.E.

Sir Basil Blackett has left India amid a chorus of approbation which has been almost universal. Even the ranks of Tuscany, limited in this case to political opponents in the Legislative Assembly, have scarcely restrained themselves from cheering. A comparison with great Finance Members of the past is inevitable, and in particular with Mr. James Wilson who restored the finances of India when, after the Mutiny, the Crown assumed the Government of India from the East India Company. Yet the circumstances were widely different. Mr. Wilson found the State on its financial side derelict and to all appearance bankrupt: he had to build up a new edifice.

The outlook when Sir Basil Blackett assumed charge seemed gloomy enough. For five years in succession there had been deficits in the Budget of the Government of India, amounting in the aggregate to nearly 100 crores. India's credit had been so affected as to make borrowing increasingly difficult and expensive. Unproductive expenditure had risen far above the pre-war level. Several of the Provinces found themselves in a condition of financial embarrassment, the grant of increased freedom being accompanied by the obligations of the Meston Settlement, and by an enormous increase in their pay lists and salary bills. Trade had slumped, and above all, largely owing to the attempt made in 1920 to re-estabish it at a fixed ratio with gold, the rupee had, in Sir Basil Blackett's own words, "broken loose from its moorings, and was drifting on an uncharted sea." In fact, however, the worst was over, provided the man was forthcoming to utilise the favourable factors of the situation. The work of the Inchcape Committee had indicated the means of restricting expenditure, though the difficult task of carrying out the indications remained. Exchange, moreover, had to some intent recovered from the vagaries of 1920. Above all, India had no crushing burden of War debt such as burdened Great Britain, or even, though in a lesser degree, a Dominion like Australia; and, though the aggregate of its public debt was large, much of it was invested in productive undertakings. The clouds, then, were breaking, the hour demanded the man, and he was assuredly found in Sir Basil Blackett.

The first essential was the balancing of the Budget, and this was effected by the doubling of the Salt Tax. The decision to do so had been made before the arrival of the new Finance Member, but he shares the credit for the adherence to the decision. No other tax could so easily obtain the required funds from the people in general, with less hardship to the poorest among them. With equal propriety, however, an impost which furnished so ready a cry to the politician and the agitator was renewed immediately equilibrium had been reached. Sir Basil Blackett's next object was the rehabilitation of the credit of India. The situation, as he leaves it, sufficiently speaks for his success. When he assumed office, India could only borrow, and that not without difficulty, at 6 per cent. free of income tax. Now the rate is below 4¾ per cent. subject to the liability of Income tax. It may truly be said that the credit of India stands out in the world's market to that of the United States and of Great Briain, if it does not in some respects even exceed the latter. The public debt of India has increased during Sir Basil Blackett's tenure by 113 crores. The increase in the Productive debt has, however, been 188 crores. The unproductive debt has actually decreased by 76 crores; and arrangements have been made for its total extinction within the next thirteen years. The loans raised in sterling in Sir Basil Blackett's time have been comparatively small. The result has been that, while the percentage of sterling debt to the whole was 66 in 1913, it had fallen to 46 in 1928. Nor does this complete the tale. A large proportion of the railway property for which the debt was incurred has been bought by the Government of India, while the Indian purchases of sterling loans on private account have been very considerable. The so-called "drain" of Indian money to meet the interest of foreign indebtedness has thus been greatly reduced.

A further successful achievement has been the separation of the Railway from the General Finance. This obviously desirable step had indeed been rendered compulsory by the increasing transference of railway control and management from companies to the State. The result hitherto has been a reduction of cost and, above all, a larger provision for capital expenditure. The sum of twelve and a half millions provided by the Mackay Committee has been increased to forty crores. The situation has, of course, its possible dangers. The centralisation of work, the reduction of competition, and the remoteness of some of the local interests, can only be compensated for by exceptional efficiency on the part of the Railway Board; and more capital expenditure is necessary both on the Railways and on communications in general. So far, however, the results of the separation have been satisfactory.

The interest of Sir Basil Blackett in the finances of the Provinces has been deep and salutary. He had nothing to do with the creation of the Meston Settlement; he had merely to face the outcry from every Province regarding the exactions of that Settlement, either in cash or deprivation of sources of revenue. In finally remitting the cash contributions, Sir Basil Blackett followed the course that was the most desired by the majority of the Provinces. Probably, however, no one was better aware of the the fact that the abolition of cash contributions, originally graduated to counteract the uneven deprivation of sources of revenue, could not but make that inequity the more noticeable. Sir Basil Blackett, however, has outlined a scheme of true Federal Finance, one feature of which would be the assignment of a portion of the Income Tax to the Province in which it is collected; a transfer for which Bombay has long been agitating. In other directions Sir Basil Blackett has done much for the improvement of Provincial Finance; the separation of Provincial and Central balances, and greater freedom, with at the same time greater efficiency, of Provincial borrowings.

If Bombay still entertains some sense of grievance regarding its contribution to the central revenues, the city has much for which to thank Sir Basil Blackett in other directions. In his time the Cotton Excise Duty was abolished. It is true that this was perfectly legitimate, so long as it was required as a source of revenue; and its abolition has certainly had little effect towards the resuscitation of the Bombay mill industry. The duty, however, could not surmount the taint of its original conception in the jealousy of Lancashire, and the sacrifice of the 84 lakhs involved was fully justified, as soon as the state of the general finances permitted it, by the removal of a rankling political grievance. A far greater service to Bombay, however, was rendered when Sir Basil Blackett stood behind the tottering fabric of one of India's greatest industries and prevented a financial disaster.

Much of Sir Basil Blackett's good work has been obscured, at least from the people of India, by the clouds raised by political opposition. There is no need to enter into the question of the ratio. Sir Basil Blackett could doubtless have, if he had thought fit, fixed the rupee at one and fourpence; he could equally, if he had wished, placed it at a higher figure than one and sixpence. The great point is that everything adjusts itself to a ratio, once firmly sustained; and the stabilisation of the currency has already brought its financial rewards. The recent trade figures have proved the falsity of those gloomy prophets who foretold that the higher exchange would penalise the exports of India. It was political feeling alone that, by the rejection of the Reserve Bank Bill, prevented a triumphal culmination of Sir Basil Blackett's work for the re-organisation of Indian finance. There is a melancholy humour in the fact that a measure generally recognised as necessary, and one moreover that transferred the control of currency and credit from the Secretary of State

Digitized by Google

and the Government of India to the representatives of the Indian people, should have been wrecked by Indian legislators, and that on no higher moral ground than the exclusion of these legislators, as such, from the loaves and fishes of the proposed directorate.

Sir Basil Blackett would probably admit with readiness that the seasons have been propitious for him. There has been no serious scarcity of rain or other natural calamity. The cessation of warfare even upon the Frontier, and the absence of any threat to the security of India from outside which was not sufficiently guarded against by the sure shield of Great Britain, has rendered it possible to reduce the military estimates to the bare bone of efficiency, if not below it, so far as technical equipment is concerned. Even the malaise that industry and trade have experienced has assisted in the recovery of Government securities. Nor would the late Finance Member hesitate to admit that much remains to be done. He has pointed out that present figure of 15 per cent. for the general revenue tariff is unduly high. Many articles which are classed as luxuries and pay a much higher rate are in practice necessities for large sections of the population, and the import duties in general do no good to the agriculturist. The policy of discriminating protection can only be justified if the protected industries show indications of competent management. In relation to Provincial finance, moreover, much yet remains to be done to obtain for the provinces true autonomy and its concomitant responsibility. Sir Basil Blackett, however, is entitled to review his work with satisfaction. The highest praise that the Senate could bestow on a Roman general was that he did not despair of the Republic; and perhaps the secret of Sir Basil Blackett's success has been the high note of confidence on which he faced the financial problems of India.

INDIA IN PARLIAMENT.

By Sir Frank Nelson, M.P.

With the exception of the still decreasing flow of Questions on Indian affairs—the only other Parliamentary contact with this part of the Empire was the spontaneous and hearty welcome given by all Parties in the House to Sir John Simon when he took his seat again at Westminster—two days after landing in England!

As he sits immediately behind me (the Liberal front-bench and the Conservative back-bench thus being in close contiguity) I was in the pleasant position of being able to be amongst the first to offer personal congratulations to him on the successful conclusion of the first stage of his great task.

I should have expected Lobby gossip to have concerned itself to no inconsiderable extent with the statement which appeared in a daily newspaper to the effect that Sir Frederick Sykes had been offered the Governorship of Bombay—but curiously enough this has not been the case. In fact I do not recall hearing it even mentioned.

The Bengal Criminal Law Amendment Ordinance of 1924 again came up at Question time on April 23, and, as usual, the questioner was more than adequately dealt with by Lord Winterton. Mr. Thurtle, fresh from his scamper across India, wanted to know whether "in view of the strong feeling that exists in India as to the continued detention of eleven detenues in goal, 25 in village domicile, eight in home domicile, and 16 confined to certain areas in Bengal, without trial, if the Secretary of State would consider releasing them in order to produce a better feeling."

Lord Winterton informed him that releases were being made as and when it was safe to do so from the point of view of public security. Whereupon Mr. Thurtle, bringing his reserves into action, asked if Lord Winterton was aware that a strong demand for such releases had recently emanated from the Annual Conference of the Labour Party, and was comprehensively annihilated by the very proper reply that the Under Secretary of State for India was not very greatly concerned with the views of the Annual Conference of the Labour Party on the question of law and order in India.

Being something of a rebel myself, I have usually great sympathy with any Back-Bencher who tries to do a little independent thinking, but what fills me with irritated wonder is why Socialists who take the trouble (I do not know who takes the expense) of visiting India do not observe the rudimentary precaution of informing themselves as to the true facts of the many questions they raise.

Lord Reading's statement of the objects and reasons of the Ordinance, published in October, 1924, are such a masterly exposition of the whole problem that I make no apology for quoting an extract: "4. Though the situation during 1923 was grave, I was reluctant to invoke the powers conferred upon me by the Government of India Act, until I was fully persuaded that all other means for dealing with the emergency had been exhausted. My Government accordingly authorised the confinement of certain leaders of the criminal associations under the provisions of Regulation III. of 1818. The movement was temporarily checked, but new leaders were found and operations were resumed, as is apparent from the dark record of crime in the present year. I have, therefore, come to the conclusion, after the fullest consultation with the local Government, that it is necessary to arm the Government of Bengal with special powers to deal with preparations for crime, with the object of protecting not only the officers of Government, whose lives are threatened, but equally private citizens, who have frequently been the innocent sufferers from such outrages, and the misguided youths who are its tools and often themselves its victims. I am convinced that preparations and plans for criminal outrages are now so dangerously developed that it is necessary to provide immediate safeguards by an Ordinance. Permanent measures to remedy the situation will in due course be presented by the Local Government.

"5. The Ordinance is directed solely to these ends and will in no way touch or affect the interests or liberties of any citizens, whether engaged in private or public affairs, so long as they do not connect themselves with violent ciminal methods. The fundamental duty of Government is to preserve public security on which political advance and all the functions of a civilised social organism depend."

Subsequent events make the above as true to-day as it was when written, but the Annual Conference of the Labour Party, forsooth, apparently think quite differently.

It would, of course, be quite improper for members of the Simon Commission to intervene in debate at this juncture on this and kindred matters, but I venture to think that the angle from which they have recently viewed India will have given them a view-point which would be of considerable interest and value if expressed in the House of Commons.

The second reading "in another place" last week of the Bill to increase the strength of the Judicial Committee of the Privy Council by the appointment of two qualified Indian judges or lawyers appropriately brought forth many tributes to the work of the late Lord Sinha. As Lord Birkenhead said, Lord Haldane did not exaggerate when he spoke of Lord Sinha's efficiency as a Judge. "I had no opportunity by close experience," the Secretary of State continued, "of forming an independent opinion upon that point, but I should be very unwilling, on the first occasion on which his name has been mentioned since his lamented decease, to withhold a tribute to the courageous and useful part which he played in India at a very critical moment in the fortunes of that country."

The King has approved the appointment of the Rev. T. H. Dixon, lately chaplain on the Indian Ecclesiastical Establishment at New Delhi, and Canon of Lahore Cathedral, to the rectory of Barton-le-Cley, Bedfordshire, vacant by the dealth of the Rev. J. H. Spokes.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Budget.

On the whole it may certainly be said that Mr. Churchill's Budget has had a remarkably good reception, particularly in view of the fact that new taxes were once again imposed while the positive immediate benefits were few in number. The feature which pleased was the proposal to assist those industries which have been under a cloud since the War by a scheme for the equalisation of rates. The finance of the scheme is to be provided by a tax of 4d. on petrol and other oils, and while the details of the scheme are still nebulous and it is not proposed to bring it into operation until October, 1929 (by which time many changes will have taken place in the personnel of the Commons) the tax has already been brought into operation. I would say here, in passing, that I have not the smallest sympathy with some of the opposition to this tax. To judge from some of the comments that have been passed it will deal a most serious blow to the motor bus industry (it has even been suggested that it will mean that no more tubes can be built, though what their connection may be with the petrol tax is not for me to say). The objection I have to the tax is on the ground that this is no time to impose new taxes, and that for generations to come Governmental finance ought to have as its first principle the vital essential of economy. I fear, however, from our experiences here and in other countries that the maxim of economy is now as extinct as the Dodo, and it is not surprising if it should be for democracy *per se* is not a system which lends itself to that policy. But this is by the way. The proposal to help industries in the way suggested has everything to commend it; I only criticise the means to the end. Throughout the country the rates are much too high, and the ideal system would have been to find some means (which should not be impossible) of enforcing economy on all local administrations, and of imposing limits beyond which rates must not be raised. As it is, the Chancellor's plan will clearly demand the provision of safeguards, for otherwise we shall have reckless local bodies raising rates in the happy assurance that larger grants will be forthcoming from the Treasury.

Motors and Railways.

Apropos of my reference in these columns last week to the effect of motor transport on railway receipts in India, an authority on the Indian railways informs me that he does not consider the threat of the motor to the railway to be serious in that country at present. It will be recalled that I pointed out that the railways in India were in a better position to meet such competition than those of many other countries, and in writing this I had in mind, of course, the condition of the roads for long distance travel which makes cross country journeys in many parts of India one prolonged adventure. In the neighbourhood of the towns the position is, of course, quite different, and the authority in question thought it very possible that the motor will make considerable inroads in certain districts into the local third class passenger traffic. But he was not of the opinion that the effect would be very serious, especially in view of the fact that the traffic in question is carried by the railways for practically nothing. In the case of this local traffic the motors, he added, have the great advantage that passengers can be picked up where they like and can get off almost at their destination. While the Indian thinks nothing of spending hours at a station waiting for a train and apparently even enjoys the experience, he would not be human if he did not utilise more convenient means of travel if they were placed at his disposal. The goods traffic, however, the authority pointed out, is the factor which really counts—the carrying of the staple produce of India such as cotton, jute, etc.—and this he was convinced would remain in the hands of the railways.

Railways in Undeveloped Countries.

The case of India is, however, the case of the country already well supplied with railways before the motor began to come into its own, and the real problem that the oil age has brought into being is the question of communications in regions which are being developed. Before the utility of the motor was realised the answer to the question was the construction of a railway, but now any such project, as I have already pointed out, is hinged about with the greatest uncertainty, for if sufficient traffic is developed to make a line pay there is the probability that motor competition will descend upon the region and reap a harvest which has been sown by others. The natural tendency must be, therefore, for more and more reliance to be placed in the future on the motor as the means of providing communications in undeveloped regions. Railways will continue to be constructed, but it is unlikely in the extreme that there will again be any vast schemes of railway construction which will cover a region with a network of lines. That belongs to an age which is past, like the tramway system, which, with the development of motor traffic has outlived its utility and only lingers on to impede traffic.

The Roumanian Stabilisation Loan.

While it is evident that the Roumanian Stabilisation Loan will now be issued under French auspices, as I suggested some time ago was extremely probable in view of France's intimate relations with Roumania, it is by no means clear how soon it will be forthcoming owing to the development of an unexpected difficulty. The position with regard to the loan is that the Bank of France is understood to be willing to undertake the issue of half the loan and to underwrite the balance which will be issued in the United States. It is necessary, however, for France to have British co-operation, and the Bank of England, it appears, declines to lend its support to a loan until Roumania changes her attitude with regard to the German portion of the 4½ per cent. Loan

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET, LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors:
E. W. H. BARRY. Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers:
BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Digitized by Google

of 1913. Roumania has refused to come to terms on this matter, and indeed takes up the attitude of refusing to recognise her German liabilities. Hence the difficulty which has arisen. The need of Roumania for the loan is imperative, and it is equally essential in the interests of every country that all that is possible should be done to further the progress of reconstruction in the Near East, and it may be hoped therefore that some solution to the question will be found.

New Chamber of Commerce.

Bulgaria is one of the many countries in the Near East which offer much greater scope for British trade, and it is satisfactory to learn of the recent establishment at Sofia of a British Bulgarian Chamber of Commerce, of which H.B.M. Minister in Sofia is Honorary President. Thus a long felt gap in our trade organisation has been filled, and it may be hoped that the result will be that a great impetus will be given to British commercial relations with Bulgaria.

Growth of Motor Shipping.

A feature of the statistics of the transits through the Suez Canal last year is the marked increase in motor ships. As a matter of fact, the tonnage of motor ships transiting the Canal has shown a continuous increase over a long period, but in 1927 the increase amounted to a record. It is worth while setting out the figures for the past few years. In 1924 the tonnage of motor ships was 1,089,000, in 1925 1,720,000, in 1926 2,522,000, and in 1927 3,585,000, an increase on the previous year of 1,063,000 tons or roughly 37 per cent. From these figures it looks very much as if the conflict between steamships and motorships has been very decisively settled in favour of the latter.

The Indo-European Telegraph Company.

At the meeting of the Indo-European Telegraph Company the Chairman, Mr. H. L. M. Tritton, was able to give a satisfactory survey of the past year's operations of the company. He referred to the more and more effective working of the direct service with Karachi, and pointed out that the results for the year showed slightly more than 2½ errors per 10,000 paid words transmitted, which, it is needless to say, is a most remarkable record. The actual time of transit between London and Karachi is a mere fraction of a second, so that the company provides the business community with a service of most noteworthy speed and accuracy. One of the most interesting parts of Mr. Tritton's speech was his reference to "Beam" competition. The effects of this competition were limited in 1927 to four months, and Mr. Tritton pointed out that it was necessary to bear in mind that the company's revenues during the current year would reflect the losses involved by this competition. It is to be noted that as a result of the competition the company has reduced its rates. The company, Mr. Tritton pointed out, is not included in the suggested holding company between the cable and wireless interests—an arrangement, he added, dependent on an agreement being made with the British Government and the Governments of the Dominions and India which would be satisfactory to the cable companies and the Marconi Company, but shareholders, he continued, might rest assured that their interests are protected under the terms of the joint purse agreements with the cable companies.

COMMENTATOR.

NEWS FROM ALL SOURCES.

The Hyderabad (Deccan) Company recommends a final dividend of 1s. 6d. per share, less tax, making 3s. per share for the year.

Swarms of locusts were last week reported to be attacking the cotton plant in Upper and Lower Egypt.

The Corporation of the Royal Exchange Assurance announces that Mr. V. M. Magnus, at present acting underwriter, has been appointed marine underwriter to the corporation.

An order has been placed by Messageries Maritimes with the Chantiers de la Loire for a motorship of 21,000 tons, with accommodation for over 1,000 passengers. The propelling machinery is to consist of two Sulzer two-cycle Diesel engines developing an approximate aggregate of 10,000 b.h.p.

The Calcutta Electric Supply Corporation recommends a final dividend of 7 per cent., making 12 per cent. for 1927, plus a bonus in cash of 4d. per ordinary share, both payments subject to tax, less Dominion relief.

The number of vessels entering and leaving Yugoslavia's Adriatic ports in 1927 totalled 142,005 with a tonnage of 23,661,344, as compared with 139,582 for 1926 with a tonnage of 20,440,548. Of these vessels 128,774 were Yugoslav, 12,439 were Italian, and 296 were British.

It is announced that at the next annual general meeting of the India General Navigation and Railway Company proposals will be submitted to take the powers necessary for the capitalisation of a portion of the reserves and the issue to ordinary shareholders of one bonus share for each three existing ordinary shares held.

The directors of the Peninsular and Oriental Steam Navigation Company announce a dividend at the rate of 5 per cent. per annum on the preferred stock (less income tax), and a dividend of 5 per cent. (actual) on the deferred stock of the company (free of income tax) for the six months ended March 31 last. Warrants will be payable on May 16.

The directors of the Oriental Telephone and Electric Company have resolved to recommend at the annual general meeting, to be held on May 22, and subject to final audit, the payment of final dividends for the year ended December 31 last of 3½ per cent. on the preference shares (less income tax), making a total of 7 per cent. for the year; 6 per cent. on the ordinary shares (free of income tax), making a total of 10 per cent. for the year, free of tax, and a bonus of 2 per cent. on the ordinary shares, free of income tax.

In a statement to the Press the Greek Minister of Finance said that the financial year 1927-28 was leaving a surplus of 250,000,000 drachmæ, or perhaps more. He claimed this as a great success for the Government, observing that this was the first time for ten years that there had been a surplus, and added that the policy of retrenchment which had led to this result would be continued even more strictly in the year 1928-29.

The British Thomson-Houston Company, Rugby, has received an order from the Calcutta Electric Supply Company for a 2,500 k.w. 6,000/450 to 500 volt motor-converter with suitable starting equipment, and one for the complete electrical equipment for 16 sub-stations, through which electricity for domestic and industrial purposes will be provided in Colombo, Ceylon.

A large increase in the imports of raw cotton into Yugoslavia has resulted from the growth in the local manufacturing industry, as well as the attempt to supply, so far as possible, the domestic demand for cotton cloth (says an American Consular report). There has also been a decline in the imports of cotton piece-goods. About 35 mills in Yugoslavia are engaged in the manufacture of textiles, and 16 of these mills are occupied solely in the production of cotton cloth. These 35 mills produce annually about 30,000,000 yards of cloth and 300,000 pairs of hose, mostly cotton. Approximately 150,000 spindles are in operation and 5,000 to 6,000 persons are employed in the textile industry.

Motors and Motoring.

By G. B. B.

The Petrol Tax.

The Budget, so far as it affects motorists, has, on the whole, been well received. There is some disappointment that the horse-power tax has not been reduced, but at the back of the minds of both manufacturers and discriminating motor owners has been the thought that the Chancellor, had he been so minded, could by a stroke of the pen have made the horse-power tax heavier without in any way exceeding his powers. It is common knowledge that the Treasury horse-power rating is on very lenient and old-fashioned lines, and it is certain that there is not a car on the road with an engine giving out as a maximum horse power at which it is rated.

The tax on petrol is not such as should raise the car. The tax on petrol is not such as should raise the price of fuel to any high figure; even with the tax added, the price of motor spirit to-day is considerably less than it was only a short time ago and with the freedom from tax of British produced spirit, which is in effect a bonus on the production of benzole, there should be a steadying influence on price which would prevent the great companies from attempting anything in the nature of unnecessary price raising. The proceeds of the tax will be used to reduce the overhead expenses of British motor and accessory manufacturers, *inter alia,* and should tend to reduce not only the cost of the vehicles themselves, but also of tyres, oils, spare parts, lamps, plugs, etc. These facts are being pretty generally recognised by the more thoughtful motorists, and when one reads in one of the daily papers that "motorists are up in arms" against the Budget proposals, one can only see in the statement some attempt to make political capital out of the situation.

Whilst on this subject of petrol I may mention that some complaints have been made again regarding the amount delivered by petrol pumps. About two years ago similar complaints were rife, and some steps, I believe, were taken by the big supplying firms. There seems some impression about that whilst big cars and commercial vehicles receive full measure, light cars and motor cycles get much less than their share. There may be something in that. A big car taking in ten gallons, for instance, may be short on the first gallon by reason of the construction of the pump, but will be getting full quantity on the other nine. If the shortage were, say, half a gallon, the total shortage on ten gallons would only be five per cent. In the case of a motor cycle taking in only one gallon, the shortage would be fifty per cent., and on a light car taking in, say, two gallons, would be 25 per cent. It is, I believe, quite possible for the petrol to run back in the pump or for a certain amount to leak out or be left in the hose and valves, and whilst with large deliveries the loss is not unduly serious, it becames serious when only small quantities are purchased. A correspondent tells me that he was once informed by a garage attendant that during the drawing of the first gallon "the pump often sucks air or petrol vapour," and "in addition, the stop sometimes fails to make the required contact." My own view is that the matter ought not to be treated lightly, as it often is. Short measure would not be tolerated in the sale of milk or other commodity, and I would suggest to light car owners in particular that they should not have the fuel filled direct into their tanks from wayside pumps, but that they should insist on seeing it filled into measures or into two-gallon cans.

Few will agree with the conclusion that the main issue of the Budget is that it emphasises the enormous influences which are being exerted, with no small measure of success, to limit the growth of motor transport and the consequent strong necessity for avoiding internal conflict and cut-throat competition as between motoring interests. The underlying implication seems to be that in some way the Budget has been designed to further the ends of those who advance the position of the railway undertakings at the expense of the road transport organisations. Those who hold that view must remember that the competition of railway-owned road vehicles with motor transport concerns is not likely to bring anything but good in its train. Nothing is to be gained by any artificial sheltering of either the railways or the motor coaches, and whichever serves the public interest best will be successful. It is true that in the past, as *Motor Transport* says, there has been a tendency for private car owners to rejoice in any restrictions placed on the use of heavy commercial and public service vehicles and a tendency on the other side to draw attention to the possibilities of the private car as a source of revenue. Curiously, that merely shows the short-sighted and selfish view of many road users, a view that is really detrimental to the motor industry. As regards the rebates that have been made in connexion with pneumatic tyres, I am certain that there are any number of instances where the user, by fitting pneumatic tyres should be able if not actually to show a saving, to keep his total running costs, including tax, no higher than they are at present. The paper I quoted above goes even further than that and says plainly that there are many users who have been employing what was really the wrong class of vehicle for their work and overloading that vehicle at the cost of high depreciation on account of the comparatively small saving in taxation. That state of things, under new provisions will no doubt be promptly remedied.

The Roumanian Minister of Finance has reduced the export duty on crude paraffin from 17,000 to 500 lei per carload of 10 tons.

LANCASHIRE AND EXPORT CREDITS.

In view of the great increase in the volume of business which the Export Credits Guarantee Department is insuring for Lancashire exporters, Mr. Douglas Hacking, the Secretary of the Department of Overseas Trade, has decided to appoint a local representative of the Department in Manchester.

Mr. Hacking has been in communication with the Manchester Chamber of Commerce on the subject, and the President and Board of Directors of the Chamber very courteously agreed to make available for the Department's representative temporary accommodation, in the offices of the Chamber. Mr. Hacking accordingly arranged that Mr. S. Judson of the Export Credits Guarantee Department should take up his duties in Manchester on May 1.

Exporters in the district who desire particulars or explanations of the scheme should therefore communicate with Mr. Judson at the offices of the Chamber.

It is hoped that this arrangement, which is experimental, will greatly facilitate the transaction of business under the Exports Credits Guarantee Scheme, as it should obviate much preliminary correspondence and enable exporters to obtain the fullest information on the spot.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at February 29, 1928, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,243,125; current, deposit, and other accounts, £E15,873,898; Egyptian Government, £E15,486,708; Sudan Government, £E263,302; Mixed Tribunals, £E1,904,664; bankers' accounts, £E313,790; cheques and bills payable, £E261,298; sundry other accounts, £E1,551,033—£E41,285,318. Assets: Government securities and securities guaranteed by the Egyptian Government, £E21,019,176; sundry securities, £E472,208; advances on merchandise, £E3,771,491; advances on securities, £E4,653,472; advances otherwise secured, £E1,415,748; sundry other advances, £E965,851; bills of exchange, £E3,705,618; local bills discounted, £E614,100; buildings and furniture, £E223,005; money at call and at short notice, £E999,375; bankers' accounts, £E322,459; sundry other accounts, £E848,776. Cash: Notes, £E1,479,180; gold, £E466,772; silver, nickel, etc., £E328,087—£E2,274,039—£E41,285,318. Issue Department.—Notes Issued, £E27,000,000—£E27,000,000. Gold, £E3,339,570; *British Treasury Bills, £E10,160,430—£E13,500,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E1,500,000; British Treasury Bills and National War Bonds, £E12,000,000—£E13,500,000—£E27,000,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

The Anglo-Persian Oil Company has struck a new oil "gusher" at Naft Khaneh, in Persian territory, near Khaniqin, on the Iraq frontier. The present flow is estimated at 500,000 gallons daily.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Various.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of the following articles required for 1928-1929:—(1) Cotton, cloth, clothing, sacks, etc. (2) Buttons, eyelets, needles, threads, etc. (3) Fuses for blasting, twines, miscellaneous, bedsteads, enamelled articles, etc. (4) Paints, metal polish, blacking boot, heel balls, chalk marking, naphtaline, tar, acids, etc. (5) Leathers native and English. (6) Fibres Indian, crin vegetal, can rattan, bassat, split rattan, etc. (7) Lamps and electrical articles. (8) Copper hardware. (9) Tools (carpenters', saddlers' shoemakers', and smiths'), machines, files, etc. (10) Buckles, nails, ironmongery, fire hose, belting, plates steel, tools steel, etc. (1) Dyeing of clothing and cloth. June 20.

Materials for Railway Footbridge.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of materials for railway footbridge, viz., mild steel sections, rivets, bolts and steel troughing. Approximate cost £E720 to £E750. June 5.

Wire Line.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 200 tons wire line galvanised iron for telephones to specifications. June 13.

Fertilisers.—Tenders are invited by the Ministry of Agriculture, Cairo, for the supply, *inter alia*, of the following:—32,000 tons nitrate of soda; 10,000 tons nitrate of lime; 1,200 tons sulphate of ammonia; and 5,000 tons lime super-phosphate. June 5.

Fish Plates, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders: 1.—(a) For 230, 500, 700, or 850 metrical tons deep angled fish plates and angled stops. May 15. (b) For 90, 150, or 180 metrical tons bolts and nuts for fish plates. May 15. 2.—For 5,000, 10,000, or 13,000 metrical tons flat bottom rails. May 16.

Tin Ingots.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 15,000 kilos tin ingots. May 23.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, May 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, May 10).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 16).

British India Line.—S.s. Warfield for Colombo, Madras, and Calcutta (London, May 5); s.s. Dumana for Bombay and Karachi (London, May 19).

Cunard Line.—S.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, June 7); s.s. Bothnia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste, and Fiume (Liverpool May 26, and Swansea May 29).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 5); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 26).

P. and O. Line.—S.s. Mantua for Bombay (London, May 11); s.s. Nagoya for Calcutta (London, May 26).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, May 5); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, May 9); s.s. Syrian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, May 17).

Ellerman and Papayanni Lines.—S.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, May 9); s.s. Bavarian for Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 12, Swansea*); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume* (Liverpool May 12, Swansea May 17); s.s. Algerian for Oran*, Algiers*, Malta, Smyrna, and Constantinople (Liverpool, May 26. * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 1.

Mr. Churchill's fourth Budget has been well styled a "producer's budget" and was consequently very well received on the Stock Exchange, where the recent activity has been concentrated in particular upon various classes of prominent manufacturing companies, all of which will from next year begin to benefit from the large remission of rates which is the central proposal of the Budget. Markets in general took on a bright tone on the day following the Budget speech, and, in particular, a smart fillip was given to prices of home railway stocks, both on the grounds of the benefit they are likely to derive from relief from local rates and from increased traffic from the heavy industries, and from the check administered to road competition by the new tax on petrol. The one section of the Stock Exchange which was not altogether pleased with the Budget was the gilt edged market, where Mr. Churchill's sinking fund provisions are regarded as showy rather than sound, last year's allocation of £65 millions being only maintained by the aid of a transfer of the Currency Notes reserve of £13 millions which will become available as a result of the amalgamation of the Currency and Bank of England Note issues, which is to take place as soon as the necessary legislation has been passed by Parliament.

The Budget and the Heavy Industries.

The Budget proposals are of considerable importance to a number of industries. The central feature of the Budget, the scheme of rating reform designed to assist the heavy industries to recover prosperity, doubtless concerns the greatest number of companies. Three-quarters of the rates payable by the iron and steel and coal trades will be remitted. This assistance is welcomed by the companies, for they have been exceptionally depressed since the post-Armistice boom. In part this has been due to their high costs of production as compared with those of their competitors. The chairmen of the various companies have declared that an appreciable item in this connexion is the heavy burden of local rates, which are burdensome owing to the very heavy depression in these industries, since out relief has to be granted on an extensive scale in their area of operations. In these circumstances, the scheme for rating relief has naturally given satisfaction to the companies. Though iron and steel shares have recently been firm, the Budget proposals gave them a further fillip. The outlook for these undertakings, or a number of them, has lately become somewhat brighter, but the investor would be well advised to be discriminating. Many companies have not paid an ordinary dividend for some time past, while plant has not been adequately depreciated. Therefore profits, even when they are made, will not always be immediately available for dividends.

The Railway and Other Companies.

The railway companies will also derive assistance through relief from rates, but they are required to pass on the benefit of this concession in the form of lower freight rates. It is believed, however, that ultimately it will lead to an increase in the aggregate traffic carried and consequently home railway stocks have received well-merited attention. Moreover, the petrol tax, to which we shall refer in a moment, will also help the companies in their struggle with road competition. But it should be remembered that these schemes for the relief of rates do not become operative until the autumn of next year and, therefore, the future should not be discounted too liberally. The imposition of a duty on imported oils has provoked much discussion. But the oil share market has not been notably disturbed. It must be recognised that the price of oils is exceptionally low, and thus the addition of the duty should not materially affect consumption. Moreover, the prospects of the industry, from the production standpoint, have recently undergone a slight improvement, output having declined from the high figures recorded in the summer. Motor transport companies will naturally feel the effects of the duty, and would prefer to reap the full advantage of the low price of petrol. But the fact that they were able to make not unreasonable profits when petrol was much dearer must be borne in mind. The reduction of the duty on sugar is welcomed by refiners.

The Nitrate Outlook.

The preliminary profit figures of the Lautaro Nitrate Company for 1927 reflect the improvement which occurred in the fortunes of the Chilean nitrate producers last year. The improvement in the case of the Lautaro Company, indeed, is remarkable and in all probability this will be exceptional. The net profit for 1927 was £284,302, as compared with £75,851 for 1926. A dividend of 3 per cent. has already been paid, absorbing £196,800, but the directors do not propose making any further distribution, preferring to use the balance to raise the carry-forward from £440,514 to £528,016. In 1926 a dividend of 5 per cent. was paid. The Lautaro Company is one of the strongest undertakings in the industry. The company's 6½ per cent. first mortgage debentures, redeemable 1940 and yielding £7 12s. per cent., should appeal to investors seeking an investment in which there is a slight speculative seasoning. There is some little uncertainty regarding the outlook for the Chilean nitrate industry. This is largely due to the official statement issued last week that the Chilean Government does not intend to reduce the existing export duty on the commodity during the ensuing nitrate year. Many producers, it will be remembered, have said that the only hope for the industry is a reduction of this tax. Whether the Government's policy bodes good or ill is somewhat doubtful, but the market is tending to take the view that it has been prompted by the improvement which has taken place in the situation, while attention is also called to the Government's offer to assist the industry in other ways.

The net profits of the National Bank of Greece for the second half of 1927 amounted to 35,135,000 drachmæ, against 32,589,000 drachmæ for the corresponding period of 1926. The dividend has been maintained at 1,300 drachmæ per share.

BANKING DEVELOPMENTS IN YUGOSLAVIA.

The April issue of the *Belgrade Economic Review* contains an interesting survey by Dr. Ivo Belin of banking developments in Yugoslavia, in the course of which he points out that further amalgamations are to be anticipated. We give the following extracts :—

Fundamental changes are bound to take place in banking during the coming few years, and our credit organisation will eventually be led by a few, but therefore strong, institutions.

The possibilities of any great development in banking in this country before the War were very limited. With a population of only three millions and those mainly peasants, with very little trade and no industries Serbia was unable to create any strong banks. Neither could much be done in the provinces which formed part of the Austro-Hungarian Monarchy, although they possessed strong banks, some of which were completely in the hands of Yugoslavs. Development could not take place rapidly mainly because of the keen competition of the banking houses of Budapest and Vienna, which with their strong connexions were able to put obstacles in their way. Then in addition there were the political circumstances which prohibited the Croatian banks from opening branches in Dalmatia, and the banks in Bosnia and Slovenia from opening branches in Croatia and Slovenia. In this way the banks were limited to their own provinces, and it is therefore not surprising that before the War our banking should have been decentralised. The pre-War Kingdom consequently had a number of medium-sized institutions, but not one large enough, by the amount of its paid-up capital and the number of its branches, to be called a really large bank.

With the end of the War and the setting up of the unified Kingdom a new era set in for banking and banking organisation. The banks were no longer confined in their business to an area comprising at most 3 million inhabitants, but were able to extend their activities over the whole State, numbering over 12 million persons. On the other hand, the establishment of many new industrial enterprises and the rapid development of our national trade brought about entirely new conditions for the development of banking.

Before the War there were also a number of banks in this country, besides our own, which, in spite of being registered in the country and having names which sounded national, nevertheless had pre-eminently foreign capital. There were also a fair number of branches of Viennese and Hungarian banks. The fate of the War brought about changes here in that some of these branches were taken over by home banks which possessed foreign capital, while others were changed into independent banks which bore very markedly the influence of the houses of which they had formerly been branches.

In this way we obtained a considerable number of new banks in which foreign capital was predominant, and consequently there was little likelihood immediately after the War of any concentration coming about in our banking. In fact, the establishment of the new houses had rather a contrary effect.

Nevertheless, the tendency towards concentration steadily gained force. Some of the banks began to open branches or to take over local banks in parts where they had previously done no business. Whereas before it was an exception for banks in one province to maintain branches in another, since the Slovenian banks might only have branches in Dalmatia and *vice versa,* and Croatian banks in Voivodina, since the two pairs of provinces belonged respectively to Austria and Hungary, the years after the War saw the banks extending their business beyond the borders of their own provinces.

First of all the Zagreb banks opened branches at Belgrade. This was natural, since it was the capital and the headquarters of the Bank of Issue and other State financial institutions. This was followed by the opening of branches in other provinces, so that we now possess banking houses which have branches in all provinces of the Kingdom.

The system of branches is not equally developed in all the banks. Side by side with those which show a tendency to open as many branches as possible and to extend their business into every part of the Kingdom are others which either do not open branches at all or as little as possible.

With affairs as they are at present we are likely in a very short time, with the coming amalgamations, to reduce the number of our large banks to 10. By the increase of the share capital and the opening of new branches there will shortly remain five to six, the magnitude of whose business will put them into the rank of really large banking houses.

Naturally there is still much to be done in the matter of the system of branches. There are very wealthy districts where the large banks are very poorly represented in branches, and most of the work is in the hands of small local banks. This is pre-eminently true of Voivodina, which, in view of its wealth and well-developed trade, deserves much more attention from the leading banks.

The credit crisis which occurred here as a result of inflation, and the losses of some of the banks in industrial investments, prevented much being done in the matter of extending the system of branches in the last few years as compared with the years immediately after the War. On the contrary, it may be said that during the crisis only those branches were set up which were brought about by the transfer of some bank into other hands.

In the concentration of banking here foreign capital plays an important part, since large sums of money from abroad are invested in some of our banks. In some cases a number of foreign houses have investments in one bank, and this weakens the part played by foreign money in our economic life, for it is certainly better for the free development of our banks that they hold the investments of a number of nations than of one. In that case there is no need to fear that such investments may have political tendencies.

The greatest share in our banks is played by the Viennese and Budapest banks. Other countries do not yet know enough about circumstances in Yugoslavia, and therefore make use of the services of Vienna, which is reputed to have an excellent knowledge of its condition. As soon as currency reform is carried out and there is no more danger of monetary fluctuations, we hope that our banks will be able to work directly with other countries and not only through the intervention of Vienna. The investment of British, Belgian, and Swiss capital will do much to bring our banking into direct contact with their money markets.

By taking over the small local banks which are exclusively in the hands of home capital and the opening of branches of large banks in all the more important places, which will mean better organisation of the collection of deposits, our banking will be so strengthened that it will no longer be so dependent on other countries. Here, too, much can be done, especially when a large loan and currency reform do much to change economic conditions here for the better. In addition, the strengthening of our Bourse will prevent the shares of our banks going abroad in large quantities. On the contrary, we shall gradually buy back the shares already abroad. Thus, in a few decades, when conditions here are quite different and when sufficient national capital will have been accumulated for all the needs of our economic life, we shall look forward to real nationalisation of our banking, and reduce the participation of foreign capital in our banking houses to a minimum.

The directors of the British India Steam Navigation Company, Ltd., have resolved to pay on May 16 interim dividends of 2½ per cent. (less income tax) on the 5 per cent. preference stock and 4 per cent. (free of income tax) on the ordinary shares for the half-year ended March 31.

Company Meeting.

INDO-EUROPEAN TELEGRAPH COMPANY.

"Beam" Competition.

Mr. H. L. M. Tritton's Speech.

The sixty-first ordinary general meeting of the Indo-European Telegraph Company, Limited, was held on April 30 at the offices, 18, Old Broad Street, London, E.C. Mr. H. L. M. Tritton (Chairman of the company) presided.

The Secretary (Mr. T. O. Stevens Perry) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—Before proceeding with the business of the meeting it is with regret that I have to refer to the absence of our colleague, Sir Rayner C. Barker, owing to illness. I am sure you will join with me in hoping that he may be restored to health in the near future.

I presume it to be your pleasure to take as read the report and accounts for 1927 which are in your hands.

Our relations continue to be satisfactory with the various Governments through whose territory our line passes, and it is a pleasure to be able to refer to the ever closer co-operation between ourselves and our friends and partners, the Indo-European Telegraph Department of the India Office. Our direct working with Karachi in India, made possible by the co-operation of which I have just spoken, works more and more effectively. It is many years since it was first introduced, and it is perhaps for that reason in danger of being overlooked by the telegraphing public, but the achievement can still hold its own even in these days of rapid progress in the art of telegraphy.

I have previously mentioned that the actual time of transit between London and Karachi and *vice versa* is a mere fraction of a second, and that the total time of transit from sender to addressee consists of time occupied in the booking office and in delivery plus time of transit within India over Indian Government lines. I need hardly add that very strict control of booking office and delivery times is maintained in the company's stations.

Endeavours have been made in India in the last two or three years and suggestions put forward in regard to certain main circuits of the Indian Telegraph Department in connexion with the Indo route with a view to securing more direct working and the further elimination of errors. The company attaches the utmost importance to accuracy, and, as shareholders are aware, we have had in operation for many years a clearing house check over our own line of every paid word transmitted. The results for the year under review show slightly more than $2\frac{1}{2}$ errors per 10,000 paid words transmitted, or, expressed in percentage, .025—a most creditable record, I venture to say. I can only regret that these two factors, speed and accuracy, combined with secrecy, which seem to me of paramount importance as denoting a first-class service, do not apparently make the appeal to the business community which they ought.

It has been a matter of satisfaction to the directors to be able to make arrangements, in co-operation with the Indo-European Telegraph Department, for facilities for direct working between Karachi and Berlin on a special circuit, in the interests of German and other Continental users.

I am glad to be able to mention that our friends, the Eastern Telegraph Company, Ltd., have been able to renew their arrangements with the Turkish Government and that in consequence communication over the Black Sea (Odessa-Constantinople) cable, in which our company have a half-interest, was restored last November.

The Accounts.

Passing now to the accounts for 1927, the receipts on revenue account show an increase of £4,132, £2,000 of which increase is from interest on investments. Expenses show an increase of £16,000, of which £7,000 is under the heading of maintenance; the increase of £7,000 in the year under review contains a certain amount of expenditure of a non-recurring nature.

The remainder of the increase, viz., on commercial account, has been mainly due to increases of salaries and allowances under the collective agreement with the staff in U.S.S.R., and to the settlement of certain sums in compensation in lieu of arrears of leave; to some heavy station repairs in Kertch long overdue; and to an increase of allowances due to the increased cost of living in Poland.

The directors effected the sale of the house at Boscombe which was acquired a few years ago as a holiday house for such of the staff as might wish to take advantage of it, and the item freehold and leasehold property in the balance-sheet is accordingly reduced.

The company's share of the expenses of mending two breaks which were found to have occurred in the Black Sea cable was met from the Black Sea Cable Maintenance Fund. The directors have provided a sum of £2,000 in writing down expenditure of reconstruction of line in Russia and Poland. The provision for investment fluctuations shows a surplus over the amount required. Sundry debtors and debit accounts, and sundry creditors and credit accounts, call for no special comment. Income tax, as I warned you last year, calls for a larger sum on this occasion, due to the altered method of computation of profits under the Finance Acts.

The slight increase of revenue for 1927, despite losses due to Beam competition, as compared with 1926 may be explained partly by a satisfactory increase in the receipts from subsidiary traffics and partly by the fact that revenue in 1926 suffered a certain loss owing to the strike on the part of the company's Russian employees.

The Beam competition with India began to operate early in September, 1927, and its effect was therefore limited in the year under review to rather less than four months. It is necessary to bear in mind that the company's revenues during the current year will reflect the losses involved by reason of this competition.

Consequent upon the introduction of the rate of 1s. 1d. per word to India by Beam Wireless, this company's rate for ordinary telegrams was reduced last September to 1s. 5d. per word with corresponding reductions for the cheaper classes of traffic—deferred, Press, daily letter telegrams, and week-end telegrams.

Mr. F. J. Brown and the managing director gave evidence before the Imperial Wireless and Cable Conference. The Conference is still sitting and has not yet made its recommendations to the Government. This company is not included in the suggested holding company between the cable and wireless interests—an arrangement you will remember dependent on an agreement being made with the British Government and the Governments of the Dominions and India which will be satisfactory to the Cable Companies and the Marconi Company, but shareholders may rest assured that their interests are protected under the terms of the Joint Purse Agreements.

On the first of this month the company's rate for ordinary telegrams to Iraq was reduced to 1s. 8d. per word, with corresponding reductions for deferred, Press, and daily letter telegrams.

The directors recommend the maintenance of the dividend at 7 per cent., and also the payment of the same bonus as last year of 15s. per share, free of tax, equal to 3 per cent., making a total distribution for the year from all sources of 10 per cent., free of tax. A payment to the retirement trust fund of £15,000 is proposed, and I am sure this will have your approval. Subject to the foregoing, there remains a balance of £19,991 to be carried forward to 1928. This sum is somewhat larger than usual, but in view of the general position shareholders will no doubt support the Board in taking a cautious view of the future.

In conclusion, I should like to place on record the directors' appreciation of the work during the year under review of the officials and staff both here and in the countries through which our line passes. I can say without fear of contradiction that the successful working of the line is a tribute to the industry and keenness of all concerned.

I now beg to move, "That the directors' report and accounts for the year 1927, duly audited, as presented to the meeting, be and are hereby received and adopted, that a dividend for the year ended December 31, 1927, be and is hereby declared of £1 2s. 6d. per share (making, with the interim dividend already paid, 7 per cent. for the year) and a bonus of 15s. per share, both dividend and bonus free of income tax, and payable on May 1, 1928, to shareholders registered on April 16, 1928; that £15,000 be handed to the trustees of the retirement trust fund."

Mr. F. J. Brown, C.B., C.B.E., seconded the resolution, and it was carried unanimously, after the Chairman had replied to some questions.

On the motion of the Chairman, seconded by Mr. Axel W. Berg (managing director), the retiring directors, Sir Rayner C. Barker, C.I.E., and Mr. Claude H. Tritton, O.B.E., were re-elected.

The auditors, Messrs. Kemp, Chatteris, Nichols, Sendell and Co., were reappointed on the proposition of Mr. E. J. Waldron, seconded by Mr. B. Phelan.

The Chairman:—I will now move the resolution, notice of intention of which was referred to in the notice summoning this meeting, to authorise the directors to effect a resettlement of the retirement trust fund. This is the resolution:—"Resolved that the directors be authorised to effect a resettlement of the retirement fund which was constituted in pursuance of a resolution of the company passed on April 27, 1904, or otherwise in such form and with such provisions as the directors shall determine."

Before I ask Mr. Brown to second this I will make a few remarks explaining the reasons which seem to the directors to make this step necessary. The Finance Act of 1921 (Section 32) made provision for exemption from income tax of income derived from investments or deposits of a superannuation fund and sums paid by employers (and employees) by way of contributions towards a superannuation fund, with the proviso, however, that the fund be approved by the Commissioners of Inland Revenue.

On steps being taken to obtain the benefit of relief under this provision, the Inland Revenue authorities pointed out that amendments to our trust deed would be necessary to render the fund capable of receiving the required approval. Among other matters, they indicated that the trust deed as drawn is void as creating or tending to a perpetuity. Also the deed in its present form contains a provision for the return to the company of any surplus which might remain after satisfying the objects of the fund, a provision which effectively precludes relief from income tax on the fund's income or on payments to the fund.

I may here remark that our fund was by no means an isolated case, similar difficulties having been experienced by other companies who have established superannuation funds. To meet this situation Parliament has recently passed an Act which enables a fund by registration under the Act to escape the application of this rule against perpetuities. In order to enable our fund to be registered certain further minor amendments must be made. In these circumstances the directors have taken the opinion of eminent counsel, who have advised that the fund should be resettled. This resolution is submitted in order that counsel's advice may be given effect to.

The resolution was seconded by Mr. Brown, and carried unanimously.

The proceedings terminated with a cordial vote of thanks to the chairman, directors, and staff proposed by Mr. Mason and seconded by Mr. Carpenter.

CONDITIONS IN GREECE IN 1927.

Following the uncertainty of 1926 there was a gradual improvement in economic conditions in Greece during 1927, to which the more stable political situation contributed largely (says an article in the United States "Commerce Reports"). Agricultural production was satisfactory and industrial activity exceeded that of the previous year.

Both imports and exports showed an increase over 1926, but left the adverse trade balance practically unchanged. There was a slight improvement in the labour situation, though accompanied by the continued advance in cost of living. The year was a prosperous one for Greek shipping.

Agricultural production in Greece was generally satisfactory during 1927. Tobacco, the most valuable export item, was estimated at 120,358,300 lbs. as compared with 120,172,000 lbs. in 1926. Preliminary returns for currants, however, indicate a decrease from 1926, resulting from unfavourable weather conditions; the 1927 crop was estimated at 283,000,000 lbs., as compared with 315,000,000 lbs. in the previous year. Larger returns for cereals are anticipated, following the increase in sown areas and the more liberal use of fertilizer; the total yield is placed at 927,700 metric tons, as against a revised figure of 649,000 metric tons in the previous year. The fig crop is expected to be slightly larger than in 1926, but a decrease is indicated for olives in consequence of the unfavourable weather.

Preliminary data on industrial production for 1927 excluding wine and olive oil, show an increase of 20 per cent. in drachma value over the previous year, the figures being 6,115,620,000 drachmæ for 1927 and 5,096,350,000 for 1926. The principal increases were recorded in the textile, chemical, and building material industries.

Industry in general benefited from the improved economic condition of the country, but a shortage of ready cash continued to retard its development. In order to relieve the financial stringency which has confronted the leading industries, negotiations were undertaken with foreign bankers to interest them in a proposed trust company for the lending of funds to Greek industrial enterprises at reasonable rates of interest. New enterprises launched during the year numbered 227, as against 84 in 1926 and 132 in 1925.

A general shortage of credit continued during the year, but the stringency was eased somewhat by the diversion of funds from speculative channels to regular commercial uses. This was achieved through means adopted by the Government to minimise fluctuations in exchange, thus reducing materially the profit accruing from loans by banks for such speculative operations.

The labour situation was somewhat more satisfactory than in 1926. There were no disputes of major importance during the year, and a large number of the idle were absorbed by public-works activities. Conditions among the clerical and professional elements continued difficult.

The index of the cost of living continued to mount during 1927, the general index reaching its highest for the year in December, when it stood at 1,978.1, as against 1,889 in December, 1926. The average for 1927 was 1,938.1, as compared with 1,797.9 in 1926.

The improvement in the political situation was accompanied by a steady increase in public-works construction during 1927. For this an extensive programme has been undertaken, which includes water supply and drainage projects, port construction, electric-lighting installations, etc. Among the more important of these may be mentioned the drainage and irrigation works in the Salonika plain, the Piræus port works, the Athens water-supply project, and the Patras waterworks and electric-lighting installations. Considerable progress on this programme was made during the year, and construction employment was chiefly in the hands of foreign concerns.

The general depression in world shipping had little effect on Greek lines, which profited from the difficulties arising between Soviet Russia and Great Britain with respect to traffic in the Black Sea. Most of this traffic, formerly handled by British ships, was diverted to Greek steamers. The Greek merchant marine on December 31, 1927, totalled 501 steamers of 1,052,446 gross tons, as against 472 of 929,619 tons at the end of 1926.

SUMMER TOURS.

Messrs. Thomas Cook and Son have just issued their programme of holidays for the summer in the shape of an attractive volume of over three hundred pages, containing details of a wealth of tours at home and abroad calculated to meet the requirements of all classes of holiday seekers. Among the regions covered by the tours may be mentioned the Holy Land and the Near East. The volume, which is admirably illustrated, may be obtained free at any of the offices of Messrs. Thomas Cook and Son.

Two submarines are being built at the Nantes yards of the Ateliers et Chantiers de la Loire for the Yugoslav Government.

Yugoslavia's exports in February totalled 294,760 tons, of the value of 438,962,558 dinars, as against 455,404,918 dinars for February, 1927. The chief exports were timber, eggs, cattle, copper, and prunes.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 25:—

Egyptian Futures.—Sakel Contract.—Throughout the week fluctuations in this market have continued to be somewhat erratic, and whilst earlier on the undertone was at times distinctly nervous, more latterly there has been some improvement, rather indicating that a good percentage of the weaker "bull" element have liquidated their holding, and also contributing to the idea that the technical position of the contract is healthier for recent happenings. Just after our last report the market was faced with a combination of "bearish" influences, the most prominent of which were prospects of an improved water situation owing to heavy rains having fallen in Abyssinia, also a rumour to the effect that the Government were going to sell their stock was strongly circulated; the latter most probably could be held mainly responsible for the drastic liquidation that both this market and Alexandria had subsequently to face. Prices at the lowest here touched 20.25d. for November before support became sufficient to restore stability. Values then started to react, and as the Government have since denied that they are going to place their holding on the market, the "bullish" element have shown renewed enterprise. In addition, the trade have begun to show rather more confidence in the situation, with the result that all the ground lost earlier in the week has been regained, to-night's close being practically the best of the week with prices 13 to 14 points advance for near and 9 to 11 points for distant positions since our last report.

During the past few days heavy sales of Sudan Sakels have been recorded here, and these, we understand, consist almost entirely of the high-class cottons. It is stated that this season's crop of this variety contains a much smaller percentage of the top marks than last year, and this, in our opinion, will later on react materially on the Egyptian Sakel position. During the summer months last season large stocks of high-grade Sudans were available for spinners and these served the two-fold purpose of keeping prices in check and also of reducing the consumption of the Egyptian variety; this year the supply position is on quite a different footing.

Manchester reports still indicate a somewhat curtailed offtake for fine yarns, but, as mentioned previously, there are signs that spinners are beginning to show some measure of confidence in ruling rates and, as the market is now beginning to show a much steadier appearance, probably more business will develop.

The Liverpool Alexandria straddle difference remains pretty much the same as it has been running for some time past, and we do not look for any permanent readjustment until much later on in the season. Our latest cable information regarding the situation at the other side is as follows:—"Owing to Government declared intention not to sell their holding at present and poor quality Sudan crop, Sakel position becoming rather narrow future course of prices depends on Government action and spinners' demand."

To conclude, we still consider that the position will be very susceptible to speculative manipulation, and whilst the undertone is distinctly steadier, fairly wide fluctuations are very probable; however, as we believe in eventually higher prices, we think any material recessions should be taken advantage of to enter into limited commitments.

Upper Contract.—Taken throughout the past week this market has shown a very steady undertone, although minor downward movements have at times been experienced mainly owing to the sentimental effect of periodical weakness shown in the Sakel contract. Recently, the firmer tendency in American values has also had its effect on prices, to-night's close showing gains of 25 to 28 points for near positions and 22 to 24 points for distant on the week. A fairly consistent trade demand has been experienced throughout the week, and local stocks of certain qualities are being rapidly thinned out. We have nothing to add to our recent "bullish" views regarding this contract, and advise purchases of old crop months on any easy markets.

Egyptian Spot.—A fair inquiry for spot Egyptian has been in evidence, but on the whole rather less business has resulted, probably owing to the violent fluctuations which have been occurring in the futures markets. Broadly speaking, the trend of the inquiry has shown little change. That is to say, that in Sakel spinners have still continued to show chief interest in the "off" qualities; that the medium qualities have again suffered from neglect, and that only a limited interest has been displayed in cotton over Strict Fully Good Fair.

The usual steady business in Uppers at from 25 to 50 on has again occurred, and there are signs that spinners are finding the medium grades of this growth more or less exhausted. Gradually they are being forced on to the better cotton, particularly as some of the competitive "outsiders" which have at times been of the greatest assistance to them, are also becoming increasingly hard to find in the requisite qualities.

In Sudan Sakel a very good business has again been done, something in the nature of a scramble having occurred amongst spinners who were anxious to obtain a share of the remaining stock of SSS. This quality has now been completely exhausted, except for an odd lot here and there which is being re-offered by speculators. A moderate business has been done in Pilion cotton at from 15½d. to 16d. White cotton has been neglected.

In c.i.f. business a considerable improvement has been reported officially. Forwardings to spinners for the week ending the 20th inst. were returned at the large figure of 11,028 bales Egyptian and 3,635 bales Sudan. Estimated sales for the week, 1,300 bales Egyptian and 8,000 bales Sudan. Quotations of Sakel show an advance of 25 points on the week; those of Uppers 20 points, and Pilion 25 to 35 points. F.G.F. Sakel to-day, 21.30d. F.G.F. Upper to-day, 15.45d. F.G.F. Pilion to-day, 16.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 19, state:—

Since our last report the futures market has been very nervous and fluctuations have been wide. The week's summary of price movements is as follows:—Sakellaridis: May, 41 dollars, 1.82 dollars down; July, 41.45 dollars, 1.83 dollars down; November, 41.97 dollars, 1.91 dollars down; January, 41.45 dollars, 1.85 dollars down. Ashmouni: April, 28.05 dollars, 0.28 dollars down; June, 28.03 dollars, 0.47 dollars down; August, 28.05 dollars, 0.50 dollars down; October, 28.05 dollars, 0.50 dollars down.

Sakel.—The week commenced with a rising market, but later on the tone changed completely and the rise has since all been lost. The reaction from the high prices of Saturday last was the direct result of profit-taking, and prices for May dropped from 43.55 dollars to 41 dollars, and for November from 44.50 dollars to 42 dollars. In view of the recent rapid and exaggerated rise, this drop is not surprising, and may be considered more or less what one should expect, but the factors which really induced the selling are undoubtedly the improvement in the river level at Roseires (Blue Nile), the better reports from up-country on the progress of the crop, and the indications that, after all, the Sakel acreage will prove to be at least equal to that of last year, possibly slightly larger.

In spite of the heavy selling out during the past week, we think

that the open speculative positions are still large; on the other hand, the technical position of the market may be somewhat better, as it is probably the weak positions which have been liquidated. The export houses bought a fair quantity of cotton at the bottom of the break, apparently against orders from spinners taking advantage of the drop to fill their immediate requirements.

Reports from Liverpool all confirm the growing interest of the trade in Sudan Sakel and predict that the whole stock of good qualities will quickly disappear into consumption; this is an important factor and sooner or later will make itself felt to the advantage of Egyptian Sakel.

The statistical position shows a slight improvement on the week. The total stock in Egypt can be put down at about 3,300,000 kantars, of which 1,500,000 kantars Sakel; this figure includes the Government stock of about 390,000 kantars, of which 350,000 kantars Sakel and about 40,000 kantars Uppers. At the same date last year the stock stood at about 4,200,000 kantars, of which Sakel probably amounted to more than 2,000,000 kantars.

Rumours have been current that the Government intended to liquidate its stock gradually at the rate of 2,000 bales a week; a declaration by the Prime Minister to-day, however, denies any intention on the part of the Government to release its stock for the time being.

Uppers.—This market has been much steadier than the Sakel market and the reaction of this latter is only moderately reflected in Uppers prices. A fair business has been concluded with the consuming centres, which, of course, has contributed to the relative firmness of the market.

The week's receipts amount to 63,551 kantars, against exports 83,223 kantars; the stock in Alexandria stands at 2,802,724 kantars.

Spot: The spot market was closed last week for the Greek Orthodox Good Friday and on Monday for the native feast of Shem-el-Nessim. The demand has been fairly active and rather more cotton has been shown on the market than during the past few weeks. Total sales amount to about 10,800 bales, of which we estimate 4,000 bales Sakellaridis, 6,000 bales Ashmouni and Zagora, 650 bales Pilion, and 150 bales other varieties.

Sakellaridis: There has been practically no change in the nature of the demand for this variety. A very small business has been done in the good grades; medium grades have been most in favour and represent the bulk of the turnover; rather less interest has been shown in low grades than heretofore. There is no marked change in the spot differences.

Ashmouni and Xagora: When the market reached its highest point during the week, rather more cotton made its appearance but sellers were not disposed to be easy on prices, and spot differences remained steady. The top grades were practically entirely neglected, but a fairly good turnover was done in the medium and low grades.

Pilion: Great interest continues to be shown in this variety, the turnover being restricted by the very limited stocks. Premiums for Fully Good Fair and above have distinctly hardened.

Other Varieties: A few lots of Nahda have changed hands and an insignificant business has been done in White and Fouadi.

Up-country: Slightly more spot business has been doing during the past week as a result of a *communiqué* by the Government to the effect that the ginning factories must shut down, for the season, at the end of the present month. New crop business has again been insignificant.

Crop, 1928.—Weather conditions during the week have, in general, been very favourable and the plants have greatly benefited. Sowing has been completed everywhere but for a few fields in the North Delta. Complaints of shortage of water are, of course, freely heard, but the better reports from the Sudan Nile stations have done much to relieve the anxiety of the growers.

Notes of the Week.

Egypt and Great Britain.

It is of good augury for the future relations of Egypt and Great Britain that the recent crisis over the Public Assemblies Bill should have passed practically without leaving any trace of bad blood on either side. Credit for this result is due in large measure to Sir Austen Chamberlain; who, in the British reply of May 2 to the Egyptian Government's Note announcing the postponement of the Senate's consideration of the Bill, recognised that this decision responded to the spirit, even if it failed to fulfil the letter, of the British demand, and took no further action beyond restating in clear terms the British point of view. Great Britain has thus proved that she has no desire to drive any Egyptian Government into a corner, and the good sense of the Egyptian people has enabled it to appreciate the opportunity thus afforded of being rid of recurring crises by placing Anglo-Egyptian relations on a basis that will keep Great Britain's position within clearly defined limits. Public interest has reverted to the rejected draft Treaty, and the possibility of negotiations on the subject being re-opened by Nahas Pasha himself is being mooted. The hope was expressed in these columns last week that this way out of the present difficulty would commend itself to Egypt. It is only necessary to add that, whoever is chosen to act as the representative of the Egyptian Government would find his task much easier, if he were armed with a resolution of the Egyptian Legislature conferring upon him plenipotentiary powers. After the experience of Zaghloul Pasha and of Sarwat Pasha there is a danger of negotiations opened by Egypt being regarded in this country as more or less a waste of time in view of the readiness with which the resultant agreement has been summarily rejected in Cairo. Past history has shown, and Egyptian opinion is slowly coming round to appreciate the fact, that Anglo-Egyptian relations are necessarily of a complex character, and can be regulated only by the careful adjustment of many difficult points. It is a work of supererogation, for the negotiators to spend months in arriving at a full realisation of this fact, in order to have their work arbitrarily rejected by those who have made no attempt to master the subject. If the Egyptian Legislature were to confer full powers on Egypt's representative and to undertake to abide by his judgment, there might be some hope for the early conclusion of an Anglo-Egyptian Treaty. If, on the other hand, the Egyptian negotiator has to keep one eye on his own political position in Egypt, the present relationship between the two countries may as well be allowed to continue indefinitely without attempts to readjust it.

Roumania's Troubled Waters.

The Roumanian Government was well advised not to impose a veto on the mass meeting of the National-Peasant Party summoned for May 6 at Alba Julia. It would have acted more wisely still, if it had not dallied so openly up to the last moment with the idea of forbidding the demonstration. Except in point of size, the Alba Julia meeting differed in no way from many similar gatherings that have been held up and down the country during the last six months. In their cumulative effect these protests against the Government suggest, what has been understood for some time past, that there is a large body of opinion behind the National-Peasants; but so far they have not sufficed to shake M. Bratianu's position. The spectacle of the National-Peasant leaders waiting at Alba Julia, or any other town, for a telegram from the Cabinet to say that it has resigned does not impress the foreign onlooker as practical politics. On the other hand, there is always a risk that, in spite of the good intentions of the organisers, a large body of men may be so moved by having its passions or enthusiasm stirred that it gets out of hand. In the case of the Alba Julia meeting, if the numbers came at all near to those reported in the Press, the National-Peasant Party and the Roumanians as a whole are to be congratulated on the maintenance of order and the general decorum of the proceedings. The loyalty of the party is above reproach, and one day it will presumably be called upon to form the Government of Roumania. Whether it is acting in the best interests of the nation in trying to eject its opponents from their political citadel by means of long-range artillery instead

Digitized by Google

of meeting them on the floor of the Chamber of Deputies in order to influence their conduct of affairs by argument is an open question. Perhaps the Roumanian Constitution is at fault in holding out as a bait to any disgruntled Opposition the possibility of dismissing a Government otherwise than by an adverse vote in Parliament.

Non Tali Auxilio.

Prince Carol of Roumania is a young man who, having specialised in amatory escapades, is apt to mistake notoriety for fame, and is probably assisted in his self-deception by the company that he keeps. His matrimonial pledges are his own affair; his renunciation of and formal exclusion from the Roumanian succession are matters of State importance with which Roumania is seriously concerned. The Prince's appearance in England, if he had known the value of silence and self-effacement, might have been dismissed merely as a breach of social conventions; as his host was not English, the incident would have passed unmentioned outside a certain type of journalism. Any attempt, however, to use English soil for political intrigue against a friendly State and Allied people is a flagrant breach of hospitality that cannot be officially condoned. To what extent the Prince himself may have conceived the melodramatic plan of flying unbidden to Roumania, or was only a pliable tool in the hands of stunt-seeking journalists does not appear. Responsibility for his actions, however, remains his own until he secures statutory freedom from it. In these circumstances it is well that he should be asked to remove his intrigues to another base. Even if the tactics of the National-Peasant Party in Roumania are mistaken, there is no valid evidence for connecting the leaders with Prince Carol's designs, and it would be unfair to patriotic men to believe, without further evidence, that they propose to lend themselves to a step which would play havoc with the Roumanian Constitution and alienate the sympathy of the countries to which Roumanians must look for help in their work of reconstruction.

Political Currents in Yugoslavia.

In Yugoslavia the political cauldron continue to seethe merrily. The Prime Minister, M. Voukitchevitch, is required not only to ward off attacks from the Opposition, but also to defend himself within his own political camp. The Radical Party is split up into two or more groups, and those who challenge his leadership are almost as active in their opposition as the leaders of the hostile Agrarian-Democrat group. The strength of M. Voukitchevitch's position, however, lies in the fact that the Radical Party cannot indulge in the luxury of a split, unless it is prepared to see itself banished into the political wilderness. Consequently, when the Prime Minister summoned a meeting of the Radical Club and asked his detractors to state their case the tone of the speakers, however critical their attitude, was pacificatory, and the sense of the Party was wholly in favour of maintaining unity. As the indefinite prolongation of the present state of affairs entails a negation of good government, the alternative before the Radical Party would seem to be to heal the breach within its ranks by giving portfolios to the sections of the Party that are at present not represented in the Cabinet, or to make way for a Government on a wider Coalition basis under a Prime Minister who would not be a Radical. Hitherto the refusal of the Party to support any Government under a non-Radical leader has sufficed to prevent the formation of one; but the possibility of detaching a substantial group of Radicals for one reason or another has become of late less remote, and has, therefore, given rise to a desire to heal the party breach before it is too late. It is conceivable that, if the attack of the Agrarian-Democrat group had been less vicious, the centrifugal forces in the Radical Party would by now have wrecked it. Under the sting of M. Raditch's invectives, however, Radicals have been helped to maintain the voting strength of the Party's representation in Parliament for all practical purposes.

Earthquakes and Political Charity.

The earthquake disasters in Bulgaria and Greece have evoked a splendid demonstration of good will and practical sympathy not only in the afflicted countries themselves, but also throughout the world. While foreigners have been struck by the efforts, both official and unofficial, of the two peoples to bring help to the victims, Greeks and Bulgarians equally have been touched by the spontaneous measures of relief inaugurated for their benefit abroad. A passage in a Greek newspaper merits quotation :—

> Everyone recognises that the English have brought to Corinth not only their excellent tents, temporary electric light, timber, food and other necessaries, but also something much better still—a cheerfulness of a childish simplicity, the cherefulness of men healthy in mind and body and consequently bountifully contagious. In other words, they have introduced *moral*. Their *sang-froid*, full of method and order, their unostentatious eagerness, have done everything necessary for the victims. Without being asked by anybody, they have offered their services to the Greek companies for the demolition of unsafe buildings. After pitching the tents, they erected wooden buildings; and on the top of all this help invaluable to the relief measures—work supervised on the spot by Sir Percy and Lady Loraine—British sailors still offer their smiling faces, which are not the least of their gifts.

In another corner of the Greek Press we learn that the Greek Government is contemplating the advisability of urging the Parliamentary Commission to expedite its inquiry into the charges against General Pangalos, in order that the trial of the ex-Dictator, who has been kept nearly two years in prison without trial, may be begun before the summer holidays. In the face of a national disaster of the proportions of the Corinth earthquake and of the wonderful exhibition of world charity of which Greece has been the object, it would not be unbecoming to the Greek nation if it were to indulge in charity of its own in the political sphere, and by proclaiming an amnesty for political offences to seek to open a new chapter of national unity in a country sorely handicapped for many years by internal feuds.

Hoist with His Own Petard.

The fate that overtook the Roumano-Hungarian Mixed Arbitral Tribunal has now overtaken its Turco-Roumanian counterpart. In the former case, when the Tribunal declared itself competent to deal with the complaints of the Hungarian Optants against the Roumanian Government, the Roumanian representative withdrew and the Tribunal was unable to operate. Now the Turco-Roumanian Tribunal has been brought to a standstill through the withdrawal in the same circumstances of the Turkish representative. The incident arose over two claims, one on the part of a private Roumanian citizen,

THURSDAY, MAY 10, 1928.

A ROUMANIAN ANNIVERSARY.

It has fallen to the lot of Roumania to inaugurate the series of celebrations that will, no doubt, mark in various countries the tenth anniversary of the end of the Great War. On April 9, 1918, Bessarabia, through its *Sfatul Tzarei,* or National Council, proclaimed its union with the Roumanian Kingdom, and on Sunday, April 29, the tenth anniversary of the union was celebrated with due ceremony at Kishinev. The reason for selecting that particular date is not at first sight apparent. Chronological accuracy would call for April 9; the facts of history suggest a postponement until the end of the year. It is true that on April 9, 1918, the *Sfatul Tzarei* voted for the union of Bessarabia with Roumania, but the decision was hedged around with significant reserves, and conditions in the Old Kingdom did not allow any immediate consummation of the union. It was only after the incorporation, without conditions, of Bukovina and Transylvania in November, 1918, that the National Council of Bessarabia decided to follow the example of the other Provinces and to withdraw the stipulations that it had previously imposed on its incorporation within Greater Roumania. A year later, in November, 1919, a Constituent Assembly in Bucharest ratified the several resolutions passed by the different provincial bodies, and Greater Roumania became a formally constituted entity. International recognition, as is known, was slow in being accorded, and among the Allied Powers Japan still withholds ratification of the Paris Treaty of October, 1920, regarding Bessarabia. Russia, whose acquiescence the Allied Powers undertook in that Treaty to invite as soon as there should be a Russian Government recognised by them, remains, it need hardly be said, hostile to the annexation; but apart from the uncertainty inevitably attaching to an unsettled dispute, the Soviet attitude now causes a minimum amount of inconvenience to Roumania.

In all the circumstances November, it might be supposed, would have been considered the most suitable month for celebrating the anniversary of Roumanian national union. Already, however, the first day of December is set apart as an annual national fête day in honour of the union with Transylvania, and must be regarded as serving this purpose. The festivities at Kishinev may not, therefore, indicate a resolve on the part of the Roumanian people, with all its weakness for public holidays and State occasions, to add yet more celebrations to the calendar; for Bukovina and the Banat will consider themselves as much entitled to honour as Bessarabia. It is, perhaps, necessary to look for a different origin of the Kishinev celebrations. Conditions in the province might well have suggested the advisability just now of a national testimonial to its services and its patriotic instinct in throwing in its lot ten years ago with the Mother-country at a time when the latter was at the ebb-tide of its fortunes. It would have been more natural, however, to have chosen the actual date in question, whether April 9 or November 27. In missing the former date by three weeks, and in organising celebrations that could only emphasise the present lack of national solidarity, the Roumanian Government has laid itself open to the charge of seeking to use Bessarabia as a pawn in the political game. The proceedings at Kishinev, it is pointed out, were staged a week before the monster meeting arranged by the National-Peasant Opposition group to be held at Alba Julia; it was certain that the Party which set political consistency so high as to absent itself from the Coronation of King Ferdinand would not be represented at the Bessarabian capital. The Kishinev celebrations, therefore, it is argued, were not intended to serve the purpose of a national reunion, but were an elaborate cloak for a party demonstration.

The rights or wrongs of this controversy have little interest outside the frontiers of Roumania. It is to be regretted, however, if the two occasions associated, within the limits of a week, with the town of Kishinev and Alba Julia serve only to add fuel to the fires of Roumanian political bitterness. The Bessarabian celebrations were elaborately staged. The three members of the Council of Regency together with the Prime Minister and other Ministers arrived at the capital early in the morning. After a *Te Deum* in the Cathedral, the company repaired to the hall where the *Sfatul Tzarei* had made its declaration ten years ago, and listened to a large number of patriotic speeches. The unveiling of a statue to Stephen-the-Great and an official luncheon were occasions for yet more eloquence, and no pains were spared to emphasise the importance of the day as a landmark in the history both of Bessarabia and of Roumania. The Prime Minister, it was noticeable, could not emulate the detachment of the spokesman of the Regents; dealing with the present and the future rather than with the past, he regarded the situation as still delicate. Unity was necessary, and throughout a long speech, in which he found opportunity to mention the pending loan, the audience were encouraged, by inference, if not by direct reference, to contrast the good intentions of the Government of the day with the recognised shortcomings of those who were inclined to challenge its authority. It was, perhaps, inevitable that the speeches should deal more with prospects than with achievements. Within the few years during which the annexation has been effective there has hardly been time for the Bessarabians to experience the practical advantages of incorporation in the mother-country that would be expected to raise local enthusiasm to a high pitch. They were urged to compare the benefits that had been opened up for them with the disadvantages and grievances characteristic of Russian domination. They have, it is true, the right to worship and to be educated in their own language; agrarian reform could be carried out with the greater thoroughness in so far as the landlords to be expropriated were mostly Russian. Bessarabia, however, has suffered more from economic stress than other parts of the Kingdom as a result of its former backwardness, which conditions in Roumania as a whole have prevented successive Bucharest Governments from ameliorating to any marked extent. The province, therefore, stands in need of encouragement to persevere and to hope for better times. In so far as this was the burden of the message delivered to it at the Kishinev celebrations, they will have served a useful purpose. The pity is that they could not have been invested with a more national character, in order that Roumania, reflecting on the events of ten years ago, might renew her faith in the truth of the adage that unity is strength.

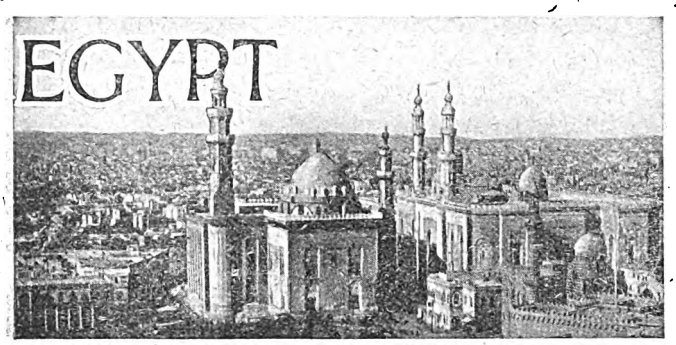
The Near and Middle East*

From Our Own Correspondents.



Cairo, April 28.

The Political Situation.

Considerable publicity has been given to the formation of a new party to comprise members of the existing Ittihad, Liberal, and Wafd parties under the presidency of Sarwat Pasha, its object being to secure acceptance of the British Treaty and thus the removal of one of the great obstructions to an active forward policy in so far as concerns the internal development of the country, which has suffered owing to the manner in which successive Governments have concentrated on the higher politics.

There is, however, no truth in this statement of the imminent formation of a new party. Whatever ideas may exist in the heads of the more prominent political leaders in regard to the future, it is certain that nothing is further from their thoughts at present than the formation of the party in question. As a matter of fact, a development in the political situation in the matter of party grouping must wait on the settlement of the crisis which appears imminent in regard to the Assemblies Law, which is on the Senate Agenda for next week but may yet be postponed again. If the British Government do not stand firm, this will mean a victory for Nahas Pasha, who will thus have gained far more than any other of his predecessors, and there will then be little need for a new party, since the Wafd will rally everyone round its banner which will have led the country to victory. On the other hand, if the British Government take drastic action, this will mean a rebuff for the Wafd, and the time will have come for the formation of a new party, which would act as a rallying centre for the more reasonably-minded Egyptians and would try to save what can be saved and steer the ship of State towards the settlement of the unresolved questions with Great Britain which in reality everyone in the country, barring the more rabid Wafdists, devoutly desires to see as soon as possible.

The Egyptian Minister to Berlin.

Mystery still enshrouds the cause for the resignation of Seifullah Yusri Pasha, Egyptian Minister in Berlin, on the night before he was due to leave Egypt in order to resume his duties. For some reason still unexplained his decision was not made known until it was too late to stop the large number of officials and friends, including the Under-Secretary of State for Foreign Affairs, Waguih Pasha, and the German Minister and his wife, Herr und Frau Von Stohrer, who went to the station in order to bid Seifullah Pasha farewell. The immediate cause of this decision on the part of the Egyptian Minister at Berlin was that, in spite of the fact that he had made an official application in ample time before the day of his departure, the Palace had not fixed the audience with the King, which it is usual for members of the Egyptian Diplomatic Service to have before they return to their posts on the conclusion of their leave. Seifullah Pasha considered, not unreasonably, that he could scarcely serve his country usefully abroad if it were known that the King had failed to accord him the customary farewell audience. That is the immediate cause of Seifullah Pasha's decision. But what everyone wants to know is what lies behind the failure of the Palace to obtain for him the audience, about which there is never any difficulty. It is asserted that there is some personal family reason—both Seifullah Pasha and his wife are connected with the Royal Family—which prompted this public demonstration of disfavour. Whatever the cause, it can only have cropped up during the last week of his stay, since it is known that Seifullah Pasha had come to be much in His Majesty's graces in spite of incidents in the past. We shall no doubt learn in due course the inner history of this incident—such things can never long be kept secret in Egypt. But in the meantime there is universal regret that at a time when she is finding it already difficult to fill the diplomatic posts abroad with men capable of properly representing her, Egypt should lose the services of a man who had given innumerable proofs of his fitness to hold the most responsible diplomatic posts in the service, and who has always been *persona gratissima* in all the European capitals in which he has moved.

The Budget and the Civil Service.

The Chamber is making steady progress with the Budget. It has already completed the consideration of the revenue and is now engaged on the expenditure, which is expected to occupy it until the end of May at the earliest. One of the questions with which it dealt this week was the proposal made by its Finance Committee for an amendment of the "Cadre" so as to effect much-needed economy. The Civil Service at present costs the country £E14,000,000, or 40 per cent. of the total Budget, reckoning that of the £E41,000,000, at which the estimates are fixed this year, £E6,000,000 represent non-recurring expenditure. This, it must be admitted, is an unreasonably large proportion of the annual revenue to spend on salaries, and the gravity of the situation in this respect can be gauged when it is added that on the basis of the present scale the salary bill of the State will increase annually by £E450,000. This, it should be pointed out, includes no Army in the strict sense of the word, no Fleet, and a very restricted foreign representation, while practically everything remains yet to be done in the domain of social and economic development.

It is true that there is a large reserve, but this is already earmarked for the important irrigation works and educational schemes which must be undertaken in the very near future. The proposal of the Finance Committee is to make a new "Cadre" on moderate lines in the place of the one made in 1921, which was based on the then super-prosperous condition of the country and is to-day out of all proportion with the new conditions of moderate prosperity which have come into being. The idea is not to touch in any way the salaries of the present officials, merely to reduce their increments by fifteen to twenty per

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

cent. and provide a "Cadre" of reduced salaries for new entrants into the Service.

The Chamber, which had in the past pressed on more than one occasion for a drastic amendment of the 'Cadre," decided that the proposal should be passed on to the Higher Staff Committee, which is sitting at the Ministry of Finance to deal with the question of the reduction of the senior posts, to investigate and to report on it. This is equivalent to postponing this very important question at least until the next session. The reason for this postponement is perfectly obvious. The Wafd does not in any way wish to arouse the Civil Service at the present very delicate political juncture.

The Persian Legation.

On the occasion of the anniversary of the accession of the Riza Shah Pahlavi the Persian Minister and Mme. Jelal gave an evening reception on Tuesday last at their home in Kasr El Doubara. There were over two hundrew guests, among those responding to the invitation being Nahas Pasha and his colleagues, Ahmed Bey Hassanein, the Diplomatic Corps, Mr. Hoare, the new Counsellor at the Residency, and practically all the staff, the leading British, French, Belgian, and Italian residents and a large number of Egyptian notables. Dancing was kept up until a very early hour. A most enjoyable evening was spent in spite of the intense heat, which for some days now has held and still holds Cairo in a firm grip.

Horticultural Shows.

Two excellent horticultural shows were held last week-end, a rose show of the Egyptian Horticultural Society at the Semiramis Hotel and the Spring Show of the Alexandria Horticultural Society at the San Stefano Casino. The Rose Show was opened by the High Commissioner, who was accompanied by Lady Lloyd. It produced an amazing quantity of excellent exhibits. The silver challenge cup for the best twelve specimens of twelve different varieties of roses was won with some lovely blossoms by Mustapha Bey Abu Rabia, who carried off several other prizes. Lady Percival, who is always a winner, took several firsts for annuals and herbaceous perennials and tied with Mrs. Greenwood for six blooms of three kinds of roses; while Mrs. Stout and Madame Naus Bey tied for the second prize for twelve specimens of roses. The Alexandria show produced a quantity of excellent exhibits, prominent anmongst them being lovely carnations from Ras El Tin Palace, a fine collection of plants from the Alexandria Municipality, and some beautiful roses from Mr. Guy Foster.

Sofia, May 1.

The Earthquakes.

A terrible earthquake has just visited the most flourishing part of Bulgaria, that is, what used to be called Eastern Roumelia. Beginning on April 14 at Chirpan and Borissovgrad, it continued on the evening of the 18th with redoubled violence at Plovdiv, destroying these three towns, of which the last boasted 100,000 inhabitants, and invading an area of 1,200 kilometres sprinkled with a population of 515,000. The earthquake affected in all 279 localities, of which 142 were entirely or almost entirely wiped out, and 265,000 persons, men, women, and children, have been rendered homeless.

As the shocks still continue, the extent of the catastrophe has not yet been established. Already, however, it is known that 13,800 houses have been destroyed and 18,300 houses very seriously damaged and rendered uninhabitable. These are enormous numbers for a small and poor country, worn out by three consecutive wars. The damage is valued at two and half milliards of levas; but it will certainly be found eventually to amount to four or five milliards, especially if account be taken of the less visible destruction in the villages, where in some places all the beasts and all inventories of the peasants have been buried under the ruins.

The victims, happily, have been relatively much less numerous: 103 killed and 672 wounded, of whom not more than 200 or 250 are seriously wounded. I say happily, because they might have been much more numerous. But at Chirpan and Borissovgrad the earthquake came on a holiday, Holy Saturday, at eleven in the morning, at a time, that is, when the schools, the churches, and other public buildings were empty and when the majority of the inhabitants were out of doors; and at Plovdiv, where there was a much graver danger, because the catastrophe came in the evening, at twenty minutes past nine, there were two shocks, of which the first, a relatively feeble one, luckily preceded the second by two or three minutes, a sufficient time for the frightened population to evacuate their houses. But for this warning, the inhabitants would have died beneath the roofs and walls which crumbled an instant after this tragic warning.

This progressive development in the shocks contradicted the laws of science, which takes it as a general principle that a catastrophic shock is followed by a series of other shocks of decreasing intensity, while here, at Plovdiv on the 18th, the quake was incomparably more violent and more disastrous than that of the 14th at Chirpan and Borissovgrad. The Bulgarian scientists believe that they have discovered the explanation of this phenomenon in the constitution of the beds of earth in the devastated regions. According to researches which they have made, the quake of the 14th, of a tectonic nature, was due to a dislocation in the subterranean beds from a line north of Chirpan, following a southerly direction and ending in a barrier to the south of the said village, where the shock encountered a certain resistance. On the 18th another dislocation, of less intensity, in conformity with the general rule, was produced, from the same source and in the same direction, but it was projected against rocky heights to the south of the Maritza, and this shock, by reaction, gave birth to a violent *contre-coup* in an opposite direction, and it was this *contre-coup* which caused the incomparably greater intensity of the second quake. This catastrophic shock was accompanied by a deep opening of the earth over an area fifteen kilometres long and two kilometres broad. It was ended by a fissure of one or two metres in depth beginning at the village of Satybegovo, inundated by the water suddenly issuing from the earth, striking the township of Papazli, entirely destroyed, passing to the north of the village of Cheshneghir, crossing the Maritza, and disappearing somewhere to the south of the village of Manoli, in the immediate neighbourhood of Plovdiv. Judging by the

EGYPTIAN MINISTRY OF EDUCATION.

EGYPTIAN UNIVERSITY, CAIRO.—The following vacancy will occur in the Faculty of Arts in October, 1928:—

PROFESSOR OF PHILOSOPHY.

The salary will be from 900 to 1140 Egyptian pounds (approximately £922 to £1168) per year, according to qualifications, and the appointment will be on contract for three years. The contract may be renewed at the end of that period, if agreeable to both parties. One month's salary will be paid on arrival for travelling expenses.

Applications should be sent before May 23, 1928, to The Director, Egyptian Educational Office, 30, Victoria Street, London, S.W.1 from whom further particulars and copies of the form of contract may be obtained.

Applicants should give their age, academic qualifications, previous teaching experience, and other particulars as they think fit, and give the names of not more than three persons to whom reference may be made.

Digitized by Google

extent of the region affected by the earthquake and of the epicentral region where the shock was felt vertically, the Bulgarian seismologists and geologists, with whom is the Serbian scientist, Elenko Michailovitch, director of the meteorological station at Belgrade, conclude that the "home" of this seismic catastrophe must be very deep, some fifteen or twenty kilometres below the surface of the earth.

This catastrophe, by its enormous proportions, and the innumerable ruins which it has created—and its effects were increased by the rains which followed it, causing many victims among the unhappy population, particularly among the children—constitutes nothing less than a national calamity. The whole nation's efforts are being directed to lessen its consequences. Already many subscription lists have been opened and assistance is coming in from all parts, in so far as the poverty of the country permits it. The first care of the Government has been to assure the feeding of the homeless and the construction of sufficient shelter to house the unfortunates. In this task, thanks to the admirable national solidarity which the Bulgarians have shown in this catastrophe and thanks also to international help, particularly on the part of Yugoslavia, Italy, Hungary and Roumania, it has already succeeded. But it will certainly be impotent to assure by the resources of the country alone, already sensibly decreased as a result of the catastrophe, the repairing of the ruins and the rebuilding of destroyed localities. And the prolonged maintenance of the present state of distress, which paralyses the economic activity of the population of the whole of southern Bulgaria, in spite of the fine harvest promised in the devastated areas, and which, exploited by subversive elements whose influence has not even yet been completely extinguished, will not fail, unless care is taken, to degenerate into social and political complications in this country, gives rise to a claim which is on every lip but which one dare not make aloud: namely, the relief or the postponing of the payments of reparations which begin to weigh heavily on the Bulgarian Treasury and the amount of which might, by a charitable gesture on the part of Bulgaria's creditors, be used for the relief of the devastated areas.

GREECE.

Athens, April 30.

The Earthquake at Corinth.

There is little to add to the details of which the British public are already in possession with regard to the earthquake at Corinth. The services of the British Navy, first on the scene, have been particularly appreciated, and most graceful references are made in the Greek Press to the moral effect of the cheerful *sang-froid* of the British sailors. The Minister and Lady Loraine have taken a very active part in promoting and organising relief of all kinds.

It is interesting to compare the present earthquake with the last serious earthquake at Corinth, which occurred in February, 1858. Then it was Old Corinth which suffered, New Corinth not yet being in existence. From the meagre details supplied by the Press of the day, it appears that the whole of Old Corinth was destroyed; the shock occurred at 11.30 a.m. and lasted eight seconds. Several columns of the famous temple were displaced and one fell. Eighteen people were killed and fifty wounded. The Government voted a sum of 90,000 drachmæ, but only after some delay and considerable opposition. Similarly at the present time, it has been sought to make political capital out of the disaster, and the Government has been accused of dilatoriness and incompetence. But the generosity of individuals and of public bodies is significant of the changed attitude of the times, and public opinion has severely condemned the action of a very wealthy Athenian who subscribed only 5,000 drachmæ to the relief fund. His subscription is, in fact, being returned to him.

It is not impossible that, in view of the catastrophe, the Hastings celebrations, which had been fixed for June 1, may be cancelled.

General News.

Among distinguished visitors to Athens during the last few weeks have been Sir Herbert Samuel, Lord Dawson of Penn, and Mr. George Macmillan, Chairman of the British School.

The British School's annual excavations in Macedonia have just been completed. The area selected was Chalcidice, hitherto almost entirely unexplored. Two prehistoric sites were excavated, both in the neighbourhood of the classical Olynthus. At the Toumba of Hagios Mamas the remains of some twenty successive settlements were uncovered, dating from the Neolithic to the end of the Bronze Age. The last settlement was Mycenæan. The pottery finds show conclusively that Chalcidice falls into line with Central Macedonia, as part of the Ægean, not of the Central European civilisation, from the earliest times.

It is satisfactory to learn that the convention for the execution of road works has been approved by the Council of Ministers. The Makris Company obtains the concession; only "national" roads are concerned; the definite programme for works to be put in hand for the first year will be communicated to the Company two months after the signing of the agreement. The personnel of the Company, with the exception of eight engineers, will be wholly Greek.

It is regrettable, though possibly unavoidable, that, in view of the Corinth disaster, the project for draining the Struma has again been deferred.

CYPRUS.

Nicosia, April 23.

A Royal Visit.

The sojourn of the Queen of Roumania and Princess Ileana has given much pleasure in the island, and, as has been evident, to the Royal visitors themselves. Their time has been spent in visiting numerous places of interest, generally with the help of Sir Ronald and Lady Storrs, whose hospitality they have greatly appreciated. During a visit to Mount Troodos they inspected the asbestos mines of Amiandos, being entertained by Mr. Jenkins, the director. During a tour to Famagusta, they inspected the Cathedral, now a mosque, the old city, and the ruins of Salamis, under the guidance of the Commissioner and Mrs. Popham, with whom they took tea in "Othello's Tower." The hospitality of Government House was extended to many leading officials and residents, H.H. ex-King Husain and his son, the Amir Zaid, being invited to tea. The Royal party left Cyprus on April 10, being accompanied to Larnaca by Sir Ronald and Lady Storrs.

Pan-Cypriot Greek Sports.

An athletic meeting was successfully carried out at Larnaca, competitors from Greece taking part. The Governor and Lady Storrs were present on April 19.

The Legislative Council.

The session was opened on April 17. The speech of the Governor was of unusual length, and dealt with almost all the leading features of the island situation and outlook. As a result of personal experience already acquired, largely by "some hundred and fifty inspections of towns and villages," Sir Ronald now feels that he is in a position to estimate and pronounce upon the relative importance of the various necessities of the Colony. As might be expected, general precedence should, after public health, be given to agriculture, including irrigation; and it is most gratifying to hear from him, after years of more or less futile experiments, that a trial well in the Morphou district, yielding a flow of 150,000 gallons a day from an 8-inch bore, enables the Government to consider, amongst

Digitized by Google

other projects, a scheme for an ample supply of chemically pure artesian water to the great central, cereal-growing plain. It is pleasing to note that measures will be taken to protect the agriculturist, to transfer, as far as possible, fiscal burdens from his shoulders, to reduce the duties upon the food of the poor, and to increase duties upon luxuries. The rapacity of money-lenders will be met by much needed amendment of the usury laws.

While some needs can now be provided for by increased revenue, the necessity of a loan is obvious, and it is the intention of Sir Ronald, with the approval of the Council, to "apply forthwith to the Secretary of State for permission to float a loan of at least half-a-million pounds," the terms of which he hopes to arrange during his vacation.

The whole speech is of very great interest and importance. It is clear that a new chapter is being opened, under able and well-considered guidance, in island development. The Governor is already able to speak of "a marked and sustained improvement in the Colony's trade, production, and revenue," and to show that encouragement is being given to all local industries. It remains for the Cypriots themselves to profit from the present opportunities.

[Fuller extracts from the Governor's speech are given on page 603.]

ARABS OF THE JEWISH PERSUASION.

By E. David Goitein.

They are the beasts of burden and the artists of Palestine. You will see a *temani* hammering a piece of vulgar brass into the dightest designs. You will see him bent double beneath the weight of a Chicago millionaire's trunk. A snail carrying Nelson's Column. . . . The Yamanite is an Arab of the Jewish persuasion. He is indistinguishable from his Muslim brother save for his fantastic side-curls which swing mischievously over his ears. For centuries he lived in Yaman, and within the last thirty ears has made a home up and down Palestine, adding yet another colour to the rainbow of races that spans that polychrome country.

My first meeting with the Yamanite Jews was one that I will not easily forget. . . . In front was a donkey; from head to tail the poor animal was covered with riders. An old Arab, so I thought him, sat somewhere in the middle, in front were two picturesquely dirty little urchins, behind him a shrieking child clinging—in danger of being pitched on to the ground each time the heavily laden donkey lurched forward. Following the donkey came a crowd of singing, shouting, laughing, yelling "Arabs" with curls like the curls of Galician Jews peeping out from under their fezes. This mass of mocking humanity was a "procession" in honour of the Passover. The leader, on the donkey, was shouting at the top of his voice "*Ashrehem Yisrael,*" to which everyone else responded "*Ashrehem Yisrael.*" This was repeated time and again—a hundred times at least.

"That is Hebrew," I said to Malcah.

"Of course," she said.

"But they are Arabs?" said I, puzzled.

"*Temanim,*" said she.

"What are *Temanim?*" I asked, innocently.

"*Am ha-aretz* (ignoramus)," she answered, rudely. "*Temanim* are *Temanim,* that is to say Jews from Yaman."

We followed the swaying, singing, laughing crowd, and as they went still they repeated:

"*Ashrayhem Yisrael! Mi c'amha Yisrael?*" "Happy, happy, Israel? Who is like Thy people Israel?"

I have said the Yamanite is a beast of burden. But that is scarcely true. Say rather, he is a gentleman who bears burdens. On one occasion during *moharram* (I know five ways of spelling it), I hired a happy-looking Yamanite to move my goods from the Street of the Prophets, which is in Musrara, to the Street of the Abyssinians. Khabir and his son, ben-Khabir, had arrived at 4.30 in the morning, and had straightway started to remove every scrap of furniture they could lay their hands on. I marvelled at the sight of the old Khabir carrying a large bedstead (born in Manchester) on his shoulder.

"That will make a fine photo," I thought to myself. I took my fool-proof camera and stood in the roadway until I saw him coming out again. This time with a large chest of drawers on his back. I got him beautifully focussed when a voice issued from beneath the chest. "Take my photo, and I will drop this chest here on this very spot." As the said chest belonged to mine host, I put my camera back nervously and immediately into my pocket. Why did Khabir not want his photograph taken?

The Yamanite, of all the Jews of Jerusalem, is the man who will appeal most to the Westerner because he is first and foremost an artist. If economic conditions have forced him to do menial work, his real bent is towards creative and beautiful work. For hundreds of years in his native country he has sat bent over his filigree work, his side-curls dancing to the music of his hammer-tops. Here, in Jerusalem, he is a craftsman no less. You can see him curled up in the wall—as if he were part of the wall. He has no eyes for anything or for anyone around him. I stood watching him, fascinated, for a very long time. He was quite unaware of me. He hammered and hammered and softly hummed to himself. I walked away without speaking to him. In the afternoon I found him in the same spot, bent intently over his work, as if he had grown into the wall still more.

This time I said: "That will be a fine piece of work when it is finished."

Tip-tap. Tip-tap.

"Will you sell it to me when you have done with it?"

Tap. Tap. Tap.

"What will you charge for it?"

He talked as little as the well of which he was a part. I stood watching. He did not look up.

I tried again. "Tell me, you sir"—I raised my voice and spoke very politely—"how long will it take you, do you think, to finish that tray?"

"*Shelosha yameem*" (three days).

"As long as that?"

Tap! Tap! Tap!

He was no conversationalist.

Three days later I found him putting the finishing touches to the same tray.

"*Shalom, adoni,*" said I.

Tap! Tip-tap! Tap! Tip-tap!

"I would like to buy that tray."

"*Boker*" (to-morrow morning). He was irritatingly monosyllabic. And then by some idiotic association of ideas I thought of Henry Ford and mass-production and efficiency . . . but I liked that Yamanite none the less. The ash-tray that took him five days to make is in front of me now. I tell you the Jew from Yaman is an artist.

But he is outrageously Orthodox. Fanatically religious. Your new Jew from Eastern Europe, if he be not atheistic, is definitely not Orthodox. Sometimes there is a clash when a Jew of Odessa meets a Yamaniya. Take this as an illustration.

Varada was the daughter of Yishak, a Yamanite farmer of Rehoboth. She was dazzlingly beautiful, as many Yamanite women are when they are young. They age early and then look rather like the hags of Macbeth. One day—a Saturday—Varada was returning home when she met a *halutz* on the roadside.

"*Shabbat shalom,*" said the *halutz*.

"*Umevoraeh,*" replied Varada, a little frightened.

"Where are you going?" Caspi asked.

"To Rehoboth. I live there."

"I am going that way. We shall go together."

"Then you must throw your cigarette away."

"Do you object to smoking?"

"It is the Sabbath day."

So he threw his cigarette away with a laugh. They talked a good deal. At Rehoboth they parted, not without a hint that they might see each other again. They were often seen together after that and all kinds of rumours were soon floating around. You can keep nothing dark in Rehoboth. You can scarcely sneeze in the morning without someone spreading the report that you have double pneumonia—in the evening. . . . In good time the *halutz* asked Varada whether she would marry him. She said that she would. No sooner had she told her father of the engagement than he became like a man demented. For to an Orthodox Jew the Zionist Jew is no better than an atheist, than a Muhammadan—almost as bad as a Christian. A *temaniya* marry a *halutz!* Yishak cursed the man. He threatened his daughter with his curse if she dare speak to him or even see him again. He ordered his wife—Varada's step-mother—to keep strict watch on the girl. There was nothing that the old woman liked better. Let it be said at once that Varada never for a moment thought of disobeying her father. Among Yamanites a father's word is law and a father's curse is a terrifying and dangerous thing, a horrible misfortune to be avoided at any cost. She made no attempts to get into touch with Caspi. Her step-mother saw to it that she should not have the means. But the *halutz* guessed what had happened and bided his time. He grew friendly with a Yamanite wise woman, a lady well versed in the magic arts, if rumour spoke true. They knocked their heads together and the wise woman having managed to give Varada some famous white powders, which helped to keep the love of the young woman fresh and strong within her, next arranged an elopement. This was to take place on the festival of Purim (March). It needed no white powder to keep the memory of Caspi fresh, but it needed more than the wit of the wise woman to bring about the elopement. Two young Jews of Rehoboth offered to lend their aid to overcome unnecessary opposition by guile, or if needs be by force. The conspiracy did not lack conspirators. Purim came. Rehoboth celebrated the merry day with feasting and carnival. The Yamanite section enjoyed itself in its own way, singing, dancing, masquerading. Everyone was out of doors. Varada was out of doors. Her step-mother, too, was out—eagle-eyed, watching her erring step-daughter. The wise woman called Varada aside. Spoke a word in her ear. Up come two masqueraders, one carrying a banjo. The other was Caspi. The wise woman, the two masqueraders, Varada separated further and further from the crowd. When her step-mother looked again, Varada was nowhere to be seen. The old lady dashed about like a woman who has lost her reason, she called aloud to all and sundry: "Where is his daughter? My head, my old head, where is his daughter?" Unable to find the daughter, she set about looking for the father. But Yishak was also not to be found. The other conspirator from Rehoboth had managed to bring the old man to his house, where, over glasses of Rishon wine, they were telling each other tales, fitting to be told on the Purim festival.

Varada was smuggled out of Rehoboth that night, and before the end of the week Rabbi Kook of Jerusalem had, without asking too many questions, married them.

"What did Yishak do when he found out?" I asked Caspi, who told me the story.

"There was no difficulty with the old man. When he discovered I was an adept in the Talmud—he almost liked me. The real trouble was with Yaka ben Meir."

"Who may he be?"

"Didn't I tell you? He was the very respectable Yamanite to whom my Varada had been promised. If Yaka knew how to use a revolver. . . . Ah! Here comes Varada. Let me introduce you. . . ."

Pitiful Need

EVERY Christian heart would throb with indignation and sympathy if the conditions surrounding Armenian refugees could be SHOWN to the world.

ORPHANS—helpless little ones to be cared for and educated — RESCUED **GIRLS** — lacking even the barest necessities of life — **WIDOWS** — bereaved and destitute—and, not least, the many **BLIND** — acutely afflicted and dependent.

MODERN YUGOSLAV ART.*

By ERNEST H. R. COLLINGS.

We may be frank, I think, about our knowledge of modern foreign art, a subject worth serious and systematic study. We have, it is true, an ably-directed Modern Foreign Section of The National Gallery at Millbank; but it is probable that this would, at the present time, contain a far more representative collection than it does, if the large number of modern European sculptures and paintings, seen in London during the last thirty years, had received really serious and broad-minded attention from collectors and critics.

We seem timid when we set out to explore the continent of modern art and, even if we brave the Channel, how pleased many of us are if we can make Paris the end of our journey!

Lord D'Abernon, in a speech not very long ago, referred to some of our patrons of art as "bleating for guidance" and, if, indeed, *they* have gone astray, there is some excuse for a general lack of knowledge about such a special subject as modern Yugoslav art.

Apart altogether from exhibitors of handicrafts, during the last quarter of a century work by more than thirty individual Yugoslav artists has been seen in London exhibitions, and one name, Ivan Meshtrovitch, has become widely known. As long ago as 1911, Mr. James Bone sowed, in the *Manchester Guardian*, his fruitful seed of critical appreciation, and when, in 1915, the public were shown the Dalmatian sculptor's art at the Victoria and Albert Museum, *knowledge* and *ignorance* met in a stimulating conflict of opinion. Since then Meshtrovitch has established his position, and it is a matter for great satisfaction that there are examples of his sculpture at the Foreign Section at Millbank; the Victoria and Albert Museum, South Kensington; the National War Museum; and the National Gallery of Scotland; in addition to many works in private collections.

At the Victoria and Albert Museum, also, there is on loan a good example of the work of Toma Rosanditch, who first exhibited in London in 1917 and secured immediate attention by the excellence of his sculpture in wood.

Meshtrovitch's fame has increased during recent years by the erection of the Rachitch Mortuary Chapel at Cavtat in Dalmatia. Here is proof of the artist's capacity to create not only architecture but architecture which flowers naturally into sculpture. Although prolonged study on the spot is, no doubt, necessary before one may venture to assess definitely the qualities of this building, photographs make it clear that Meshtrovitch has built a shrine which, in its synthesis of styles, is admirably in accord with the traditions of the land where it is set.

In interesting contrast is the Petrinovitch Mortuary Chapel at Supetar on the island of Bratch, off Split, the work, both architecturally and sculpturally, of Rosanditch. This building, it may be suggested, has not the reserve of Meshtrovitch's brooding spirit but it is a most happy expression of its creator's easy naturalism in construction, carving and modelling.

The fact that these two sculptors have shown such ability in the master-art may urge us to seek other examples of modern Yugoslav architecture. A conspicuous exponent is the Slovene, Josip Plechnik, associated with the important architectural renaissance which derived from the work of Wagner and his pupils, in Austria, before the War. Plechnik, who has since worked in Czechoslovakia and Yugoslavia, is a notable designer of domestic and religious buildings. It may be recalled that another Slovene architect, Max Fabiani, arranged the Slovene artists' display at the Austrian Exhibition at Earls Court, London, in 1906. It was at this exhibition, in the separate Dalmatian Pavilion, that Meshtrovitch first showed his sculpture in England.

A serious attempt to continue the Serbo-Byzantine style of religious architecture is the compactly designed church of St. George by Kosta Yovanovitch, at Topola, south of Belgrade.

How clearly Meshtrovitch emphasised the importance of unity in the arts was apparent in the pavilion, designed by Bayalovitch, at the Rome Exhibition of 1911, where the new growth of Yugoslav culture was revealed to the world. In that building, painting as well as sculpture was the servant of architecture, particularly in the designs of scenes in the life of the hero, Marko Kralyevitch, by three artists working under the direct inspiration of Meshtrovitch. Although different in manner, these paintings were alike in the urgency of the message which they wrote upon the wall. They said what they had to say in bold and simple decoration, and the talents of the three men, Liuba Babitch, Tomislav Krizman, and Mirko Rachki, deserve wide recognition. Krizman and Rachki have exhibited in London: at the moment, a drawing in colour, "The Eve of the Battle of Kossovo," by Rachki in on view, with lithographs by Meshtrovitch and other Yugoslav artists, at the Exhibition of International Art at Whitechapel Art Gallery. We look forward, however, to further acquaintance with Krizman's and Rachki's work and we have yet to welcome paintings by Babitch and by Yozo Kliakovitch, the latter known to some by his black and white designs in the monograph on Meshtrovitch, issued in London in 1919 and now out of print. Kliakovitch is an expert designer of book decorations, but he is also a painter of real power. He has executed frescoes in the Church of St. Mark and decorated other buildings in Zagreb.

The painters I have mentioned, together with Meshtrovitch and Rosanditch, help to form what may be termed the Centre Group in Yugoslav art, a group attentive to the heritage of the past and controlling their experiments in modern forms to the direct expression of Yugoslav ideals. The dominating influence, not always in the direction of technique, is that of Meshtrovitch.

A few of the many other artists who claim attention must now be mentioned. To the right stand such men as Bukovatz, Grohar, Jama and Vidovitch (all of whom exhibited at Earls Court in 1906), who, particularly in their exploration of effects of light, have helped to give new life to Yugoslav painting, as also has Pochek by the deftness of his renderings of Montenegrin types. On the left may be named such younger men as Sava Popovitch, introduced to London by the Serbian Relief Fund in 1919, and who has since joined "The London Group," with whom he exhibits regularly; and Petar Dobrovitch who is at present, I believe, in Paris and has not yet exhibited in London. Dobrovitch is an impressive and forceful painter, keenly interested in modern French technique, but he possesses an individuality which gives him an assured position of his own. His personality and exploits have inspired an excellent medal by Ivo Kerditch, an able craftsman in work of this kind.

Among Yugoslav artists exhibiting in London during the last few years is that versatile worker who signs his sculptures, paintings, and caricatures with the single name "Sava." He held a comprehensive show at the Fine Art Society in 1926. In the same year Madame Nasta Royitz showed paintings and some attractive small figures in bronze and terra cotta at the Gieves Art Gallery. In 1927 this artist, with other compatriots, exhibited at the Women's International Art Club Exhibition at the Suffolk Street Galleries, while at the Royal Academy Madame Iva Despitch had two pieces of sculpture.

I have very briefly indicated some of the varied activities of modern Yugoslav art. There is to be found, in its most sustained achievements, as also in the art of Czechoslovakia, Poland and Russia, a quality of passionate life, physical and spiritual, controlled by that sense of order which is conspicuous in the people's handicrafts. The archæologist may like to trace back this Slav char-

* An address given before the Jugoslav Society of Great Britain on May 2.

Digitized by Google

acteristic and may, possibly, be tempted to see a connexion between it and the sensuous decoration of ancient Scythian and Siberian metal-work. Apart from such an obvious influence as that which derives from Byzantine culture, Slav art certainly seems to disclose a deeper, if more distant, connexion with Asia. One almost feels, in face of such an expression of centaur-like life as photographs of Meshtrovitch's Chicago "Indians" reveal, that the sculptor must have nomad blood in his veins.

A fascinating field is open to anyone who seriously takes up the study of modern Yugoslav art. From the time of its awakening in the second half of the nineteenth century it has, of course, been subject to the cosmopolitan influences of such centres as Paris, Munich, and Vienna; but these influences have not been strong enough to destroy its independent spirit, which has gathered increasing strength from patriotism and pride in past achievement. In studying the new, the old cannot be forgotten and, in the latter, a constant interaction of Eastern and Western ideas is present. While the remains of the ancient Serbian Churches show, for the most part, Byzantine influence, the architecture of Dalmatia, where the ever present authority of Diocletian's Palace cannot be ignored, is almost predominantly Romanesque, until it passes for a short time into Gothic, before the coming of Renaissance styles. If there are only few remains of the wall paintings of olden Serbia, Dalmatia provides a wealth of native sculptural ornament for the student, who will also note Slovene work in the building arts and not ignore the contribution of artists of Yugoslav origin to the architecture, sculpture and painting of Italy. Not least of all is the rich background of peasant arts and crafts ever patiently cultivated in their perfection and their beauty.

The art workers of the Yugoslav lands may well give thanks that the fates brought upon the scene, at a critical moment, so well endowed an artist as Meshtrovitch, architect, sculptor, painter and writer; one whose whole outlook is towards a co-ordination of the arts to the better service of man's needs. His "Temple of Kossovo" was no idle dream; it was a project which, we feel, its designer was perfectly competent to carry out. He has shown that he can appreciate the individuality of other artists, but can direct their work to a common purpose. He had a vision of co-operative work dedicated to something infinitely wider than the glory of his own people and their country. Whatever may be the future of Yugoslav art, it cannot be doubted that Meshtrovitch will be honoured for the direction and the purpose he has given it.

It might be useful, perhaps, to compare the modern art of Yugoslavia with that of other European countries, but this cannot be attempted now. I will, however, set one figure beside that of Meshtrovitch. A Yugoslav friend has suggested the likeness, as an artist, of the Swiss painter, Hodler (who died in 1918) to Meshtrovitch, and it is a useful comparison, for it brings into consideration an entirely different aspect of modern art. In some ways the two artists are widely different, but they have important qualities in common. They share integrity of purpose. Both are patriots and the conditions of their fellows and their homeland profoundly affect their art. Both attentive to current art movements, neither is the slave of fashion and each transcends local boundaries by setting free, from the conflict within him, figures of human beings which are companionable images to which the spectator freely confides his fears and his hopes.

Had I time I should like to take the matter of comparison further and discuss the sculpture of Meshtrovitch in relation to the sculpture of those modern artists who are concerned almost entirely with formal expression. Just as friendship with Yugoslavia does not imply lack of friendship for other countries, so does appreciation of Meshtrovitch in no way involve disparagement of other sculptors. Meshtrovitch may appeal to us by the way in which he gives appropriate sculptural shape to a so-called literary or descriptive motif; another sculptor may move us by a composition in which the shape seems to have no such association at all. However different the two things are, we may discover, if we study them broad-mindedly, that each is a sincere attempt to give enduring form to a transitory image which the artist's trained eye and hand knew at once was good.

After references to the photographs shown of the works of Meshtrovitch, Rosanditch, Iva Despitch and Krshinitch, Mr. Collings said of Kliakovitch:

It is seen at once that the cloud which seemed to hang about the figures, about "Adam and Eve," no less than about the national heroes, has gone. The painter now takes up his brush with a song upon his lips. He is undaunted by ambitious tasks and, if the colour in these pictures matches the strong and supple line, Kliakovitch, it is safe to say, is able to hold his own with any contemporary European painter.

Speaking generally, painters to-day are divided into two well defined groups. On one side are those who express, spontaneously, by means of caligraphic line and summary colour, their impressions of the life of the moment: on the other side are those who deliberately express, by means of considered line and ordered colour, experiences which have been emotionally digested. To the second group Kliakovitch belongs. He shows clearly, at times, the influence of Meshtrovitch. There is no slavish copying, only joyful homage to another; and individual strength is not surrendered. The latest work by Kliakovitch, of which I have a photograph, is a composition of many figures, painted this year for the Town Council of Zagreb. Here is no dead *academic* labour; but an adventurous search for vital form appropriate to an imagined scene, full of action.

In many ways the Slavs are giving new health to European art: Yugoslavia may well be proud of her contribution.

Since the War about 500 miles of new railway lines have been constructed in Yugoslavia.

Mlle. Zenia Atanasijevitch has been elected by the Council of the University of Belgrade to a Professorship of the Faculty of Letters. She will hold the Chair of Philosophy.

Hassan Rifaat Bey, of the Egyptian Ministry of Public Instruction, and Dr. Farid Rifai, director of the Egyptian Press Bureau, will represent Egypt at the International Printing Exhibition to be held shortly in Cologne.

Colonel Charles Edward Swaine, C.B., who died on May 2, was the G.O.C. Cavalry, Egyptian Expedition, in 1882. He was present at the action of Mahuta, and took part in the capture of Mahsameh. He was also in both actions of Kassassin, the Battle of Tel-el-Kebir, the pursuit to Belbeis, and the surrender and occupation of Cairo. In 1884 and 1885 he served with the Light Camel Corps in the Nile Expedition.

Book Reviews

CHARDIN REPRINTED.

"SIR JOHN CHARDIN'S TRAVELS IN PERSIA." Edited by N. M. Penzer. With an Introduction by Brigadier-General Sir Percy Sykes. (London: The Argonaut Press. 28s. net.)

The name of Chardin, who wrote what is still one of the best books upon Persia, is very familiar to all students of Iran, and it is, therefore, all the more remarkable that this book, which is a reprint from the two-volume edition that was begun in 1720, should now have been reprinted for the first time. As Mr. Penzer states in his Preface, this two-volume edition of the "Travels" has escaped the notice of all bibliographers, largely on account of the fact, apparently, that the edition was a failure. However, amends are better late than never, and certainly this edition from the Argonaut Press is most handsome amends, for the book is worthily printed and produced, and there can be no higher praise than that when applied to Chardin's work, which we may now fairly reckon to be immortal.

It is probably superfluous to recall to any reader of THE NEAR EAST AND INDIA the details of Chardin's career. Suffice it to remind them that this traveller jeweller was born in Paris in 1643, and had performed his curious journeys (seeing Persia in the time of Abbas II. and Sulaiman III.) to the East before he settled, as a Huguenot refugee, in England in 1681. Thirty-two years later, having prospered both in business and in the study of Orientalism, he died; and there is a tablet to his memory in Westminster Abbey.

The charm of Chardin's writing, its *naiveté*, its shrewdness, its clarity, and its humour, seems even more evident in this edition than in the French. Which English reader but will follow with sympathetic absorption his duels with the rascally Nazir, the King's overseer or superintendent, who so often thwarted his plans for selling his jewels to the Shah in 1671? For in the narrative of these negotiations is preferred, incidentally but very adequately, the genius of the country of Persia, together with an account of the position of foreigners in the land of the Safavis. Even at that time, towards the end of the seventeenth century, there were disputes among foreign representatives on right of place, the French, English, and Muscovites all maintaining an individual point of view. But it was a representative of another nationality who, according to Chardin, summed up the Persian way of dealing with these foreigners' quarrels. "The *Persian* Courtiers," says Chardin, never fly into a Passion or Heat, whatever Occasion may be given them. This made a *Portugal* Ambassador say pleasantly enough, speaking of 'em, That the *Persians* never give you ill Language, nor never do you any Good." This first volume is, indeed, full of human interest, as the second volume is full of facts concerning the land and the people of Persia.

Chardin's "Travels" are, in short, almost as good as ever they were. The geographical nature of Persia has changed little since his day; nor has the method of operation of the Persian mind, which too often presents difficulties to the Occidental. How plainly but cunningly Chardin observes the Russo-Persian position, for example, when, in recounting the resolve of the Persian Court to favour the Russians before the French and English, he put into the mouth of the "first (Persian) Minister" these words:—

The Muscovite *is our neighbour, and our Friend, and the Commerce has been settled for a long time between us, and without Interruption: We send Embassadors each to the other Reciprocally almost every Year, but we hardly know the others. The Power of their Kings may be as great as it is Represented, but it is so remote from us, that it is with Difficulty we receive any News of it. It is therefore necessary to have a regard to our Neighbours at any rate.*

It may be mentioned that Sir Percy Sykes, who contributes an admirable introduction to this book, regards Chardin as the greatest of all the distinguished Europeans who visited Persia during the Safavi régime. We can imagine that few, after reading this splendidly-produced book, will dissent from that appreciation.

THE TWAIN MUST MEET.

"INDIA AND THE WEST." By F. S. Marvin. (London: Longmans. 7s. 6d.)

Mr. Marvin approaches his subject with disarming modesty. He claims no more than six months' acquaintance with India. On that, preceded by much historical study and followed by much thought, he has based the subject matter of this book. What he is trying to find is how England and India can best co-operate for the greater benefit of both parties and of the world generally, and what he is trying to do is to set out his thoughts as to how this can best be done, for the consideration of Englishmen and Indians. He finds that each party has much to learn from the other, feels that there is danger of this undoubted fact being lost sight of in the heat of political and religious conflict, and strives with the help of history, to set things in their true light.

That his object is a most desirable one there can be no doubt at all. And equally there can be no doubt that he has earnestly pursued it. What one does doubt is whether practical good is likely to come of it. To us it seems that Mr. Marvin is working in the clouds and that the results which he hopes for are either visionary or, at least, likely to be deferred for a far longer period than he contemplates. It is all very well to urge the abolition of caste, which he clearly sees is *the* stumbling block in the way. But the language which he uses in arguing this fact is hardly likely to have the least effect in the quarters where the main opposition resides. It is all very well to argue that industrialisation can be introduced into India without the lamentable accompaniments which attended the Industrial Revolution in England. Even though this is true to some extent, he hardly seems to realise how hopelessly difficult it would be to induce the Indian industrial worker to take the part required of him in the industrial Utopia imagined in this work. It is easy enough to write poetically about Indian religions cultivating a forward look. But it will be long before even a beginning can be made in this direction. Mr. Marvin's own panacea, history, pulls too strongly the other

ISLAMIC LITERATURE.

way to allow of any hope of a speedy reverse in outlook. In fact, as regards most of the themes treated, we see no sign of practical treatment, though we do very readily admit that his views may influence the few whose minds are prepared to consider them and that, in this way, indirectly something may result to bring about the result that he longs to see. For this reason we hope that the book will be widely read by such. To us his only immediately practical suggestions seem to be those arising from his consideration of the plan of education, a subject, of course, on which he is specially qualified to write. But what he says is disappointingly little and we should like to see his practical suggestions on this most important matter worked out in detail.

While we acknowledge that the ideal co-operation between India and England must ever be kept in mind, because England will have failed in her duties alike to East and West unless it comes about, we doubt greatly whether a mind trained solely on Western thought and lines and unmodified by intimate knowledge of the Indian mentality can do very much to bring the goal nearer. We are indeed inclined to hope for more help from the purely Indian side. C. S-W.

THE DAGGER FROM ALAMUT.

THE ASSASSINS." By Sir Henry Sharp. (Oliver Ainsworth). (London: Faber and Gwyer. 7s. 6d.)

This is a most readable tale of the Assassins, that curious cult which, with one fastness in Alamut, in Persia, and another in Syria, terrorised Western Asia in our Middle Ages. The events which "Oliver Ainsworth" describes, with a wealth of convincing detail and considerable insight into the orthodox Muslim mind, the mind of the Ismaili, and the character of the Crusading Christian, took place in the sixth century of the Hajira.

The fanaticism and the gruesomeness of the agents of the Assassins' doctrines are clearly described; and the "love-story," which we suppose was inevitable, happily does not prosper. But we would not spoil the novel for any reader by recapitulating its plot: suffice it to say that it is replete with thrills, with poetry, and with consistent movement. The story really has a beginning, a middle, and an end; and it was worthy of the skill in construction which has been expended on it. Would that all novels dealing with Western Asia were as pregnant with love and knowledge of the country!

It may be that Sir Henry Sharp occasionally overdoes the allegorical style of writing affected by Orientalists, that he indulges in anachronism (as when he borrows a Turkish proverb for contemporary conversation: "The dogs bark, but the caravan passes on"); but his description of the Vultures' Nest at Alamut, of the Assassins' Order, the Grand Master, the Emissaries, the Associates, and so on, and of the Mussulmans' clash with the Crusaders, alone compensate for any slight irritation that might arise from inconsiderable faults.

THE FUTURE OF PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The references that you make in your issue of April 26 to the future of Palestine "as a self-governing Arab State" and to the "Allied Declaration of November, 1918," clearly show that you are making an assumption for which there is not the least justification. The Declaration in question, issued by Viscount Allenby, expressly speaks of Syria and Mesopotamia and does not make any mention whatsoever of Palestine! The claims of the Zionists, based on the Balfour Declaration of November, 1917, were well known at the time, and they were not in any way qualified or modified by the Anglo-French Declaration of twelve months later. On the contrary, when King (then Amir) Faisal was in Paris in the spring of 1919 for the purpose of submitting the Arab claims to the Peace Conference, he wrote a letter, which was published at the time, in which he stated:—

"Our deputation here in Paris is fully acquainted with the proposals submitted yesterday by the Zionist Organisation to the Peace Conference, and we regard them as moderate and proper. We will do our best in so far as we are concerned to help them through."

According to a statement made by Mr. Churchill in the House of Commons on July 11, 1922, it was not until January 20, 1921, that the first suggestion was made by the Amir Faisal, in the course of a conversation at the Foreign Office, that Palestine was included in the area within which Great Britain undertook to support and recognise the independence of the Arabs. The British Government's point of view was then expressed, and the Amir Faisal accepted the statement that there had been no intention to include Palestine.

The allegation that the Palestinian Arabs had been promised independence was often made in the early years of the British Administration of the country, but it was so effectively—because officially—refuted that nothing more had been heard of it in recent years. It is, therefore, astonishing that the legend should have been revived in your journal, and all the more as the reference in your editorial note stands in strange contrast to the view implied in the article in the same issue on "Palestine's Trade in 1927," where the term "the Jewish National Home" seems to be used as a synonym for Palestine.—I am, etc.,

ISRAEL COHEN.

The Zionist Organisation, Central Office, 79, Great Russell Street, W.C.1., May 1.

[It was far from our intention that the words to which Mr. Israel Cohen takes exception should revive an unprofitable controversy. Both the spirit and the letter of the Mandate provide for a self-governing Palestine, and the views of King Faisal or of anyone else cannot be regarded as overriding this basic fact. We hope and believe that when the time comes for self-government, all antagonism between Arab and Jew will be merged in a common Palestinian citizenship in a State which, geographically situated within the four corners of the Arab world, may be referred to as an Arab State. The object of the Note in question was to challenge Colonel Wedgwood's attempt to induce Great Britain to commit a deliberate and formal breach of the Mandatory undertaking by some artificial postponement of the goal to which Palestine is entitled to look forward. It was written not so much because we imagined that Colonel Wedgwood would achieve his end, but because his words must inevitably react on the Arab population of Palestine to the prejudice of the Zionist cause, which we believe can be furthered better by allowing a barren controversy to rest. —ED.]

PERSONAL AND GENERAL

TO-DAY

May 10, 1928 (New Style).
April 27, 1928 (Old Style).
Dulkaada 20, 1346 A.H., of the Muslim Calendar.
Iyar 20, 5689, of the Jewish Calendar.

Lieutenant-General Sir Alfred Codrington has gone abroad for a few weeks.

Sir Willoughby and Lady Dickinson are expected back from South Africa on May 22.

Sir Prabhashanakar Pattani arrived last week at the Grand Pump Room Hotel, Bath.

Lady Ratan Tata has arrived in London from India, and is residing at 43, Park Lane, W.

Sir John and Lady Stavridi and the Misses Stavridi nave returned to 33, Lennox Gardens, from Italy.

The Maharaja of Nawanagar arrived at Marseilles in the P. and O. s.s. Rawalpindi on May 4 on his way to England.

Sir William Marris, late Governor of the United Provinces, has arrived in London, and has taken his seat as a member of the Council of the Secretary of State for India.

Lady Coghlan and Mr. Austin Coghlan have returned to England from a prolonged tour in Italy and Greece. Lady Coghlan's address is Pyrton Manor, Watlington, near Oxford.

Mr. C. Leonard Woolley will lecture to the Royal Asiatic Society, at the School of Oriental Studies, Finsbury Circus, on May 15, at 4.30 p.m., on "The Excavations at Ur, 1927-28." The lecture will be illustrated.

Under the auspices of the Central Asian Society, Wing-Commander R. M. Hill will lecture on "Experiences on the Cairo-Baghdad Air Route." The lecture, which is to be illustrated, will be delivered at the Royal United Service Institution, Whitehall, on May 16, at 5 p.m.

Mr. H. C. Luke, Colonial Secretary, Sierra Leone, has been appointed Chief Secretary to the Government of Palestine in succession to Lieutenant-Colonel G. S. Symes, who was recently appointed as Resident and Commander-in-Chief at Aden. Since 1924 Mr. Luke has been Colonial Secretary at Sierra Leone, and for four years previously was Assistant Governor in Jerusalem.

NOTES OF THE WEEK

(Continued from page 578.)

the other brought by the Roumanian Ministry of War, which claimed the restitution of the Turkish guns, captured by Roumanian troops at the siege of Plevna, that had been removed by the Turks during their occupation of Roumanian territory in the Great War. These tribunals were set up under the Peace Treaties for the purpose of deciding disputes of this nature in the application of the conditions of peace. In the case of the Hungarian Optants, before the issue had been decided and when the Tribunal had merely declared its own competence to deal with the matter, the Roumanian Government stultified the spirit of arbitration that was the essence of the Mixed Tribunal by rendering the Court inoperative. Turkey, profiting by the example, has done the same, in spite of the fact that both countries agreed in the Treaty of Lausanne to regard the decisions of the Mixed Arbitral Tribunals as final and conclusive and to ensure their enforcement in their respective territories. Roumania's action in regard to the Hungarian optants has created a European question and has exercised the Council of the League of Nations for several sessions. In the face of its failure to inculcate wisdom into the litigants in that dispute, the Council will be well advised to leave the Turco-Roumanian squabble and the guns where they are.

Great Britain and the Yaman.

It is welcome news that the British authorities in Aden have lost little time, once the two Shaikhs kidnapped by Zaidi forces had been released—consequent upon the bombing of Qataba, which we have already recorded—in conferring with representatives of the Imam Yahya with the purpose of converting the temporary truce arranged into a lasting peace. The Acting Resident at Aden left Aden on April 12 for Taiz, at the Imam Yahya's suggestion, for pourparlers, and returned on April 25. It appears that these informal negotiations were conducted with goodwill on both sides, and there appears to be some ground now for hope that a problem which has baffled solution for too many years may be settled amicably. Whether the incidental rising of the Zaraniq against the Zaidi forces between Hudaida and Sanaa had any effect upon the Imam's tractability it is impossible from this distance to state, but whatever the cause of the better spirit now apparently prevailing between the Zaidi Imam and the Aden Protectorate, the fact of its existence is one unreservedly to be welcomed. It will be fortunate indeed if the new Resident at Aden, Colonel Symes, is able to start, so to speak, with a clean slate.

Mr. Tatton-Brown, Director-General of the Egyptian Customs Administration, is leaving Alexandria for Europe on three and half months' leave of absence on June 11.

Where to stay in the East

Write for particulars of attractive offer for Advertising Hotels on this page.

BEYROUT—Hotel Metropole.
CAIRO—The National Hotel.
JAFFA—Hotel Jerusalem.
JAIPUR (Rajputana)—New Hotel.
JERUSALEM—St John's Hotel, *H. & F. Fast, Managers*

CYPRUS.

Miss Young's Camp, Troodos.

There are summer quarters, for a limited number of paying guests, on Troodos (Miss Young's) in the midst of forests, 6 406 ft. above the sea—the summer resort of the Troops and Government Officials. 20 hours from Port-Said.

Pitched in the pine forest in a lofty and secluded situation, on the upper slopes of Mount Olympus—25 minutes from the summit. Perfect climate, dry, cool and bracing air, enchanting panoramas; no mosquitoes; completely equipped with every comfort and convenience.

Troodos is 35 mile from Limassol and 45 miles from Nicosia. From both towns there are good carriage and motor roads. The summer climate is dry and healthy. The nights are often rather cold after the end of August. As regards dress, Ladies should be provided with washing skirts, as there is a good deal of red dust on the hills; white is much worn, but dust-coloured costumes are advisable. A warm woollen coat and skirt are essential. Riding and motor excursions, Tennis and croquet are the chief occupations of the Visitors. An English Club provides Newspapers, Telegrams (Reuter's) and Books. The water supply is good and there is plenty of fresh milk. Inclusive terms £3 10s. a week. *Open June 15.*

Apply to Miss Young, 38 Victoria Street, Nicosia, Cyprus

CYPRUS.

SAVOY HOTEL: Port of Famagusta.
PALACE HOTEL: Inland City of Nicosia.

THE WEEK AT HOME

London, Tuesday Morning.

Loyalty of Trade Unionists.

It appears to be taken for granted by many people that one result of the great industrial stoppage in 1926 was that the Trade Unionists would in future be determined not to allow their Unions again to dictate to them. And the Trades Disputes Act was hailed as giving to employees a freedom which hitherto they had been virtually denied.

But this psychological reasoning may have been false. For it has just been announced that in Nottinghamshire, where there was a definite split in the miners' Trade Union movement—one camp forming a new party, under Mr. Spencer, which earned the public approval of the employers, and the other camp clinging to the old Miners' Association—the men are fairly solidly preferring the old to the new love. This fact has been proved by a ballot undertaken by the T.U.C. as a sort of answer to the employers for their favouring of the new Industrial (Spencer) Union, and, indeed, no completer answer or vindication of loyalty to the T.U.C. could have been made. It would seem, therefore, that the so-called "new methods" of co-operation between masters and men are not yet wholly acceptable to the men, and that something more must be done to convince the old-fashioned type of Trade Unionist that the "new methods" are not merely a dodge of the "capitalist."

The figures against the Spencer Union have obviously come as a most unpleasant surprise to many quarters, but it is useless to ignore them. For an artificial bolstering up of essentially unpopular ideas can never provide a permanent solution of the mining trouble.

Liberal Stoicism.

No other presumption is possible than that the Liberals know their own business better than anyone else, yet the country is still wondering why with melancholy cheerfulness and academic courage they push candidate after candidate upon the altar of immolation. They themselves, however, argue that it is better to have fought and lost than never to have fought at all, for total abstinence in a particular constituency not only discourages the few remaining Liberals in that constituency, but also discourages neighbouring constituencies.

Last week, in fact, it was resolved anew to fight every election, both of the hopeless and of the possible sort, that anything less than this was simply to abandon the task of criticism of the present Government to the Labour Party.

Is this heroic, or is it folly? The cynical will be moved to think that it is mainly the result of having cash to play with—and to justify. But would the return of Mr. Lloyd George to power really imply the return of Liberalism?

Assessing Time.

In whatever direction the young man's thoughts may be turning in the spring time, the thought of older men indubitably tend towards the income-tax, towards the bewildering business of being assessed. Often enough it is impossible to arrive at the ultimate truth of things without a visit to one of the multitudinous officers of taxes, before whom one lays bare one's grievances and hopes. The experience is not always pleasant, though courtesy is preserved.

For consider the physical environment in which financial confession is made. As was stated last week at the annual meeting of the Association of Officers of Taxes, the citizen states his case standing at a counter, within earshot of all and sundry. The secrecy which as a normal desire should attend such things as salaries, marriages, births, and so on is almost entirely lacking, because the Tax Officials lack necessary facilities. It is bad enough to have to be taxed at all, but at least there should be privacy. In the present inconvenient circumstances, it must be said that the officials manage the heart-rending affair very well.

The Reading of the Bible.

It is not often nowadays that things which are taken for granted are put again to the question. One does not refer, of course, to articles of belief, but to facts.

Now Mr. Arnold Bennett, whose infallibility is not yet a thing of universal acceptance even among us half-educated people, has just startled the world by declaring that the sales of the Bible are decreasing. He has at once been contradicted, but one does not imagine that the contradiction, which in the nature of things cannot but be *ex parte*, will make much difference to him. However, the subject was referred to a day or two ago in a typical speech by Mr. Baldwin, so that everyone is discussing the matter now.

Unhappily, the modern criterion of a book's influence and popularity is the number of copies of it which are sold—a very false criterion, though one that is accepted, perhaps not unnaturally, by "enterprising" newspaper proprietors and successful novelists. But for myself I should certainly say that the Bible is less read now than it was even when Matthew Arnold noted a decrease in public study of the Book. There are very few young men and women to-day who in thirty years' time will know their Bible as their mothers and fathers know it. But this fact is possibly much more due to social change than to religious change.

Joys of Summer.

The season begins in great gaiety and promise. Opera at Covent Garden, the Academy, a Royal win in the One Thousand Guineas, sporting County Cricket—all these things hearten the mind jaded with the winter and the days of little sun. Everyone is hoping that the coming summer will compensate for past evil summers, and there appears to be a general atmosphere of freshness and jollity and content that the good things of English summer life should be fully with us again.

Nature for her part is certainly trying to pull the best out of us all.

ALTER EGO

The King and Queen of Afghanistan received representatives of the Polish Army at Warsaw. The King was presented with an aeroplane of Polish construction. Afterwards a luncheon party was given in honour of the King and Queen by M. Zaleski, the Minister of Foreign Affairs.

THE EUROPEAN ASSOCIATION.

It is satisfactory to see from the last issue of the European Association's quarterly publication that the Association is arranging to frame a considered and comprehensive statement of the views of the British community on the questions which are engaging the attention of the Statutory Commission. For it is obviously essential that the attitude of the community towards further constitutional changes should be made perfectly clear to the Commission. And the Association is the only body which is so organised as to be able to carry out this duty in an effective way. The Chambers of Commerce may be trusted to deal efficiently with the commercial and industrial aspects of the problem regarded from the European stand-point; but they are not in a position to give expression to the opinion of the community on its political aspects. In order to obtain clear ideas as to how the Europeans view the possibility of a further advance in the system of government it is necessary to consider what the Indian demand really is. It is not easy to come to a conclusion on this point because so many divergent opinions are expressed by Indian writers and speakers; so many wild and extravagant claims are made; and communal and other differences are so much in evidence. But it now seems to be more or less accepted that the Indian leaders are practically unanimous in respect of one issue. They all apparently agree that constitutional development must continue on the lines of the further extension of representative institutions with the administration in the hands of ministers responsible to elected representatives.

If, as appears to be the case, there is this large measure of agreement among the Indians there at once arises the question of what ought to be in the circumstances the attitude of the Europeans. It is often asserted by Indian journalists and politicians that the non-official Europeans are really opposed to the Reforms Scheme; and that they would like to see a reversion to the old bureaucratic system of government. But, as we pointed out recently, this is not so. Although they certainly feared that the Reforms would be unsuccessful, the Europeans loyally accepted the new Constitution when it was introduced; and they have since striven earnestly and sincerely in the Central Legislature and in the Provincial Legislatures to make it a success. And they are prepared to maintain this attitude. Indeed, at the last annual meeting of the Association in Calcutta quite recently, Mr. C. B. Chartres, the President, made it clear that the community has a very real wish to help India along the path that she seeks to travel. He further expressed the opinion that the Association ought not to be content, when submitting evidence to the Commission, to confine itself to criticism, but should try to help in the creation of a system of representative government suitable to the difficult conditions prevailing in India. He was not in a position to indicate the precise nature of the recommendations which the Association would make. But he pointed out that self-government already plays a part in the life of India, for example, in the village panchayets, the municipalities, the district boards, and to some extent in the Councils themselves. And he added that there is available a mass of evidence as to the working of these institutions which would guide the Association in forecasting the probable result of further changes.

It will be generally agreed, we think, that the Association has come to a right conclusion. At the same time the difficulties in the way of a further constitutional advance must not be lost sight of, and the Association has them clearly in mind. Similarly the magnitude and importance of the European commercial and industrial interests in India will not, we may be sure, be overlooked by the Association. In these commercial and industrial pursuits, in which practically all the Europeans in the country are engaged, the relations between Europeans and Indians are cordial and friendly. And there is no good reason why similar relations should not prevail in political life. The difficulty is that, under the name of nationalism, what is really race hatred is being preached throughout India. It is true that the communal tension between Hindus and Muhammadans might be overcome by the development of a real national feeling. But such a feeling clearly cannot be based, as the extreme party seek to base it, on hatred, whether of the British or of any other race. These extremists refuse to admit the right of Great Britain to fulfil its obligations under the Government of India Act; and they decline to recognise any Royal Commission however constituted. From them the European Association differs, of course, radically as the President told the Lahore Branch recently. But it does not believe that their extreme and impracticable opinions are shared by the people generally. On the contrary it is convinced that the great majority of thinking Indians who are concerned for the welfare of their country agree that the maintenance of the British connexion is vital to its peace and prosperity. But among these there is undoubtedly a strong wish to see India make steady and ordered progress on the road to self-government within the Empire; and with this natural aspiration the Europeans are in sympathy. They are prepared therefore, as we have said, to support further constitutional changes with this end in view subject, of course, to such safeguards as may be deemed to be necessary for the protection of their rights as individuals, and of their great material interests in the country.

CURRENT TOPICS.

Sir Walter Willson.

The retirement from India of Sir Walter Willson leaves a most serious gap in the ranks of those European non-officials who interest themselves in public affairs in India. For his knowledge and experience of Indian public life, and his acquaintance with all recent central legislation, must certainly be as great as, if indeed not greater than, that possessed by any other non-official European in the country. He has united a long and successful business career in India with a no less successful career in public life. In 1922 he retired from Messrs. Turner, Morrison and Co., Ltd., an eminent firm of shipowners and merchants with whom he had been for many years, and of whose Calcutta establishment he was then acting chief. For some time before he left the firm he served in numerous public capacities. He was, for example, a member of the Legislative Council of Bihar and Orissa, where he represented the Indian Mining Association. He was also a member of the Corporation of Calcutta, his constituency being the Bengal Chamber of Commerce. His first experience in the Assembly was as a representative of the Bengal European constituency, in which capacity he served for two years. This was in the first Assembly which was constituted in 1920, and in which the Associated Chambers of Commerce were unrepresented. In the second Assembly the Chambers were given a nominated seat; and at their unanimous request Mr. Willson—as he then was—consented to be their member. He has held the seat until now and he has been admittedly a conspicuous success. His business training gave him an intimate and extensive knowledge of the interests that he was called upon to represent. He understood how European commercial men regarded public questions; and he had no difficulty in giving accurate and forcible expression to their views. Moreover, he never allowed himself to forget his constituency. On the contrary, he consistently took extraordinary pains to keep the Chambers fully informed of what was going on in the Assembly, and to invite their opinions on all matters affecting their interests. He made a point of attending their annual conferences at which he was always a welcome speaker; and when the Assembly was not in session he visited the various Chambers and discussed important questions with them. He quickly realised that to enable him to keep in close touch with the Chambers a secretariat, on, of course, a small scale, was essential. This office he organised without delay, and he maintained it for some time at his own cost. It has now been established by the Chambers on a permanent basis.

In the Assembly Sir Walter Willson was known as a hard-working, practical member who could always be trusted to be well-acquainted with any subject on which he spoke. A practised and ready debater, he was listened to with attention and respect. By the Indian members he was liked and esteemed, although he never hesitated to put forward the European point of view. In a recent issue we referred to his speech at the last annual meeting of the Associated Chambers in which he reviewed the political situation from the European stand-point. He is firmly and, as we think, rightly convinced that it is essential at the present time for European business men in India to take an active part in public affairs. He has lost no opportunity of pressing this conviction upon the Chambers, and his example has given very great weight to his words.

Harnessing the Elements.

The decision of the Government of India to transfer the headquarters of the Meteorological Department from Simla to Poona has now been carried out. The headquarters have been at Simla since 1904, but the Department has existed as an all-India organisation since 1875. Before the meteorological work devolved on the local Governments; and in Bengal, where storms and depressions and cyclones are so much in evidence, it was naturally regarded with considerable interest. Henry Blanford was in charge of the Bengal work in 1875, and he was so successful that the Government of India asked him to organise an all-India Department. This he did, establishing a branch office at Simla, where much of the work was done, but leaving the administrative headquarters at Calcutta. In 1887 he was succeeded, as Meteorological Reporter, by Sir John Eliot, under whose able direction the activities of the Department were greatly enlarged, and who was followed by Sir Gilbert Walker in 1904, when the headquarters were transferred to Simla. Mr. J. H. Field succeeded Sir Gilbert Walker in 1924, and in March of this year he retired, Dr. C. W. D. Normand taking charge. Sir John Eliot, in addition to reorganising and enlarging the Department, was mainly responsible for the establishment of the Observatory at Kodaikanal; and he also set up observatories in Persia. The purely scientific activities of the Department were largely developed by Sir Gilbert Walker, who is an eminent mathematician. Mr. Field is well known as the originator of upper-air research in India; and he also established the Observatory at Agra. And Dr. Normand, who has fifteen years' experience of Indian meteorology, has devoted special attention to weather forecasting.

One of the important duties of the Department has always been the publication of cyclone warnings for the Bay of Bengal. When retrenchment in the public services became unavoidable in 1922, this duty was transferred to Simla; but the shipping interests concerned in the Bay of Bengal objected, with the result that it was last year transferred back to Calcutta. Another equally important duty undertaken by the Department is the publication of similar warnings in respect of the Arabian Sea. It also gives meteorological assistance on an extensive scale to aviation and wireless. The removal to Poona will, it is anticipated, be followed by an active programme of upper-air investigation, with the object of aiding not only Indian, but also European, flying, and of promoting accuracy in weather forecasting. Meteorological work has always been viewed with sympathy by the commercial community in India, and the need for a reduction in expenditure on the Department was greatly regretted. So much so that the Associated Chambers of Commerce of India and Ceylon, at their annual meeting in 1925, unanimously passed a resolution urging the Government of India to make more adequate financial provision for the Department. It is satisfactory to see that the justice of this recommendation has not been altogether unrecognised. The superior staff of the Department has been strengthened; the Bay of Bengal storm-warnings are now again issued from Calcutta; a forecasting centre for aviation has been established at Karachi; and it may be assumed that the general work of the department, as well as its special activities, will be considerably extended and developed at Poona.

THE INDIAN STATES COMMITTEE.

The Maharaja Jam Saheb of Nawangar has arrived in London. As announced in THE NEAR EAST AND INDIA of April 26, he is the first of the special delegation of ruling Princes who will be in England this summer in connexion with the Indian States Committee. The Chairman, Sir Harcourt Butler, and the members of the Committee, Professor W. C. Holdsworth, K.C., and Mr. Sidney Peel, returned last week.

The delegation comprises the Chancellor of the Chamber of Princes (the Maharaja of Patiala), the Maharaja of Kashmir, the Nawab of Bhopal, and the Maharao of Cutch. Several other Indian Princes, as previously stated, will be in this country at the same time and available for consultation, although they will not form part of the deputation.

Sir Leslie Scott, K.C., M.P., and Professor L. F. Rushbrook Williams, of the Patiala State, who are assisting the Princes in the preparation of their case for presentation to the Committee, also travelled from India by the same boat.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Politics

Calcutta, April 19.

There is less political news this week than there has been at any time since Sir John Simon and his colleagues arrived in India. The *Statesman*, having space to spare yesterday, reproduced the whole of an article in the *New Statesman* on the subject of the latter's strictures on the attitude of so many Indian politicians with regard to the Commission's task, strictures that have provoked an unusual amount of adverse criticism throughout the Indian Nationalist Press. The *New Statesman* is not to be bullied into withdrawing its strictures, and, indeed, repeats them, and that is all to the good. Words such as the following cannot but have their effect: ". . . we can only regard demands for 'independence' or 'Dominion Status' as mere rhetorical insincerities. We do not insult India by referring to these obvious facts. It is they who insult us by assuming that we may be bullied or persuaded into shutting our eyes to them." Such words must have their effect, especially when they are given men to read a day or two after they have read the cablegram giving Sir John Simon's words on reaching home, such words as these: "Many Indian politicians feel in their hearts that the boycott is not a political instrument. You cannot take the smallest step towards promoting responsible government in India by this means. I am convinced that some of those who allowed themselves to be rushed into the boycott feel this deeply, and our proposal that Indian Committees should work with us on equal terms in a joint conference still affords an opportunity for responsible Indian statesmen to join in the work of constructing the future Constitution of India."

Of small indications of how things are moving these may be taken. Mr. P. Mukherjee, presiding at the annual general meeting of the Punjab Chamber of Commerce, said that as a rule they did not participate in politics, but they felt that the formation of recommendations to the Statutory Commission was intimately connected with their interests. "It is, to my mind," Mr. Mukherjee added, "unwise for us, therefore, to cultivate the barren sands of non-co-operation." On the other hand, Pandit Jawahirlal Nehru, presiding over the Punjab Political Conference, advocated the cultivation of a revolutionary outlook. By "revolutionary" he meant some form of intensive non-co-operation without violence. The real problem before them was how to exercise communalism. It was really a creation of the educated classes in search of office and employment. They must begin to act on live economic issues.

His Highness the Maharaja of Kashmir, at a State banquet at Srinagar, speaking of the future of the Indian States, said, "It is not to be wondered that, while the economic and political unification of India is coming about so rapidly, the Princes should desire a clear definition of their rights and an admission of their interests. They feel that decisions have been taken on important matters jointly affecting British India and the Indian States, in which not only were their interests overlooked, but their position as secured by treaties and solemn pledges had been seriously affected. No ruler doubts the determination of the British Government to observe the treaties in spirit and in letter. On many solemn occasions British sovereigns and their representatives have pledged themselves to see that these instruments, in which are enshrined our rights, will be faithfully respected."

Royal Commission on Agriculture.

Lord Irwin's work as Viceroy in India was fittingly begun by the appointment of a Royal Commission on Agriculture. It was reported on Tuesday that the Commission's report, which it is believed is unanimous, was signed at Mahabaleshwar on Saturday. It is not of a strikingly revolutionary character, according to report, but contains sound practical suggestions showing the cultivators how to dig more money out of the soil, and how to meet the vagaries of the monsoons. There are said to be six hundred recommendations of an all-Indian character, laying down the future agricultural policy of India. There is no field in which there is more to be done than that of Indian agriculture. In the matter of animal husbandry alone there is work for generations. One can only hope that there may be no unnecessary delay in the work of carrying out the Commission's recommendations.

Jungle Tribes.

A queerer quest can hardly be imagined than one which has just brought a famous German scientist, Dr. Baron von Eickstedt, and Baroness von Eickstedt to Calcutta. They have spent a year and a half studying and measuring the skulls of jungle tribes such as the *Weddas* in Ceylon, the *Soras* in the Ganjam district, the *Palaung* in the Shan States, and the *Engis* in the Little Andaman Islands. The *Weddas* are a dying race, only about a hundred survivors remaining. For months on end the two anthropologists lived among the pigmy tribes in the Little Andaman group of islands. These people have a deep-rooted aversion to strangers, but the Baron and Baroness succeeded in establishing friendly relations with the tribe. Their work was made doubly difficult by the fact that they were among a people whose language they did not understand, and whose feelings were difficult to analyse. It was essential that the pigmies should be kept in good humour, for otherwise the anthropologists would have had to leave the islands with their work still unfinished. They appear to have succeeded. The investigation is to be continued in Orissa. The resulting book should be a valuable contribution to anthropological research.

BOMBAY LETTER.

(From Our Own Correspondent.)

Social Service.

Bombay, April 21.

The need for co-ordination among the several movements for social progress in the country, instead of each movement developing as a sort of revolt against the existing order of things, was emphasised by Mr. K. Natarajan in his presidential address before the Bombay Social Service Conference. As an example he cited the women's movement which, he pointed out, was characterised by a feeling of bitterness against men as the authors of all the troubles of women. He laid stress on the evolutionary progress of society as being more effective and enduring than the method of revolution and suggested that students of the School of Sociology of the University of Bombay should be afforded opportunities to acquire practical experience of the problems they were studying. Numerous resolutions covering the various social problems were passed, the most important being those dealing with prohibition, prostitution and international traffic. The conference consisted of social workers drawn from every community, who co-operated without the least effort in the proceedings.

Education and Agriculture.

The Linlithgow Commission on Indian Agriculture have signed their report, which will be published towards the end of next month. The most valuable portions of the report, from the point of view of the development of agriculture in this country, are those dealing with research, village uplift, agricultural demonstration, financing the agriculturist and the consolidation of holdings. I have already emphasised in my last letter that the future of agriculture in this country depends on the uplift of the masses, which can only be achieved through education and should, therefore, come first in any scheme for the development of agriculture in this country. The question of financing the agriculturist is a very difficult one and has not been effectively solved by Government to the present day. During the floods in Gujarat I visited the

Digitized by Google

affected areas and I found that the arrangements for the granting of loans by Government was so complicated that the cultivator, bewildered by the numerous conditions, preferred to go to the moneylender for loans at a rate varying from 20 to 33⅓ per cent. Even this complicated system of loans by Government did not come into operation until very late and required substantial security from a man, whose house had been washed away, whose corn had been destroyed and whose cattle had been lost in the floods. The much-abused *sowcar* (moneylender) was alone willing to lend money and his loans were welcome even at the exorbitant rate that he demanded. There can be no gainsaying the fact that private agencies had penetrated the remotest villages, many of which were for several days under water, while Government were still formulating plans for reaching these inaccessible villages. The truth is that Government machinery had just broken down when it was most needed, and yet this system, which could not weather a crisis, has been patched up and restored as if it were some sacred monument in the hope that Gujarat will not be visited by another such cyclonic monsoon. It will be interesting to see what administrative changes the Commission will propose in order to remedy these serious defects.

Marketing and Cottage Industries.

The problems of marketing and cottage industries were, it is stated, the most difficult with which the Commission were faced in view of the fact that very little, or no, evidence was submitted on these questions to them. Marketing as such has not been seriously tried in India and it is believed that the Commission will recommend the appointment of special officers to organise and systematise marketing methods for the different crops all over India. The Commission seems to be of opinion that the cultivator is greatly handicapped by the lack of adequate facilities for selling his produce at the highest price obtainable. As regards cottage industries, again, the problem is a complicated one. The agriculturist is busy for only four months in the year and in the irrigated areas for six months with his work of cultivation. For the remaining eight months he is idle and has to live on the yield of the land, which is, more often than not, insufficient to maintain him and his family through the year. It was in order to meet this need that Mr. Gandhi started the *charkha* (spinning wheel) movement, which has taken root in some of the villages of Gujarat, where the villagers are neatly clad in homespun. The introduction of cottage industries on a large scale will go a long way to relieve the agriculturist from his present predicament. It will find employment for him during the slack months and the surplus of man power on land will gradually be absorbed by these industries. There can be nothing startling about agricultural reform and development, but it will give a tremendous impetus to progress and prosperity if a regular system is evolved.

Industrial Disputes.

From the agricultural we turn to the industrial problem. India is at present being agitated by a series of industrial disputes which are growing steadily. An example is the cotton mill industry of Bombay, strikes in which have become a chronic feature. During the last week the situation has developed into a serious crisis and the prospects of a general strike are not very far from realisation. The complaint is not an unusual one. The management is attempting to introduce new methods involving a reduction in labour and the workers are threatening to go on strike if some of them are sent away. It is quite clear that the workers are being incited to make exorbitant demands by an irresponsible group of leaders who seem bent on organising a general strike. The Textile Labour Union, which represents the moderate section, seems bewildered by the tactics of the Left Wingers and the situation is far from showing signs of improvement. The workers are wavering from one set of leaders to another and it is difficult to say whose counsels will prevail.

THE MANAGING AGENCY SYSTEM.

(From a Correspondent.)

The movement towards combinations and amalgamations in industry in this country has drawn attention anew to the Indian system whereby a group of joint-stock companies are often managed by one firm or by another joint-stock company. It is the exception in India for companies to be managed otherwise than on this system, which works well in practice. The Indian Companies law was consolidated and amended in 1912-13, when the advantages and disadvantages of the system were investigated. Following the English law, neither the previous Indian Act of 1882, nor the consolidating Bill, contained any provision requiring a company to have individual persons as directors. It was, however, suggested in the course of the discussion on the Bill that, in view of the existence of the managing agency system, the new law ought to require every company to have a director or directors. As a matter of convenience, this proposed provision, which was adopted by the Legislature, was not inserted in the consolidating Bill. It was considered separately and was added by an amending Act, which became operative on the same date as the larger Act. In addition to providing for every company to have a director or directors, the amending Act made two further changes in the law. The first of these was that interested directors were required to disclose their interests in contracts to the other directors; and, in the case of contracts appointing managing agents, to the shareholders. The second provision was that in the case of contracts by the agents of a company (other than a private company), in which the company is an undisclosed principal, a memorandum of the terms of the contract were to be communicated to the company.

The enforcement of these new provisions necessitated certain changes in the management of then existing companies. These were carried out and the system has since continued to work smoothly and without difficulty. When a new company is launched it is customary for the issue to be made by the managing agency firm; and if the firm is of good standing and substantial reputation an appeal to the public is seldom necessary. In lieu of a prospectus the managing agents publish a statement, containing the usual particulars, and receive subscriptions from their associates and friends. It is quite the common practice for one agency firm to manage a number of companies. These may be concerned with any of the industries that are carried on in the province or, it may be, in other provinces. If the agency firm is located in Calcutta, for example, it may act as agents for several jute mills companies in the neighbourhood, and for companies owning and working tea estates in Bengal or in Assam, and for companies owning and working coal mines in Bengal or in the province of Bihar and Orissa. Then the firm may have, in addition, companies manufacturing miscellaneous products, for example, flour, oil, paint, ropes, etc. In Bombay, Madras, Rangoon, Karachi and elsewhere in India the practice is similar. The system is perhaps open to criticism, inasmuch as it leads to a complexity of interests being made subject to a single control. But on the other hand this is often an advantage. Indian industries are in an early stage of their development, and many of them might not have been started at all but for the existence of the managing agency system. All industries are liable to periods of depression and those in India are no exception to the rule. And practical experience has shown that at such times many of the weaker companies would have been unable to carry on but for their managing agents who have helped them either by direct advances or by guaranteeing bank advances.

The actual working system which a managing agency firm follows may not be without interest. It is the common practice for an agency firm to have, either as partners or departmental managers, certain specialists in the various lines of business with which the firm is chiefly concerned. The partner, or manager, who specialises in, say, tea, will represent the firm—generally as chairman—

Digitized by Google

on the Boards of all the tea companies that are in the agency. Similarly each of the other partners or managers takes charge of a group of companies. The result, broadly stated, is that the general policy governing sales and purchases, in fact the whole organisation, becomes identical for each group of companies. Not only does this collective administration ensure identity of interests, policy and control. It also means that the overhead charges in respect of general management, accounts, secretarial and clerical work, purchases, sales, etc., are divided *pro rata* to the common benefit of the group. Managing agents are generally remunerated by a monthly salary in addition to a percentage of net trading profits; and such remuneration includes all head-office administration and staff. Frequently, but not necessarily, the agents hold a controlling interest in each of the companies that they manage. And they are, as a rule, protected by a managing agency agreement which ensures continuity of interest and tenure of management for a period of years. The Calcutta Jute Mills have been mentioned in the Press recently in connexion with a scheme for the sale and purchase of their shares in the London market. They constitute one of the principal manufacturing industries in India, and they are a striking example of what can be accomplished by the managing agency system. It seems to be obvious that a system which can produce such a result must have many points in its favour. It is well, perhaps, to add that the managing agency system is practised by Indian as well as by European merchants. The bulk of the Calcutta jute mills, and a large majority of the tea manufacturing concerns in Bengal and Assam, are under European control. But in Bombay, Calcutta, and all the other large mercantile and industries centres numbers of Indian managing agency firms are in existence, and many of them are working successfully. In the Bombay cotton industry Indian firms have, of course, a largely preponderating share.

INDIA IN PARLIAMENT.

By Sir Frank Nelson, M.P.

One of the most interesting and significant features of the Simon Commission's recent tour in India was the warmth and evident sincerity of the welcome accorded by the representatives of the depressed classes at every centre visited. Those of us who were in India at the time of the Prince of Wales' visit are reminded of the fact that the most striking spectacle, and certainly the most genuine demonstration of enthusiasm, on that occasion was provided by H.R.H.'s reception by the same people at Delhi. Few indeed, of H.R.H.'s many generous and impulsive acts during that visit caused those responsible for his safety greater anxiety, and yet none, I bid fair to say, was more fruitful of real and lasting results.

An Indian judge once summed up in a few words some of the worst mischief done by the caste system as "physically, by narrowing the circle of choice in marriage, intellectually, by cramping the energies, and morally, by destroying mutual confidence and habits of co-operation." But a far more glaring evil is the condition of those constituting what are generally described as either the "depressed classes" or "untouchables." Neither term is capable of very precise definition and all recent estimates of their number must be accepted with reserve. The figures quoted by Lord Winterton in reply to questions in the House of Commons last week are probably the closest approximation. "The Government of India inform me," the Under-Secretary for India stated, "that the latest census returns indicate 43 millions as the number of members of the so-called depressed classes, and that from information provided in provincial educational reports they estimate that, of these, some 29 millions are 'untouchables.'"

As I have previously remarked in this column, the religious beliefs and social customs that mould and govern the lives of the vast majority of the peoples of India are, to an extent almost inconceivable to the Western mind, the same to-day as they were two thousand years ago. These 43 million low-caste or no-caste people are still restricted to menial occupations of the lowest and most unclean kind. They are strictly segregated from the rest of the community. They can only dwell within their own quarter. They can only deal in particular bazaars. They are not allowed to draw water from any wells but those assigned to them.

As the author of one of the best studies of modern India reminds us: "These are not conditions which existed thousands or even hundreds of years ago. They exist to-day all over India, though in Central and Southern India, and in the Madras Presidency in particular, more than elsewhere. They are a blot on Hinduism and the civilisation which it has produced, and hard indeed to reconcile with the political aspirations of educated Indians who excuse or justify such system, and yet contend that India is ripe for the most democratic institutions. It rests with the Indians themselves to remove that reproach, for it impinges on the domain of religion and is therefore held to lie beyond the range of Government action."

Although orthodox Hinduism still opposes to any reform the *vis inertiæ* of long-descended tradition, and the British Administration, while it has never recognised, yet has in practice to tolerate a doctrine so fundamentally opposed to democratic principles and to self-determination, Sir John Simon's visit and the recent conference at Delhi alike testify to the growth of an organised movement among the depressed classes themselves to better their conditions and to secure some recognition of their right to live as self-respecting human beings. They have now leaders of their own who have learnt the value of organisation for the ventilation of their grievances, whilst they have obtained some measure of representation under the Reformed Constitution.

The penalty, or one of the penalties, of public life is the free discussion—by those who for the most part know nothing of the subject, of the past, present and future of men who figure in the public eye.

I am impelled to moralise thus ponderously—for I am continually being told that Sir Basil Blackett—possibly the greatest of all Indian Finance Members—is to take up Parliamentary life.

This may be so—and if such a prophesy does indeed fructify, the House of Commons is the gainer.

Personally, unless Government break virtually all precedent, and give him immediate office, I should view Sir Basil's incursion into politics as a deplorable waste of a very brilliant brain. That safe seats are not so easily found is another consideration to bear in mind, and when they do occur are seldom, if ever, bestowed on comparatively young men (I have one recent instance of this very definitely in my mind as I write, viz., Marylebone), and generally I cannot visualise the former Finance Member of the Government of India as a back-bencher—with perhaps one opportunity in the year to spend on the subject he knows best (Indian Finance) and that to a House of, perhaps, 40 members.

It is sad but true (and I know of no alternative procedure) that many men with life-times spent in India and authorities in specialised subjects, retire in the prime of their intellectual powers, and their services are more or less lost to the country they have served so well.

After a brief hearing of the case of Kazi Bazler Rahaman, the Muslim who is charged with the murder on April 20 of Mr. G. H. W. Davies, District Magistrate of Chittagong, the accused has been placed under medical observation. A plea of insanity has been entered on his behalf.

The Rockefeller Foundation has made a generous offer to construct a building in Calcutta for a Central Institute of Public Health and Medical Research, to be maintained by funds supplied by the Government of India. This proposal, which is accompanied by certain suggestions, is now under consideration, together with the Fletcher Report, which, as already stated, makes notable proposals for Indian medical research.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Progress in Cyprus.

Among regions in the Near East which have come more particularly to the forefront in recent years owing to their economic potentialities Cyprus takes an important place. A succinct survey of the progress that is being made as well as of the problems which the authorities still have to solve in their task of ensuring the development of the Island was given at the opening of the Legislative Council by the Governor, Sir Ronald Storrs, an extensive report of whose speech will be found elsewhere in these columns. Last year will probably come to be considered as in some respects a turning point in the history of the Island. It was marked by a great improvement in the trade returns, and by the development in Great Britain of a much more substantial market for Cypriot produce, and further by the expansion of the tourist traffic to the Island in regard to which considerable hopes are based. Sir Ronald Storrs indicated some of the steps which are being taken to cater for the tourists, such as the erection of hotels in Nicosia and Prodomos, and legislation facilitating the introduction of visitors' motor cars. Of agricultural developments during the year, to which reference was made by the Governor, mention may be made of the increased production of tobacco, silk, and citrus fruit. The figures for tobacco are very striking, the yield being 141,302 okes as compared with 56,725 okes for 1926. To improve the standard of quality of the cigarette tobacco grown in the Island the Government engaged at the beginning of last year an expert from Mytilene. The production of silk continued to progress, the yield of cocoons being 205,000 okes as compared with 180,000 in 1926, while the progress in citrus fruit cultivation can be gathered from the fact that the export of oranges in 1927 totalled nearly 21 millions as compared with about 14 millions in 1926. The orange, it may be pointed out, is one of the chief hopes of Cyprus agriculture, as it has been established that the Island can produce fruit of a quality equal to that of Palestine.

Development Work in Cyprus.

A particularly interesting passage in Sir Ronald Storrs' speech was his reference to the prospect of a loan of over £500,000. The loan is required for port development, a water supply scheme, and a comprehensive road programme which will meet one of the outstanding needs of the Island. It is obvious that until recently it would have been a difficult matter to have negotiated a loan for the Island on reasonable terms, and the fact that this development is now possible is the plainest possible indication of the measure of the advance which has been made. The Governor dealt in some detail with future developments, and made it abundantly clear that the well-being of the agricultural community is to receive the fullest attention on the part of the Government. In this connexion a departure of special interest to which he referred is a scheme for the extension of the use of artificial fertilisers in the Island.

Near East Loans.

During the past week progress is reported to have been made in the Paris negotiations for a Roumanian loan. Before there could be a loan it was necessary to bring about a settlement in regard to Roumania's pre-War loans, and it is understood that the negotiations over this matter have been practically finished. The amount of the loan will be about £12,000,000, but it is not yet known how much will be issued in France and how much in the United States. France has been desirous, it appears, of obtaining German participation in the loan, but in view of Roumania's attitude in regard to the German part of the 1913 loan it seems that this development is out of the question. While Paris is occupied with the Roumanian Loan London will be similarly engaged over the Yugoslav Loan, negotiations in regard to which are due to begin this week following the arrival here of the Yugoslav Minister of Finance. Like the Roumanian loan, this loan is for the purpose of stabilising the currency, and it is proposed to devote a large part of both loans to works of public utility.

Egypt and the Cotton Position.

It was pointed out in these columns recently that the surprising improvement in Palestine trade revealed in the figures for 1927 was due to the effect of the world trade improvement on neighbouring markets, particularly Egypt which once again became an important outlet for Palestinian produce owing to the change in the cotton situation. As a matter of fact, if the change in the outlook in Palestine is striking the rapid recovery that took place in Egypt is equally surprising, and adds one further testimony to the astonishing recuperative power that Egypt has invariably displayed. It is this factor in her recent economic history that makes the effects of crises which would be serious for other countries of only passing incidence. In 1927, however, the change in the outlook, as was indicated by Mr. Carver in his presidential address at the recent meeting of the British Chamber of Commerce of Egypt was due in some measure to uncontrollable factors. For one thing, there were the Mississippi floods; then the anxiety regarding the Nile water supplies was relieved; and finally, there

was the relative prosperity of the Egyptian section of the spinning trade in Great Britain. Of these factors the most important was, of course, the first, and its result was that Egypt was able to dispose of her cotton crop at about 40 per cent. above the 1926 prices. Hence the speedy return of prosperity to the country and the renewed development of purchasing power, the effect of which, as has been pointed out, has been of such importance for Palestine. For the current year, provided that no unforeseen factors intervene, it appears certain that this prosperity will continue. The tourist season has been exceedingly good, and the smaller crop from the Sudan combined with the steady revival of trade which must in the end affect the cotton as well as other industries, suggests that Egypt may confidently look to receive at least as much this year for its cotton as in 1927 with the result that in that part of the Near East which comes under the trade orbit of Egypt a period of satisfactory commercial conditions may be anticipated.

New Home for the Fair?

It appears probable that before very long the White City will know the British Industries Fair no more. The Underground Railway Company has under contemplation a scheme for making use of the site of the Earl's Court Exhibition for the construction of an exhibition hall which can only be described as of a vast character seeing that the ground floor is to be large enough to take in the whole of the Fair as it is to-day. The authorities are understood to be willing to make the change from the White City with which they have an arrangement until 1930, so so that after that year, provided the plan is carried through (and it seems certain that it will be), the Fair will have a new habitation, as it is understood that the building can be constructed by the spring of 1931. Thus one more will be added to the lengthy list of the homes of the Fair, of which up to date the White City has been by far the most convenient. The rapid extension of the Fair is, however, beginning to tax the resources of the White City and next year an additional building there is to be brought into use. Of course, it is too late now, but one cannot help wondering why the Wembley Exhibition buildings were not utilised, as was suggested at the time, for a permanent home for the Fair.

Suez Canal Traffic.

The development of the Suez Canal traffic during the first two months of this year was continued in March, and the figures of transits and tonnage for the first quarter constitute a record. The number of transits for the first three months of this year was 1,499 as compared with 1,383 for the same period in 1927 and 1,295 for 1926. The net tonnage was 7,853,479 as against 7,284,670 for 1927 and 6,755,596 for 1926. As regards merchandise the figures were 7,977,000 tons as against 7,164,000 for 1927 and 6,777,000 for 1926. These figures throw a most encouraging light on the question whether trade is tending steadily to revive, and it may be hoped that the indications they give in that respect will be reflected before long in a recovery in some of the depressed industries in this country.

COMMENTATOR.

EUROPEAN RECONSTRUCTION AND THE LEAGUE.

The important work accomplished by the League of Nations in furthering reconstruction in Central Europe is discussed in an article in the Monthly Review of the Anglo-International Bank, Ltd., from which we give the following extracts :—

It is impossible within the limits of this article to give a detailed account of the various measures undertaken by the Financial Committee for the restoration of normal economic conditions in Central Europe. In every case, even if the methods have varied, one policy has guided all its actions : how best to help a nation not only to extricate itself from its financial difficulties but also to lay the foundations for a permanent economic recovery.

The Greek Government first sought the aid of the League in 1923 on behalf of the million and a half refugees from Asia Minor. The formidable task of settling this vast army on the land was accomplished by the aid of the Refugee Loan of 1924. Encouraged by the success of this effort, the Greek Government addressed a second appeal to the League in March, 1927, and after a careful consideration of the whole situation, a further loan of 9 millions sterling was sanctioned, of which 3 million pounds were assigned to the refugees, 3 millions to the budget, and 3 millions to the repayment by the State of part of its debt to the National Bank in order to facilitate the stabilisation of the currency. A special provision was also made for the establishment of a new bank of issue. As a result of these measures a solid foundation has been laid for the normal economic development of the country.

A similar process has taken place in Bulgaria, where a refugee problem of much the same nature called for immediate solution. The first appeal to the League was made in May, 1926, and in June of the same year a scheme was approved for a refugee loan of 2¼ million pounds sterling to be assigned to the settlement on the land of the 120,000 Bulgarian refugees from the provinces lost in the Great War. The loan was issued in December, 1926, and a Commissioner of the League was appointed as Controller. As in the case of Greece, this first loan was followed by an application from the Bulgarian Government, in September, 1927, for further financial assistance for the stabilisation of the State finances and of the currency. On this occasion the negotiations, which began in December of last year, were unduly protracted owing to the Bulgarian Government's objection to converting the National Bank into an independent institution. Finally, however, a compromise was reached, and a loan of 4½ million pounds was sanctioned, of which 1½ millions are destined for the National Bank, approximately 1 million for the payment of budget arrears, and 1¼ millions for railway and transport construction. Similarly, in March, 1927, after an investigation of her economic and financial situation by representatives of the Finance Committee, Esthonia raised a loan of 1,350,000 pounds sterling for the reconstruction of her national bank and for the creation of a State Mortgage Bank. At the present moment negotiations are pending for the adoption of a financial reconstruction scheme for Portugal.

This brief outline of the activities of the Financial Committee gives only a faint idea of the vast amount of spade work that has been accomplished. The results of this work, however, are patent to every observer. With the single exception of Roumania, the currencies of every State in Central and South-Eastern Europe have been stabilised or are in process of being stabilised. Budgets have been brought into equilibrium, and solid foundations have been laid for a sound financial administration. While it is true that the so-called League of Nations' reconstruction schemes have been applied only to the smaller nations, chiefly those which had suffered most severely from the War, the Financial Committee has been largely instrumental through its advice and recommendations in securing currency stabilisation in other countries. Indeed, certain of the so-called victorious nations might have been in a far stronger financial position to-day if they had not been too proud to avail themselves of the use of the remarkable financial machinery which the League provides in the form of the Financial Committee.

So far from increasing the rates for loans, the hall-mark of the League has tended to reduce rates and in some cases has made loans possible where they could not have been obtained elsewhere. It should not be forgotten that the influx of American money which, in the form of private loans, has poured into the Succession States during the last three years, would never have been possible without the preliminary groundwork of the Financial Committee and without the confidence which that work has inspired.

Engineering Topics.

By G. B. B.

One of the rarest of events is the explosion of a steam wagon boiler. I think I have mentioned before in the columns of THE NEAR EAST AND INDIA that British steam wagons are admittedly without an equal in the world, and one of the factors which has led to their occupancy of an unrivalled position is the extraordinary care shown in their construction. It was, therefore, with something of a shock that one read, recently, of the explosion of a steam wagon boiler at Blackburn. Comment was reserved until the result of the inquiry, which was at once put in hand, was heard. The report contains severe strictures on the owners of the wagon, and the design and construction of the boiler would appear to have been as perfect as that type of British product always is. The Commissioners give the considered opinion that the prime cause of the explosion was, in their view, the weakness of the material caused by corrosion and consequent deterioration. There is a further finding to the effect that they cannot admit a contention that this deterioration was not such as could have been ascertained with ordinary care and intelligent supervision. They added that the gradual waste of metal caused in the grooving at the bottom flange of the firebox should have been known not only to the fireman but to the owner of the vehicle and his inspection staff, and dealt with as a serious defect necessitating the dropping and the internal inspection of the firebox. Every owner knows, or should know, what ought to be done in such a case and the Commissioners say that the proper remedies should have been applied at once. It is pleasing to know that the boiler itself was not at fault in any way, either through bad design, bad workmanship or faulty material.

A Veteran Engineer.

Mr. Henry Davey, who died recently at the age of 85, was one of the best-known of the old school of engineers, and the story of his life, if given in full, would be full of epic stories of problems solved and difficulties overcome. He will be best remembered, perhaps, in connection with the differential pumping engine, although his improvements in the gear of, and in compounding, the Cornish engine, run it close. He invented a "Safety Motor" for farmers and dairy use which consisted of a small cast-iron boiler and a condenser. The boiler supplied steam to a small steam engine at atmospheric pressure, and the engine was consequently operated entirely on the vacuum. This device would, no doubt, have met with a ready sale, but unfortunately the small internal combustion engine made its appearance, and the boiler with its fire and smoke and steam stood no chance against the neat and compact petrol tin.

A Giant Crane.

It is interesting to note that the Great Western Railway have provided a floating crane, of 125 tons, which can be sent, as and when necessary, to any South Wales port. Previously the most powerful crane in South Wales had a capacity of 70 tons, but its proportions are quite dwarfed by those of the new monster in which the height of the main lift blocks is about 85 feet above the deck of the pontoon which is 83 feet long by 47 feet broad and 9ft. deep. The Great Western Railway seems to be doing all it can for the well-being of South Wales and its industries.

A Deep Water Jetty.

I have just been reading the admirable paper given by Messrs. Faber and Taylor at the Civils, on the deep water jetty built for the Associated Portland Cement Manufacturers at Bevan's Cement Works, Northfleet, Kent. Possibly the most illuminating part of the paper was that which dealt with the rapid hardening cement, known as "Ferrocrete," which is one of the products of the company and with which some remarkable results are being obtained. A large number of reinforced concrete piles were required for the work, each weighing about 10 tons. The specification called for the concrete to attain a cube crushing strain of not less than 3,000lb. per square inch at the age of seven days. The actual results, I am told, varied from 3,000lb. to 4,500lb., with an average of 3,750lb. At 28 days the figure varied from 3,500lb. to 5,500lb., with an average of about 4,500lb. These seem to be figures which should satisfy any requirements. It was specified that no objection would be raised to the handling and driving of the piles at the age of seven days, nor to the removal of the centreing under the beams and slabs at the same time. The design of the jetty was specially directed towards obtaining lateral strength and stiffness in the concrete structure, to resist the blow of ships, and the fenders were designed to secure resilience instead of being firmly fixed to the structure.

The traffic receipts of the South Indian Railway for the week ended April 1 amounted to Rs.12,31,346.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for April was 48,770 tons.

The launch took place on May 4 from the Jarrow yard of Palmer's Shipbuilding and Iron Company of the British Ardour, the 62nd oil tanker built in this country since the War for the Anglo-Persian Oil Company's fleet.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits; whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Bridge over the Nile at Benha.—Tenders are invited for the construction of a metallic bridge over the Nile at Benha. August 14. (D.O.T.)

Various Supplies.—The War Department of the Egyptian Government invite tenders for the undermentioned supplies (the figures representing yards):—twill khaki for shirts, 101,436; drill, various (linen and cotton), 14,961; calico, cotton, grey, 166,534; calico, turkey, red, 5,340; canvas W.P. chocolate, 7,556; canvas cotton chocolate, 1,260; canvas coarse coloured, 2,300; canvas Dawlais, 2,290; canvas stiffening, 499; canvas gummed for collars, 362; cloth dark blue sailors, 280; cloth Melton lining, 142; serge sailors navy blue, 2,964; serge khaki G.S., 22,885; Bedford cord mixture, 145; flannel khaki for shirts, 82,917; flannel white for shirts, 571; webbing flax surcingle 3 in., 1,324; webbing khaki cotton for belts, 40; bunting various colours, 1,825; felt numnahs, 645; felt for water bottles, 83 (June 12); Bedford cord, wool and cotton mixture, 4,695; rope, cotton, white, ½ in. to 1½ in. circ. total, 36,384; rope, Italian hemp, ¾ in. circ., 3,560; drill, white cotton, officers', 796. June 4.

Fire Bricks, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 18,000 high refractory fire bricks, and for 50 tons structural steel for footbridges, viz., channels, beams, angles, flats, squares, rounds, rivets, and bolts.

Document and Map Printing Paper.—The Surveyor-General of Egypt invites tenders for the supply of 2,364 reams of map printing paper, and 200 reams of document paper. July 14. (D.O.T.)

Sensitive Paper, Etc.—The Surveyor-General of Egypt, Giza 'Mudiriya), invites tenders for the supply of sensitive paper and chemicals for photostat for 1928-1929. June 4.

Metal Cabinets and Safes.—The Survey of Egypt Department of the Ministry of Finance invites tenders for the supply of 120 filing cabinets and 12 safes. July 4. (D.O.T.)

Diesel engine-driven generating sets for Mansourah.—The Ministry of the Interior invites tenders for the supply and erection at Mansourah Drainage Air Compressing Station of two additional Diesel engine-driven generating sets. May 17. (D.O.T.)

Rails.—Tenders are invited by the Ministry of Finance, Survey of Egypt, for the supply of any quantity of rails up to 14,050 tons (8,300 tons light, 5,750 tons heavy). Offers for any portion will be taken into consideration. Offers may be for either new or second-hand rails. July 25. (D.O.T.)

Printing Plates.—The Survey of Egypt invites tenders for the supply of 1,550 aluminium lithographic printing plates, required during 1928-29. June 27. (D.O.T.)

GREECE.

Steel Schooners.—An Athens firm desires offers in respect of four steel schooners of between three and four hundred tons, fitted with auxiliary motors. The vessels should not draw more than ten or twelve feet of water. (D.O.T.)

INDIA.

Bridge Girders.—The Indian Stores Department invites tenders for Order No. N-8341 for bridge girders—metre gauge—for the Assam Bengal Railway. May 21. (D.O.T.)

Sea-going, Steel, Steam Launch.—The Indian Stores Department, Simla, invites tenders for one sea-going, steel, single screw, single deck steam launch complete in all respects. Length approximately 87 feet and of suitable beam. Mean draft up to 6 feet. June 4. (D O.T.)

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ELYSIA ... May 11		*CIRCASSIA ... July 3	
*CASTALIA ... May 25		*†MASSILIA ... July 10	

*First class passengers only. Specially low fares. †Calls Port Sudan

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

NEW COMPANIES.

STANDARD CARPET COMPANY (1928).

The Standard Carpet Company (1928), Ltd., has been registered as a public company, with a nominal capital of £400,000, in £1 shares (375,000 ordinary and 25,000 deferred). The objects are to acquire the business carried on by the Standard Carpet Company, Ltd., and to carry on the business of importers, exporters, manufacturers, and factors of and dealers in carpets, rugs, mats, and fabrics of all descriptions, etc. The first directors are: G. M. Mavrogordato, 40-41, Old Broad Street, E.C.2, merchant banker; P. J. Agelasto, 129, Palmerston House, Old Broad Street, E.C.2., merchant banker; A. M. Calliafas, 42, Sackville Street, Manchester, merchant; J. Hill, Battenhall, near Worcester, director of public companies; V. P. B. Williams, Birjand, East Persia, merchant; E. H. Athanassoglou, 9-11, Wilson Street, Finsbury, E.C.2, carpet merchant; D. N. Copsidas, 9-11, Wilson Street, Finsbury, E.C.2. The above directors are to hold office until the ordinary general meeting in 1938. The registered office is at 9-11, Wilson Street, Finsbury, E.C.2.

ABYSSINIAN PRODUCE AND TRADING.

The Abyssinian Produce and Trading Company, Ltd., has been registered as a private company with a nominal capital of £5,000, in £1 shares. The objects are to acquire the businesses of produce buyers, importers and exporters, and merchants carried on by the Abyssinian Produce Company, Ltd., at 88, Wool Exchange, E.C., and Jibouti, French Somaliland, and elsewhere, and to carry on in Abyssinia, French Somaliland, the Sudan, Aden Protectorate, and elsewhere the business of buyers and exporters of and dealers in hides, skins, coffee, wax, wool, mohair, horns, and generally every kind of African and other produce and products, and shipping brokers and agents; also to carry on in Europe, Africa, Asia, and elsewhere the business of shippers and importers of every kind of machinery and merchandise, and also the business of fellmongers, cleaners, scourers, woolbrokers, pressers, and warehousers and storers of all kinds of produce, general traders, etc. The first directors are: C. A. Chidell, Hook Hill, Woking (director of African Produce Co., Ltd.); J. O. Lane, 1, Burgess Park Mansions, Hampstead, N.W., manager of wool company; A. Moulsdale, 232, Evering Road, Clapton, E.5, hide and skin manager; H. W. Chadwick, 21, Beechcroft Mansions, S.W.16, hide and skin broker. The registered office is at 103, Wool Exchange, Coleman Street, E.C.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, May 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Calcutta (Birkenhead, May 17).

Bibby Line.—S.s. Oxfordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 16).

British India Line.—S.s. Mashobra for Colombo, Madras ,and Calcutta (London, May 19); s.s. Dumana for Bombay and Karachi (London, May 19).

Cunard Line.—S.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow and Swansea June 5, and Liverpool, June 7); s.s. Bothnia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool May 26, and Swansea May 29).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 26).

P. and O. Line.—S.s. China for Bombay (London, May 25); s.s. Nagoya for Calcutta (London, May 26).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, May 22); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, May 30).

Ellerman and Papayanni Lines.—S.s. Bavarian for Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool May 12, Swansea*); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume* (Liverpool May 12, Swansea May 17); s.s. Algerian for Oran*, Algiers*, Malta, Smyrna, and Constantinople (Liverpool, May 26. *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 8.

Business on the Stock Exchange has continued quite active, but in some directions there have been signs of profit taking. Industrials have moved irregularly on this account, but there has been a steady volume of buying in the gilt-edged market. Rubbers have improved a little with a small recovery in price of the raw material, and mining and oil shares have attracted more attention than of late. Normally the month of May is regarded as a good period for the Stock Exchange. Budget uncertainties are out of the way, monetary conditions are usually comfortable, and there is a tendency for the foreign exchanges to move favourably. Just at present, however, the monetary outlook is a little obscure by reason of the position in the United States where several of the Reserve banks have recently raised their rates. The New York Bank has not yet made a change, and it does not follow that a rise in New York would be the signal for an increase in Bank Rate here. Indeed, the latter contingency is not generally anticipated. Nevertheless, there is a slight feeling of restraint, and while activity in industrial shares may possibly continue, the investor must realise that the prices of many shares have now been pushed up to "dangerous" levels.

A Reasonable Rate of Interest.

What should the investor regard as a reasonable rate of interest on his aggregate savings? It is perhaps easier to say what is an unreasonable rate. At intervals financial journalists are asked to recommend a "perfectly safe investment yielding 10 per cent. It requires little experience of the financial world to say that this is extremely unreasonable. In a paper read this week before the Institute of Actuaries, the author gave the rates of interest recently earned by twelve insurance companies on their investments and these figures offer some guidance as to the rate of interest obtained by expert investors whose primary aim is the security of their funds. In 1913, when income-tax was 1s. 2d. in the £, the average net rate earned was 3.92 per cent.; in 1918, when income-tax was 6s., the rate of 3.79 per cent.; and in 1920-21, 4.79 per cent. Last year, when the tax was 4s., the rate was 4.08 per cent. The insurance companies employ investment experts of the highest standing and these rates of interest may be regarded as being in the neighbourhood of the highest obtainable with a very generous margin of security. The figures are subject to various qualifications and are open to more than one interpretation. Nevertheless, they seem to suggest roughly the limits of the average net rate of interest which the ordinary investor who plays for safety may expect to earn.

The Armstrong-Whitworth Report.

The actual financial results of Armstrong-Whitworth and Co., for the past year are not very encouraging. There was a net loss for the year, before providing for depreciation, of £527,953, which compares with £531,210 for 1926. As a credit balance of £114,182 was brought in, the debit balance is reduced to £413,772. This has been deducted from the general reserve fund, the present figure being £86,228. It is clear, therefore, that from the financial standpoint the company has made little progress in the direction of restoring its fortunes. But the directors' report indicates that steps are being taken to improve the company's position. In this connexion it is noteworthy that the financial position tends to show greater liquidity. But the shareholders must realise that a drastic writing down of the book value of assets will be necessary owing to the heavy losses of the past. The directors, however, do not propose to submit a reconstruction scheme until the company's earning power is more definitely known. There may be wisdom in thus hastening slowly, but this should not obscure the real facts of the situation.

New Zealand Securities.

The popularity of New Zealand stocks in this country has been abundantly testified by the ready response which has been accorded the cash loan offered for subscription this week. New Zealand is certainly at great pains to maintain her credit. The Budget for the past financial year showed a surplus of about £180,000, which brings the total revenue surpluses since 1914 up to over £30,000,000. This has been applied almost entirely to debt reduction or invested in productive works. The gross debt of New Zealand on March 31 last was £251,397,000, against which the Government's tangible assets are valued at £254,600,000. Of these assets £218,700,000 are directly interest-bearing and productive. Last year's redemptions of debt amounted to £2,476,000. The people in New Zealand are becoming to an increasing extent the creditors of their own Government. In 1914 only 16.86 per cent. of the public debt was held in the Dominion, whereas in March, 1927, the proportion had risen to no less than 44.46 per cent. In common with most other investment stocks, New Zealand securities have lately appreciated, but in view of her financial record they will appeal to investors seeking sound stocks. An attractive investment is available in the 3 per cent. inscribed loan, redeemable 1945, which returns £4 18s. 9d. per cent. A longer-dated stock may be found in the 4 per cent. inscribed loan, redeemable 1963, which yields £4 15s. 6d. per cent.

The President of the Yugoslav Parliament has notified the President of the Greek Chamber that an urgent Bill has been voted for a credit of 2,000,000 dinars (about £8,000), which will be used by the Serbian Red Cross for the aid of the sufferers from the Greek earthquakes.

The Egyptian Minister of Public Works on April 26 signed a contract authorising Messrs. Nicholas and Dixon-Spain, architects and surveyors, of 19, Hanover Square, W.1, to draw up plans and specifications for the New Kasr el Aini Hospital and the Faculty of Medicine, the building of which will probably cost £1,000,000.

Vickers, Ltd., announce that the following gentlemen have been appointed directors of the Metropolitan Carriage Wagon and Finance Co., Ltd.: Mr. J. R. Crouch, Mr. R. C. Irwin, Mr. G. G. Sim, Mr. Howard Williams, and that Mr. T. L. Taylor (Chairman and Managing Director of Taylor Bros and Co., Ltd.) and Mr. Alexander Spencer (Chairman of Spencer Moulton and Co.) have been appointed Chairman and Vice-Chairman respectively.

DEVELOPMENTS IN CYPRUS.

Sir Ronald Storrs' Survey.

Sir Ronald Storrs, Governor of Cyprus, in his speech in opening the Session of the Legislative Council of the Island on April 17, gave a detailed survey of developments during the past year, which, as he indicated, was a most fruitful period for the Island. He also outlined the policy which is to be pursued in the immediate future, and indicated, *inter alia,* the prospect of the negotiation of a loan for Cyprus of not less than £500,000. We give the following extracts from his speech dealing more particularly with commercial and financial developments :—

The imports for 1927, amounting to £1,585,940 show an increase of £15,662 over 1926. As Customs import duties were raised early in the year this increase may be considered most satisfactory. The largest increments were :—Fertilisers, £27,952 ; cotton goods, £26,478 ; sugar, £20,644 ; and flour, £18,968. It is encouraging to note the expansion in fertilisers which accounted, to a large extent, for the increased yield of agricultural products. Importation of machinery showed the considerable decrease of £58,464, owing chiefly to mining companies having satisfied their needs for the present. A vitally important growth is that of exports, amounting to £439,299, of which carobs accounted for £150,474, asbestos £82,855, pyrites £40,579, potatoes £30,811, raisins £28,310, cotton £25,427, and barley £23,504. Not only were the quantities exported in excess of those of the previous year, but there was also a noticeable enhancement in prices, especially of carobs, raisins, and wine, largely owing to which Limassol, which has been suffering more than any other district in the Island from economic depression, was enabled to take the first steps upward. The adverse balance of trade which at the end of 1926 gave an excess of £466,707 of imports over exports, had, by the end of 1927, been reduced to £43,070. Five hundred and eighteen steamers with a total tonnage of 934,361 called at Cyprus ports, showing an increase over 1926 of 20 steamers of a tonnage of 80,637, and nearly a million more articles were handled in the post.

Agriculture and Industry.

The average production of cereals was good and prices high. In spite of the damage done by *Dacus oleae* the yield of olives was on the whole satisfactory, One result of the increased yield of olives was the decreased importation of edible oils to the value of £19,288. The cultivation of potatoes is being rapidly extended, and will greatly increase prosperity. Carobs were average in quantity and fair in quality, but fetched excellent prices. In view of the gross and systematic frauds perpetrated upon villagers in the weighing of their carobs by the unscrupulous abuse of litre weighing kantars and private kantars, orders have been issued that these are to be replaced as and when practicable by oke kantars ; that inspection of weighing machines and where possible of actual weighing shall be carried out by mudirs and police detailed for the purpose, and that, within municipal areas, the use of other than municipal kantars for weighing carobs or any other crops shall be forbidden.

Although 1927 was not a good year for flax, the industry is rapidly reviving and the recent flotation of an important flax fibre and pulp company in Glasgow has created a market for Mesaoria farmers' flax-straw, usually abandoned on the field.

In order to improve dairy products arrangements have been made for a tour, at this moment in progress, of practical demonstrations in cheese-making, to be given by the Agricultural Department, the cheeses to be sold by auction in the place where they are made. The Ironmongers' Company are generously maintaining a Cypriot student at Reading College, and the Turners' Company have presented to the Colony for purposes of instruction a lathe of the most modern design. With general reference to agriculture I would here record my conviction that until the Agricultural School is transferred from city surroundings and influences, preferably to the Farm at Athalassa, really satisfactory results will not be obtained.

Intensive research and special propaganda have been devoted to the production of tobacco, silk, citrus, wine, and, above all, to co-operative societies, with the following results :—

The production and approximate export of tobacco are as follows :—

	Production. Okes.	Area. Donums.	Value. £
1927	141,302	3,117	10,597
1926	56,725	1,634	4,254

68,320 okes were exported in 1927 as against 2,120 in 1926. In addition to the above some 56,000 lb. of yellow leaf were produced in 1927 and used by local manufacturers, bringing the total production for 1927 to 286,000 or an increase of 460 per cent. over that of 1926. Most of the tobacco produced and shipped is the Latakia type of fumigated leaf for which Cyprus is particularly well adapted ; so much so that it is admitted by expert opinion to equal in quality that of Syrian Latakia. Additional publicity and assistance have been given in the United Kingdom and elsewhere to the sale of Cyprus cigarettes, still unfortunately debarred by the high proportion of foreign tobacco from Imperial preference. The cigarette tobacco grown in the Island lacks the standard of quality and manipulation expected by the United Kingdom market, to remedy which defects the Government has enlisted the services of a practical expert from Mytilene who has since the beginning of the year been engaged in instructing cultivators in all stages of the growing, curing, sorting, and packing of the leaf, and in training two members of the Agricultural Department to continue and extend the work on the termination of his contract. Preparations have been made for the planting of sufficient new crop tobacco, Latakia and light cigarette leaf, to meet the present requirements of the United Kingdom, local, and foreign markets.

The production of silk is steadily on the increase : 205,000 okes of cocoons in 1927 as against 180,000 in 1926, or 22 okes per box as against 19, in so much that the Agricultural Department finds it difficult to meet the heavy demand for mulberry saplings, over 100,000 of which have been distributed since 1926 from the Government nursery gardens, and many more from school gardens. Superior methods of cultivation are being followed, and in many places the trees are being methodically and more carefully pruned. This encouragement to the industry is largely due to the establishment of the Paphian Filature, which not only employs some 180 work-people of that district but also pays direct to the grower a just cash price for his produce. If producers can be educated to produce the average per box attained in some countries, there is a good prospect of Cyprus sericulture attaining quantities at least four times greater than ever before and a quality inferior to none.

The development of citrus fruit is particularly encouraging, nearly 21 million oranges having been exported in 1927 against some 14 million in 1926. In 1926 Cyprus fruit was placed at a disadvantage by the Egyptian Authorities, who levied a charge of £1 per ton (*c.a.* 4s. per 1,000) for fumigation, but this has now been rectified by local fumigation by Government at 2s. per ton and the issue of certificates prior to shipment. Prophylactic tree fumigation is also undertaken in the summer. Gardens, assisted by recent successful water-borings initiated by Government, are rapidly increasing in and around Famagusta ; and Professor Powell, the citrus expert who visited the Island last December, pronounced one of the Cyprus varieties the finest in the world, and made several suggestions (which are being adopted) for the general improvement of orange cultivation. Citrate of lime, manufactured in Kyrenia from local lemons and lime, was sold in England at prices which should encourage the development of the industry in the Paphos district also : and there is no reason why by organised manufacture Cyprus with Imperial preference should not compete favourably with Sicily's large exportation to the United Kingdom.

The viticultural expert has been transferred from Perapedhi to Limassol, the centre of the vine-growing district. With a view of encouraging the production of table grapes, he was sent to Greece and Crete to arrange for a large supply of grafts and cuttings, which the Agricultural Department will shortly be in a position to supply to growers. I shall recur in my programme to an important development of viticulture.

The Mining Industry.

Mining is on the increase. The output of pyrites from Skouriotissa reached over 200,000 tons, or 40,000 tons over any previous year. The Cyprus Asbestos Company, which alone employs an average per month of 2,718 persons with a wage bill of £10,800, mined approximately 1½ million tons of rock, from which were produced 11,200 tons of asbestos, almost double the figure of 1926. The systematic prospecting programme by drilling at Mavrovouni has proved the existence of a further pyritic ore body of some 12 to 13 million tons. Development of this area was begun last August and is being vigorously prosecuted with a view to putting the mine on a productive basis within the next three years. Interest in the mineral resources of the Island has been shown by the visits of eminent mining engineers and geologists. As a result of these visits several areas have been taken under prospecting permit by a very influential London mining company, whose engineer is at present in

Cyprus to examine and advise on the best method of working the areas. The outlook for mining in the Island is good, and the results of the past two years have more than justified the appointment of the Inspector of Mines.

No aspect of the economic revival of Cyprus is more hopeful than the increase of co-operative scoieties. At the end of 1926 there were 47 and not one Muslim. There are now 126, including 13 Muslim. Such, indeed, is the growth of the co-operative movement that I have found it necessary to detail a special officer in each district, without extra expense to Government or societies, for their supervision and guidance. A favourable tendency is latterly reported from the Limassol district, notwithstanding the stubborn, insidious, and sometimes menacing opposition of moneylenders. It is even rumoured that merchants are offering members of societies here and at Paphos "facilities" at a comparatively low rate of interest. But the villagers of Paphos, now next in co-operative development to Famagusta, have too freshly in mind the methods of their past creditors to succumb to the lure. Not only the number of societies but also, more reassuring still, the number of members, is steadily increasing. Thus Komi-Kebir, which started in October, 1923, with 20 members, had at the end of last year 407, and had been granted by the Bank loans of nearly £10,000, and others show a similar rate of progress. All have punctually repaid their annuities. I shall allude later to the extensions proposed to their scope and utility.

With regard to the Supplementary Appropriation Bill, the Colony is to be congratulated in that the excess provision necessary for 1927 amounts to £8,536 only, as against £42,832 in respect of 1926.

The Chamber of Commerce was founded last April, and has already addressed or been consulted by the Government upon matters of such importance as legislation for the limitation of hours of employment, partnership and bills of exchange, duty on Cyprus carobs imported into Spain, and the Mail contract; and has, by the issue of certificates of origin, facilitated trade transactions between Cyprus and Turkey. Local pre-eminences are being honourably waived and the Chamber is now working in contact with the London Chamber of Commerce, the Federation of British Industries, and the Federation of Chambers of Commerce of the British Empire. During my recent visit to Egypt an arrangement was concluded whereby the premises of the Cyprus Government Agent at Port Said will be placed at the disposal of the Cyprus commercial community there, and it was proposed to establish branches of the Cyprus Chamber in Alexandria and Cairo. The Chamber of Commerce has started well and cannot fail, so long as maintained on its present basis, to promote and to enhance the prestige of Cyprus commerce.

Negotiations begun last summer with the Khedivial Mail Service have resulted in the radical revision, gratuitous for one year, of the sailings, whereby the outward mail will be dispatched at least 24 hours after, instead of the day before, the arrival of the inward, thus saving the commercial and general public six days' unnecessary delay in answering their correspondence and some thousands of pounds annually in cablegrams, and making possible urgent visits from the mainland with a minimum waste of time.

The Trade Commissioner in London has rendered valuable service in assistance to Cyprus business men (which has received public acknowledgment in the Chamber of Commerce) and, generally, in bringing business to and, therefore, augmenting the wealth of Cyprus. His activities, combined with a forward policy in the Island, have resulted in a greatly increased influx of visitors; and hotels are now being erected, with Government advice and assistance, in Nicosia and Prodromos for the cold and hot seasons respectively. Legislation has been enacted facilitating the introduction of visitors' motor cars, and the sale of local industries to tourists organised, under Government and municipal control, at those ports whose municipalities have availed themselves of the opportunity.

The stamp and coin issues, besides attracting general attention to the amenities and possibilities of Cyprus, are estimated to bring in to the country a clear profit of several thousands of pounds.

At the formal opening of the 1927 Session of the Legislative Council I had spent only a few weeks in Cyprus, and had therefore enjoyed but slight opportunity of acquiring that knowledge which can proceed only from personal experience. I have now made some hundred and fifty inspections of towns and villages and am consequently in a better position to estimate and pronounce upon the nature, the extent and, above all, the relative importance of the various necessities of the Colony. When, as is occurring in many countries larger than Cyprus, funds are manifestly insufficient to meet even the most essential services, the difficulty of framing satisfactory estimates of expenditure is very great, and it is all the more necessary for Government to be guided as far as possible by a clear line of policy, to establish a priority of urgency, and to lay down a programme stretching beyond the budget of the moment and over a period of years. It is my considered opinion, recently reinforced by the important conclusions of the Development Committee, that in the interests of the country and its inhabitants general precedence should be accorded after public health to agriculture, including irrigation and transport, of which the resulting increased productivity will entail and provide for extensive harbour improvements. The first of these can and should be met largely from annual revenue. The second postulates capital expenditure and therefore a loan.

A Loan?

The action of His Majesty's Government in assuming the burden of the Ottoman Debt Charge has elevated the Cyprus Loan from a pious aspiration into a practical possibility and, had the Government not been debarred by previous commitments, I would, as indicated in my last opening address, have preferred (and it might have been feasible) to make the necessary provision in the Estimates for 1928. I now anticipate and intend that whatever portion of the £32,800 Debt Charge Remission may be required for the issue of a loan will be provided without difficulty from ordinary revenue having regard to the marked and sustained improvement in the Colony's trade, production, and revenue, and I propose with your approval to apply forthwith to the Secretary of State for permission to float a loan of at least half a million pounds. Whatever may be the terms of this loan, which I hope to arrange during my vacation, it is highly improbable that any portion of the charges thereon will fall due before 1929.

The opportunity for capital development arrives at an auspicious moment in the fortunes of the Colony, for the Government water boring operations, whose recent discoveries are rapidly enriching Famagusta, are being extended westward, and it is with the utmost satisfaction that I am able to announce that the first trial well, sunk near Syrianokhorio, has resulted in a natural artesian flow of 150,000 gallons a day from an eight-inch bore, indicating that a large artesian basin exists in the Morphou district and consequently enabling the Government to consider a detailed scheme whereby at a cost of about £100,000 an ample supply of water, chemically and bacteriologically pure, may be made available for the great central plain of the Island, including the capital and reaching through Knodara and Lefkoniko to the villages of the Karpas. Meanwhile works of considerable magnitude have been approved for transferring water from Xeropotamos into the Lefka valley and for developing, by an influx of a million gallons a day, the region of Syrianokhori-Kato Zodia, and I earnestly hope that it may be found practicable to preserve and restore to use the important barrage work initiated in the Middle Ages near Kiti and to utilise for irrigation purposes the fresh-water lake at Famagusta, possibly supplemented on its annual exhaustion by water from deep bores. Government will take charge of exploratory work and control subsoil water and future Government-aided water supplies, introducing, as soon as possible, the necessary protective legislation.

The roads of the Colony have sunk to a degree of deterioration at which, if not saved now, they will soon be lost altogether. A comprehensive road programme, involving the expenditure of some £400,000 over a period of years has therefore been prepared and will be put into execution as soon as the loan is floated.

Honourable Gentlemen will recollect that I expressed the hope, though not the certainty, that I might be able to lay before them in the course of the year Supplementary Estimates. The surplus balance carried over from 1927 has been found to be £45,049 and the Supplementary Estimates now before you provide for the appropriation of the greater portion of that sum on public services and works of urgency, the balance of £6,000 being held in reserve to meet unforeseen emergencies during the current year, with the proviso that, in order to meet future loan charges, not more (and, to allow for contingencies, preferably less) than £13,000 should be

recurrent. I propose that, of this recurrent, £1,246 should be devoted to implementing Dr. Horn's anti-malarial recommendations, dealing next year with the further important question (raised in his report) of reorganising the rural medical system with a view to substituting whole for part time service given by rural medical officers.

The non-recurrent portion of the Supplementary Estimates will be devoted to meeting as many as possible of the suggestions of Honourable Members of which special note was taken during the Budget Session: notably road, water supplies, agricultural pests, and urgent public buildings such as the maternity and out-patients wing of the Nicosia Hospital, and repairs such as the Court House of Limassol. An emergency appropriation has been inserted towards the preservation by dredging of Larnaca harbour, the very existence of which is threatened by the rapid encroachments of silting sand. Honourable Gentlemen will learn with pleasure that the Suez Canal Company have kindly consented to place the advice of their senior harbour-dredging expert at the disposal, without fee, of the Government and that he will arrive in Larnaca before the end of this month.

Acting upon the recommendations of the Taxation Committee, the Government will shortly lay before you measures, subject to higher approval, based upon the following principles: the maintenance of the basis of indirect taxation, to which Cypriots are accustomed; the transference so far as possible of the fiscal burden from agriculturists; the reduction of duties upon the food of the poor, such as peas and beans, and of the price of salt, and the increase of duties upon luxuries; the encouragement of local manufactures and of the introduction of capital into the Colony and the increase of the funds available for education. You will also be invited to approve the abolition of the excise duty on spirits manufactured in the Island, thus removing the grievances of the producers of zivania.

The Commission appointed to inquire into the present system of taxation by municipalities made certain recommendations for extension and reform, and the Government is studying, amongst other aspects of the case, means for facilitating rate-collection with a view to enabling municipalities to contribute a more just quota than is apparently possible at present to hospitals, fire protection and other acknowledged municipal duties and necessities.

It has been computed by the Land Registry Office, by far the best and most accurate authority, that the total value of the immovable property of Cyprus was on December 31 last £14,200,000, or £41.82 per head of the population, and that the mortgage debts of the Colony amounted to £1,647,810, being 11.60 per cent. of that value. The Committee appointed in view of this disquieting state of affairs to inquire respectively into the working of the Laws of 1919 regarding usury and insolvent farmers, and into the possibility of extending agricultural credit, after full consultation of the interests involved, submitted comprehensive and valuable reports upon which the Government proposes to adopt forthwith executive, and to place before you legislative measures as follows:—Permission for co-operative credit societies to open current accounts to allow of temporary monetary facilities to members; extension of amount of individual loan from £100 to £200 and of period from 6 to 20 years; repayment as a general measure on account of debt to be accepted at any time, and to bear interest; audit of co-operative credit societies free and on the spot; prohibition of the repayment of capital or interest in kind and the raising, by Government guarantee, of the loan capital of the Agricultural Bank to £300,000. It is also proposed that, as a check to land speculation by moneylenders, a right should be granted to repurchase at sale price plus interest, within one year after the sale, land bought at a sale by creditors. The Usury Laws of 1919 failed to attain their object because the measures taken against usury were not accompanied by any deterrent in the shape of penalties, an omission which will, I trust, be generously repaired in any future enactments of this Council. The agriculturists must be protected and the law must be strengthened, both at the expense of the usurer. Their path must be made smooth, and his, rough. They must increase and he must decrease, and I imagine that tears for his diminution will be exclusively of his own shedding.

Extension of Use of Fertilisers.

A scheme is under consideration for extending the use of artificial fertilisers in Cyprus, hitherto retarded by uncertainty as to the qualities best adapted for different sorts of crops, lack of funds, State or private, for experiment, and the problem of payment for fertilisers either before crops are reaped and sold, or afterwards, with consequent heavy interest charges. The scheme comprises free provision of experimental fertilisers and, on conclusion of tests, delivery of fertilisers at the lowest prices against payment after the carrying and sale of crops; and, I need hardly add implies neither monopoly, Governmental or other, nor interference with private enterprise.

An entirely new development of the carob industry is the establishment in Limassol of a factory (the machinery of which is already on the high seas) by the British Tragasol Products, Ltd., for the treatment and preparation of carobs in such a way as to be saleable direct to the consumer, involving investment of capital in Cyprus besides the employment of skilled and unskilled labour.

Grape growers and wine producers stand to profit on an unprecedented scale by an arrangement now in process of negotiation with an influential group who are prepared to incur trouble and expense in order to render local vintages suitable for other markets and to purchase, without interference with existing interests, a large proportion of the hitherto unexported wines of Cyprus.

Visitors will not be attracted to Cyprus until proper accommodation can be provided. I was therefore fortunate, after a series of a somewhat negative experiences in the search within and without the Island for hotel capital or enterprise, to discover when in Egypt one or two powerful members of the commercial community with sufficient of both to send over a well-known hotel expert. This gentleman returned so favourably impressed by the possibilities of what he found that a project for a chain of modern hotels is being seriously investigated and will, if adopted, notably enhance the amenities and prosperity of Cyprus.

With each of the above companies, and, I hope, with others that may operate in Cyprus, I am concluding a special arrangement whereby Cypriots will be enabled to take up, on the most advantageous terms, as many shares as they may desire, thus securing a practical interest in the development of their country, and profiting by the alternative now afforded to the usurious acquisition and unpatriotic export of Cypriot capital.

Proposals have for some time been before the Secretary of State for the establishment of wireless communication with the outside world and of a telephone system for internal communication. Action upon these proposals has been unavoidably delayed pending the report of the Imperial Wireless and Cables Conference at present sitting in London and inquiring into questions of general policy affecting wireless and cable communications of the Empire as a whole; but I trust that it will not be long before steps can be taken for the establishment of both these services.

Allusion has been made to the Agricultural Credit, Usury Law, revision of Taxation, Municipal and Development Committees, whose invaluable suggestions are now being translated into facts. The report of the Railway System and Rates Committee has been received and is occupying my attention. The Forestry Report should be in my hands by the end of the spring, and the Rural Inquiry before the autumn. Neither official nor unofficial members of these Committees have grudged their time or trouble, and I would hereby renew to them, individually and collectively, my high appreciation of their co-operation in these esential preliminaries to any considered governmental projects. The execution of the recommendations submitted has entailed heavy extra calls upon the Administration, which has displayed in response, Cypriot as well as British through all grades, in circumstances not always of the most encouraging, a standard of duty and diligence worthy of the best traditions of the Civil Service.

SUCCESS OF BRITISH MOTOR CYCLES.

In a recent reliability trial held in Italy, an Ariel motor cycle ridden by M. Bellavita, of Milan, put up a particularly fine performance. Of 135 starters only 38 finished, the combined result of a very difficult course and atrocious weather conditions. In some parts the course was so difficult that many riders preferred to push their machines rather than ride through. There were three Ariel machines to finish, all doing well. M. Bellavita was the only entrant to attain the maximum speed of 45 km. which was fixed in consideration of the difficult course. Ariel Works, Ltd., of Birmingham, are awarding M. Bellavita a special gold medal for this success.

The traffic receipts of the Suez Canal from April 21 to 27 amounted to 4,270,000 francs, as against 4,070,000 francs for the corresponding period of last year.

The Yugoslav shipping lines carried 1,300,000 passengers last year, compared with 1,230,000 in 1926, and 790,000 in 1925. The improvement is to be attributed largely to the growth of the Adriatic tourist traffic.

The Turkish Grand National Assembly passed the Budget for 1928 on April 30. The estimated expenditure and revenue balance at approximately £T207,000,000 (£21,790,000), of which about one-third is devoted to the Army, Navy, Air Force, and Military Factories, and one-quarter to Public Works.

It is reported from Roumania that the cold weather and frosts of March and April have done considerable damage to the seed crops. According to reports of the Ministry of Agriculture, the wheat, rye, and barley areas have all suffered, more especially in Moldavia and Wallachia. On the other hand, the damage caused in Transylvania has been on the whole inconsiderable.

THE EGYPTIAN MARKET FOR CEMENT.

Building has been an outstanding activity in Egypt for the past ten years and conditions to-day indicate continued expansion (says the United States Acting Commercial Attache at Cairo, Mr. Charles E. Dickerson, in a recent report). As a consequence, large quantities of cement have been and will be imported from abroad. There is one large cement factory in Egypt which produces a fair-quality product, but this supplies only a part of the country's needs and a small portion for export to near-by markets. The lack of a local fuel supply and the cheapness of imported cement constitute the greatest handicap to the expansion of the domestic production.

The prosperity in the building trade in recent years is attributable in large measure to the gradual Europeanization of steadily increasing sections of the larger centres. Both Cairo and Alexandria at present are divided into two districts, old and new. In the new section the European elements reside and do business, and the buildings are of modern construction and have most of the improvements of western civilisation. The old town is made up of the native quarters where narrow crooked streets separate old and cheaply-built houses of the Turkish harem type. The former section is steadily expanding in both cities and the latter is gradually receding and disappearing.

Other factors which have contributed to the activity in the local building trade are the higher rates paid for flats and houses in the new sections, the protracted business depression which has induced wealthy merchants to turn their attention to the regular income from real property, and the intervention of the authorities in the case of old building conditions, which presented a menace to life. The collapse of old houses has been a frequent occurrence in the past, and in Lower Egypt, where the rainfall is heavy during two or three months of the year, the danger still exists.

Egypt lacks a domestic supply of stone and lumber, but there is plenty of sand and gravel, and concrete is, therefore, a natural building medium. Rebuilding operations in the old quarters have created a large demand for cement, which is reflected in the official import statistics of the Egyptian Government. In 1921 there were imported 39,160 metric tons of cement, as compared with 179,578 in 1926 and 185,010 in the first 10 months of 1927. The United States thus far has not participated to any appreciable extent in this trade, although a negligible quantity of American white cement is being imported through England. The principal foreign sources of Egyptian cement imports are Yugoslavia, Belgium, Germany, the United Kingdom, and France, in the order named.

Palestine cement recently made its appearance on this market. The quality is good, and it sells at somewhat higher prices than the other imported varieties. It is probable that this product will remain at a relatively high level of price for some time to come, owing to the necessity for importing fuel for manufacture.

The damp Egyptian climate made underground cellars impracticable under the old building system. The present use of cement and other waterproofing material has increased floor space. The larger buildings now going up require deeper and more reliable foundations, since the soil is only just above sea level, and in many places in Lower Egypt is even below. The contemplated improvement of the roads and other works projected by the Government are also factors in increasing the demand for cement.

Cement is imported into Egypt to-day by merchants and a few commission houses; they buy for their own account and resell to contractors who receive a credit varying from two to three months. Stocks are never large as the damp weather causes rapid deterioration. The retail price for imported cement in Cairo varies from £3 to £4 per ton, delivered on the spot, according to grade. The local product is of the lower quality and sells at about £3 at present.

Exports of the cement locally produced totalled 165 tons in 1925, 116 in 1926, and 21 during the first ten months of 1927. In 1926 and 1927 the exports were not classified by destinations; in 925 the principal shipments were 76 tons to Cyprus, 41 to Rhodes, and 39 to Palestine. Re-exports of imported cement amounted to 86 tons in 1925 (almost entirely to Cyprus), 54 in 1926, and 76 in the first ten months of 1927.

COMPANY NOTES AND REPORTS.

EGYPTIAN MARKETS.

The report of the Egyptian Markets, Ltd., for the year ended December 31 last states that the number of cattle market days lost during the year in consequence of cattle plague was 167 as compared with 85 during the year 1926. The economic situation in Egypt improved somewhat during the year under review, but business generally throughout the period was still depressed, more especially the cotton trade, which seriously affected the fellaheen and consequently the company's business. The gross receipts from the cattle markets, etc., exclusive of slaughter houses, show a decrease of £1,733 as compared with the year 1926, the total being £58,790 against £60,523. The gross receipts from the general markets for the year under review were £32,526 as compared with £34,414 for the year 1926, a decrease of £1,888. The net receipts from the slaughter houses worked during the year were £1,101 against £1,056 during 1926, an increase of £45. The Government took over three slaughter houses during 1927, reducing the number worked by the company at the close of the year under review to thirty-five. The expenses in the trading account show a decrease of £865 under rents, salaries and wages; but cost of maintenance and repairs increased by £259, resulting in a net decrease in expenses of £606. The net profit derived from the sale of miscellaneous articles and sundries was £8,008, as compared with £8,840 for the previous year, a decrease of £832. This decrease is entirely due to general commercial depression and the increasingly keen competition from merchants dealing in the same commodities. The contingent liabilities for which provision was made in the accounts for the years 1925 and 1926 by transfers to general reserve account, having matured, an amount equivalent to the sums so transferred, viz., £5,978 os. 5d. has been withdrawn from that account. The net revenue from all sources for the year 1927 amounted to £54,616 8s. 8d. as compared with £57,775 3s. 9d. during the previous year, a decrease of £3,158 15s. 1d. After deduction of the amount of £23,658 7s. 1d., which it is estimated will be required to meet payment of the Government's share of profits for 1927, a balance of £30,958 1s. 7d. remains, which, with the amount of £13,241 4s. 3d. brought forward from 1926, makes a total of £44,199 5s. 10d. to be dealt with. The fixed charges comprising the annual premia for the amortisation of the share capital and debentures and debenture interest amounted to £5,684 19s. The sum of £2,000 has been transferred to general reserve and a balance of £36,514 6s. 10d. remains available for distribution. The directors recommend the payment of a final dividend (No. 47) on the ordinary shares for the year ended December 31, 1927, of 5 per cent., and a bonus of 1 per cent., making, with the interim dividend of 5 per cent. paid in November, 1927, a total of 11 per cent. for the year, absorbing in all £19,217 and in accordance with the terms of the memorandum of association of the company, and subject to the settlement of the proportion of profits due to the Government, the payment of a dividend (No. 18) on the deferred shares at the rate of £10 6s. 7 7-30d. per share for the year 1927, which will absorb £3,099 os. 10d., and leave a balance of £14,198 6s. to be carried forward, which balance is also subject to the settlement above referred to.

SINAI MINING COMPANY.

The net profit of the Sinai Mining Company for 1927 was £66,026, plus £4,438 brought in. After transferring to reserve for general purposes £30,000, the directors recommend a final dividend of 6¼ per cent. on the ordinary and participating preference shares, making 10 per cent., free of tax, and carrying forward £6,964. The directors state that the political position in Egypt has not interfered with the company's operations. The company's relations with the administrative departments of the Egyptian Government are, as hitherto, satisfactory. A considerable tonnage of ore has been sold for shipment in 1928, but at lower prices than those obtained in 1927.

SOUTH INDIAN RAILWAY.

The South Indian Railway Company announced the payment on July 2 of an interim dividend from surplus profits of 2 per cent., less tax (compared with 2 per cent. paid on July 1, 1927), making, with the interest guaranteed of 1¾ per cent., less tax, a total distribution for the half-year of 3¾ per cent.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 3:—

Egyptian Futures.—Sakel Contract.—On the whole the steadier undertone in evidence at the time of our last report has been maintained during the past week, and, generally speaking, free trading has been practicable without causing the abnormal fluctuations to which we have latterly become accustomed. Over last week-end the political crisis in Egypt had a detrimental effect on values, but not to the extent that might have been expected, our market showing commendable steadiness in face of a sharp relapse in Alexandria, the resistance at this side being attributable mainly to the then strongly advancing tendency of American values. A partial clearance in the political atmosphere yesterday was a signal for a sharp advance both at this side and in the overseas market, values here appreciating about 80 points during the session. The movement, however, attracted no trade support and to-day, with some profit-taking in evidence, prices have fallen away again, to-night's close showing gains of 33 to 55 points for near and 55 to 59 points for distant positions on the week.

From a "bull" point of view, the weakness latterly shown by near positions must be rather disturbing; holders of May contracts have been evening up their position, and in process of doing this the difference of the month in question has widened to nearly 60 points under November, and this in face of the fact that our market is running at such a substantial discount with Alexandria. The only logical deduction to be drawn from this state of affairs is that trade at the moment is in an unsatisfactory state, with a correspondingly moderate spot demand in evidence. Manchester reports have latterly endorsed this view, and complaints are rife that little yarn business is offering, and what contracts are being entered into are certainly not on to-day's value of the raw material. Reports to hand from Continental and American users also show the present level quite out of line with buyers' ideas; it thus remains to be seen whether holders in Egypt can maintain their present attitude in face of the situation that has arisen, and the next two or three weeks will determine whether they are going to get their price, or alternately, if spinners will be forced into the market to obtain supplies to keep their mills running. With regard to the statistical side of the position we have just received the following information from a reliable source in Alexandria:—"Outturn 1927 Sakel crop just under 2,500,000 kantars being inferior to expectation. 1928 crop acreage about equal previous year present conditions and prospects indicate smaller outturn, consider normal yearly consumption surpass this figure hence expect new crop keep strong." For a long view we are not against the market and consider it quite possible that prices will be worked to considerably higher levels during the summer months. However, for the immediate future it appears probable that erratic fluctuations will be witnessed, and on this account we consider commitments should be restricted to moderate lines.

Upper Contract.—This contract continues to show a very steady undertone and, aided by a further advance in American values, prices have again appreciated on the week. The upward movement has met with considerable profit-taking and this has closed in slightly our premium over the American contract. Spinners continue to purchase consistently and returns of the local stock show a total of 16,000 bales here. In isolated cases, spinners of finer cottons have shown a tendency to turn a part of their machinery on to varieties covered by this contract.

The statistical position continues to grow in strength and this confirms the "bullish" views which we have expressed for some time now. We still consider that purchases of old crop months on any easing in values will later on prove profitable.

Egyptian Spot.—An improved business has been reported in spot Egyptian, in spite of the unceasing fluctuations which have occurred during the week owing to political unrest in Egypt. Now that the situation with regard to Sudan Sakel is more or less definitely known, there is a tendency on the part of spinners to turn again towards the ordinary Sakel market. Little change in the scope of inquiry has as yet been observed, however, and it has continued to follow along well-worn lines. Low Sakel, 8d. to 14½d. and 17d. to 18d., is still well to the fore. The singular neglect of cotton at from 100 off to 100 on has continued, and it is only when we reach the 200 to 250 on figures that we find serious attention being paid to the better grades. Unfortunately, this "Good" Sakel is not plentiful here. The top grades (Fine and Extra Fine) have failed to arouse any fresh interest owing to the high prices ruling. Uppers have been a steady market and a very fair business has resulted in cotton at from 15½d. to 16d. Inquiries are frequently received for "Fair" Uppers at from 14.50d. to 15d., but the cotton produced in response is almost always either lacking in staple or proves to be thoroughly mixed with "re-cleaned" cotton.

Pilion at from 16d. to 16½d. has been in moderate request, and a slightly improved demand for the medium quality of White cotton has been noticeable. Maraad cotton has been inquired for on several occasions. Sudan Sakel has been rather quieter than of late, but has moved off steadily. The SSSSS quality has now become available. This quality, so far, shows a very distinct improvement on last year's cotton, and is likely to meet with a good offtake. We understand that there will be a considerable quantity to arrive out of the present crop.

Forwardings to spinners for the week ending April 27 were returned at 8,138 bales Egyptian and 741 bales Sudan. Estimated spot sales for the week, 2,100 bales Egyptian and 2,300 bales Sudan. Quotations of Sakel show a net advance of 10 points on the week and those of Upper and Pilion 30 points. F.G.F. Sakel to-day, 21.40d. F.G.F. Upper to-day, 15.75d. F.G.F. Pilion to-day, 16.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 26, state:—

Since our last report the futures market has been very nervous, with a rather weak undertone at the close to-day. The week's summary of price movements is as follows:—Sakellaridis: May, 41.32 dollars, 0.32 dollars up; July, 41.95 dollars, 0.50 dollars up; November, 42.58 dollars, 0.61 dollars up; January, 41.18 dollars, 0.73 dollars up. Ashmouni: June, 28.80 dollars, 0.77 dollars up; August, 29 dollars, 0.85 dollars up; October, 29 dollars, 0.95 dollars up.

Sakel.—We have had a series of very active markets but, for the moment, there is not the same bullish enthusiasm as there was a couple of weeks back. One of the factors which has contributed to the slackening of the bullish enthusiasm is the improvement in the prospects for the summer water supply; it seems now that the Ministry are thinking of granting permission for rice cultivation on a limited scale.

The important local speculators, carrying big long positions, have been taking advantage of the firmness of American and the better demand on the part of spinners to secure profits, and they have recently unloaded a considerable quantity of the contracts held by them. The liquidation of these speculative positions has been, to a large extent, taken by the export houses and, as a result, the technical position of the market must be considered to have still further improved.

There is no doubt that spinners have taken advantage of the drop

to secure their immediate requirements. Lancashire has been the chief buyer, with the Continent a good second; America has not shown any interest at all. The Government has once again denied any intention of putting its stock of cotton up for sale. Exports during the past week have been very good and, as a result, the statistical position shows a further improvement. No permits have, so far, been granted for ginning after the 30th inst., and receipts are accordingly likely to be heavy during the next week. With the ginning season drawing to a close, it is becoming more and more evident that arivals during the current season will fall short of 6,000,000 kantars, whilst reports from our up-country agencies indicate that the quantity of cotton which will be carried over unginned into the new season will be negligible.

In spite of the fact that the market during the past two days has shown itself somewhat heavy, we think that any serious decline is improbable; on the contrary, if American prices continue to improve and spinners' demand for Egyptian assumes somewhat larger proportions, it is quite on the cards that we shall have a further rise.

Uppers.—The market has, of course, been favourably influenced by the rise in American and the Upper/Sakel straddle has slightly narrowed. The trade demand, although only moderate, continues to be regular. We consider the present Uppers premium over American not unreasonable and do not look for a decline for the time being.

At the third April tender 15,750 kantars dockets were issued, making a total for the month of 39,750 kantars.

The week's receipts amount to 105,760 kantars, against exports 181,481 kantars; the stock in Alexandria stands at 2,727,003 kantars.

Spot: There has not been much change in the nature of the demand as compared with last week. Total sales amount to about 10,200 bales, of which we estimate 5,400 bales Sakellaridis, 4,000 bales Ashmouni and Zagora, 700 bales Pilion, and 100 bales other varieties.

Sakellaridis: The good grades are still neglected, though one or two buyers have been in the market for small quantities at cheap prices. There has been no diminution in the demand for cotton round about Fully Good Fair and the premiums continue to harden daily as these grades become scarcer. A fair business has been done in the low grades at about last week's discounts.

Ashmouni and Zagora: In general, there has been much less demand for these varieties. The good grades have not found much favour. The bulk of the sales has been confined to cotton from Good Fair to Good Fair to Fully Good Fair. There has been some demand for low grade. On the whole, spot differences are rather easier.

Pilion: Is still much demanded, but buyers do not seem so inclined to pay the extravagant premiums sellers are asking.

Other Varieties: A few lots of Nahda and White have been treated.

Up-country: Very little spot business has been put through up-country during the past week, whilst new crop purchases have been few owing to the pretensions of the growers. A fair number of ginning factories are still hard at work ginning the stocks remaining in their hands; some are even working day and night.

Crop, 1928.—The temperature has, on the whole, been favourable, although in some districts the heat has been abnormal. The plant is still a little late in many parts of the South and Central Delta. Locusts have appeared in the Delta districts, but no damage has been caused so far. Water is sufficient for present needs, but it is in general, being distributed very sparingly. The cotton acreage looks like being slightly in excess of that of last year.

The Persian Majlis has passed a Bill to set up a new maximum and minimum Customs tariff.

Notes of the Week.

Anglo-Egyptian Relations.

During the past week the process of liquidating the "certain liveliness" that characterised the relations between Egypt and Great Britain in connexion with the Public Assemblies Bill has been advanced in various ways. Perhaps the most notable is the message from the Egyptian Prime Minister to Sir Austen Chamberlain, conveyed through Lord Lloyd. In the course of an interview with the British High Commissioner Nahas Pasha asked the latter to convey to the Secretary of State for Foreign Affairs "his gratitude for the conciliatory and friendly spirit which he felt, whatever the differences of opinion between England and Egypt, had inspired the happy solution of the recent crisis. Both Governments had maintained their respective points of view, but he wished to renew the expression of his keen desire to work in harmony with His Majesty's Government and to avoid future sources of friction." This eminently satisfactory message suggests that, if both Governments were given a free hand, the conclusion of a treaty of alliance, which would solve most of, if not all, the questions outstanding between them, might not unreasonably be expected during the course of the current year. The crux lies in the unfortunate tradition which has been allowed to grow up during the last few years in Egypt that Anglo-Egyptian relations can be reduced to a matter of two or three slogans readily comprehensible to the Egyptian "man-in-the-street." The truth is that the adjustment of those relations, with any chance of permanent satisfaction to both parties, can be achieved only by a gradual process of extreme delicacy, which calls for a degree of knowledge and statesmanship not possessed by those whose political experience is necessarily restricted. If the Egyptian Chamber of Deputies could take upon itself to accept in advance any treaty with Great Britain that the united wisdom of the Cabinet endorsed, it would be doing a signal service to Egypt.

Points of View.

The cause of mutual understanding has also been furthered by the publication by the British Government of "Papers" respecting the proposed Egyptian Law regulating Public Meetings and Demonstrations. In this White Paper are published not only the text of the Public Assemblies Bill, with that of the Law of 1923 that it was intended to supersede, but also the portions of a speech delivered by Nahas Pasha which constituted the Egyptian Government's explanation of the Bill. From these two documents it is not difficult to understand how the controversy was allowed to reach such a critical point. The British Government could only examine the text of the Bill and declare it wanting in all the more important safeguards for the maintenance of public order in respect of meetings and demonstrations. The Egyptian Cabinet seems to have paid less attention to the text and to have judged the Bill by the tenour of discussions in its course through Parliament and by declarations of the Government's policy in regard to it. Obviously, there is also a fundamental difference in the attitude of the two peoples towards their respective police forces. The British conceive of a police force as the protector of the public; to the Egyptian mind police may be a protection in certain circumstances, but for the most part they are oppressors against whom the public has to be protected as far as possible. It may well be that this idea was more responsible for the strange provisions of the Bill than any deliberately suicidal intention to pave the way for riots which must inevitably bring down retribution on Egypt. It would be worth the while of the Chamber of Deputies to consider the serious handicap which the Egyptian attitude towards the police is to the efficiency and adequacy of that force. To such an unfortunate attitude may be traced the existing shortcomings of the Egyptian police and its difficulties in the prevention and detection of crime.

Digitized by Google

Great Britain's Attitude.

Behind Nahas Pasha's expression of gratitude for the "happy solution" of the crisis lies possibly the difficulty experienced by the Egyptians in appreciating Great Britain's concentration on a single vital point and the complete absence of ulterior motives. The Public Assemblies Bill was regarded as a pretext for an attack all along the line on Egypt's independence, and for some time it was not realised that when the British Government challenged the provisions of that measure, it was genuinely concerned for Egypt's own welfare. No doubt on the subject, however, could well be entertained after Sir Austen Chamberlain's dispatch of April 16, in which he instructed Lord Lloyd to make it clear to the Egyptians that "the intervention which His Majesty's Government in Great Britain cannot now avoid, is strictly limited to those points which, in the absence of agreement between the two Governments, were reserved by the Declaration of 1922 to the absolute discretion of His Majesty's Government; it is directed neither against the liberties accorded by that Declaration to Egypt nor against the Constitution, which last His Majesty's Government have declared to be a matter for King Fuad and the Egyptian people. . . . Egypt should therefore realise that British action is not aimed at their present constitutional régime, which they (i.e., the British Government) are not concerned either to attack or to defend." It was after the receipt of this message that Nahas Pasha gave his detailed explanation of the Public Assemblies Bill, and undertook to have a declaration in the same sense made in the Senate, which would be accepted by the courts as the correct interpretation of the new law. The British Government, however, held that the Bill was the proper place in which the modifications implied in Nahas Pasha's explanation ought to have been embodied, and it could not accept such a roundabout method of making the law innocuous and at the same time practical.

Surmises and Facts.

It was in keeping with his attitude throughout that Sir Austen Chamberlain entered into a careful consideration of the points raised by Nahas Pasha in his defence of the Public Assemblies Bill, but the proposed method of meeting the more obvious objections to the measure left so many loopholes for stultification that he was obliged to insist upon its withdrawal. Even so the Egyptian Government, in complying with the request, expressed the hope that, "in the light of mutual confidence governing relations of the two countries, present difficulties will shortly be dispelled, to give place to an era of understanding, justice and friendship." Nahas Pasha's subsequent message confirmed what must have been the Egyptian Government's relief on realising that the fears which it had entertained of Great Britain's intentions were groundless. What is now required is that the Egyptians as a whole, and the Chamber of Deputies in particular, should appreciate the British attitude. With the best intentions, no doubt, the Egyptian Association of Great Britain and Ireland has issued a pamphlet, entitled "An Explanation of the Present Egyptian Situation"; but it is characterised from start to finish by this fundamental error of confusing the author's imaginations and surmises for facts. Egyptians in Egypt, who have the right to look to their compatriots living in England to help them to understand the British character and British mentality, will search this pamphlet in vain for any attempt to appraise, still less to interpret, the British point of view, and will find in it only such misstatements as appear in Egyptian newspapers which have been at pains to argue that Afghanistan occupies the same position in regard to the British Empire as Egypt does, and that, therefore, as Afghanistan has won complete independence, Egypt is equally entitled to it.

The Roumanian Opposition.

The monster meeting organised at Alba Julia by the parliamentary Opposition in Roumania is over, but the *status quo ante* persists for the time being. It is conceivable that the Liberal Government may one day allow itself to be impressed by the constant marshalling of its political opponents in hostile demonstrations, but the history of the Party suggests that it will finish first the business on which it has particularly set its heart. As this business includes a foreign loan and the stabilisation of the currency it will be of interest to see whether the increasing prospect of a violent upheaval serves to render foreign capital yet shier than it has been of Roumania and so prolongs the tenure of office of the Bratianu Government. A grave responsibility rests with the Council of Regency, for it can quite well defend its inaction behind the letter of the law until it is brought home to the greater part of the people that only a revolution can free the country from the trammels of an obsolete political system. In the old days, with two main parties in the Kingdom, King Carol's practice of entrusting office to them alternately worked sufficiently well for all ordinary purposes. As a result of the War the Conservatives have been eliminated and the organisation of the Liberals has placed their party in an exceptionally strong position. The personality of their late leader, M. Ion Bratianu, made him a power in the Kingdom, and when he vacated office in March, 1926, he could nominate his own successor, whose withdrawal he was able to bring about a year later. If the Regency Council were to identify itself with the Liberal Party and to adopt the latter's view that the National-Peasant Group are not qualified to hold the reins of government, it will be brought home to the latter that, so long as the present system endures, they will have no chance of assuming office. Further, the Constitution provides that no modification can be made in it during the period of a Regency. In these circumstances the danger of the opposition to the present Government being forced along unconstitutional lines must increase, unless the Regency Council decides in time that the alternating system of government is the wiser course for Roumania to adopt.

M. Smithescu.

The majority of Prince Carol's troubles seem to be attributable to the characteristic, generally associated with the female sex, of being *varium et mutabile.* With a

Digitized by Google

praiseworthy, but all too brief, effort at self-effacement, he planned a visit to England without the assistance of a publicity agent. On his arrival in the country, however, his good resolve forsook him, and either he or his host, or both, fell victims to the embarrassing fascination that a title exercises on cheap journalism. If he had chosen an unassuming name, he might still be enjoying the vagaries of the English climate; but it was Prince Carol—accompanied—who arrived at the "Surrey country house," and a few days later it was would-be-King Carol who was preparing for a star turn on the European stage with manifestoes and aeroplanes. The easy-going British, who would have welcomed M. Smithescu and might have tolerated ex-Prince Carol, cannot be expected to waste any sympathy on a pretender to the Roumanian throne, if only for the reason that they realise that out of erratic and irresponsible princes are republics made. Roumania has serious internal troubles of her own to deal with and cannot want to have dynastic complications added to them. As things are, she has been able to assume an amused indifference to the vagaries of a young man of whom the country would have been proud, if he had deserved well of it, but of whom it now considers itself to be well rid. Great Britain, for no fault of her own, has had to suffer much ado about an inconsiderate visitor.

Near Eastern Peace.

It was inevitable that the negotiations now in progress between Italy and Turkey and between Greece and Turkey should revive among the Yugoslavs fears that further schemes were on foot for the encircling of their country. Although the interpellation addressed to the Yugoslav Foreign Minister last week had special reference to Albania and to her position in regard to Italy, the course of the debate showed that it was the general trend of Italy's foreign policy that was being challenged. M. Marinkovitch's answer was scrupulously correct; he refused to be drawn into a discussion on Italy's hypothetical intentions. He had no grounds for believing that Italy proposed to identify herself with a policy at variance with her international undertakings; at the same time Yugoslavia could not prevent Italy or any other Great Power from exerting a certain influence in the Balkans. The Yugoslav Government was engaged at the moment in trying to bring about a friendly understanding with Italy over all questions outstanding between the two countries; but the problem, M. Marinkovitch added, was not an easy one. Although both the Italian and the Turkish Press write confidently about a Turco-Italian agreement, the negotiations taking place in Angora show no sign of an early conclusion. As in the case of the Greco-Turkish conversations, there is a reluctance to sign a treaty of friendship and non-aggression when various questions are outstanding between the States which are calculated to prevent the establishment of really friendly relations between the two peoples. The Eastern Mediterranean tripartite pact which had already been envisaged in several countries may yet require some time to reach its consummation. The movement, however, is a sound one, if only on the principle that the signing of the pledge is a sound plan for the drunkard. If certain States are addicted to quarrelling and have no other means of breaking themselves of the habit, they had better give pledges to one another to behave themselves.

Consolidating the Royal Air Force.

It is no secret that the Royal Air Force wishes to proceed with the work of consolidation, particularly in the Middle East, and in this connexion a speech delivered last week in London by Sir Samuel Hoare, Secretary of State for Air, should be noted. Sir Samuel explained that the Middle East has a pool of air defence, from which squadrons may be sent out to any place where trouble is threatened. And he gave as instance of the effectiveness of this scheme the recent events on the South-West frontier of Iraq. (He is reported, by the by, as having said: "In the autumn of last year the tribes on the frontier started raiding as a result of poverty and want, and I do not believe that there was any political reason for those raids at all." This is a somewhat new light on a problem which is being discussed at Jidda between King Ibn Saoud and Sir Gilbert Clayton.) That the Royal Air Force should wish to consolidate in the Middle East is only natural, but it occurs to one, not for the first time, whether their desire ought not to be paralleled in the political sphere. Would it not be an excellent thing if the problems affecting, say, Egypt, the Red Sea area, Palestine, Trans-Jordan, and Iraq were in the hands of one authority? Is there not a loss in efficiency in the subdivision of control in relation to these Middle Eastern countries?

Armenian Settlement in Syria.

There can, one imagines, be only one thing to hold back the support of the British people for the scheme of settling Armenians in French mandated territory in Syria, and that is fear that these unfortunate people, who so often in the past have been used as a catspaw in international politics, may yet again in Syria be setting a rod in pickle for themselves. Nowhere in the East is the multiplication of minorities, from whatever humane or just motives it be considered or urged, without obvious dangers. But it must at once be confessed that in regard to this particular scheme of settling Armenians in north-west Syria, the French mandatory authorities have persuaded the closest observers that it is safe. Motives of self-interest may not be entirely lacking in this plan of colonisation, but in the view of the International Labour Bureau of Geneva, at any rate, which has regarded the problem from every aspect, the scheme is one to be steadfastly encouraged. Much remains to be done for these Armenians, but there is no question that this highly-gifted people are making good in Syria, particularly in agricultural colonisation. It must never be forgotten that as explicit promises were made to the Armenian people as to the Jewish people, and if the larger hopes can never be fulfilled, at least some salving of conscience may be obtained in Europeans' support of this eminently practical scheme in Syria. The ultimate aim is that the Armenians in Syria, while they can never become, so to speak, Syrian in race, will coalesce with the other peoples in the mandated territory in a Syrian citizenship; in other words, that, while retaining their Armenian characteristics and traditions they may, under the supervising hand of France, become "good Syrians."

ANGLO-PERSIAN RELATIONS.

The recent history of Anglo-Persian relations has followed a curiously undulating course. At the time of the Armistice British prestige in Persia was at its zenith, and had wiser counsels subsequently prevailed, not only would the many troubles which Great Britain has had to suffer at the hands of Persia have been avoided, but the regeneration of Persia itself would have been proceeding on sounder and safer lines. However, the milk is spilt; that is, British troops were withdrawn from Qasvin and the Anglo-Persian Agreement unhappily went by the board. From the summit, British prestige in the land of the Shah, or, rather, in the land of increasing Persian Nationalism, fell suddenly and with resounding clash to the bottom. Nor was Bolshevist Russia slow to perceive the plight of Great Britain, for in 1921 she ostentatiously held herself out as the one true friend of Persia who would renounce all, that the Persians might have their full independence, which had been so ruthlessly threatened by the "brutal," "colonising," or "Imperialist" English. After that the problem arose of how to protect essential British interests in Persia, and how to re-establish the reputation which had been hardly won. For the first few years the methods pursued to this end were not happily conceived, however much their outward, superficial success might deceive certain foreign observers, who erroneously imagined that Britain's star was in the ascendant in Persia. Admittedly, it shone in the Palace at Teheran; but in Persia at large it barely twinkled. In fact, nothing of practical value was achieved during the years to which we refer to the advantage of Great Britain, unless personal and unproductive friendship with the Shah, Riza Pahlavi, be reckoned as a certain accretion of prestige. It is, therefore, all the more to the credit of the present British Minister in Teheran, Sir Robert Clive, that after this difficult interregnum, or vacuum, he should, in the series of conventions which were signed last week in Teheran between Great Britain and Persia, have shown that the application of patience and insistence to the various problems as between England and Persia was not wholly unavailing, and that friendship can live with respect. We do not wish, in the absence of the full text of these treaties and conventions, to blow any premature trumpets of triumph, to assert that the decline of Russian prestige in China has inevitably and manifestly extended to Persia also, and that in the future Anglo-Persian relations must proceed on a smooth and regular basis; generalisations of that kind are better reserved until the whole series of agreements can be comprehensively reviewed. But in the meantime some sort of congratulation is patently due to the authors of these agreements.

It is claimed that these conventions constitute a new basis for Anglo-Persian relations, and certainly there appears to have been a spirit of give-and-take on both sides, at least on certain questions. In the problem of tariff autonomy, for instance, Great Britain, which has hitherto been very unfavourably placed as compared with Bolshevist Russia, who until her recent Commercial Treaty with Persia had been enjoying the old Tsarist tariff of 1903, is now to receive most-favoured-nation treatment. That treatment is to be reciprocal, but the agreement under which British goods will pay only the new Persian minimum tariffs is provisional, and is, it is said, to be replaced later by a comprehensive Treaty affecting Navigation and Commerce. Again, generosity has been shown by the other side in the matter of "Capitulations." These Capitulations have been abrogated in favour of an arrangement which, while it involves the disappearance of the British Consular Courts in Persia, not only allows a British Consul to be present at any trial in which a British subject is implicated, but also provides that British defendants shall be brought before the competent judicial authority within twenty-four hours, and that entry of residences shall be made only on the order of the competent judicial authority. Moreover, Notes have been exchanged upon the vexed subject of flying of British aeroplanes across Persian soil. It is asserted that the Persian Government has declared its intention to construct aerodromes and that Imperial Airways, whose route to India has hitherto been checked at Basrah, may use these aerodromes. This reference to the route to India, however, is, in the summarised form that is all which is at present available, so very sketchy and vague that it is unwise to infer too much from it. It is true that optimistic affirmations have been made by responsible men upon the prolongation of the air route from Basrah to Karachi, but, with details lacking, an attitude of hopeful reserve and one possessing a recollection of Persian dilatoriness seems to be discreetest.

From the aspect of Persia these agreements of May 9 will surely seem matters for unreserved self-felicitation. The Teheran Government appears to have played its cards with considerable skill. Having first settled, what to it was the more pressing problem of relations with Bolshevist Russia, it has turned with no smaller success to the less immediately urgent problem, but one which it impatiently conceives in part to affect its dignity, of relations with the British Empire. To judge by the brief summaries of the conventions, Persia has gained many of her points, and yielded little. We hear nothing, for example, of the recognition by Persia of Iraq; nor is any provision announced for the repayment by Persia of her debt to Great Britain, which has been reduced to about £2,000,000. These are omissions which would seem to indicate that it is the old policy of attempting to settle the various problems, piecemeal, instead of comprehensively, which has again been indulged, although, as we have said, final judgment must be postponed until the arrival of full information. It may be found, moreover, that the arrangements in regard to foreign jurisdiction in Persia—a matter which involves several hundreds of British subjects in Persia—and to the "Imperial" air route to India, look better on paper than they will work out in practice. For outside Teheran itself there are but few "competent judicial authorities" to which reference has to be made; nor is the sometimes fatal gap between Governmental recommendation (of privileges to Imperial Airways) and the ratification by the Majlis of such recommendation yet bridged. But taken as a whole, these conventions do unquestionably indicate that the Persian Government has in part torn itself away from that Bolshevist embrace which for so long had kept it from any sort of real contact with Great Britain. If the agreements made last week in Teheran are worked out in a mood of sincerity and of desire to serve the best interest alike of Persia and of Great Britain, there appears to be no reason why the ideologists of Persia, who can but be repelled by the doctrines of Moscow, howsoever these be couched, should not return to the freer, grander, and more spacious paths which radiate from the British Empire. But it should always be remembered that to Persia herself these foreign agreements are not the capital factor in life, loom they never so big upon the international horizon; that factor lies within her own borders, and consists in the treatment of her people by her people. For some generations to come Persia's main problems will be internal rather than external.

The Near and Middle East*

From Our Own Correspondents.

Belgrade, May 10.

Foreign Affairs.

Owing to the rareness with which questions of foreign policy have been discussed in the Skupshtina during recent years, to-day's debate on foreign affairs which followed on M. Marinkovitch's reply to the written questions on Italo-Albanian relations put by the leaders of the Opposition, MM. S. Raditch, S. Pribitchevitch, and Y. Yovanovitch, aroused very great interest.

M. Marinkovitch read a short, clear statement to the effect that he had no information which would lead him to conclude that the statements made in various newspapers that Italy was preparing to declare a Customs Union with Albania and eventually a protectorate over her were true. Therefore, he had taken no steps to ascertain what would be the Great Powers' attitude in case Italy did attempt to follow out such a policy; but, since such action would be against the provisions of the various treaties regulating Albania's international status, he was sure that it would not meet with their consent. He declared that the best way to counteract Italian influence in the Balkans and to maintain the principle of the Balkans for the Balkan peoples was to follow the policy of settling all outstanding questions with Italy in a friendly and peaceful manner. This was the policy of the present Government and was in keeping with the peaceful policy of past Governments.

M. Svetozar Pribitchevitch in reply declared that Italy was obviously trying to isolate Yugoslavia and that her growing friendship with Hungary, to whom it had recently been proved she was supplying arms, had emboldened the Hungarian Premier openly to speak in Parliament of the revision of the Trianon Treaties. Both M. Pribitchevitch and M. Yovan Yovanovitch, the Peasant Leader, who supported him, claimed that Albania was rapidly becoming a mere colony of Italy. This was shown by the fact that Albania was becoming economically and politically dependent on Italy, which had secured control of her army, police, roads, ports, Customs services, postal service, and schools. The Albanian question was part of the bigger question of control of the Adriatic. As such, it had been prominent for many years. Italy had for this reason tried to secure control of Albania and had quarrelled with Austria-Hungary over this matter; she intervened, therefore, at the close of the Balkan War, made secret treaties during the World War and had been given a vague sphere of interest in Albania during the Peace Conference. Now she was following the same policy with more success by economic means. The Albanian Budget for this year was 31 million French francs, over half of which was devoted to the army and police force at Italy's desire. But Albanian revenues could not cover more than one-third of this total sum, and the excess was being provided by Italy. By supplying arms, munitions and officers for the Albanian army, building roads, and ports, and taking the proceeds of her Customs to guarantee loans, Italy has made Albania economically and politically dependent on her. Both speakers maintained that the Albanian question was not merely an Italo-Yugoslav one, but one of world importance, and that Italy's present policy endangered world peace. They, therefore, called on the Government to do all it could, should opportunity present itself, to get the League of Nations to take Albania under its protection.

M. Pribitchevitch claimed that a strong internal Government was essential to a successful foreign policy and asked for the appointment of a Committee for Foreign Affairs, so that the Foreign Minister should have behind him the support of the whole nation and the wisdom of the whole Parliament. He won the applause of the whole House by advocating a policy of close friendship with Bulgaria, which should pave the way to the eventual formation of one vast State with twenty million people stretching from the Adriatic to the Black Sea. This, he claimed, was the only lasting and healthy solution to all South Slav and Balkan problems.

Much of the excitement of this debate was lost owing to the absence of M. Raditch, who was suspended from the Skupshtina for ten sittings owing to his alleged use of most ordinary and vulgar terms of abuse in debate. Of late M. Raditch has been getting wilder and wilder in his statements and language and has been making the most outrageous and ill-based attacks on all and sundry. If, on his return to the Skupshtina, he offends again, he may be expelled for good.

The Loan Negotiations.

It is generally believed, according to the Belgrade press, that the stability of the present Government is bound up with its success or failure in obtaining a large foreign loan on reasonable terms. On Monday last the Minister of Finance, Dr. Bogdan Markovitch left for London, to conclude there the negotiations which his representatives have been carrying on for some time with an Anglo-American financial group. It is reported that prospects appear very favourable and that Dr. Markovitch took with him a list of the various public works the Government intends to carry out with the proceeds of the loan and a guarantee that all the funds shall be used for the purposes stated. This completely disposes of M. Raditch's wild statement that most of the proceeds of the loan would be used for military purposes.

The Rift in the Radical Party.

The most outstanding event in internal political life was the speech of M. Misha Trifunovitch at a meeting of the Radical Club. In a cool and reasoned way he attacked M. Voukitchevitch's policy, maintaining that by refusing to consult his Club and his Party he was offending against the principles of democracy, for which the Radical Party had always fought. He suggested that there was also a tendency to disregard Parliament and the Constitution, took exception, for example, to M. Voukitchevitch's remark to M. Raditch and M. Pribitchevitch that they could never hope to get into power, and

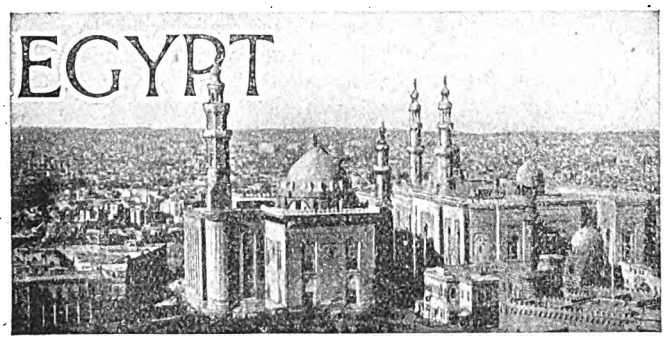
expressed the fear that such an attitude was the result of the influence of anti-democratic ideas such as were predominant in the Governments of most neighbour States, the Fascists of Italy, the "white" Governments of Hungary and Bulgaria, and the present Government of Roumania. It was believed that this speech would mean a complete break in the Radical Party, but, owing to M. Voukitchevitch's illness and various other delays the situation has calmed down again, and it would seem that efforts to pacify the contending factions may yet meet with success.

St. George's Day.

Despite the rain St. George's Day was celebrated last Sunday in the traditional way by most of the population of Serbia. Many stayed up all night singing and dancing in the cafés, others rose before the dawn and joined their sleepless comrades in the woods and fields to celebrate the coming of Spring and, more important, the Spring meetings of the *Chetniks* in the mountain and forest fastnesses, from which they launched their attacks on the Turks.



Cairo, May 5.

The Political Situation.

The manner in which the crisis over the Assemblies Bill has been settled certainly came as a surprise to everyone here. The answer to the ultimatum had appeared to be so unsatisfactory, in that not only did it not give the categorical assurance with regard to the future of this measure but also went so far as to deny once more to Great Britain the right to intervene in Egyptian affairs even when foreign interests were involved, that there seemed no alternative but to put into operation the sanctions which had been foreshadowed in the event of the British demand not being complied with within the time limit fixed. The first reaction among the foreign communities to the Note which Mr. Hoare, Counsellor at the Residency, presented on behalf of the British Government to Nahas Pasha in answer to the Egyptian Government's reply to the ultimatum was one of disappointment and annoyance—disappointment at the loss of what they considered to be a golden opportunity for setting a term to a state of affairs which had fast been becoming intolerable, and annoyance that what they regarded as the only answer to the Egyptian reply should not have been given.

However, when everyone had had time to read and digest the British Note and to consider quietly the pros and cons of the British Government's action, the feeling grew that perhaps after all there was something to say for this unexpected course. And as reflection matured the British action increased in favour. The view that prevailed in all but Die-hard quarters was that the adjournment of the Assemblies Bill, after all that the Wafd and the Cabinet had said about the Bill's having to go through at all costs, constituted a capitulation to the British point of view.

To that extent it was certainly satisfactory, and it was a statesmanlike move not to proceed to the coercive measures which the circumstances would certainly have justified, but to accept the important concession involved in the adjournment, while reasserting the British Government's intention never to allow any measure having the objectionable provisions to become law and to maintain its right of intervention which it enjoyed under the Declaration of February 28, 1922.

That is in great measure the considered opinion of the leading members of the British and foreign communities. But all unite in the view that whether this course turns out to have been the sound and wisest one will entirely depend on whether the British Government adheres throughout to what it has said in its latest Note. The Wafd is certain in the near future to find itself compelled by circumstances to do something which is not regarded with favour by Great Britain. That eventuality will constitute the touchstone of the position, and on the extent to which the British Government reflects in its handling of such an eventuality the firm tone of its last Note will depend whether anything will have been gained or lost by the present display of magnanimity.

Among Egyptians there is, of course, jubilation that the danger of British action has been averted. Certain circles privately regret that Great Britain has not seen fit to carry out the sanctions which were foreshadowed, partly because it would have suited their own political ambitions and schemes, and partly because they consider that the country will never make the progress it should so long as the present régime exists. The Wafd is frankly joyful. As the time grew near for the expiration of the time-limit their nervousness increased, and it reached its zenith when Mr. Hoare's arrival at the Senate to see Nahas Pasha was announced. The relief was correspondingly great when it was learned that the British Government had accepted the gesture of the Government in securing an adjournment to the autumn session. Whatever Naha Pasha lost by his retiring from the uncompromising position which he had taken up has been entirely regained by the fact that, what he did, actually saved the country from a grave danger which menaced it. And the transformation of the possibility that, from one day to another he would lose office, into a certainty that he will be in power for some time to come, has added to his prestige.

The general impression everywhere now is that the Bill is for all practical purposes dead, but whether the Cabinet will be able to resist the pressure which its enemies for their own purposes will put on it next autumn will depend on the impression which then exists of the British Government's adherence to its determination never to allow a measure with such provisions to become law.

Mohamed Pasha Mahmoud.

The local political situation threatens to undergo a development owing to the proffered resignation of Mohamed Pasha Mahmoud from the Finance Portfolio. He held his portfolio with Gaafar Pasha Wali, the Minister for War, as representing the Liberal Party, of which he is the Vice-President, and it was by the presence of these two members in the Cabinet that the Coalition between the two parties has been maintained. Mohamed Mahmoud Pasha wishes to resign for reasons of ill-health. His health has certainly left much to be desired of late, but no one believes that that is the main cause of his resignation, and there is reason to think that incompatibility of temperament between the two elements in the Cabinet has a good deal

EGYPTIAN MINISTRY OF EDUCATION.

EGYPTIAN UNIVERSITY, CAIRO.—The following vacancy will occur in the Faculty of Arts in October, 1928:—

PROFESSOR OF PHILOSOPHY.

The salary will be from 900 to 1140 Egyptian pounds (approximately £922 to £1168) per year, according to qualifications, and the appointment will be on contract for three years. The contract may be renewed at the end of that period, if agreeable to both parties. One month's salary will be paid on arrival for travelling expenses.

Applications should be sent before May 23, 1928, to The Director, Egyptian Educational Office, 39, Victoria Street, London, S.W.1 from whom further particulars and copies of the form of contract may be obtained.

Applicants should give their age, academic qualifications, previous teaching experience, and other particulars as they think fit, and give the names of not more than three persons to whom reference may be made.

Digitized by Google

to do with this decision and that in the very near future Gaafar Wali Pasha will follow suit. In any case it is going to be a very difficult matter to find another Liberal to take Mahmoud Pasha's place, since all the *ministrables* among the party have been against the continuation of the Coalition. It was only by the barest majority, it will be recollected, that the decision was taken, when the Nahas Cabinet was in course of formation, to continue the combination, and then only as the result of the votes of the family of the Minister of Finance. There is certainly a great deal to be said for leaving the Wafd to run its own show, and the opportunity may now be taken by the Liberal Party to sever its active connexion with the Coalition. In that event it will be interesting to see whom the Wafd nominates to the vacant posts in the Cabinet, for there are several serious candidates for Cabinet rank—among them some who are not *persona grata* with Great Britain or the Palace. Nahas Pasha certainly will not have an easy task in settling this question, but there is no reason to fear at present any serious political complication, and unless some unforeseeable complication intervenes, the Cabinet should have a clear run until the autumn session.

Reopening Negotiations.

The vernacular Press is very insistent on the point that the recent incident in regard to the Assemblies Bill and the settlement attained make it all the more urgent to come to a definite understanding in regard to the questions outstanding between the two countries. And Nahas Pasha is credited with the intention of shortly trying to reopen negotiations with the British Government. For this purpose he and some other leading members of the Wafd will, it is stated, make a trip to London as soon as Parliament rises in order to sound official quarters there in this connexion. The tone of the Press is markedly friendly. Naturally it hails the settlement as a victory for Egypt and a vindication of Egypt's right. But at the same time it pays a warm tribute to the conciliatory and friendly attitude of the British Government, which it regards as of good augury for the success of the negotiations.

ROUMANIA.

Bucharest, May 9.

The Alba Julia Meeting.

The most outstanding political event of the past week was the great meeting held at Alba Julia by the National-Peasants Party on Sunday, May 6. The number of people who attended is variously estimated at from 60,000 to 80,000, the first figure being probably nearer the truth. The town itself is small, and it must have taken a great deal of careful organisation, combined with the goodwill of the inhabitants, to accommodate, however primitively, such formidable numbers of people. Whole villages from the neighbourhood trekked in on foot or in their ox-carts and large delegations of workmen attended from the coal mines of Petroshani and Lupeni, causing considerable irritation to the directors, for these are Liberal institutions. Wild rumours were current in Bucharest, especially in Liberal circles, that the National-Peasants intended to elect a separate Government for Transylvania and that the 200,000 demonstrators were then going to march on Bucharest with banners flying. As a measure of precaution, no doubt, the principal approaches to Bucharest were full of soldiers.

As a matter of fact, however, there appears to have been no disorder whatever. The Opposition leaders proclaimed their loyalty to a United Greater Roumania and to the Crown, but announced their intention of overthrowing the Liberal Government at the earliest possible moment by any means in their power.

According to the reports of some foreign journalists, the enthusiasm with which M. Maniu was received all

through Transylvania leaves little doubt as to which party would obtain the majority of votes in the case of free elections being allowed. It is true that he has already a large following in the Old Kingdom, to say nothing of Bessarabia, which would vote for him, or, rather for M. Michalake, almost to a man. On the other hand, M. Michalake inspires distrust in a great many people who might otherwise vote against the Liberals, because of his land policy. He appears to have promised the peasants to give them all the land, leaving none to the old landed proprietors who are already impoverished by the expropriation. One of the main objects of the great demonstration was to protest against the proposal brought forward by Signor Mussolini to revise the Peace Treaties, and to give back to Hungary some of the former Hungarian towns inside the Roumanian frontier. That would, of course, be a tremendous sacrifice for Roumania to make, as the towns in question are large and rich and form the trade centres for the whole surrounding districts, which are among the richest and most important in the country from the industrial point of view. Moreover, the inhabitants of these towns are not principally Hungarians, but Jews and Swabians, and all the surrounding villages are mainly Roumanian. The Hungarian population in Transylvania is much further east. Cluj, for instance, is a purely Hungarian town and there are many Hungarian villages to the south-east of Cluj, in the provinces of Ciuc and Oderhei, etc. As these lie in the very centre of the province it is impossible to cede them to Hungary. The only true solution would be to establish absolute equality of treatment, not only on paper but in practice, for all Roumanian citizens of whatever race.

As to the result of the demonstration it does not appear to have so much as shaken the present Government. The country is perfectly quiet, and there is no sign of any change of the Administration. Furthermore, the National-Peasant Party has once more given evidence of its greatest weakness, namely, disunion among its own leaders, for it was obvious that M. Maniu was not prepared to go so far as M. Michalake in his efforts to force the Liberals to resign. He was determined to keep strictly within the bounds of the law, whereas the peasant section of the party, under M. Michalake, have more extremist tendencies, and show a tendency to get out of hand.

The Liberals are determined to remain in power until they have completed the arrangements for a loan and for the stabilisation of the currency. It is reported that the negotiations with the Blair group and the Banque de Paris et des Pays Bas have now reached the final stages under the auspices of the Banque de France and the French Government.

By a decree of the Shah, the Foreign Capitulations in Persia have been abrogated as from May 10.

FRIENDS OF ARMENIA.

At the annual meeting of the Friends of Armenia, which was held on May 9, at the Central Hall, Westminster, the Rt. Hon. Lord Radstock, who presided, in referring to the conditions prevailing among the Armenians, said it was impossible for anyone who had not been on the spot to realise their condition and unspeakable misery. The work of this Society, he said, was two-fold—a relief work to meet the actual physical needs, and above all to carry the message of comfort and peace to this suffering race. The work of the various organisations that had been going on among the Armenians for many years past, although it had been of great importance, had no permanent value; but now a scheme had been put forward by which Armenian families could be planted on French mandated territory in Syria, where, under the direction of the French Government and by help of money from the League of Nations, they would have an opportunity of wqrking out their own salvation.

The Rt. Hon. the Lord Bishop of Guildford said he could never rise to speak about any subject connected with the Armenians without recalling a tour he made some years ago. When visiting the eastern part of the diocese of Gibraltar he spent some time at Smyrna and visited Constantinople and many places in Greece, and became full with sorrow and sympathy at the terrible lot of the Armenians. Referring to the possibilities of these people, he recalled that in many parts of the Levant High Schools were to be found in which the scholars were of all nationalities, including Greek, Turk, English, French, German, and Armenian, and almost invariably at the top of the school or form were Armenian pupils, who, because of their industry and intelligence, outstripped the Europeans! The industry of the race was vividly brought before him when, visiting a number of refugee camps in Greece, he was painfully struck with the untidiness and absence of all decencies and niceties of life, despite all the splendid help provided by the Save the Children and other Funds. But in the midst of all this squalor there was one encampment where the houses were not built of biscuit tins or odd pieces of wood, but built in an orderly fashion with a well in the centre from which pure water was obtained. When he inquired who were the people living here he was informed that they were Armenians who felt that they could not live as the other refugees. In this encampment a school was built. In view of all this character and initiative was it strange that the French Government was so willing to receive them on its mandated territory? Their action was not, in reality, philanthropy; it was that the French knew that there were no better citizens for their Syrian territory than the Armenians. He hoped as a human being with human feelings, and as an Englishman, that this Society, the Friends of Armenia, would grow in strength, power and support in order to be able adequately to help these Armenian people.

Mrs. Altounian gave an account of the work of the hospital at Aleppo which was opened in 1921, when about 70,000 refugees were coming into the district in a great state of destitution, and among them were a great many girls without friends or relations.

Captain G. F. Gracey, D.S.O., Secretary, in presenting the report of the year's work, especially referred to the plans of the League of Nations which were being conducted by the International Labour Office for settling Armenian refugees on the land in Syria. Under this scheme 40,000 destitute Armenian refugees were to be placed in this mandated territory. Of these, 28,000 were agricultural workers, and the balance of 12,000 artizans. The approximate average cost of placing an agricultural family of four or five persons on the land was £45, and of an urban family £57. Colonies were in course of formation on land purchased, rented, or in some cases given as a gift by the French Government. In regard to the urban settlement, that of the artizans, a large number of them were already working in the towns in which they were to be settled, and at the moment the principal need was to take them out of the sordid and unhealthy conditions of the camps and place them in decent dwellings. An Armenian quarter was already under construction at Beyrout, and plans were under consideration for Aleppo, Alexandretta, and elsewhere. Progress in agricultural settlement during the past eighteen months had been disappointing, but the process was now going forward and working smoothly. The funds used for this purpose were largely British, and as a Society the Friends of Armenia had made a first contribution of £3,000.

Judge Mahmoud Bey Saddek, of the Mansourah Courts, has been transferred to the Alexandria Mixed Courts.

H.M. King Fuad has conferred the 3rd Class of the Order of the Nile on M. Georges Blanchard, a professor of the French School of Law in Cairo.

H.M. King Fuad has given the sum of £1,500 to encourage authors of dramatic works in Arabic. Of this sum £500 will be used for the next three years, each amount being divided into a first prize of £350, a second prize of £100 and a third of £50.

Though the date has not been officially fixed it is understood in Bucharest that the annual Little Entente Conference will meet there on June 15.

The film depôt of the Egyptian Ministry of the Interior in Cairo was destroyed by fire on May 10 and a number of films awaiting censorship were burnt. The damage is estimated at £10,000. Nahas Pasha, Prime Minister, was working in the Ministry when the fire broke out.

Book Reviews

THE PERSIAN GULF.

"THE PERSIAN GULF: AN HISTORICAL SKETCH FROM THE EARLIEST TIMES TO THE BEGINNING OF THE TWENTIETH CENTURY." By Lt.-Col. Sir Arnold T. Wilson. With a Foreword by the Right Hon. L. S. Amery. (Oxford University Press. 25s. net.)

If the day is now irrevocably past when Lord Curzon could write:—"The majority of those at home probably regard the Persian Gulf as a sea whose northern shore is, perhaps always has been, Persian, whose southern shore belongs to they do not know whom, and where a British official can have little else to do but protect British subjects and safeguard British commerce," it is still true that the history, the significance, and the work of universal value performed by Great Britain in the Gulf are inadequately known, realised, and recognised. But for such failing there can be no excuse after the publication of the masterly survey under review.

To say here that, of all living Englishmen, no one had in so great a measure as the author of this book the qualifications, alike in experience and in study, the keenness, and the sense of the fitness of things, to trace the long history of the Gulf from its known beginnings, through the blood-stained centuries, down to its cleansing by the British, would be an insult to readers of THE NEAR EAST AND INDIA, to whom Sir Arnold's services in the Middle East, and particularly in the region of the Gulf, are known not only as an accomplishment in themselves, but as an inspiration to other following Englishmen. And in any case Mr. Amery in his Foreword mentions the matter. But we would take this opportunity of emphasising the necessity, which will be patent to all readers of this work, of the author's continuing the story down to the present day. Sir Arnold must be freed of the obligations which, he tells us, at present inhibit his recounting the later history of the Gulf. "It is in our power, as it is our duty," as he himself is so fond of saying, "to learn from and to profit by the mistakes of past generations"; yet of all such generations do not the last two decades contain some of the most valuable lessons for Imperial servants in the Gulf?

His amassing of the pertinent facts is a most impressive record, and his reference to original authorities most formidable; but in no Teutonic sense, for everything is examined afresh by Sir Arnold's penetrating mind, and we know, from the Introduction itself, in which we learn, among other things, that the reputation of the Gulf as possessing an unenviable climate is undeserved, and that "a fresh orientation of the benevolent policy pursued by Great Britain for over a century is necessary," that the author of this record will accept no view merely because others have accepted it. His story, in other words, is not an example of the academic historian of whose activities it has been written:—

> It all comes out of the books they read,
> It all goes into the books they write.

This book is a real contribution to human knowledge, modestly though Sir Arnold claims it, following Johnson, as a diversifying of the surface of existing knowledge; and, too, it is in the highest sense utilitarian, as helping to a sympathetic understanding of the problems of the Gulf. It is in this double aspect, the absolute and the relative, that the book deserves to be very widely read.

Of the early history of the Gulf and up to its relations with Western European nations, we do not propose to say much. The chapters on this section have been written mainly by Sir Arnold's collaborator, Mr. H. W. Mardon, and although they are full of stimulating matter, from the quotations which introduce them to the very full footnotes, it is with a perhaps unworthy impatience that we expect the chapters on the coming to the Gulf of the Portuguese, at the beginning of the fifteenth century.

The whole narrative of Alboquerque's ambition to found a Portuguese Empire in the East, of the attempt of his successors to hold the Gulf in fee and in fear, and of their unsuccessful rivalry with the British, who got an obstinate footing in the Gulf in the seventeenth century, is told with admirable lucidity. Nor does the story lose in vigour and picturesqueness when the next phase, one of Anglo-Dutch rivalry, is related. The Dutchmen were far better organised, at least in the commercial sense, than the Portuguese had been, and it was only by taking a leaf out of their book, by making the East India Company, that is, a semi-national concern, that England was able to beat the Dutch.

In the eighteenth century, of course, British influence in the Gulf grew apace, and towards the end of it, in 1778, it was a Persian port, Bushire, which was substituted as English headquarters in the Gulf for the former headquarters of Basra. From that date it has so remained to the present day.

With the suppression, during the nineteenth century, of piracy, the slave traffic, and the arms traffic in the Gulf, we cannot here deal. But Sir Arnold does well to remind us that these things were achieved at considerable price, and were not merely the result of a selfish desire to make the Gulf a *mare clausum* for the British. On this important subject he writes:—

> Thus, after much effort and great sacrifices, did England bring about peace in the waters of the Persian Gulf, a peace which other nations—and too many Englishmen—are prone to regard as the almost spontaneous concomitant of the increasing power which modern weapons and organised naval forces conferred upon European Powers in Eastern waters. When, in 1820, England made the General Treaty with the chiefs of the maritime tribes, it was not her own protection alone that she sought. In forcing the tribes to abandon piracy "against any nation whatsoever," she was solicitous for the common good, and was securing other nations as well as herself.

He does well, again, to remind us that, although Great Britain has achieved much in the Gulf, where she has "anticipated, in spirit and in fact . . . those principles to which the mandatory system, under the League of Nations, has given solemn sanction," very much remains to be done. Domestic slavery, for instance, must be abolished—it may, Sir Arnold thinks, eventually be abolished through the beneficent influence of missionaries working in the Gulf; educational facilities are still largely lacking; the inhabitants are scarcely being assisted to take their place in a world of changing conditions; and so on. But these things are, so to speak, incidental to the main theme of the author, who will surely deal more fully with such problems in the subsequent volume which he must not be allowed to escape writing.

It is difficult in a short review to do much more than indicate a few of the milestones, a few of the lights upon a road that has too long lain in semi-obscurity: the road of the history of the Gulf. As Sir Arnold says, that history contains themes for novels; it teems with romance, with human endeavour, with international intrigue, with good and evil almost inextricably mixed. On the whole, however, the thread of British influence during the later centuries has been drawn with a sort of magnetic beneficence, and the author entertains no false modesty in his appraisement of British achievement.

This book the uninformed reader may find stiff reading; but if he is made of the right stuff, it will but make him

THE PERSIA SOCIETY.

the more ashamed of his ignorance. He has, in any case, the priceless advantage of an excellent index, an exhaustive bibliography, some beautiful illustrations, of which the most modern and the most indispensable is the pocket map of the Gulf, and last of all, the production of the Clarendon Press. To add that the text is worthy of all these adjuncts is merely to reiterate that "The Persian Gulf" is a publication of capital importance and of permanent value.

One slight indication of the care with which the book has been written is in the fact that our sole points of difference with the author occur on page 171, where he neglects, in quoting the famous "Will" of Peter the Great, to add that it was a forgery, and on page 14, where in a footnote it is stated that British subsidies to Ibn Saoud came to an end in 1923, instead of 1924. We are conscious, however, that on so large a canvas such blemishes are quite inconsiderable, and that the very mention of them is the kind of ingratitude to which only a reviewer could stoop.

THE ECONOMIC HISTORY OF THE PUNJAB.

"THE LAND OF THE FIVE RIVERS." By H. K. Trevaskis. (Oxford University Press, 10s. 6d. net.)

The sub-title describes this book as an economic history "from the earliest times" to 1890. It is an ambitious task, and one far beyond the powers of any individual scholar, who should go to the original sources. Mr. Trevaskis does not attempt the impossible; and for the Hindu, Muslim, and Sikh periods, he gives merely a summary of the facts, guesses, and blunders, of modern writers. The summary is certainly well done, and probably it was worth doing, but the author's method has the drawback of perpetuating some rather important blunders, while the line between ascertained fact and ingenious conjecture is not drawn with the precision required by scientific historians of to-day. Mr. Trevaskis, whose literary allusions are a most attractive feature of his book, will, we think, pardon the suggestion that we should have been glad of rather more than a halfpenny worth of fact to this intolerable quantity of conjecture; and, for the Muslim period at least, there are a good many facts buried in the chronicles, which would strengthen the story at some of its weakest points. The history of the short period of British rule is presented in traditional form, with secretaries, lawyers, and money-lenders, as the villains of the piece: here we should have welcomed a rather larger supply of critical analysis, especially on such points as the relation between local prices and the extension of railways, or changes in land-values in different regions of the province. The book is well written, pleasant to handle, and easy to read.

A GUEST OF THE ARABS.

"ADVENTURES IN ARABIA." By W. R. Seabrook. (London: Harrap 12s. 6d. net.)

The author of this book, who, according to his own account, was fired a few years ago to visiting Arabia by a Druse émigré in America and by the writing of Doughty, was certainly equipped with two of the requisites for popularity among the Arabs, namely, courage and respect for custom. It is obvious that he found an easy welcome in certain parts of Syria, Trans-Jordan, and Iraq, and among those to whom he acknowledges thanks for "hospitality, friendship, and protection" are Mitkhal Pasha, head of the Bani Sakhr, the Amir Abdullah, Sultan Pasha Atrash, Hussein Pasha Atrash (lord of Anz), Suleiman Bey Izzedin, the Druse historian, the head of the Whirling Dervishes in Tripoli, and the Mir Said Beg, ruler of the Yezidis. From this acknowledgement alone the reader is prepared for some authoritative, or at least some intimate, writing upon such interesting subjects as tribal life in a mandated territory, the mysteries of the Druse and Yezidi faiths, the inner nature of the worship of the Dervishes. Nor will he be disappointed; although it may be that the less he knew previously of such subjects the more pleased will he be at the vivid and generally unstrained character of Mr. Seabrook's sketches. The author's *joie de vivre* is undeniably infectious, and there are numerous photographs and sketches which will make the book most palatable for the ordinary reader's taste. Mr. Seabrook disclaims, indeed, all purpose in thus having visited Arabia, but if that purpose had been one of composing a popular book upon a country which might be supposed, from its colours and contrasts, to hold considerable interest for America, he could not have better accomplished it.

He plunges straight into Trans-Jordan at the beginning of the book, where we find him, having deliberately avoided British guidance (a usual habit with American travellers in Arabia), at his ease in the tent of Shaikh Mitkhal of the Bani Sakhr. Here among the black tents this *farangi* enjoyed himself to the full, contriving by a confession of a sort of Unitarian faith to be classified as a Muslim—at least a Muslim of sufficient strictness to satisfy the Wahhabi-hating Bani Sakhr. He loved the indolence of the nomad life, but carefully and most interestingly describes its formalities. Nothing could be cleaner-cut or more convincing than his etched pictures of Mansour, the Slave of Shaikh Mitkhal, or of Haditha Pasha, the robber saint, or of his riding with the Bani Sakhr on raid—*ghrazzu*, as he calls it. In his account of this last, by the way, is a remarkable tribute to the Amir Abdullah of Trans-Jordan, of whom Mr. Seabrook writes in glowing fashion:—

> The Amir Abdullah is a stocky man of medium height, with beard and complexion sandy rather than bronzed—an unusual type for an Arab—yet his appearance belies him, for he is of the prest Mecca shereefian blood, and his slightly bulging forehead holds a shrewd and cunning brain. He knows the psychology of the desert tribes more intimately than any other politician in Arabia, for he was sent by the old family custom to live among the black tents in his youth, and fought for the Allies at the head of the Bedouin troops in the World War.

But even more than the accounts of Mr. Seabrook's own experiences with the nomads will be cherished his telling of a desert legend—"For the Eyes of Gutne"—a story of infinite pathos and beauty, a story of the immemorial hold of desert customs upon desert people. Incomparably this chapter, pregnant with humanity, is the most memorable in the book.

Other chapters, while containing vivid descriptions and occasionally little-known information, deal with more trodden ground in Arabia in the homes of the Druses, the Veiled Lady of Mukhtara (Sitt Nazira al Jumblatt), the palace of the Whirling Devishes, the monastery of the Rufai, or Howling Dervishes, the mountain of the Yezidis of Kurdistan, and so forth. In all of them, however, there is a fresh touch which makes them extremely readable. The discerning reader will know what to discount in all these stories, whether it refers to Shekih Wahab's killing of the Wahhabi leader, Faisal al Dawish, or to the murder of Zionist colonists by Badawin a few years ago; and, such discount having been made, will certainly confess that there is a substantial residue of lively, informing, and thoroughly worthy matter in this book.

BOOKS RECEIVED.

"Pages from Bulgaria's Life." Year-Book for 1924-1927. (New York City: The Bulgarian Student Association.)

"The Northern Hejaz," and "Arabia Deserta." By Alois Musil. (New York: Published under the Patronage of the Czech Academy of Sciences and Arts and of Charles R. Crane. American Geographical Society Oriental Explorations and Studies Nos. 1 and 2 7 dollars and 8 dollars respectively.)

NAMRUD.

By George Stanley.

The dry weather having continued for several days, five armoured cars were detailed for a run out to Gowair, to make a report on the state of the ferry and the river itself, and to carry out revolver practice on the way back at Namrud.

Out of the camp into the town of Mosul the roads were good, and even through the streets of the town, although there was, as usual, the difficulty of avoiding running over the town people, who seem totally devoid of intelligence or quick action so far as traffic is concerned. A gang of convicts, some in chains, hauling trucks filled with stones across the main street into the bazaar caused delay, sufficient at any rate for us to examine them pretty closely, and it was rather curious to notice that they appeared cleaner and better cared for than the surrounding crowd. After a certain amount of hooting, noises from the exhaust, and so forth, the convoy turned into Nineveh Street and down towards the bridge across the Tigris. This bridge was originally started by the Turks, and in true fashion was carried right down to the water's edge where, however, it ended, presumably owing to the lack of funds. Since the War a pontoon bridge over the river has been built by the British. Owing to its structure the armoured cars, weighing some four tons, necessarily go dead slow, and only one vehicle at a time is allowed to cross this span of 100 yards or so. With several cars in the convoy, the crossing was rather a long business.

Having formed up on the other bank of the Tigris, the convoy made good use of the strip of even road up to the mounds of Nineveh. At that point there are cross roads and the way lay hard right, through the village of Nebi Yunis. The surface of the track was deeply rutted and as hard as iron, so that the springs of the cars had plenty of work to do, especially as at frequent intervals unlooked-for Wadis ran across the track.

A few mud villages were passed, and although the immediate surroundings soon became monotonous, the distant view was delightful. To the left, some 100 miles off, the snow capped mountains over the Kurdistan border brought back memories of Switzerland, and on the right low-lying white clouds balanced the picture.

Only one small stop occurred, and that took place while crossing a wooden bridge over a small stream at the foot of an Assyrian monastery. After a tender had crossed over, it seemed possible that the weight of an armoured car might prove too much for the bridge. As usual, the structure showed signs of original good intent, for there was brickwork on either side of the bank, but the builders lost interest or money and only wooden beams were used for the arch of the bridge; they did not look too secure, especially as there were no supports underneath to take the strain. With a little adjustment the crossing was effected—much to the disappointment of the miscellaneous Arabs who had drifted in, from a village nearby, to watch the proceedings and pass the time of day. Indeed, why not, for no one hurries in these parts, and are there not women to attend to all manual labour?

A dozen more miles of the switchback track and the ferry hove in sight. On this occasion the river was fairly passive and had not overflowed its banks, with the result that there was at least a quarter of a mile of pebbly beach and a strip of sand to cross before the landing place could be reached. From inquiries it was learned that the ferry was working, and three peculiar shaped boats, looking like the shells of split Barcelona nuts, were pointed out on the opposite bank as being the ferry boats.

The village of Gowair presented a quaint sight. The three ferries drawn up on the beach; on the one side in the background a Mosque and two half finished houses in decay, on the other, the neat white-washed barracks of the Iraqi Police; the whole overlooking a miscellaneous collection of mud huts from which the Arab idlers present had come.

The states of both the Ferry and the river having been duly noted, a move was made towards Namrud, which, after a series of baffling tracks, was reached some three quarters of an hour later.

Here under the shadows of the mounds of the buried city, the vehicles were parked, firing targets placed, W/T mast erected and preparations for the mid-day meal started. Whilst these activities were in progress, two of us took the Interpreter and started on a voyage of exploration. On the way we collected a couple of Arabs, who were only too pleased to kill time by showing us the best way over the mounds and expatiating on the legends of this once mighty and prosperous city. The first and largest mound scaled was about fifty feet high, with a circumference of anything up to a quarter of a mile. It was supposed to be the barracks. At the base was a cutting and a cave, but being rather doubtful of it, we did not penetrate for more than a few yards. The sides of the cave consisted of the actual masonry of the buildings and the size and regularity of the slabs were remarkable. The self-appointed Arab guides informed us that the cave led right into the centre of the mound and then up a stairway to the top, but we accepted their statements without investigation. Leaving the Barracks, we went along to the King's Palace, and here actually above the ground are the tops of the monuments or gateways, like those in the British Museum. The figures protruded well over ten feet out of the ground, and as we were already thirty feet above ground level, they must be of considerable height.

The protuberances were at irregular intervals of anything up to a hundred yards. The first seen was the figure of an elephant—just the top of the ears, frontal development, and beginning of trunk. After this figure came others with human heads. The faces were all of the same description, with head dress and thick bobbed hair. The chins wore the Egyptian beard, and just above ground level, behind the heads, were the tops of wings; in some cases, instead of wings there were regular lines of carved hieroglyphics. One strange thing was that all these figures had deep indentations, like sword cuts, on the tops of the head.

From the figures and tablets we passed on to what must have been the tops of the houses, and traversing the outer court of the Palace came to the finest specimen of the whole place, namely the top of the statue of King Namrud himself. He stands all alone with only the torso showing

above the ground. The hand piece measures five feet, so the whole body must be four to five times that size, and then very possibly the statue is mounted on a pedestal. His bobbed hair and beard are in excellent condition, also the folded hands over the chest, but the face has suffered some chipping. The figure faces east, probably overlooking the largest part of the city. Around the shoulders is what resembles a present day cartridge belt filled with cartridges.

To stand in front of the statue smoking a pipe, and maybe knocking ash upon his cherished head, makes one think on the vanity of man and the relative values in life. In those days, at least 3,000 years ago, there must have been thousands of victims—according to Namrud's reputation—who looked in vain for mercy from this fierce old image. And now, the two Arab idlers sit on the side of the depression immediately facing the image, swinging their legs and puffing tobacco smoke into the face whilst, the Interpreter taps the face, feels over the surface and vilifies the old scoundrel; John, the Assyrian bearer, however, adopts a respectful attitude toward it so as to be on the safe side.

The following is the legend of King Namrud as related during our contemplation of the image:—

Namrud was a great and powerful king who lived at the time of Abraham's father, Aher. He claimed mastery of the earth and set himself up as God. In this he was helped by Aher, his chief priest, and together they sold stone images of himself for his subjects to worship.

When Abraham came to years of discretion, he asked his father why the people worshipped stones instead of the God in the Heavens who had created the earth and all mankind, whereupon the father became wroth and forbade his son from holding such revolutionary views. One night, however, Abraham went to the place of worship and smashed up the effigies of Namrud, but unfortunately the next morning the Devil went to Namrud and reported what had taken place, whereupon Abraham was arrested. On being asked by the King why he had done this thing, the young zealot replied that tne stones were only images and further exhorted the King to pray to the true God. Namrud's anger knew no bounds, and Abraham was cast into prison; a few days later a huge bonfire was lit and the prisoner thrown upon it.

The fire burned for a week, but the soldiers found that Abraham had come to no harm, he having been miraculously protected by his God. The King's daughter, Sarah, who had witnessed the whole proceedings, became enamoured of Abraham, but the intrigue being discovered, Namrud ordered that Abraham should be outlawed. Sarah escaped out of the city and joined Abraham, eventually settling down at a place which afterwards became the holy city of Mecca.

Namrud collected a large army and built a strong and high citadel, declaring that he would fight against the God in the sky, if such existed, but while the building operations were in progress, the God of the Heavens turned Namrud and his chief officers into stones– the images existing to the present day.

On our way back to the armoured cars, our Arab idlers expressed the hope that we would come again and even partake of a meal with them; they have noble countenances and courtly maners. Thinking we might be anxious for a souvenir of the ruins, one of them ran back to his village and produced a large piece of masonry, with carved hieroglyphics similar to those on the monuments and tablets. He would take no money for this souvenir, nor for the trouble and time spent in showing us over the ruins.

After lunch we went over to the squatting Arabs to bid them farewell and the blessing of Allah. The parting was dignified and cordial—we must come again and talk to them; next time they would produce more *antikas*. As we got into the cars, however, the Interpreter whispered that the old fraud, with all his nobility, would find eight annas useful for buying tobacco; and he accepted a rupee with alacrity.

NEWS IN BRIEF.

In February 170 Jews entered Palestine, and 187 Jews emigrated from that country.

M. Bogdan Markovitch, Yugoslav Minister of Finance, left Belgrade on May 7 for London by way of Paris.

Colonel W. G. S. Dobbie, C.M.G., D.S.O., has been appointed Brigade Commander, Egypt, with effect from July 16.

The King of Afghanistan witnessed a naval review at Kronstadt on May 11 and also saw gunnery practice from one of the Kronstadt forts.

Excavations of the American School of Archæology at the Heræon of Argolis, near Mycenæ, recently revealed some Mycenæan tombs containing vases, gold ornaments, and other objects.

Kouleli and Nanoff, two Bulgarian *komitajis,* who were condemned to death for an attempted dynamite outrage last October, were shot on May 7 behind the Heptapyrgon prison at Salonika.

King Ibn Saoud on May 11 held a preliminary conversation with Sir Gilbert Clayton, on the subject of the differences between Najd, Iraq, and Great Britain, as the Mandatory Power for Iraq.

As a result of King Fuad's intervention, Mahomed Pasha Mahmoud, Liberal Minister of Finance in the Egyptian Cabinet, has agreed to remain in office. although he had asked to be allowed to resign on grounds of ill-health.

The will of Mr. Shem Jones (67), of Hartington Road, Chiswick, W., late accountant of the Chartered Bank of India and China, Bishopsgate, E.C. (net personalty £24,057), has been proved at £24,204.

M. Molloff, Bulgarian Minister of Finance, accompanied by the Director of the Public Debt, left Sofia at the end of last week for Paris and London to open negotiations with the respective banks for the stabilisation loan authorised by the League of Nations.

Mgr. Dossitey, Metropolitan of Nish (Yugoslavia), who had been distributing relief among the Bulgarian earthquake victims on behalf of Patriarch Demetrius, left at the end of last week for Belgrade. Before leaving he was received by King Boris, and was visited by M. Tsankoff.

The Roumanian National festival was celebrated on May 10 throughout the country. In Bucharest a Te Deum was celebrated by the Patriarch, the congregation including the King, Queen Marie, and Cabinet Ministers. There was a review of the garrison while aeroplanes flew overhead.

Mr. John Roberson Baird Smith, K.I.H., of St. Vincent Street, Glasgow, the East India United Service Club, London, and care of the Chartered Bank of India, Australia and China, Bishopsgate, E.C., a Fellow of the University of Rangoon, and late of the Irrawaddy Flotilla Co., Ltd., Rangoon (personal estate in Great Britain), left £11,118.

Marshal Franchet d'Esperey, Commander of the French forces in the Near East during the Great War, arrived last week at Melilla, having completed his tour in the Spanish zone of Morocco. In an interview he declared that the operations in connexion with the landing at Alhucemas in 1925 surpassed the exploits of the Dardanelles.

The majority of the Egyptian Financial Commision has approved the annual contribution of £750,000 to the Sudan Defence Force with the customary reservations that it does not imply recognition of any changes in the Sudan "but it paid in order to preserve Egypt's connexion with the Sudan." The matter comes before the Chamber this week.

After the return to Athens of M. Michalacopoulos, Greek Foreign Minister from Hypati, a meeting of the party leaders participating in the present Government was held at Kephissia on May 10, presided over by the Premier. M. Michalacopoulos acquainted his colleagues with the latest developments in the Greco-Turkish negotiations for a Pact of arbitration and non-aggression.

The Archbishop of York on May 11 unveiled and dedicated at the church of East Rounton, about six miles from Northallerton, a stained glass window to the memory of Miss Gertrude Lothian Bell (daughter of Sir Hugh Bell and of his first wife Mary), who was born at Washington, County Durham, on July 14, 1868, and died at Baghdad on July 12, 1926.

The Save the Children Fund has received from the Archbishop of Sofia an expression of gratitude for its relief work among the stricken populations of the earthquake zone in Bulgaria. The relief work, which was begun by the Save the Children Fund within a few days of the first shocks, is still being continued. Gifts should be sent to Mr. H. D. Watson, hon. treasurer, The Save the Children Fund, 26, Gordon Street, W.C.1.

THE WEEK AT HOME

London, Tuesday Morning.

Dog-Racing.

Like newspaper-ownership, professional Association football, professional boxing, and other things, dog-racing (as it is called) has now become a matter primarily of financial interest; it is only secondarily a hobby or a pastime. And that is why so very many sportsmen oppose the conditions under which dog-meetings are now held. In the opposition which has steadily accumulated to dog-racing there is, of course, the "kill-joy" element, but that is an unfortunate element, which in no way affects the correctness of the judgment of the main opposers.

Last week in the House of Commons a second reading was given to a Bill introduced by Mr. John Buchan which proposed to give to local authorities the right to veto and control dog-racing. Any hope that the "gambling fraternity" may have had that the reading would fail was completely demolished by Mr. J. H. Thomas, whose speculative instinct is not exactly undeveloped. This Labour leader spoke of chars-à-bancs waiting at factory gates three nights a week to take workmen straight to the racing track, of workmen who have no wages to draw at the end of the week because they have mortgaged the whole to betting touts, and of children whose Sunday dinner depends on the result of a dog race on Saturday night. After such talk, coming from such a man, defence of dog-racing is futile. It is the particular, not the general principle, which is so disastrous in application.

Octopuses and Newspapers.

Everywhere in the provincial world of newspapers there are now oysters turning a little blue. For the twin walruses—octopuses, rather—the Berry group and the Rothermere group, are after them; and engulfment appears certain. First at Aberdeen; then at Derby; and who can say where the next meal will take place?

It is unfashionable to regret the disappearance of old and independent newspapers; the only thing that matters, apparently, is the amount or the condition offered by the rival trusts. In some quarters, where conscience is not wholly dead, a feeble effort is made to assure us that continuity of staff and of policy is certain; and of course we accept that, reflecting on the temporary nature of continuity.

So far the Berry group has had most of the fun. At Aberdeen the Rothermere people got in first, but the Berry people laughed last. At Derby, too, the Rothermere people first battered at the ramparts, which, however, capitulated to the more thorough blandishments of the Berry people. Next time, it is to be presumed that the Rothermere folk, whose boast of establishing a "chain" of provincial papers is looking a little empty at the moment, will allow the Berry group to make the first offer, which is, it seems, always unsuccessful.

There is plenty of room for tears over this Gargantuan feast, particularly when such an old paper as the *Aberdeen Journal* provides the *hors d'œuvre*. And how many small newspaper proprietors in the provinces will be found to resist the offers of the magnates of London?

Science and the Soul.

It was good to find, in spite of our modern deference to Science, a smart outburst against the dicta which have just been expressed by an eminent scientist, Sir Arthur Keith, upon the nature of the mind and cognate matters. Sir Arthur appears to think that every scientist, every medical man, must deny immortality. If that is so, then it is only so much the worse for the scientists. How very futile it is to dogmatise upon subjects upon which we can, in the nature of things, have no positive knowledge! It is doubly regrettable to find so narrow an attitude, which seemed reasonable enough in the aggressive agnostic scientists of the Victorian era, preserved in our more spacious modern time.

Of course there is a very wide disbelief in immortality, and of course its existence cannot be scientifically proved. But are we, granted these things, much nearer the heart of the problem? Scientists will never show us the way to the soul, but who are we that we should be guided in all our ways by scientists?

Mr. Ramsay MacDonald's Seat.

Life for Mr. Ramsay MacDonald is, one imagines, a terribly serious affair; his politics leave no time for pleasantries. A few days ago, for instance, it got about that his own seat of Aberavon was no longer considered quite "safe," and the suggestion was made that he should be a candidate for Seaham, vacated by Mr. Sidney Webb.

But the very idea that he was running away from Aberavon rendered necessary official denials, and the impression was gained, or fostered, that the leader of the Labour Party would never, never desert Aberavon. Now, however, renewed discussion is going on whether it would not be a good plan on Mr. MacDonald's part to dissociate himself from the low Liberal and the still lower Communist who are putting up for Aberavon; he is leaving the mattter for a small committee of his Party to decide.

One would have thought that the Labour leader would have obtained more popularity in Aberavon itself and in the country at large by sticking to his local guns, instead of sanctioning the suggestion of his inviolability. But if the Party's advisers consider that a decline in Mr. MacDonald's prestige at Aberavon would adversely affect the chances of the whole party, no doubt they are justified in finding asylum for him before the General Election next year. The amusing factor of the situation is that it is the hated, despised Liberals, not the dominant Conservatives, who threaten the integrity of Aberavon.

America and Golf.

Mr. Walter Hagen has done it again. One would be churlish to withold unstinted praise from the man who, having but a few days before been pulverised by Compston, can walk off with the Championship at Sandwich. Hagen's was a performance that has stuck hard in the memory of every golfer.

One very pleasing result of this lamentable ending of the Championship—lamentable being used in the insular sense—is a better understanding of the real Hagen. This egregious American golfer is by no means the arrogant publicist which certain remarks sent out by his Press Agent on a former visit to Britain made him out to be, but a human, likeable fellow. He took his defeat by Compston and his triumph at Sandwich like a man.

The Preservation of Cambridge.

The physical beauties of Cambridge are less immediately apprehended than are those of "the other place," where already a Preservation Society has been formed to guard against the spread of industrialism in all its hideous manifestations. A few days ago, however, a letter was published in the Press showing that Cambridge had followed the sensible lead of Oxford in this manner; and a "Preservation Society" is now appealing for funds.

The University itself is, of course, inviolable; but its setting is menaced. Perhaps the love of Cambridge is deep and real only in those who have lived and learned and dreamed for months by its slow river; but even to outsiders its peaceful majesty appeals, and there are, one supposes, hundreds of thousands who never "kept a Chapel" that have seen:—

> The sunset all a golden sea
> From Haslingfield to Madingley.

In Cambridge Town itself there are few beauties outside the College buildings, but in the neighbourhood there are ways and views tramped and loved by generations of men from both the University and the County, and it is these last which the omnivorous builder threatens. An annual subscription of 10s. 6d. or upwards will carry membership of this very necessary "Cambridge Preservation Society."

PERSONAL AND GENERAL

TO-DAY

May 17, 1928 (New Style).
May 4, 1928 (Old Style).
Dulkaada 27, 1346 A.H., of the Muslim Calendar.
Iyar 20, 5689, of the Jewish Calendar.

Sir Willoughby Carey left London on May 11 for Bombay in the P. and O. s.s. Mantua.

The Aga Khan is making a satisfactory recovery from his recent attack of bronchial pneumonia.

Lady Willoughby de Broke has returned to Woodley House, Kineton, Warwickshire, from Egypt.

Lord Ronaldshay has accepted the presidentship of the Royal Asiatic Society, in succession to Sir Edward Maclagan.

Admiral of the Fleet Lord Wester Wemyss left Marseilles on May 11 for Port Said in the P. and O. s.s. Mooltan.

Lady Constance Milnes Gaskell and Miss Milnes Gaskell returned last week to 47, Pont Street, from their visit to Lord and Lady Lloyd at The Residency, Cairo.

King Amanullah of Afghanistan and his party, accompanied by Karakhan, Soviet Commissor for Foreign Affairs, left Leningrad on May 13 for the Crimea.

M. and Mme. Dimitri Stancioff, and Mlle. Stancioff, have left London for the Villa des Trois Sources, Varna, Bulgaria, where they will spend the summer and autumn.

Sir Robert Hodgson was received in audience by the King at Buckingham Palace on May 11, and kissed hands upon his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Durazzo.

Lieutenant-General Sir Harold Walker had the honour of being received by the King at Buckingham Palace on May 11 upon relinquishing his appointment as General Officer Commanding-in-Chief, Southern Command, India.

At a meeting of the Near and Middle East Association, to take place, by kind permission of Sir Edward and Lady Boyle, at 63, Queen's Gate, S.W., on May 21, at 8.45 p.m., Dr. Camillo Pellizzi will speak on "Italy and the Near East." Count de Salis will preside.

The Triennial Gold Medal of the Royal Asiatic Society was presented on May 8 to Dr. D. S. Margoliouth, Laudian Professor of Arabic at Oxford University, in recognition of his great services to Asiatic learning. The presentation was made at the Society's rooms by the President, Sir Edward Maclagan.

Mr. Charles Cain, whose exhibition of etchings of Iraq at the Greatorex Galleries in London formed the subject of a special article in THE NEAR EAST AND INDIA of June 2, 1927, has one of the etchings singled out therein for special mention hung in the Prints Room of this year's Royal Academy. It is called "Daughters of Israel," depicting married Jewesses in Baghdad; and it was reproduced in our columns in the article to which reference has been made.

A dinner will be held on June 8 at the Mayfair Hotel, Piccadilly, W., for Officers of the Forces in Mesopotamia, North and South Persia, and Eastern Persian Cordon, including members of the Civil Administration in Mesopotamia and the Consular Service in Persia. General Sir William Marshall, Commander-in-Chief in Mesopotamia, will preside. Officers wishing to attend should communicate with the Hon. Secretary, Mesopotamian and Persian Dinner, 3, Copthall Buildings, E.C.2.

THE LEBANON HOSPITAL.

The 29th annual meeting of the Lebanon Hospital for Mental Diseases (near Beyrout, Syria) will take place at Friends House, Euston Road, opposite Euston Station, on May 22 at 3 p.m., Sir Wyndham Deedes, C.M.G., late Chief Secretary to the Palestine Government, in the Chair. An address will be given by Sir Maurice Craig, M.D., F.R.C.P., on "The Treatment of Early Mental Disorder," and Sir Robert Armstrong-Jones and Dr. Bedford Pierce and others will also speak. The Lebanon Hospital is the only place for the treatment of mental disorders in Syria, and is also a teaching centre for Psychiatry in the Near East. It is administered on an international and undenominational basis, under a British medical director. All who are interested are cordially invited to attend this meeting. Further particulars are obtainable from the London office, 139, Marylebone Road, W.1.

According to a Reuter message from Teheran the Soviet Post Office there has announced that an international postal air service has been established and that the Teheran-Baku service may now be connected with 25 countries in Europe and Asia Minor, including Germany, Sweden, Lithuania, Estonia, Finland, Czechoslovakia, Spain, Italy, Turkey, and Bulgaria.

Dr. W. Doorenbos, formerly head of the Quarantine Bacteriological Service at Suez, is to succeed Dr. F. d'Herelle as Chief Bacteriologist to the Quarantine Board of Egypt. Dr. Doorenbos has made researches in connexion with plague during the recent epidemic in Suez and will shortly proceed to Holland to report on his discoveries.

Ahmed Pasha Mazlum died in Cairo on May 9 after a long illness. Ahmed Pasha Mazlum entered the Egyptian Cabinet in 1893, and was Minister of Finance in Mustapha Pasha Fahmy's Cabinet from 1895 to 1908. On the creation of the Legislative Assembly, in 1913, he became its President until 1923. After being Minister of Wakfs under Zaghloul Pasha in the spring of 1924, he again became President of the Assembly in March of that year, but resigned in July, 1924, in order to take charge of the Ministry of Communications till October while its incumbent, Mohamed Pasha Said, was Acting Prime Minister during Zaghloul Pasha's absence abroad.

Miss Young's Camp, Troodos.

There are summer quarters, for a limited number of paying guests, on Troodos (Miss Young's) in the midst of forests, 6,406 ft. above the sea—the summer resort of the Troops and Government Officials. 20 hours from Port-Said.

Pitched in the pine forest in a lofty and secluded situation, on the upper slopes of Mount Olympus—25 minutes from the summit. Perfect climate, dry, cool and bracing air, enchanting panoramas; no mosquitoes; completely equipped with every comfort and convenience.

Troodos is 35 miles from Limassol and 45 miles from Nicosia. From both towns there are good carriage and motor roads. The summer climate is dry and healthy. The nights are often rather cold after the end of August. As regards dress, Ladies should be provided with washing skirts, as there is a good deal of red dust on the hills; white is much worn, but dust-coloured costumes are advisable. A warm woollen coat and skirt are essential. Riding and motor excursions, Tennis and croquet are the chief occupations of the Visitors. An English Club provides Newspapers, Telegrams (Reuter's) and Books. The water supply is good and there is plenty of fresh milk. Inclusive terms £3 10s. a week. *Open June 15.*

Apply to Miss Young, 38 Victoria Street, Nicosia, Cyprus.

TWENTIETH-CENTURY BENGAL.

At the present moment the Swaraj party in Bengal would appear to be in some danger of disruption. Their attempt to boycott the Statutory Commission is clearly losing force; their campaign against the use of British goods lacks vigour; their leader has failed to secure re-election as Mayor of Calcutta; and they are in serious disagreement concerning Mr. Subhas Chandra Bose's proposal to restrict the cultivation of jute in Bengal. This state of affairs lends additional interest to the recently published study, by the late Mr. Prithwis Chandra Roy, of the life and times of the founder of the party, Chitta Ranjan Das. Mr. Ray was well known in Bengal as a writer and speaker on Indian political, economic and social questions. He was the author of a book on "The Poverty Problem of India," and of several other volumes; and he was for some time editor of the *Bengalee*, the newspaper which was formerly conducted by the late Sir Surendra Nath Banerjee. His life of Mr. C. R. Das is more than a personal memoir; it is also a record of the political history of Bengal for roughly the first quarter of the twentieth century. Das was not, of course, a prominent figure in public affairs during the greater part of this period. He was born in 1870, but he did not enter political life until 1917, when he presided over the Bengal Provincial Conference. He was the son of a Calcutta solicitor, Bhuban Mahan Das, and, after graduating at the Calcutta University in 1890, he went to England to compete for the Indian Civil Service. Failing to get a place in the list of successful candidates, he joined the Middle Temple and, in due course, was called to the Bar. He returned to India in 1893 and was enrolled as an advocate of the Calcutta High Court.

For a long time he found it to be very difficult to get into practice at the Bar; and, while he was waiting for briefs, he tried his hand at literary work, publishing a volume of poems. But here also he met with little or no success, and even as late as 1905 he had failed to make any headway either as a barrister or as a literary man. In the following year the financial affairs of his family were such that his father and he had no alternative but to seek the protection of the insolvency court. Soon afterwards, however, the tide turned; his practice at the Bar began to develop; and in 1908 he successfully defended Aurobindo Ghose who, with a number of other young Bengalis, had been charged with complicity in the revolutionary movement which was then taking shape. This case established Das's reputation as an advocate. Within a comparatively short time afterwards he was making a large income; and in 1913 he paid the debts for which he and his father had been adjudged insolvents six years earlier. His practice continued to grow, and he soon became one of the recognised leaders of the Calcutta Bar. As we have seen, he was elected President of the Bengal Provincial Conference in 1917. His presidential address, which differed entirely from the ordinary type of political speech, attracted much attention; and the occasion really marked his entry into active politics. Two years later the non-co-operation movement was launched by Mr. Gandhi, the immediate object against which it was directed being the Rowlatt Act. At a special session held in Calcutta in September, 1920, the National Congress resolved to support the movement. Das opposed the resolution, but three months later he entered into a secret pact with Mr. Gandhi by which each promised the other freedom of action in his own sphere. Almost immediately afterwards Das was converted to the non-co-operation idea, and he forthwith became one of its staunchest supporters. He gave up his practice at the Bar, ceased smoking and drinking, and began to live the life of an ascetic. The non-co-operators refused to enter the new Councils which were constituted in 1920 under the Reforms scheme; and for about three years Das agreed with them. He then came to the conclusion that there was no future before the non-co-operation movement as such. This decision he followed up by founding the Swaraj party, which pledged itself to enter the Councils and, by persistent and continuous obstruction, to destroy the new system of government. In December, 1923, the party carried the elections in Bengal and Das entered the local Council as head of the strongest single party in it. This success was repeated very soon afterwards at the elections for the newly-constituted Corporation of Calcutta; and Das was elected Mayor of the city. A few months afterwards his health began to fail, and in June, 1925, he died at Darjeeling.

The foregoing is in outline the story of a remarkable career, a story which Mr. Ray has told in considerable detail. His book is written, of course, from the Nationalist standpoint and we certainly cannot endorse quite a number of his conclusions. He has not much that is good to say of British rule in India; and he is particularly severe on the Reforms scheme. He tells us that Das "wanted no patchwork reforms but the abolition of the entire system of dyarchy, the corner stone on which the Government of India Act is based, in order that the onus of misgovernment might be fixed upon the bureaucracy alone." It was, he says, a blunder on the part of the Nationalists to boycott the Councils at the elections of 1920, for the reason that their absence "did not allow the people to get a glimpse of the defects of dyarchy in good time." This is very unconvincing. The fact is that the Nationalists made a mistake when they decided to boycott the Councils; and the Swaraj party also made a mistake when they decided to enter the Councils solely for the purpose of obstruction. It is true that in Bengal dyarchy broke down; but other provinces have shown that it can be worked. And it is incontestable that to-day the new legislatures are solidly established and that they reflect the political conditions of the country. The Swaraj party, which is pledged to the destruction of the system of government which the legislatures represent, is steadily losing ground and in Bengal it is, as we began by saying, in danger of disruption.

"The Life and Times of C. R. Das." By Prithwis Chandra Roy. (Oxford University Press. 12s. 6d.)

CURRENT TOPICS.

The Problem of the Indian States.

The problem of the Indian States on which the Harcourt Butler Committee must shortly report is, as its Chairman stated in his speech in Kashmir, a most complex and delicate one. There is fortunately good ground for the hope expressed by him that a solution satisfactory to the main parties involved will be attained. It is doubtless true, as His Highness the Maharaja of Kashmir stated on the same occasion, that the States only want to live and let live. Yet the interests of the States themselves and of their subjects are so intertwined with those of the remainder of British India, and indeed of the British Empire, that a totally isolated existence would be impossible for the States, even if the rulers and peoples of the States desired it, which we venture greatly to doubt. The problem is in reality threefold: the relationship of the rulers with the British Crown, with the other Governments of India, whether Central or Provincial, and with their own subjects. The first question fortunately presents little or no difficulty. The steadfast loyalty of the Indian Rulers to the British Crown, and in particular to its personification in the King Emperor, needs no proof. The relations between the States and the Government of India, as well as the Provincial Governments, present more difficulty. The States would naturally resent any interference with their own internal affairs on the part of popularly elected assemblies, whose voters would in most cases be entirely alien from the traditions and the peoples of the States. On the other hand, there are many problems of defence, trade and taxation which are coming increasingly within the purview and the power of the popular assemblies of British India, and yet may vitally affect the prosperity of States which have no voice within these assemblies. Nor can the value of the sane and independent opinion of the Princes, even on matters more directly affecting British India alone, be easily overestimated.

While, moreover, the relations with the more important States have rightly been taken over by the Government of India, however remote these States are from Simla and Delhi, there are many little Principalities, particularly in Bombay, so interlaced with the surrounding British districts, that dislocation from the Provincial Governments is undesirable, if it can be avoided. It is, however, the relationship with the Rulers' own subjects that may present the greatest difficulty. The chiefs naturally resent any interference which may be regarded as an encroachment on their treaty rights. It must, however, be remembered that these rights implied good government by the chiefs, and interference to ensure such government was far more common in ancient days, when the treaties were new, than they have been in recent years. The subjects of the States must naturally expect some evolution of institutions comparable with, though not necessarily equal to, those taking place in British territory. On the other hand, we believe that the inhabitants of the States neither expect nor desire the complete development of popular election and popular control that their brethren in British India have asked for and have been promised. The advance of administration in Indian States, though unequal and far behind the popular development in British India, has been in many cases remarkable. We believe, therefore, that the problem, difficult as it admittedly is, is by no means insoluble. Certainly it could not have been entrusted to a more competent Committee or to an abler Chairman.

Municipal Progress in Bengal.

The recently issued annual review of the work of the municipalities in Bengal does not afford much encouragement to the well-wishers of self-government in India. Progress is slow and efficiency is not the strong point of municipal administration in the Province. At the same time it is satisfactory to be able to say that the picture is not all shadow. For practically al the municipalities have made some advance with sanitation; and many have tried to check the various epidemic diseases which are common in the delta. Then again some have been forward in their efforts to restrict the sale of adulterated food, and in numerous other ways they have endeavoured to promote the public welfare. It must not be assumed, therefore, that the record is one of complete failure. But, unfortunately, irregularities and embezzlements are much too common. Many of the municipalities are also behind with their collections, and they do not seriously trouble to improve matters. There are 115 municipalities in the Province, and in only twenty-four of them were the collections entirely satisfactory; six others realised 99 per cent. of the demand; and the remainder had outstanding balances at the end of the year.

Calcutta does not come within the scope of the annual review as its municipal administration is controlled by a separate Act—the Calcutta Municipal Act of 1923. This statute, which was largely the work of the late Sir Surendra Nath Banerjee, provides for a Corporation consisting of eighty-five councillors and five aldermen. Sixty-three of the councillors are elected by the ratepayers; twelve by various public bodies; and ten are nominated by the Local Government. When the Act came into operation in 1924 the late Mr. C. R. Das, the leader of the Bengal Swaraj Party, was elected Mayor, and on his death in 1925 his successor in the party leadership—Mr. J. M. Sen Gupta—succeeded him also as Mayor. But the party has now lost its hold on the Corporation. At the recent election it had to make way for a non-Swarajist coalition; Mr. Sen Gupta failed to secure re-election as Mayor; and his place was taken by Mr. B. K. Basu, a Calcutta solicitor, and an independent in politics. The Swarajist administration has not been a conspicuous success, although it has certainly striven to promote the cause of primary education. But it has been too exclusively political, and its disappearance is not likely to be regretted.

A Good Lead.

The directors of the Tata Iron and Steel Company are to be congratulated upon their decision to introduce a profit-sharing scheme at Tatanagar. The scheme is a simple one, embodying the system of bonuses on production which is more widely followed in this country than is generally supposed and has, of course, become almost a commonplace of industrial organisation in the United States, under the lead of Mr. Henry Ford. All workers in receipt of a wage not exceeding Rs.300 a month will be given a bonus based on the ascertained output of finished steel over a given period at a rate which is expected to work out at about the equivalent of five weeks' pay in the year. The minimum production for the purpose of the scheme has been fixed at 475,000 tons in 1928-29 and 535,000 tons in 1929-30. That these are not impossible figures, the General Manager shows by reference to recent output. During the six months ended March 31 last the total finished tonnage has averaged over 40,000 tons a month, notwithstanding the strikes which marked the end of that period. With the additional facilities and equipment now being installed and proper co-operation on the part of the workers Mr. Tutwiler estimates that the desired level will be reached very soon, when an annual payment of some ten lakhs of rupees will be involved.

Though the details have not yet been worked out, the intention is that men on lower rates of pay shall receive a proportionately larger share than those on higher rates of pay. This, as the *Times of India* remarks, is all to the good. "The more poorly paid employees suffer most severely under present industrial conditions. They have little scope for initiative. They are seldom consulted. Their pay appears to be the same whether or not their labour has brought substantial profits. They are, in fact, slaves of the machine." The scheme is a courageous and statesmanlike attempt to grapple with a problem which is assuming increasing importance as the industrialisation of India proceeds. And no doubt in the long run the lead, if followed by other industrial undertakings, will bring about a much better relationship between labour

Digitized by Google

and capital. It is also calculated to increase the efficiency of the workers, as they will have an inducement hitherto lacking to show greater output in each department. But whether in the early stages of its introduction the results will be quite so satisfactory as our Bombay contemporary thinks may be doubted. On the contrary, it is likely rather to have a very unsettling effect upon the workpeople and provide a fruitful field in which the agitator will be able to sow many tares by playing upon the traditional jealousies and cupidity of the individual workers, whose understanding of the system will unfortunately be of the most elementary character. And the suggestion, implied if not expressly stated, that the inauguration of the scheme is in any way conditional upon the continuance of the protection of the industry is a definite mistake which, we hope, will be retrieved when the final details are settled and the system actually put into force.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 26.

Politics.

A story in India, but how true one does not know, is that there was a vacancy on the Viceroy's Council. "Let me have a man," said the Viceroy, "who knows his own mind." So they gave him Sir Reginald Craddock. When the time came for Sir Reginald to go to Burma, the Viceroy said: "No more men, thank you, who know their own minds!" Men who have heard that story must have been reminded of it, when they read Sir Reginald's reply in the *Contemporary Review* to Sir Sankaran Nair's recent article in the same journal. In the absence of political news from within India, that reply and Mr. Fenner Brockway's open letter to Sir John Simon in the *New Leader* have held most of our attention, indeed, all of it that was not occupied with the affairs of the Indian States, of which presently. Sir Reginald Craddock certainly knows his own mind, and no one can express it better than he can himself. There are many in India, let it be said, who are in entire agreement with him regarding the danger of the determination of the Brahmin caste to rule. If those should rule who best can, others think, the Brahmin ought to rule in India, and, indeed, must. The men who most distinguish themselves in every walk of life in India are the Brahmins. One sees that wherever one looks. It may, therefore, not be any matter of choice. The Brahmin has always used his wits, with the consequence that he now has far more wits than any rivals you could put up.

Mr. Fenner Brockway must be allowed to have made a good point, when, addressing Sir John Simon, he said: "You must have appreciated that men like Pandit Motilal Nehru, Dr. Ansari, Mr. M. A. Jinnah, and Lala Lajpat Rai are not impossibilists, but reasonable men with whom a basis of agreement can be found," but a bad point, when he said: "Take evidence from official quarters and denationalised groups, if you will." A fair comment on that was the *Statesman's* ". . . very large parties in India will resent warmly Mr. Fenner Brockway's allusion to 'denationalised groups,' which phrase is intended to cover all those Indians who are prepared to work with the Commission. If his knowledge of India were as great as his assurance, he would know that these parties yield to none in their desire for bettering Indian government; The possession of a little commonsense is not evidence of a loss of nationality."

The Indian States.

There was a gathering of Princes and Chiefs in Bombay at the end of last week, when, according to report, a formal conference was held to discuss a tentative scheme, prepared with the help of Sir Leslie Scott, for submission to the Butler Committee. The scheme seeks to protect the treaty rights of the States; concedes the legitimacy of British-Indian aspirations, and guarantees good government within the States. Three organisations are proposed to give effect to these ideas: (1) The Viceroy in Indian States Council; (2) The Governor-General in Indian States Council; (3) A union Court. The first of those three bodies will concern itself with treaty rights and undertakings; the second, with commerce, agriculture, irrigation, the drug traffic, etc.; and the third will be a form of arbitration tribunal, with the right to appeal to the Privy Council.

The relations between the larger and the smaller States formed the chief topic of a speech delivered by H.H. the Maharaja of Patiala at a general meeting of Princes and Chiefs at which about forty States were represented either by their rulers or by their Ministers or advisers. "From information which has come to me," the Maharaja said, "I believe that the rulers of the smaller States are in some instances hesitating to joint with the Standing Committee, because they fear that their own interests may suffer, and that any change which is made in the present system will be of advantage only to the larger States, and not to the smaller States. I believe that this hesitation arises from some misunderstanding as to what the object of the whole scheme," H.H. the Maharaja of Bikaner and H.H. the Jam Saheb of Nawanagar reinforced the appeal of the Chancellor to the smaller States. They may now all be expected to work for the common end.

Mr. George Davies.

The United Service Club flew its flag at half-mast all day on Saturday as a mark of respect for the memory of Mr. George Davies, the popular District Magistrate of Chittagong, murdered the day before by a Muhammadan. Mr. Davies was, of course, well known in Calcutta, where he was deeply respected. The members of the Chittagong Bar met on Saturday and passed the following resolution: "That the members of the District Bar Association do place on record their deep sense of grief at the unexpected and tragic death of our popular District Magistrate, Mr. Davies, and that the members present feel it their solemn duty to record further that the death was filled them and all the people of the district with a sense of shame and humiliation, and they condemn this dastardly and inhuman outrage with all the emphasis at their command." The Islam Association passed a similar resolution.

The Weather.

Bow Bazar registered a shade temperature yesterday of 109 degrees. The air was dry, fortunately, which it was very far from being last Thursday and Friday. The relative humidity those two days was very high, and one's physical discomfort was almost more than human flesh could endure. How much higher the temperature means to go remains to be seen. Some of us almost wish it would go higher, for the satisfaction of the betting instinct in us. It is always so. If it has rained for three days in torrents, one hopes that it will keep it up and give one a new record to boast of. And so with the temperature. If there is something to bet on, men will get at least that satisfaction.

CIVIL AVIATION IN INDIA.

(From a Bombay Correspondent.)

The decision of the Government of India to allow the use of the Royal Air Force stations and landing grounds in India by civil aircraft, where the exigencies of the service permit, will serve to lend a considerable impetus to the development of civil aviation in this country. Except under conditions of war there is not much likelihood of the stations and landing grounds being required exclusively for the Air Force. And the concession will obviate the necessity of duplicating landing facilities at important centres and thus save considerable sums of money which could be more usefully employed in equipping

Digitized by Google

the country with more aeroplanes for civil and commercial flying.

While at first Calcutta seemed to be in the vanguard of progress in the development of commercial and civil aviation in India, Bombay has lately recovered its lost initiative and the contest for the honour of providing the country with its first fleet of aeroplanes in commercial service is likely to be close and keen.

About the time of the Government of India's decision came the news that important Calcutta business interests were floating several concerns of the foregoing nature. A company to operate between Calcutta and Rangoon and another to engage in exploiting the possibilities of traffic between Calcutta and Darjeeling and other hill stations were stated to have been launched. The Air Surveys Company, Ltd., of Rangoon, announced more recently that they were opening a new centre of activity in Singapore. This company is registered in England, but the Calcutta branch will be shortly registered in India with rupee capital with the object of running transport services all over India as well as continuing the original business of carrying out aerial surveys. The Calcutta-Rangoon scheme, which was announced afterwards, was, however, stated to be dependent upon Government's giving the new company the contract to carry the Calcutta-Rangoon mails, and if that could not for any reason be done it was even feared that the company may not even materialise.

But the activities of Bombay have not begun and ended, as has been suggested, with the formation of a light aeroplane club. Further information is now available concerning the Eastern Airways, Ltd., which has recently been registered at Bombay. Considerable progress has been made in the preliminary organisation of the Company. Arrangements have been made to bring experts from Europe to serve the Company until such time as suitable Indians have been trained to take their places. A batch of educated Indian young men is proposed to be sent out to Europe to study aeronautics and the manufacture of aeroplanes, etc., on a five years' contract to serve the Company on their return to India.

The Company proposes to start an air service between Bombay and the other big cities of India. Quite a large part of the country will be covered by the four air-routes proposed to be established as soon as the organisation is put in full working order. The four routes are: (1) the Bombay-Karachi route, touching Porbundar, Rajkot and certain other Gujrat and Kathiawar centres; (2) the Karachi-Delhi route, traversing the states of Jaisalmeh, Jodhpur, Bikaner, Jaipur and Alwar, etc.; (3) the Bombay-Calcutta route, covering most of the Central India States; and (4) the Bombay-Madras route, crossing the dominions of Hyderabad.

In addition to the services mentioned above the Company proposes to provide joy flying and short-distance trips for the public of India between important places. For this purpose the Company will establish five central stations at or near Bombay, Calcutta, Delhi, Madras, and Rangoon.

To start with the Company proposes to get out 30 machines; the long-distance machines will be luxuriously fitted with arrangements for buffet and toilet.

The death, following a paralytic stroke, is announced from Karachi of Mr. Edward Raymond, formerly additional Judicial Commissioner of Sind. Mr. Raymond was 63 years of age, and he had been associated with the Judicial Commissioner's Court since 1891.

The Bombay Corporation on May 10 rejected by 26 votes to 22 a resolution proposing that a sum not exceeding £7,000 should be spent for the relief of the mill strikers by employing them in cleaning the city and levelling the low-lying parts.

Sir Philip Hartog is to preside over a committee auxiliary to the Simon Commission to inquire into the growth of education, which is the second statutory item in the Commission's terms of reference. Sir Sultan Ahmad, Vice-Chancellor of Patna University, and a Hindu educationist, with two Englishmen, will be members of the committee. Mrs. Muthulakshmi Reddy, the woman member, is Vice-President of the Madras Council, which voted against co-operation with the Simon Commission in her council.

MEDICAL SERVICES IN INDIA.

The Secretary of State for India has sanctioned a scheme for the reorganisation of the medical services in India, based on proposals framed by the Government of India in consultation with the Provincial Governments. The following is an outline of the scheme, which is described in a *communiqué* issued by the Government of India:—

The Indian Medical Service, constituted on the same broad lines as at present, will be retained primarily to meet the needs of the Indian Army. In order to maintain the necessary minimum war reserve of military medical officers and to provide for European medical attendance for European officers of all Superior Civil Services and their families, Local Governments will be required to employ a stated number of Indian Medical Service officers. The Government of India will draw on the same Service to meet requirements of the civil administration for which they are responsible. The war reserve to be employed by the civil side should consist of 134 British and 66 Indian officers. The larger number of British officers is due to the fact that British officers cannot be recruited in India in an emergency from the ranks of private practitioners. The other factor which enters into the reckoning is the need for making adequate arrangements for medical attendance on British *personnel* of the Superior Civil Services and their families, and for the requirements of the civil administration for which the Central Government are responsible. The total number of Indian Medical Service officers required for civil employment is calculated at 302—212 Europeans and 90 Indians. To provide employment for 302 officers, 237 posts are required. The remaining 65 officers will constitute the leave and study-leave reserve calculated at 27½ per cent. Of the 237 posts, 59 are available under the Government of India, including posts in the Foreign and Political Department, and 178 posts will be provided in the provinces; 112 of the 178 posts primarily represent requirements of Civil Services in the matter of European medical attendance, and must be held by British officers. The remaining 66 posts will be open either to Europeans or Indians. Twenty-eight out of 59 appointments under the Government of India will similarly be open to officers of either race. At present 268 appointments are reserved for the Indian Medical Service in Provinces. The new scheme, which reserves only 178 posts for them, will gradually release 90 posts for Provincial Medical Services. The adoption of the new list of reserved posts will leave, on the civil side, a surplus of Indian Medical Service officers who are now holding appointments which are at present reserved for the service. The existing rights of these officers will be fully preserved, and prospects equivalent to those afforded by the present list of reserved posts will be retained for them.

Among the rules which will come into force "in the interests of the Army, the Local Governments, and of officers themselves," is one making liability to serve on either civil or military side a definite condition of service for all future entrants to the Indian Medical Service.

THE INDIAN PROBLEM.

Sir Campbell Rhodes, Member of the India Council, presided at a meeting of the Royal Colonial Institute on May 8 when Sir Reginald Craddock read a paper on "The Indian Problem."

"We have now arrived," the lecturer said, "at a most critical chapter in the story of the British connexion with India, and upon the steps now taken must depend largely the course of history. Is the work of two centuries to be thrown away by the worship of theory to the neglect of facts, and does it now only remain for some budding Gibbon to begin collecting materials for a 'History of the Decline and Fall of the British Empire in India,' or will the British nation once more triumph over difficulties by finding a solution which will enable India to continue on a path of peaceful progress—material, moral and intellectual? This is the real issue upon which the Simon Commission are now engaged, and upon which the British Parliament will presently have to make its decision. That decision, whatever it may be, may have momentous consequences, serious enough for the British people, but infinitely graver for the vast and patient masses of India, who have welcomed impartial British rule as their haven of rest after centuries of confused turmoil and oppression."

After contending that in his historic announcement of August, 1917, Mr. Montagu was promising what it was beyond his power to perform, "viz., to introduce genuine democracy among a collection of races representing in the aggregate one-sixth of the population of the world

Digitized by Google

who for thirty centuries of their own volition had never exhibited even the faintest glimmering of a democratic conscience," Sir Reginald said that the mistake lay not in the expression of the desire that the peoples of India should be increasingly associated in the administration of their country, but "in attempting to lay down in advance the particular form of Government to be supplied to them, without any regard to its suitability."

Not only was the question, therefore, begged in the initial statement of policy, but the reforms of 1919 were based, actually if not explicitly, on three false hypotheses. The first was that India was a nation; the second that the inauguration of democratic machinery was a fitting reward for India's services in the war; the third that a decree favouring democracy would alter the character of many millions of people.

There were no exact parallels in the world for the Indian situation to-day, but if it could be imagined that all the nations of Europe had for a period of time been artificially united under an alien paramount power, and that at the time that that power withdrew, such martial races as France and Germany were backward in educational development while the intelligentsia were mainly to be found in Portugal and Greece, could a single democracy in Europe have any chance of success? The only result in Europe would have been the splitting up of the continent into its racial component parts. The same would be the result in India if the British withdrew. The designation European was a Continental term, not a national one, and the designation of India was similarly not a national term but a sub-continental one. To keep the peace in Europe between all these races had been the dream of many eminent statesmen, whose success had been very indifferent. The task of keeping the peace in India, if it were so split up into races, would be still more difficult. Yet the course set by the Reforms was based on the confident hope that India could settle down as one great happy family, self-governing yet still remaining within the British Empire. The framers of these Reforms left in the air entirely the future of the British Services, the position of the Indian States, and the constitution of the Army; that is to say, they omitted in their scheme to grapple with all the most vital factors upon which the whole future of India depended. They were in fact precise where they ought to have been vague, and vague where they ought to have been precise.

In conclusion, Sir Reginald said that the primary essential to self-government was national unity. The preamble to the Government of India pledged us to take such measures as would promote the unity essential to self-government on democratic lines. The substantial steps in that direction taken in pursuance of the pledge had been found not to increase unity but to cause disunity. Clearly, therefore, the lines had not been the right ones and it was futile to attempt to pursue them. The real remedy was to return to the starting point and advance along a more likely route, and to such a stage on that route as the experience of the last eight years seemed to justify. During that time such unity as already existed could be increased only by the obliteration of caste distinctions, racial dissensions and religious intolerances, and that obliteration would only become possible with the widest diffusion of education. Until, however, those obstacles were completely overcome, democracy in India must remain a very distant ideal.

Finally, the lecturer summarised his own suggestions in the following propositions:—

I. The Indian Princes and Chiefs must remain outside the scheme. They enjoy sovereign rights and cannot be coerced into any form of subjection to a group of intellectuals of British India. Any agreement they might make over matters which jointly concern them and British India were, of course, in a different category, but they would make them with the sovereign power, and not with Legislative Councils.

II. The Central Government must be made strong and able to carry out its policy instead of being at the mercy of a hostile majority in its Legislature. When the inhabitants of every province in India had learned how to govern themselves and have agreed that representatives of each should jointly govern the whole as a central authority, strong enough without foreign aid to impose its will from Peshawar to Cape Comorin, and from Bombay to Assam, then only can a Central Legislative body be described as self-governing. The powers given to the Legislative Assembly reach the climax of absurdity when applied to Burma. The inhabitants of Burma had no desire to assist in governing Indians, and the very last thing they wished was to be themselves controlled in any way by Indians. What was true of Burma is true, if in a slightly less degree, of all the provinces. For every one of them is in a minority *vis-a-vis* of the rest; yet every one of these provinces, for periods varying from a century and a half to seventy years, had readily accepted the sovereignty of Great Britain, and, save for a handful of ambitious politicians, they accepted it now.

III. In the case of the Provincial Governments where the people concerned are more homogeneous, practice in self-government can be more real, but dyarchy and the dual Cabinet of members and Ministers should go. Every Governor of a province required a Council of Ministers, half British, half Indian, working as a single Cabinet. But all these Ministers must have the status and protection now accorded to a Member of an Executive Council, and be appointed for some definite term. Ordinarily the Governor should select his Indian Ministers from the Provincial Legislative Council.

IV. The constitution of the Councils and the franchise were matters of supreme importance.

A rough scale of the classes and interests which would require separate representations would be something as follows:

The Literate Classes: (a) Brahman; (b) Non-Brahman. Obtained by electorates of the learned professions, journalists, schoolmasters and registered graduates of the Universities.

Commerce: (a) British Commerce; (b) Indian Commerce.

The Land: (a) The great landlords; (b) Land-holders; (c) Tenants. All the above members would be obtained by election, but the candidate would have to be of the same denomination as the electorate.

The Denominational Classes requiring separate electorates of their own under the above-mentioned heads would be Mahomedans, Europeans and Anglo-Indians, and Sikhs in the Punjab.

Certain interests would be best represented by nomination. Labour; Indian Christians; the Depressed Classes.

After the elected and the ear-marked nominations were complete, 25 per cent. of the total strength of the Council should be available for nomination of any person without any restrictions as to their being official or non-official, or of any class or creed.

V. The British element in the Services should be fixed for a long period of time. In the Security Services they could possibly be reduced below half. In the other Services a lower fraction of British might be feasible in some but not in others, but all British-recruited Services should be under the control of the Central Government and the Secretary of State.

Lieutenant-Colonel R. A. E. Benn, C.I.E., F.R.G.S., is leaving India shortly, after 40 years' Army and political service. He was employed on intelligence duties on the Afghan Frontier and as a military adviser under the Foreign Office. He has been Consul and Political Agent and is an authority on all Afghan matters. Latterly he has been in the service of Jhalawar State.

As Afghanistan has joined the Universal Postal Union, notification has been issued in India that correspondence for Afghanistan will henceforth be subject to the conditions laid down in the Post and Telegraph Guide for correspondence going by foreign post. The rates of postage for a letter posted in India for Afghanistan are:—3 annas (3d.) the first ounce, 1½ annas each ounce over; postcards, 1½ annas. The rates of postage for other classes of correspondence are the same as those for foreign correspondence. Registration will be available for all classes of articles at a fee of 3 annas each.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Trade Barriers.

At this time of slowly reviving trade the hindrances to the development of international commerce resulting from the various barriers in the shape of regulations and restrictions tend to be more fully appreciated. Unfortunately while in some directions there has been an improvement, broadly speaking, things remain much as they were owing to a failure to realise how great an impediment to commerce these barriers are and that the welfare of all nations is dependent on their removal. At the Economic Conference of the League of Nations this question was fully ventilated this week, and the point was made that while much has been accomplished during the past year by international conventions, in a number of cases tariffs have been increased. Sir Arthur Balfour, who discussed the question, said that a tariff holiday would not be enough, and suggested dealing with the problem through the various industries. It is not, however, merely a question of tariffs, but all the various regulations which hamper the efforts of the trader. These are particularly numerous in the Near East. Currency regulations are a case in point. Thus in Yugoslavia permission has to be obtained from the Ministry of Finance before an exporter to that country can obtain the money for the goods he has sold. This is only one example of the hindrances to trade in the Near East, and it is obvious that if trade is to develop smoothly they must be abandoned. If the League of Nations can bring this about it will deserve well of the world.

The Yugoslav Loan.

Negotiations for the Yugoslav loan have now been in progress here for some time, but no developments can be looked for until the arrival of the Yugoslav Minister of Finance, who is at present in Paris. The question of the pre-War debts is occupying his attention there, and it is at the moment uncertain when he will arrive in London. As already stated, the amount of the loan is £50,000,000, and it is intended for works of construction, chiefly railways and public roads.

Stabilisation in Greece.

A further stage in the process of reconstruction in the Balkans is marked by the decision of the Greek Government to stabilise the drachma at a rate of 375 to the pound sterling, a rate which approximates to the existing exchange rate. Greece is now on the basis of the gold exchange standard, and the various bank in Athens have been invited to transfer their deposits from the National Bank to the new bank of issue, the Bank of Greece, whose Governor is M. Diomede, former Governer of the National Bank. The National Bank, of which M. Drossopoulos has just been elected Governor, will henceforth occupy itself more particularly with commercial and industrial developments. The stabilisation of the currency has been accompanied by a number of important steps for the development of the country, notably the allocation to the Greek company, Macris and Co., which is allied for this purpose with the Shell group, of a contract for road construction, while Messrs. Henry Boot and Sons have been allocated a contract for drainage works in Epirus and other parts of the country.

Empire Cotton Growing.

Elsewhere will be found extensive extracts from the interesting report of the British Cotton Growing Association for the past year. It is an inevitable accompaniment of agricultural developments that progress should be marked by vicissitudes, and in 1927 there was a substantial decrease in the production of cotton in the new fields of the Empire. This was due, of course, to the fall in cotton prices, which made the growing of American cotton no longer a remunerative undertaking. With Sakellarides the position was otherwise, and the Sudan, where the construction of the Makwar Dam had rendered possible a great expansion of cotton cultivation, showed figures far in advance of those of the previous year. For the current year, as it happens, the Sudan output shows a decrease, but this is only a temporary phase, and next year there is likely to be a great improvement both in the Gezira, where Sakellarides is grown, and in other parts of the Sudan and elsewhere in the Empire where American cotton is cultivated, the production of which will be encouraged by the improvement in prices.

Anglo-Egyptian Oilfields.

An excellent report is forthcoming from the Anglo-Egyptian Oilfields for the past year. The production of oil was 11,019 tons greater than in 1926, while the total income was £649,288 as against £611,973. The net profit was £328,100 as compared with £245,136, and it is proposed to pay a dividend of 17½ per cent. on the "B" shares as against one of 12½ per cent. for the previous twelve months. Drilling was begun by the Red Sea Petroleum Company on the Farsan Islands last June and continued during the year, but so far no definite results have been obtained. It is interesting to note that

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

Digitized by Google

the Anglo-Egyptian Oilfields has accepted an offer to take part in a concession for exploitation for oil in Somaliland. In view of the marked improvement in the results obtained by the Anglo-Egyptian Oilfields it is hardly necessary to say that this week's meeting will be looked forward to with special interest.

Burmah Oil Company.

Oil developments during the year, more especially in the Far East, indicated the probability of a substantial reduction in the earnings of the Burmah Oil Company for the past year, and the decline in profits from £2,405,000 to £1,914,772 therefore came as no surprise. A final dividend is proposed of 10 per cent. making 20 per cent. for the year as compared with 30 per cent. for the previous twelve months. The allocations include £20,000 to insurance reserve, £200,000 to the general reserve, £150,000 to field expenditure equalisation, all of which are the same as a year ago, and the balance to be carried forward is £502,416 as against £453,469. Since the closing of the financial year the company has been affected by the passing of the interim dividend by the Anglo-Persian Oil Company, and this factor and the general oil situation have doubtless had their influence on the final distribution. The oil outlook may now be said to be improving, and on this question we shall no doubt hear some interesting comments at the forthcoming meeting of the Burmah Oil Company.

Western Films and the East.

The question of the influence of films on undeveloped nations is clearly one of outstanding importance. As a result of developments during and after the War we have obtained very clear data as to the effects of half-digested ideas on mentalities unable to appraise them at their true value, and it is natural therefore that there should be considerable anxiety regarding the consequences of the unchecked publicity in the East of films of the kind that are freely shown in this country. A commission has been dealing with the question as regards India, and from comments which have appeared (the report is not yet available) it would appear that the result of the inquiry is of a reassuring character. It seems that sensational films do not bring into contempt the European mode of life, but that the effect of the surroundings in which the actors move is to impress those who see the films. This seems to me to some extent a contradiction. If the Indians are impressed by the magnificence of the settings of the films (and it must be admitted that the word magnificent is by no means an inapt description of the usual surroundings of the films), it is at least arguable that they are likely to be equally influenced by the plots. That is, in fact, the whole case for most careful censorship of films destined for the East. What the surroundings may be matters nothing; it is the whole atmosphere of the films (for which we have to thank America) that, it is feared, must tend to lower the the prestige of the West in the eyes of the East, and it would take much more substantial evidence than that which I have cited to convince me that the display of certain films in the East can be productive of anything but harm.

COMMENTATOR.

NEWS FROM ALL SOURCES.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended April 20 totalled £E6,721, making the total from April 1 £E14,030.

The Yugoslav Hopgrowers' Association is to invite hopgrowers from all the Central European countries to an international conference to be held at Novi Sad in July.

The Soviet Press states that the King of Afghanistan, after his visit to Turkey, will make a brief stay in the Caucasus and inspect the Baku oil wells on his way to Persia.

A group of Deputies will shortly submit to the Turkish Assembly a motion providing for the adoption from the month of June of Arab figures, as used in Western Europe, in place of the Turkish ciphers at present the rule in Turkey.

Contracts have been given by the Yugoslav State Railways to Czechoslovak, Austrian, Hungarian, and Polish iron and engineering works for the supply of rails and other sundry material to the value of about £300,000.

It is reported from Bucharest that during a hurricane which swept over the town of Cluj (Klausenburg) on May 1, hailstones the size of eggs fell, killing six children and injuring about ten persons. A hurricane also swept the town of Giurgevo.

It is reported that the fusion is to take place of the Yugoslav Discount Bank, the Belgrade Agrarian and Commercial Bank, and the Bosnian Bank. The new concern will have a capital of 200 million dinars.

According to *La Bulgarie* the prospects for the new crop of roses are not yet very clear. The young rose trees suffered from the severe cold in December and the months following, so that a rather mediocre crop is expected.

The report of an expert employed by the Persian Government to investigate the mineral resources of the country has disclosed the fact (says an American Consular report) that iron ore deposits have been discovered in Somnan sufficient to meet Persia's needs of this ore for 20 years, together with beds of coal estimated to contain 30 years' supply. It is reckoned that about £2,500,000 will be required to establish blast-furnaces, a steel mill, and an iron foundry on a large scale; but a smaller unit could be established for a little more than £1,000,000, and it is stated that the Government is prepared to build the latter.

The Director of Agriculture and Forests in Palestine, in a report on crop prospects in April, states that a complete failure of rains from April 1 to 24 and the prevalence of excessively high temperatures during the same period seriously reduced the yield prospects of winter crops. Conditions at the time of writing amount almost to a drought, and it is feared that unless there is a complete change in the weather in the near future the outlook for summer cultivation will be equally unfavourable. Flying locusts have appeared in considerable numbers at Jericho, Hebron, Tiberias, Samakh, Gaza, and elsewhere. Large numbers have been destroyed by departmental units assisted by the Police and local inhabitants and no damage of any consequence has occurred. No egg laying has been reported to date, but the danger of invasion on a large scale has not yet disappeared.

H.M. Representative at Sofia reports that the Bulgarian authorities have decided that the provisions of the Weights and Measures Law of 1910, which have not hitherto been strictly enforced as regards leather products sold in or imported into Bulgaria, are to be strictly observed in regard to these products as from April 15. Consequently all trade in leather products must now be carried out in accordance with the metric system. The exclusive use of the metric system is, H.M. Representative states, probably not essential in markings and documents the use of which is confined solely to the purposes of shipping (bills of lading, markings on packing cases, bales, etc.); but invoices and specifications and also any other documents necessary for the clearance of goods through the Customs and for compliance with internal regulations should show metric weights and measures.

Motors and Motoring.

By G. B. B.

The immediate effect of the Budget has been an increased interest in methods for effecting a reduction in petrol consumption and in appliances intended to cut down the use of fuel with reducing speed or efficiency. With regard to these latter let me say at once that many of them are quite useless for the purpose. Many have as their object the "breaking-up" of the petrol into a finer spray and mixing it with air, and these, without exception, are of little or no value. The underlying idea is that the petrol comes from the carburettor jet in a fine stream and that some sort of mixer can churn it up into a gas with the inlet air. In practice they are useless.

Scientific tests have proved beyond doubt that there is no ordinary arrangement of moving or fixed blades that can break up globules of petrol into fine particles. So here the petrol tax may result in a saving to the man who —offered one of these mixers—keeps his money in his pocket.

Then there is the secret "dope," in the shape of mysterious pellets, powders or fluids which are to be added to the petrol, and which are claimed to do all manner of miraculous things in increasing speed or power or in reducing petrol consumption. Used for any length of time they will also cure the buyer of credulity. Without exception these are valueless. The utmost they can do is to reduce the grade of petrol and make it produce a slower firing gas, and, as everyone knows, a slow firing gas tends to eliminate tendency to knock on hills, and it also has some advantage in hill work although it is slower on the level. There are none of these powders or tablets that make the slightest difference to the power or economy of the engine. The addition of paraffin, benzole or alcohol to the petrol will do more good and cost less than any of the much-vaunted dopes.

A Petrol Saver.

Of all the petrol savers I know of there is none so efficient as an extra air valve, a device that has been on the market for years, which has "stood the test of time" and which will give excellent results if properly handled. The idea is merely an opening in the inlet in order to allow more air to be taken in with the fuel mixture after the gas has been drawn from the mixing chamber and before it enters the cylinders. This air valve is controlled and so the amount of extra air added can be increased or cut down at will. It has been found on some engines with certain carburettor settings that the engine will not take any extra air, which means that the mixture was already as weak as the engine could deal with. In the majority of cases, however, it is possible to give a good deal of extra air, especially when running on the level, and half a cylinder full of air costs a lot less than a half a cylinder full of rich petrol-air gas.

I see in the columns of one of the leading motor papers that there is some correspondence regarding the attitude of the Automobile Association and the Royal Automobile Club towards the petrol tax and towards each other. One correspondent writes: "Before my next subscription becomes due I would like to say I shall not renew until there is unity," etc. I do not know that the Associations will be greatly disturbed by his threat as they are both strongly established. A good many people, however, are now beginning to ask what good purpose either of those bodies now serve.

New Scammell Lorry.

I have just seen one of the new Scammell 15-ton eight wheelers just delivered to a big transport concern which runs a direct service between London and Manchester. It is one of the best built and sturdiest vehicles I have yet examined, and is designed on the soundest engineering lines. I should like to direct the attention of some of my Near East friends to this latest example of British commercial motor transport, as it seems just the thing for much of their work.

Up in Southport the other day I noticed a number of new Vulcan six-cylinder omnibuses at work and was struck with the comfort of their equipment and the flexibility they showed in traffic. The Douglas, I.O.M. Corporation, I noticed, is also running some Vulcan vehicles, but it seems invidious to mention these places seeing that public authorities everywhere, from Accrington to York and from Acton to Wrexham are using some form of Vulcans. Whether it be runabout feeders for tramways, road motor coaches, omnibuses, tipping wagons, or low load refuse collectors, the Vulcan people seem to supply models to meet all requirements.

According to reports which have reached Constantinople about the damage done in Anatolia by the earthquake there on May 2, several villages in the Kutahia and Broussa districts were almost destroyed. Loss of life was small, but many people were injured.

Damage estimated at more than £200,000 has been caused by the overflowing of the River Struma, in the districts of Serres and Siderokastron (Demir Hissar), where a large area of cultivated land has been flooded and some 3,000 families have been rendered homeless.

The Roumanian postal administration has opened a competition for suitable designs for a projected issue of a series of air post stamps for use on new aerial services, Bucharest-Timosora, and Bucharest, Galatz, Jassy, and Czernowitz.

COMPANY NOTES AND REPORTS.

ANGLO-EGYPTIAN OILFIELDS.

The report of the Anglo-Egyptian Oilfields for 1927 states that the net profit was £328,100 compared with £245,136. The directors recommend that £328,389 be applied to dividends, leaving £249,202 to be carried forward. This allows a dividend equal to 17½ per cent. on the "B" share capital. Further exploration work at Ashrafi confirmed the doubts expressed in last years' report that commercial production could be expected from that island. The exploration well was plugged and abandoned in July. The Red Sea Petroleum Company's exploration well on the Farsan Islands was commenced in June and drilling was continued throughout the year. No definite results have as yet been obtained from it. In accordance with the directors' policy to search for further oil-producing areas for the company, they have accepted an offer to participate in a concession to explore for oil in Somaliland. The Somaliland Petroleum Company, Ltd., has been formed for this purpose and the capital is being provided equally by this company and by the Anglo-Saxon Petroleum Company. A geological expedition will be sent to Somaliland in September, so that work can be commenced during the coming cold weather.

ORIENTAL TELEPHONE AND ELECTRIC.

The revenue of the Oriental Telephone and Electric Company for 1927 is £72,118, plus £17,812 brought forward. The directors recommend a final dividend of 6 per cent. and a bonus of 2 per cent. for the year, free of tax, on the ordinary shares, making 12 per cent. in all, carrying forward £25,243.

CONSTANTINOPLE TELEPHONE.

The report of the Constantinople Telephone Company for 1927 states that in accordance with the arrangement with the bondholders and certificate holders, whereby it was agreed to postpone payment of interest until January 1, 1928, and to authorise the directors to raise further capital, coupons in arrear became payable on January 1, 1928. These have been discharged, together with interest, at the rate of 6 per cent. per annum. After debiting the amount of obligation and certificate interest and the usual allocation to reserve for contingencies account, there was a profit of £T4,668, which, after deducting the net debit balance of £T190 at December 31, 1926, shows a profit balance of £T Standard 4,478, which it is proposed to carry forward.

KASSALA RAILWAY.

The report of the Kassala Railway Company for 1927 states that in January, 1927, a further issue of £150,000 Four and a-Half per Cent. Guaranteed Debenture stock 1934-53 was arranged, this being part of the unissued balance of £1,500,000 authorised and guaranteed by H.M. Treasury. The total amount of stock issued to date is £1,440,000. The net proceeds of this second issue—namely, £135,799—have been applied to the purchase of general railway plant and equipment required for the general purposes of the Sudan Government Railways. The revenue account shows a deficit on working for the year 1927, after charging interest and management expenses on the Four and a-Half per Cent. Guaranteed Debenture stock, of £27,146. The amount of this deficit has been provided by the Sudan Government Railways in accordance with the terms of the construction contract.

HYDERABAD (DECCAN).

The report of the Hyderabad (Deccan) Company for 1927 states that the dividends received from the Singareni Collieries Company amounted to 9 per cent. on its capital, being the same as for the previous year. During the past nine years £43,500 have been spent on further prospecting, and as the prospecting has now finished, this amount has been written off to profit and loss. The profit for the year amounted to £40,331, and after placing £2,000 to reserve the Board recommends a final dividend of 1s. 6d. per share, less tax (making 3s. per share for the year), leaving £3,789 to be carried forward.

NEW T.S.S. CALIFORNIA. 17,000 TONS,
carrying 1st. 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.
This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Bridge over the Nile at Samanoud.—The Ministry of Communications, Egyptian Government, invites tenders for the construction of a metal bridge over the Nile. August 23. (D.O.T.)

Asphalt.—The Tanzim Department of the Ministry of Public Works invites tenders for the supply of liquid asphalt (bitumen) required during the year 1928-1929. (D.O.T.)

Weighbridge, Etc.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of a weighbridge, platform weighing machines, counter balances, and Beranger balances. June 30. (D.O.T.)

Mechanical Filter, Etc.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a mechanical filter, 2 low-pressure and 2 high-pressure centrifugal pumps, 1 semi-rotary double-piston hand pump, also suction and delivery piping, a 10 h.p. electric motor, sterilising apparatus, etc. June 3. (D.O.T.)

Ironmongery, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of ironmongery, metal tin and zinc sheets, wire metal iron, metal iron pig or scrap, metal lead old pipes, metal bronze pig or scrap to the Department of Ordnance Services, Citadel, Cairo. June 11.

Book Binding Cloth, Stc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 9,350 yards book binding cloth, imitation leather cloth and imitation leather paper; 31 lockers operator steel, 85 zenith. telephonometers (3-minute clocks) and 10 stop watches No. 3 with split seconds; 300 laminated side bearing springs; and 87 tons steel, viz., angles, flats, round, rivets and bolts and nuts. Firms interested should communicate with Chief Inspecting Engineer, London, for information.

Tank Engines.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of twenty-2-6-4 type side tank engines for miscellaneous service. July 12.

Fertilisers.—Tenders are invited by the Ministry of Agriculture, Cairo, for the supply, *inter alia*, of the following :—32,000 tons nitrate of soda; 10,000 tons nitrate of lime; 1,200 tons sulphate of ammonia; and 5,000 tons lime super-phosphate. June 5.

Tin Ingots.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 15,000 kilos tin ingots. May 23.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, May 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Calcutta (Birkenhead, May 27).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 30).

British India Line.—S.s. Mashobra for Colombo, Madras ,and Calcutta (London, May 19); s.s. Dumana for Bombay and Karachi (London, May 19).

Cunard Line.—S.s. Bosnia for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow and Swansea June 5, and Liverpool June 7); s.s. Bothnia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool May 26, and Swansea May 29).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 26); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 16).

P. and O. Line.—S.s. China for Bombay (London, May 25); s.s. Nagoya for Calcutta (London, May 26).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, May 22); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, May 30).

Ellerman and Papayanni Lines.—S.s. Algerian for Oran*, Algiers*, Malta, Smyrna, and Constantinople (Liverpool, May 26). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to :—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Tieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 15.

The Stock Exchange has been occupied with the arrangement of a very big settlement and to some extent this has acted as a slight check to the volume of business.

Uncertainty as to the monetary outlook has affected high-class investment stocks, but activity in the industrial section continues, although the centre of interest has shifted a little. Some reaction has occurred in the gramophone group, and attention has been transferred to artificial silk shares and other textiles, which were stimulated by the excellent results disclosed by J. and P. Coats. Tobacco shares improved on rumours of a bonus by the Imperial Company, while Hudsons Bays were brought into the limelight by American buying, which sent the price well over 6 and was said to be based on oil discoveries on the company's lands. The oil market has been good under the lead of Mexican Eagles, but rubbers were dull.

Considerable interest has been aroused by the Currency Bill, which gives the details as to the proposed amalgamation of the Currency and Bank of England note issues promised in the Budget. On the whole, the financial experts express their approval of the terms, which involve very little real change in the basis of security for both classes of notes, but provide slightly more elasticity in the currency, which modern requirements demand

Overseas Investments.

During the last year or two overseas borrowers have frequently appeared in the London capital market and the success which many of these issues have enjoyed indicates a substantial demand on the part of the investor for well-secured overseas investments. In some quarters, however, there have been fears that we were over-lending and possibly some investors have been somewhat doubtful as to the best line to take. This week Sir Robert Kindersley, Chairman of the National Savings Movement, gave carefully prepared figures which should do much to set these fears at rest. He showed that the British share of sinking fund remittances amounted to £34 millions. Of the foreign capital issues made here last year, which amounted to £138 millions, it is calculated that £109 millions was subscribed by British investors, but as £34 millions represented repayments of old loans, the new British savings for foreign investment amounted to £15 millions. This is approximately £20 millions less than the Board of Trade's estimate of the total which should have been available. Thus if Sir Robert's figures are well-founded—and they will not be easily controverted—they show that the position with regard to overseas lending is better than has often been supposed. It is clear, however, that there is ample scope for an expansion of savings both for home and overseas investment.

The White Star Line.

The White Star Line has issued its first report since control was acquired by the Royal Mail Steam Packet Company and this makes a very satisfactory showing. The profit for 1927, after providing for depreciation, amounts to £699,995, as compared with £267,427 for 1926 and £438,992 for 1925. A year ago the company paid a dividend of 5 per cent. on its ordinary share capital—which is, of course, held by the Royal Mail interests—but for the past year a distribution of 9 per cent. is being made. The greater part of the company's capital—£5 millions out of £6—consists of 6½ per cent. preference shares, which are quoted on the Stock Exchange and are guaranteed by the Royal Mail. The present return is £5 18s. per cent. The White Star recently entered into an agreement to purchase the Australian Commonwealth Line and expert opinion inclines to the view that the company acquired the tonnage at a favourable price, though possible difficulties in regard to Australian labour cannot be overlooked. Speaking at the meeting of Harland and Wolff this week, Lord Kylsant was moderately hopeful regarding the outlook for shipping and shipbuilding. *The Economist's* freight index number for April records a slight advance as compared with March, but the level of rates is still very much below that ruling last year.

The Home Railway Position.

Superficially at least the traffic returns of the leading home railway companies for the first four months of the current year give little ground for encouragement and offer some explanation of the neglect which the companies' stocks have lately suffered. Compared with the corresponding period of 1927 the total receipts of the four leading groups for the 18 weeks from January 1 to May 5-6, totalling £59,460,000, show a decrease of £2,859,000, equal to approximately 5 per cent. The decline, which was common to all the companies, mainly occurred in goods and mineral receipts. The position, however, is less unsatisfactory than it seems at first sight. The returns for the first four months of the current year compare with a period when traffic was exceptionally heavy following the resumption of work after the coal stoppage. It is possible, therefore, that the traffic figures in the near future will compare less unfavourably with those of last year than the returns for the past four months. Moreover, taking a longer view, the railways are expected to benefit by the scheme of rating relief proposed by the Budget, while they are also likely to benefit by the powers, which Parliament will probably confer, to use the roads. In any case, the investor who holds railway stocks for income purposes has no reason for uneasiness.

Turkey's imports and exports in January were valued at £T17,770,227 and £T15,419,619, as compared with £T17,039,077 and £T22,219,590 respectively in January, 1926. Imports from the United Kingdom totalled £T1,871,182, and included cotton goods, £T813,189, metals, £T341,958, woollen goods, £T224,365, and machinery £T65,994.

To commemorate the tenth anniversary of the restoration of Bessarabia after more than a century of Russian occupation, commemorative postage stamps have appeared in Roumania embracing seven denominations, namely, 1 leu green, 2 lei chocolate, 31 sepia, 51 lake, 7.501 ultramarine, 101 blue-green, and 201 dull purple. The subject of the design, according to *The Times*, is understood to be a view of the ancient fortified city of Khotin, where the Diet which decided for reunion with Roumania met in 1918.

Near East Markets

CYPRUS TRADE IN MARCH.

Increased Imports.

The following report has been issued on the trade of Cyprus for March :—

The value of imports continued to increase during the month, being some £27,000 more than for March last year and £36,000 more than the quinquennial average. Mining development is responsible for the considerable increase in imported machinery.

Harvest prospects are not yet certain, and large quantities of flour continue to flow into the island. An interesting item of increase is that in sulphur and insecticides for combating vine and other agricultural pests.

The export trade, though the value was somewhat below that of March, 1927, may be considered as highly satisfactory and is higher than the five years average. The export of carobs continued to be good, but the price again dropped slightly, as was expected. The price of raisins also dropped slightly but that of wine increased.

NEAR EAST MARKET REPORTS.

The Monthly Review of Barclays Bank, Ltd., contains the following report for the first quarter of this year :—

Egypt.

The three months under review have been marked by a much more cheerful tone than previously. The factor chiefly responsible was the steady upward movement in the price of cotton, which proceeded until the highest point of the season was touched, and although the benefit of this improvement did not extend to the producer in the interior to any great extent, it imparted a certain amount of confidence and eased his position, through the restoration of credit. A marked advance in the price of cereals also occurred, and the exceedingly heavy accumulation of stocks was gradually reduced, either by local consumption or by the export of certain varieties. There was, therefore, a greater purchasing power in the interior, which reacted beneficially on the import trade. Piece-goods were steady, and although prices were only a shade firmer, the distribution was better and small traders met their engagements more freely. Quotations for Colonial produce were harder, and stocks were depleted by local consumption and by distribution to Palestine and the Greek islands. The Stock Exchange throughout showed firmness, and prices of gilt-edged securities and of certain Land Companies recorded an appreciable improvement. A number of shares were in demand for foreign investors, Paris and Brussels buying freely at times, and as the supply was limited quotations for these particular shares showed a substantial advance. At the moment of writing the new cotton crop has been planted and, although the Nile is low and work in some districts was considerably delayed by poor irrigation, the plants are looking well, a spell of ideal growing weather having compensated for much of the delay.

The Sudan.

The period under review has not been marked by any outstanding event. Energies have been concentrated on the picking and marketing of the cotton crop, which, although less in grade and quantity than had been expected, is being disposed of at good prices, owing to the substantial rise in Egyptian and American cotton in Liverpool. It is thought that the Gezira crop, helped by good growing weather at the end of the season, is likely to produce 400,000 kantars. General business has pursued its normal course and dura is cheap and plentiful. Owing to improved means of transport, gum has been brought forward in greater quantities and prices have fallen. The motor trade has increased by leaps and bounds and the widespread use of cars and lorries has led to small traders opening shops in insignificant villages, thus taking to the native supplies for which he had previously to travel some distance. This development should lead to greater consumption of imported articles and freer circulation of the money earned in cotton growing.

Palestine.

The past three months have shown a steady improvement in the trade of the country, and, with normal progress in industrial and agricultural developments in evidence, it is thought that the worst difficulties have been overcome.

The orange season is at an end, and the total shipments have amounted approximately to 2,000,000 cases, of which about 75 per cent. has been sold, the general prices realised being between 13s. and 14s. per case. As compared with previous seasons, exports to Egypt were insignificant, owing to the fact that fruits have not been fit for shipment to European ports. A new agricultural feature in the country is the cultivation of bananas, which promises to become a remunerative industry; it is expected that an exportable surplus will be secured. Other agricultural products are being developed more scientifically than previously, and, with the assistance of the Empire Marketing Board and the general use of better methods, it is hoped that the country will yield far more than hitherto, in which case the volume of exports should continue to show a gradual but steady increase.

The absence of rain during January gave rise to grave anxiety for the safety of crops, but the position was alleviated by heavy rainfalls in February, and it is expected that there will be a considerable quantity of cereals for export.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date April 28 :—

Market March 19 to April 28. Arrivals in Kordofan Stations and Tendelti were 3,004 tons as against 2,998 tons for the same period last year, i.e., they were practically the same for both years. But the daily arrivals since April 15 have shown a decline as against last year and in actual fact from the 15th to the 28th they were 13 per cent. less.

Although arrivals during the period January/April this year were much larger than those of last year, it is noteworthy that whilst arrivals in 1927 were gradually increasing up to the end of March, arrivals this year were the largest during January/February, March showing a decline as against even January, and this would seem to confirm the opinion previously expressed that the more the gum is brought in early in the season the less the arrivals will be later.

Arrivals of inferior Hashab are equal to, if not somewhat less than, those of last year.

Prices at El Obeid have remained firm and without change from March 19 to April 7, when a fall of 2½d. took place. They have since remained firm.

The demand we received during March was the largest recorded this year, whilst during April, although demand has slightly fallen off, it compares favourably with that received during the same month last year.

King Fuad of Egypt has given £1,000 towards the relief of the sufferers at Corinth.

Mgr. Dimitriye, the Serb Patriarch, on May 4 sent a Serbian Bishop to Bulgaria in order to conduct relief work in the earthquake area on behalf of his Beatitude.

Two hundred and thirty dwellings have been destroyed and one person killed and twelve seriously injured in a village fire near Mansura, Egypt. Two other fires in villages in Lower Egypt destroyed 56 dwellings. A fire also broke out in the ancient Coptic chuch at Nari Guirgis, in old Cairo, but was fortunately got under before serious damage had been done.

EMPIRE COTTON PRODUCTION IN 1927.

The outstanding feature in the development of cotton growing in the Empire in the past year was, of course, the great increase in the Sudan output, which was unfortunately coupled with a decline in the production of cotton in other regions as a result of the low prices, with the consequence that the net production of cotton in new fields in the Empire declined from 439,300 bales for 1926 to 369,600 bales. The report of the British Cotton Growing Association, which has just been issued, gives as usual a most interesting survey of developments. We give the following extracts :—

Notwithstanding the continued depression in the cotton trade of this country there has again been a satisfactory demand for cotton of outside growths of good grade and staple, and the total sales of such cotton, viz., other than cotton from the U.S.A. and Egypt, during the season ended July 31, 1927, amounted to 878,440 bales, as follows :—South African, 14,840; East African, 117,740; West African, 42,600; Brazilian, etc., 105,860; Peruvian, etc., 369,700; Sudan (Sakel and other Sudan), 188,800; West Indian, 9,920; Sea Island, 2,200; East Indian, etc., 15,650; Australian, 4,560; Sundries, 6,570; total, 878,440 bales.

The total sales of Empire grown cotton show a large increase over the previous year, especially Sudan cotton, which has increased from 39,820 bales to 188,800 bales.

The total number of bales and the value of the cotton which has been dealt with by the Association during the last six years is as follows :—

Year.	Bales.	Value £
1922	67,386 ...	1,628,778
1923	54,606 ...	1,588,480
1924	59,583 ...	1,922,097
1925	84,320 ...	2,502,967
1926	135,522 ...	3,368,740
1927	171,600 ...	5,012,084

During the year under review the Association's engineering department has not been occupied so much with complete new ginneries as with small miscellaneous orders for clients to whom ginning, baling, and other machinery had previously been supplied. The department is often called upon to purchase machinery of all classes for customers who have other interests in addition to cotton, and two four-ton electrically operated cranes, 40 ft. radius, for lifting sugar cane, were supplied for Barbadoes towards the end of 1927. The Chiromo ginnery in Nyasaland has been completed and is now in full working order, and has an output of 50 bales (of 400 lb.) per day. The ginnery, consisting of an air blast plant, of four gins of eighty saws, 40 roller gins, revolving box with finisher press, and an oil engine to drive the outfit, which was supplied to Nili Factories, Ltd., Punjab, is working satisfactorily, and it is stated that the cotton produced from these gins is more readily saleable than cotton turned out from the Brush type of gins.

The value of buildings, machinery, stores, etc., supplied during the year to ginners, planters, and others engaged in the cultivation of cotton, amounted to £58,909, as compared with £143,108 in 1926, and £170,783 in 1925.

The commission earned during 1927 on sales of cotton and cottonseed, and on supplies of stores, amounted to £30,525, which compares with £19,179 in 1926, and £19,786 in 1925. Bank and other interest, including interest on money advanced for financing cotton, etc., amounted to £11,648 16s. 10d. against £11,434 19s. 8d. in 1926. Receipts for dividends from shares in cotton growing companies were £8,147, against £13,551 11s. 6d. in 1926.

The Empire Cotton Growing Corporation are doing a good deal of research work in various parts of the Empire, and in the training of experts, and the result of their labours will ultimately be of great benefit to the Lancashire cotton trade as well as to the Colonies. As there appears to be some misconception in the minds of many people, it might be pointed out that the British Cotton Growing Association does not receive any portion of the Cotton Levy, which all goes to the Empire Cotton Growing Corporation. Although the operations of the Association are confined to the British Empire, it is impossible to stipulate that all the cotton produced should be forwarded to Lancashire, so long as the Empire is open to trade with all nations, but where the British Cotton Growing Association has any influence the cotton is invariably brought to Lancashire, and in addition others are encouraged to ship to this country. When the cotton is received here it is offered on the open market, and it would not be desirable to refuse to sell to other countries provided the prices are satisfactory, as to do otherwise would create a dangerous precedent.

It was mentioned in the last annual report that Messrs. Elder Dempster and Co., Ltd., as members of the West African Conference Lines, had reduced the ocean freight and charges on cotton and cottonseed by approximately one-third, in consideration of the low values then ruling for the produce. At the beginning of the present season the company were again approached with the request to maintain the reduced rate for the new season, or at any rate until June, 1928, by which time the great bulk of the produce would have been shipped. This request has been acceded to, and the thanks of the Colonial Office and of the Association have been tendered to Messrs. Elder Dempster and Co., Ltd., for the practical support thus given to an important Imperial industry.

The net profit for the year, after making full provision for depreciation and for income tax, and reserving a further sum of £15,000 for bad and doubtful debts, is £33,824 10s. 11d. This is a highly satisfactory result which was made possible by the improvement in the values of cotton during the year, as at the beginning of the season, when cotton values were low, the native growers in Nigeria and elsewhere were paid prices in excess of the relative value of the cotton in Liverpool.

The following extracts are taken from reports dealing with progress in various cotton-growing regions :—

India.

The 1927 season on the demonstration farm of the B.C.G.A. (Punjab), Ltd., at Khanewal, was extremely unfavourable for cotton. Up to October prospects were good, but at the beginning of that month a drastic change for the worse took place; the yields throughout the Punjab were very disappointing, and the yields on the farm averaged only 724.12lbs. of seed cotton per acre, as against an average of 1306.3lbs. of seed cotton per acre for the previous year, or a decrease of 582.18lbs. of seed cotton per acre. The total area under cotton was 2,660 acres, and the following are the particulars of the varieties cultivated and the yields :—

Variety.	Area. Acres.	Lbs. of Seed Cotton.
Mollisoni	622.3 ...	1137.18
4F ...	690.1 ...	483.25
289F ...	1191.3 ...	675.87
285F ...	156.3 ...	528.53

It will be seen that Mollisoni gave by far the heaviest yield, and throughout the Lower Bari Doab Colony this variety suffered less than the American varieties. On the B.C.G.A. (Punjab), Limited, farm, however, it must be noted that the Mollisoni line was the best in all plots, as it followed a bare fallow whereas one of the American lines, *viz.*, 4F followed wheat and the other two followed Kharif fodders.

In March, the Royal Commission on Agriculture visited the B.C.G.A. (Punjab), Ltd., Estate, as well as a number of other estates in the Punjab. Although the Commission arrived at Khanewal in the middle of a dust storm which had been blowing for over three days, and things would naturally look at their worst, the members appeared to be much impressed with the prospects of further progress on the estate, and with the Punjab as a whole.

Digitized by Google

In addition to the farm of 7,500 acres as Khanewal, the B.C.G.A. (Punjab), Ltd., controls:—

(1) The pumping installation at Shahpur, where an area of 2,500 acres is being cultivated under irrigation by pumping water from the river Ravi.
(2) Primahal temporary cultivation—area, 4,000 acres.
(3) Chak Shahana temporary cultivation—area 2,000 acres.
(4) The Managing Agency of the Iqbalnagar Estate—area, 2,000 acres.
(5) The Bundi Agricultural Syndicate, Bundi—area, 24,000 acres.
(6) Sind Reclamation Company of Mirpur Khas—area, 1,300 acres.
(7) The Nili Factories, Ltd., consisting of two Ginning and Pressing Factories in the Nili area.
(8) The Ginning Factory, Khanewal.

During the year a number of other proposals for developments in the Bahawalpur and Sutlej Valey areas have been under consideration, and the Council have decided to allocate a sum not exceeding £40,000 in connection with development work in these or other suitable areas.

In view of the increased activities of the B.C.G.A. (Punjab), Ltd., Mr. Roger Thomas, B.Sc., late Inspector-General of Agriculture in Iraq, and late member of the Indian Agricultural Service, has been engaged to assist Prof. Roberts in the management.

Mr. F. Hodgkinson inspected the Khanewal Estate in the early part of 1927, and submitted a report on the operations in accordance with the terms of the agreement with the Punjab Government. For the 1927-28 season this report is being prepared by Mr. Roger Thomas, who, previous to his engagement, had spent several months studying conditions in the Cotton States of the U.S.A.

The annual report of the Indian Central Cotton Committee for the year ended August 31, 1927, shows that the Committee has been paying special ateention towards the improvement of cotton marketing and the discouragement of abuses, and a prominent feature of the year's work is the development of research financed by the Committee. Careful consideration has been given to the prevention of the introduction of foreign insect pests and diseases of cotton, and work in connection with the Cotton Transport Act, the Cotton Ginning and Pressing Factories Act, and the improvement of cotton statistics is receiving due consideration.

The area of cotton sown in India in the season 1926-27 was 24,676,000 acres, which compares with 28,491,000 acres in 1925-26 season. The forecast of the estimated out-turn of cotton was 5,003,000 bales, against 6,250,000 bales—the revised figure for the preceding year. The yield was unsatisfactory in certain important producing areas, particularly in the Punjab, where the production of the American variety was estimated at only 229,000 bales against 359,000 bales in the previous season.

The Sudan.

There can be no doubt that the feature of Empire cotton growing development during the year was the remarkable increase in the production of cotton in the Sudan, and particularly on the irrigated areas of the Gezira Plain so ably controlled by the Sudan Plantations Syndicate Ltd., where the cotton crop amounted to 474,378 kantars from 10,058 feddans, as compared with 348,106 kantars from 80,031 feddans in the previous season. The average yield per feddan was 4.74 kantars, against 4.94 kantars the previous year when the yield was considered to be beyond the most sanguine expectations. The whole crop, viz., 113,169 bales, was marketed through the Association, and owing to the excellent quality and even grading, the cotton found a ready market at excellent prices.

For the 1927-28 season the Sudan Plantations Syndicate have 105,622 feddans under cotton in the Gezira, and for

the 1928-29 season it is hoped that the area will be 135,000 feddans, whilst for 1929-30 it is expected that 150,000 feddans will be planted with cotton, so that the whole of the new area referred to in the annual report for 1926 will not be in bearing before the 1929-30 season.

During the 1926-27 season, 26,100 feddans were planted with cotton, and the quantity of lint produced was 54,128 kantars, which compares with 22,210 kantars from 11,400 feddans for the previous season. The cotton was of most excellent quality and commanded high prices. For the coming season's crop the Gash flood was an ideal one.

In the Tokar area approximately 25,000 feddans were sown with cotton, and germination was good. The resulting crop amounted to 32,000 kantars, which was approximately three times greater than in 1925-26, when the crop was a failure. The prospects for the coming season are quite good.

Reference was made in the last annual report to negotiations which have been entered into for undertaking the commercial and financial operations necessary for developing the rain-grown cotton areas in the Southern Provinces of the Sudan. The Sudan Government has come to the conclusion that for the time being it is not desirable to conclude the arrangements which were under consideration for the provision of capital for ginneries, cotton buying, etc., but for the present developments are being proceeded with by the Government in the desired direction, and for the time being the Government have decided to provide all the requisite money. It is intended to push cotton cultivation in these areas, and the Sudan Government has created an extra department and appointed additional staff to superintend the operations.

There has been an increase in the production of rain-grown cotton from the Southern Province, but in the Northern Province the natives have concentrated on food crops which paid them better owing to the relative high cost of food and the lower values of American cotton during the period. The total quantity of rain-grown cotton during the season is estimated at 21,216 kantars, against 32,550 kantars in 1925-26.

Iraq.

There was a falling off in cotton production during the 1927 season, which was accounted for by the lower prices paid to cultivators for the previous crop, and accentuated by bad weather towards the end of the 1926 season. The crop only totalled 1,800 bales, which compares with 3,500 in 1926, but with normal climatic conditions a complete recovery is expected in 1927-28.

Under the terms of the Cotton Law 1927, regulations governing seed distribution, cultivation, and the ginning and marketing of cotton, have been issued to ensure that the industry develops on right lines, and that the quality of the cotton is maintained. The selection of propagation of improved strains is carried out by the Deparment of Agriculture, and the distribution of seed and the maintenance of the relative records has been delegated by the Department to the B.C.G.A. It is desirable that the activities of the Agricultural Department should be improved, so that it could deal with economic pests, instruction in methods of cultivation, etc., and given favourable conditions there is reason to believe that cotton is destined to be an even more important factor in the future of Iraq than oil.

No Need for Pessimism.

Although the actual results in number of bales produced within the Empire are somewhat disappointing there is no justification for pessimism as to the future. It has always been recognised that a really unfavourable season climatically, coupled with low buying prices would be a severe test for cotton growing, more especially in the districts which have only been developed in recent years. It is therefore extremely satisfactory to know that the industry has successfully stood the test of the combined effects of poor crops and relatively low values. In the Sudan, where the crop is largely grown under irrigation, the yield was not affected by the unfavourable weather conditions which existed in most other areas, and the cotton generally consisted of high class quality of the Sakellarides variety, the price of which was high in comparison with American.

The bulk of the cotton crop in East Africa and West Africa is marketed during the early part of the year, when the price of American futures was in the neighbourhood of 7d. per lb.. The concessions which were made by the Authorities in Nigeria and Uganda in reducing the freight charges on cotton on the Government railways, together with the reduction in ocean freight made by the Steamship Lines, and other savings which were effected, made it possible for much better prices being paid to cultivators than would otherwise have been the case.

For the 1927-28 season the market values of American Futures have allowed for considerably higher prices being paid for the crop, which will result in an extended area being cultivated with cotton.

The European Commission of the Danube has decided not to reduce navigation charges on the Danube.

The traffic recipts of the South Indian Railway Company for the week ended March 31 amounted to Rs.15,09,808, making the total for the year Rs.6,24,73,957 as compared with Rs.5,90,52,238 for the year ended March 31, 1927.

Negotiations are being carried on in Athens, it is reported, by representatives of the Banca Commerciale Italiana with a view to the establishment of an affiliated bank under Greek law. It is understood that the bank is also contemplating the establishment of a branch at Smyrna.

It is reported that negotiations are in progress for the building of a new Balkan railway from Durazzo to Constantinople, for which a good deal of survey work has already been carried out. The promoters of the scheme are the Balkans Railway International Syndicate, an Italian group, supported by various Turkish, Albanian, and Greek financiers.

The value of Egypt's imports in March was £E3,884,993, as compared with £E3,702,772 for the corresponding month of 1927, while that of the exports was £E4,367,717 as against £E4,898,175. For the first three months of this year the value of the imports was £E11,043,980 as compared with £E10,669,627 for the first quarter of 1927, while that of the exports was £E13,266,906 as against £E12,041,888.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 9:—

Egyptian Futures.—Sakel Contract.—Trading in this market throughout the week has proceeded on rather quiet lines, and with no particular features developing directly concerned with the position, fluctuations have been mainly governed by movements in the American values. Thus, up to the week-end, a gradual decline was experienced with a subsequent sharp reaction that carried the level to 21.80d. for Novembers yesterday. Since this some easing has been in evidence and prices have fallen away, with the result that little change on the week has to be recorded, near positions having declined 3 to 8 points, whilst new crop months have lost 4 to 6 points. From the way the market has acted recently it would appear that the open account is now considerably reduced, with the majority of operators watching the position until some fresh developments crop up from which they can formulate a clearer view of the situation. At the present juncture the unsatisfactory state of trade and the poor support accorded by spinners is having a sobering effect on the "bullish" element; on the other hand, the comparatively strong statistical position of Egyptian Sakel and the rapidity with which the arrivals of Sudan Sakel have been taken up to date is certainly checking anything but very moderate commitments on the "short" side. Quite apart from this the mere fact that our market continues to run at such a substantial discount with Alexandria is sufficient in itself to restrict short sales to conservative proportions. The dragging tendency of near positions, to which we drew attention last week, continues to be a feature, and this in our opinion clearly indicates the present trade attitude towards the existing price level. Spinners' complaints regarding the limited character of the demand for yarns have been even more persistent than last week and few concerns have been able to dispose of their production.

Occasional reports are coming to hand of some local Sakel users commencing to substitute partly other varieties; this tendency is also occasionally noticeable on the part of Continental spinners. The cut into Sakel consumption from the above sources has been so far unimportant and hardly likely to affect values, but any spreading of the movement would have its effect, and on this account its development will have to be carefully watched. Throughout the week the Alexandria market has shown comparative steadiness, and a greater resistance to declines even in face of the periodical weaker New York advices. The Alexandria General Produce Association's monthly crop report for April is fairly satisfactory, and normal progress appears to have been made; in some cases, as was to be expected, complaints are being received of insufficient water. For the immediate future it appears probable that fluctuations will be mainly governed by the action of the American markets; should values show any material easing, we think conservative purchases would be warranted, as we are still of the opinion that higher levels will be periodically attained during the summer months.

Upper Contract.—A moderate business has been transacted in this market during the past week, and whilst at times values have eased in sympathy with the American markets, the undertone, on the whole, has been very steady. Trade reports are mainly satisfactory, and spinners continue to buy consistently, both out of stock and for shipment. The tendency for more users to turn to the Upper varieties, commented upon by us last week, continues in evidence in certain cases; the higher qualities are in request from these sources. Near months continue to maintain their premium over the distant options, and will probably harden further; tenders will be welcomed by some of the spot houses, as cotton so obtained will certainly be considerably cheaper than imports from the other side. At the ruling difference with the other cottons our contract appears reasonable, and on this account we still favour purchases of old crop positions on easy markets.

Egyptian Spot.—The fluctuations in the futures market have not done anything to inspire confidence amongst consumers of Egyptian cotton. Nevertheless, a healthy inquiry has been maintained for spot Egyptians and there have been some slight signs of a "broadening out" tendency, particularly as regards Sakel. For example, there has been distinctly more inquiry during the past week for cotton at from "50 off to 50 on" the Sakel contract. There ought to be a fairly good selection of this style of cotton in Liverpool, as buyers have persistently ignored this quality for a long time. No doubt it is a sign that the stock of the inferior qualities, which have for so long occupied the attention of spinners, is becoming exhausted. We are of the opinion that it is only a question of time before the demand will work gradually upwards to better qualities still. A feature of this week has been a steady demand for low Sakel cotton at about 14d., but owing to the small stocks now held the results have, unfortunately, been poor. The customary steady trade in Uppers, at from 25 to 50 "on" contracts, has again been in evidence, and the basis remains firm for this style of cotton. The better grades have remained neglected.

An improved inquiry for Pilion has been witnessed at from 80 to 150 on May Uppers, but we doubt if much business has resulted. Spinners, however, appear to be showing a more genuine interest in this growth at the moment. Other Egyptian growths have suffered from neglect. In Sudan Sakel a very good business has taken place, chiefly for the SSSS and SSSSS qualities, and the basis has hardened by about 25 points. Sales latterly have overtaken arrivals and trade interest shows no signs of slackening. Trading in forward cotton (Egyptians) has been quieter this week, and reports from up-country have been somewhat discouraging. Forwardings for the week ending the 4th inst. were returned as 4,681 bales Egyptians and 1,548 bales Sudans.

Estimated spot sales for the week, 1,800 bales Egyptian and 7,300 bales Sudan. Quotations of Sakel show a net advance of 20 points on the week, and those of Upper and Pilion are unchanged on balance. F.G.F. Sakel to-day, 21.60d. F.G.F. Upper to-day, 15.75d. F.G.F. Pilion to-day, 16.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 3, state:—

The futures market during the past week has been very active, and the tone at the close to-day was firm, especially for Sakel. The week's summary of price movements is as follows:—Sakellaridis: May, 42.35 dollars, 1.03 dollars up; July, 43.03 dollars, 1.08 dollars up; November, 43.62 dollars, 1.04 dollars up; January, 43.35 dollars, 1.17 dollars up. Ashmouni: June, 28.90 dollars, 0.10 dollars up; August, 29.15 dollars, 0.15 dollars up; October, 29.36 dollars, 0.36 dollars up.

Sakel.—We have had a series of fluctuating markets, but, as mentioned above, the close to-day was firm. The rise in New York has not had much influence on the market here, operators being rather sceptical and inclined to think that the rise will not be maintained.

The demand from abroad has not been very good this week and the serious slackening of the inquiry is reflected in the smaller spot sales at Minet el Bassal, where the daily figure has averaged only about 1,900 bales. This falling off in the demand is rather surprising, as reports from the consuming centres led one to expect a fairly good and regular demand in view of the low mill stocks.

Arrivals from the interior have been heavy, but this was anticipated and only to be expected, seeing that all ginning had to be finished by April 30. All factories have now closed down, and as most of the cotton has been already sent down, arrivals in Alexandria during the next three months will be negligible. It rather looks as if prices will stabilise round about present values, unless, of course, new unforeseen factors appear.

Uppers.—This market has lost much of its recent activity, and even the rise in American has not had any great influence. The demand from spinners has been only moderate, America continuing to take no interest at all, whilst even Lancashire and the Continent have only bought now and again and on very moderate lines.

The week's receipts amount to 138,926 kantars, against exports 116,727 kantars; the stock in Alexandria stands at 2,749,202 kantars.

Spot: The demand has been moderate and showed a considerable decrease during the latter part of the week. Total sales amount to about 11,500 bales, of which we estimate about 7,200 bales Sakellaridis, 3,500 bales Ashmouni and Zagora, 600 bales Pilion, and 200 bales other varieties.

Sakellaridis: The demand has been centred practically entirely on the medium grades. Good cotton is quite neglected and the lower grades have not been much in favour. Spot differences for the latter have eased somewhat.

Ashmouni and Zagora: There has been a very much smaller business done in these varieties, and spot differences have eased all round. The good grades are still neglected.

Pilion: A steady business continues in this variety and cotton below Fully Good Fair is becoming rather scarce. Spot differences are, if anything, a little harder.

Other Varieties: Apart from a few lots of Nahda, which have changed hands at about last week's premiums, no business has been reported.

Up-country: During the early part of the week spot business was very brisk, but with the closing down of the ginning factories business has ceased and little further will be done until August.

Crop, 1928.—Weather conditions have been rather abnormal; some days have been very hot, others have been on the cool side, but in spite of this the plant seems to be going along all right. In the South and Central Delta the crop is still late, although some of the delay has recently been received in many districts. The locusts to which we made allusion in our previous report have been got rid of, with but insignificant damage to the crop. The reports on the water supply continue to be more reassuring. The Sudan gauges show considerable rises, and indications are now for a sufficient supply of water during the summer months.

The new Persian Customs tariff was passed by the Majlis on May 3, and came into force on May 10.

Mr. Bernhard Baron has sent £5,000 to the Zionist Executive in Jerusalem as a contribution to the special fund for the programme of constructive work to be executed by Jewish workers in Palestine.

The Turkish Government on May 8 decided to adopt the Latin characters for the Turkish alphabet and also make use of the phonetics of France and Hungary.

Bolckow Vaughan and Co., Middlesbrough, have received an order for 880 tons of rails for the Great Indian Peninsular Railway, weighing 115 lb. per yard. This is the heaviest section of rail which has been supplied for use on the Great Indian Peninsular Railway. Some of the rails will be of chrome steel and others of ordinary steel sorbitically treated.

Notes of the Week.

A Political Crisis in Greece.

After a long period of abstention from participation in Greek politics, M. Venizelos has found the old habit too strong for him again. So long as the abstention was reinforced by absence from Greece it remained exemplary, and the waters of Greek politics suffered, as far as the veteran politician was concerned, from nothing worse than feverish calls sent across them from perfervid followers who wished their leader back among them. Gradually the fear of untoward events if he should set foot again in Greece was overcome, and M. Venizelos prepared the ground for his return by visits to Crete, the island of his birth, and the scene of his earlier *franc-tireur* exploits. Arrived in Athens, he has found it impossible to ignore the political questions of the day. His advice, inevitably sought, has always been in favour of the *status quo*, but the more frequently it has been given the more closely has M. Venizelos tended to become identified again with the party which he created. This equivocal position is regarded as intolerable by the actual leader of the more important section of the Party, M. Kaphandaris, and he has announced his intention of relinquishing his leadership. This step would entail his resignation from the Ministry of Finance, and would almost certainly involve the fall of the Government, in addition to leaving the Progressive Liberals leaderless. In these circumstances M. Venizelos, who has allowed it to be assumed that under certain conditions he might agree to be a candidate for the Presidency of the Republic, may be drawn still further into the political mælstrom and may feel compelled to resume the leadership of the Liberal Party. In any case, Greece is confronted once more with the prospect of political turmoil, and it is significant that the responsibility rests once more with M. Venizelos. Called in 1910 to rescue Greece from political chaos, he has, after clearing up that particular situation, been mainly responsible for the storm period through which the country has been passing ever since.

Southern Serbia.

The hopes that were raised by the announcement that Dr. Koroshetz, Yugoslav Minister of the Interior, was going to make a personal investigation of conditions in Southern Serbia will not have found much confirmation in his first utterances on his return from his visit of inspection. He is reported to have paid a tribute to the police and gendarmerie, and to have declared, enigmatically, that all such measures as were required in the province would be taken. Now, the trouble in Serbian Macedonia has had far more to do with police and gendarmerie methods on the spot than with the policy dictated from Belgrade; for grievances regarding the closing of churches and schools and the prohibition of the use of the language or dialect known to the inhabitants concerned have weighed less with the population and their sympathisers abroad than the actual treatment meted out to them by the police and gendarmerie. It is significant that, when the country has been ringing with the conduct of the police in prisons in the capital itself and most of the chief towns, the Minister of the Interior should be able to imply that in Macedonia they were above criticism, if indeed that is the meaning that his words were intended to convey. Almost simultaneously the Secretariat of the League of Nations is supplied with a memorandum of the National Committee of the Organisations of Macedonian Emigrants in Bulgaria giving chapter and verse for innumerable murders and outrages alleged to have been committed on the inhabitants of Southern Serbia either by or at the instigation of officials.

Conflicting Evidence.

In a Geneva publication documentary evidence is supplied purporting to show that what was recently described in the Belgrade Press as a raid into Yugoslavia of three Bulgarian *komitajis*, of whom two were killed, was in fact the attempt of three men resident in the Kotchani district to escape from police persecution by fleeing into Bulgaria. They

Digitized by Google

were unarmed, and so close is the Yugoslav watch on the frontier, it is alleged, that only one succeeded in making his way across unscathed. Certainly this version conforms more with Serbia's military reputation than the oft-repeated official lament that the country lies defenceless at the mercy of any Bulgarian *komitaji* who cares to walk into Serbia on a loudly advertised mission of bombing and assassination. One of the difficulties that the foreign observer has had to contend with in understanding the situation in Southern Serbia is the failure of the Yugoslav authorities to protect the country from Bulgarian raids, in spite of the fact that in addition to regular troops ten thousand gendarmerie are said to be stationed in Serbian Macedonia. The position is clarified if the majority of the alleged *komitajis* are local inhabitants who in self-defence are driven to "take to the hills" or to make good their escape across the frontier. It is not suggested that the policy of which these people are the victims is dictated from Belgrade, which is probably in ignorance of the actual situation. For a long time an obstacle in the way of any improvement has been the frequent changes of Government and the preoccupation of Ministers with their own political fortunes, which has left the Minister of the Interior with no opportunity to grapple with the Macedonian problem. Hence the importance of Dr. Koroshetz's novel procedure in making a personal inspection of conditions in Macedonia. His reputation inspires the belief that, even if he feels obliged to pour official whitewash over a state of affairs that has been made a party question, he will contrive to introduce improvements into the administration of the province. Whatever may be the attitude of Serbs towards their Macedonian fellow-subjects, it is evident that public opinion in Croatia and Slovenia is finding in the past treatment of the province a fresh argument against Serbian domination in the Tripartite Kingdom.

Turkey and Her Debts.

Whatever material improvements the Government of Mustapha Kemal Pasha has been able to introduce into Turkey, and however much it may have increased Turkish self-respect at home, it cannot be said to have made Turkey an easier country for foreigners to negotiate with. Nothing is simpler than to prolong negotiations indefinitely, when one party has convinced itself that it has nothing to gain by bringing them to a conclusion and nothing to lose by exasperating the other party. A rough division of the world separates it into a civilised portion and an uncivilised portion; in the former certain recognised rules of procedure govern the intercourse of nations, which can be dispensed with in the latter, because the affairs of uncivilised nations call for only minor attention. Two nations, however, to-day refuse to fit themselves into one category or the other. Russia and Turkey, with all the outward trappings of civilisation, cannot be classed as uncivilised countries, but their Governments consistently refuse to base their international relations on the good faith and reciprocity which have come to be regarded as the hall-mark of civilised nations. It may be more than a coincidence that this attitude on their part accompanies an official repudiation of religion and consequently of any known code of ethics. The Turkish Government retains a conception which is called honour, because it compels its nominee Members of Parliament to swear on it or by it, and presumably it is for that reason something which is supposed to condition the Government's own actions. It would interest, however, the foreign Bondholders to discover where this abstract virtue enters into the dealings which the Angora Government have carried on for some three years, ostensibly with the object of regulating Turkish indebtedness. Time and again agreement has been reached, with very generous concessions on the part of the Bondholders, only to have the arrangement defeated by some palpably specious device on the part of the Turkish Government—specious, that is to say, in the opinion of the civilised world, however it may appear to Angora. In such circumstances there can be little surprise that in the world at large the stability of the present régime in Angora is so often questioned, because no greater contrast could be afforded than that between the uprightness and fair dealing of the ordinary Turk and the sharp practices and corruption with which recent events suggest that the ruling clique in Turkey is honeycombed. It is just as impossible that Turkey should make good at home, if all her rulers and officials are of the type of Ihsan Bey and Ali Jenani Bey, as it is that she should ever occupy in the world the position to which her size and resources entitle her, if her international relations are to be regulated after the manner of the negotiations with the representatives of the foreign Bondholders. The reason now given for delaying payment may be sound from a purely technical point of view; but Turkey will have lost an excellent opportunity of rehabilitating herself in the eyes of her creditors, if she does not make a point of submitting the Ottoman Debt Agreement at once to the Grand National Assembly, even if it means prolonging the session for a few days or even weeks.

Persia and Turkey.

The announcement that at last an Ambassador has been appointed by Riza Shah Pahlavi to Turkey is a welcome indication that the strained relations which were noticeable last year as a result of incidents upon the Turco-Persian frontier are now easier. Certainly the Turks will be pleased at the choice of Mirza Mohamed Ali Khan Foroughi (the Zoka al Mulk) a former Prime Minister and Minister for War in Teheran, for his suave and charming ways are well known to the Government at Angora. It is perhaps unwise to assume that the reformation of Turkey is identical with the reformation of Persia and that the interests of the Sunni country and the interests of the Shiah country are the same; but there is every reason to suppose that, in the main, the energy of the Administrations of these two countries is mutually admired. Certainly every friend of peace in the Middle East will welcome the official manifestation that last year's troubles between Persia and Turkey may now be settled. Whether it is in the power of the border Kurds again to disturb the peace remains to be seen.

King Amanullah's Tour.

For duration and variety King Amanullah's tour will constitute a "record" among royal journeys by the time when his Majesty returns to Kabul. The visit to Russia has been concluded without a hitch and the King has now reached Angora, which for all the novelty of its position among the world's capitals is making a bold bid to engage

his interest during a five days' stay. For the Turks it will be a new experience to play the elder brother, but in their common cult of Western civilization there will be several opportunities for displaying the advantage already held over their Eastern ally. If report be true, even the hurried decision to use Latin characters for writing Turkish was adopted without any definite scheme in view, in order to have one more point of contact with the West before the Afghan King arrived. Perhaps the best return that King Amanullah can make to his Turkish hosts is to persuade the Ghazi to follow in his footsteps, and to see, as President of the Turkish Republic, some of the countries which hitherto he has been so anxious to imitate, while keeping them and their people at arm's length.

Egypt and the Hijaz.

Although Egypt is not officially participating in the Pilgrimage of 1928, the *Mahmal* having again been suspended, and the Holy Carpet coming this year from Delhi instead of from Cairo, it would appear that the relations between Egypt and the Holy Land of Islam are destined inevitably to become closer. For Egypt, above all other Muslim countries, can take to the Hijaz precisely what that land most needs: scientific knowledge and its application to the uses of Islam. It was stated last week that the Egyptian Government consented to the request of the Government of the Hijaz for a delegation which should supervise the construction, in Mecca, Madina, and other towns connected with the Pilgrimage, of water-works and other buildings of public usefulness. That the Egyptians are eminently qualified for this public service is patent; and it is to the credit of King Ibn Saoud that he should, after certain unfortunate experiences in the employment of medical or hygienic advice from other quarters, have requested the Government which refused his conditions for the sending of the *Mahmal* to come to his rescue in the interests of Islam. Reports upon the health and the amenities of the pilgrims at Mecca this year will be awaited with unusual interest. There can, however, be little doubt that the ruler of the Wahhabis is resolved to do all in his power to make for Mussulmans the duty of becoming a *hajji* as attractive and comfortable an experience as is consonant with the unescapable regulations.

Locusts in the Middle East.

Few things could more strikingly show the difference that European influence in the Middle East has made than the precautions which now are taken for dealing with the inevitable invasion of locusts, one of which invasions is now afflicting Northern Iraq, Trans-Jordan, and, as our Jerusalem Correspondent reports, Palestine as well. Time was when the fatalistic peasant in many parts of the world regarded the coming of the locusts as a direct intervention of Providence, with whose ways it would be something worse than folly to interfere. Now, however, Europeans have taught the Arab fellahin to employ every available device of science either to forestall or to cut short this hereditary foe to the crops. Flame-guns, trenches, aeroplanes even, are brought into play to counteract the numberless hosts of locusts, and it is unquestionable that thousands of pounds worth of crops have been saved through this display in the mandated countries of beneficient militarism. It is in ways like this that the outlook of the Muslim Arab is to some extent being revolutionised, although an attitude of resigned indifference to the blows of Fate cannot be undermined in a day.

The King's Speeeh at Baghdad.

With the main aspect of the result of the Iraqi elections we deal elsewhere, but additional significance of the trend of policy in Baghdad may be derived from the King's Speech, which was delivered at the opening of the new Parliament last Saturday. Indirect reference, which was a very clear echo of the Anglo-Iraqi negotiations pursued last year in London, was made to the problem of compulsory service, it being hoped that the question of national defence would be decided "in a manner which will ensure the proper defence and security of the country." The Speech afterwards referred to the satisfactory improvement in the finances of Iraq and to the increase in State revenues; to the negotiations now in process for the establishment of a National Bank and of an Agricultural Bank; and to the extension of motor and telephonic services in Iraq. The main stress, therefore, was laid upon the internal consolidation of Iraq, upon that economy which is the least spectacular but the most useful thing for an undeveloped country to achieve. It is true that Iraq's relations with Najd are at the moment under a cloud, but that, it is confidently hoped, will soon be lifted, and that her relations with Persia are still far from satisfactory. But the cardinal truth remains that Iraq's real salvation lies in the industry, the patience, and the resources of her people.

THE STUDY OF ENGLISH IN YUGOSLAVIA.

The annual general meeting of the Yugoslav Society for the Study of English (J.S.Ş.E.), Liubliana, was held recently in the Ladies' Room of the Kavarna Emona, Liubliana. This institution has now existed for a little over six years, and during the whole of that time has carried on its useful work of propagating the study of the English language and English literature, successfully, though very unostentatiously—the latter largely because its most active members are far too much taken up with their work to find time to advertise it. From the various reports read at the meeting it appears that during the past year the Society has been greatly handicapped by financial difficulties, but that Mr. Kennard, British Minister in Belgrade, and Mr. G. H. Bullock, British Consul in Zagreb, have generously come to its assistance. For nearly two years the Society has been established in suitable premises at Selenburgova Ulitza 7/I., and the outlook for the future is decidedly more encouraging than it was twelve months ago. Of all departments of the Society's activity, the Library is the most appreciated. Friends of the Society are reminded that this, the only public English Library in Yugoslavia, is constituted solely by donations, and that all English books are welcome—technical works, fiction, science, philosophy or poetry—provided that they are good of their kind. The Society's rooms are open every day from 6 to 7 p.m. English-speaking visitors are welcome and the Secretary is always prepared to help them in the matter of obtaining information about the country. Letters, inquiries, and gifts should be addressed to:—Mrs. F. Copeland, Yugoslav Society for the Study of English, Selenburgova Ulitza 7/I, Liubliana, Yugoslavia; or to Gospod N. Majaron, Valvazorjev Trg, 6, Liubliana, Yugoslavia.

It is stated from Beyrout that a marauding band from Trans-Jordan, out on a cattle-raiding expedition, encountered a party of Druses at Elanak on May 17. In the fight which followed the Druses lost 15 wounded and their antagonists 12 killed.

THE ELECTIONS IN IRAQ.

There can be few observers of political life in Iraq, of its elements, its purpose, and its significance, who did not anticipate a victory in the secondary elections for the Government of Sir Abdul Muhsin Beg as Saadun which last January succeeded the Administration of Jaafar Pasha al Askari. The present Cabinet at Baghdad has, in fact, scored a heavy victory in these elections; for of the eighty-eight seats in the new Majlis, the supporters of the Government have seventy, the Opposition have ten, and the Independents have eight. There is in this state of affairs nothing, of course, that is very remarkable; Iraq is by no means the only country in the world in which the Government has, as Government, a strong pull in the elections. But there was a distinguishing feature of the campaign just ended, and that was an energetic journalistic fight against the Anglo-Iraqi Treaty, which was signed in London last year by Jaafar Pasha at the instance of King Faisal. This anti-Treaty battle was conducted with unusual vigour and skill, but the political solutions of its authors do not appear to have impressed themselves as feasible upon the people of Iraq at large. The old tendency of backing the "Ins" and spurning the "Outs" has once more asserted itself, or, if you will, the line of least resistance has been taken. It would, however, probably be a mistake to suppose that these secondary elections were fought upon the issue of the ratification of the Anglo-Iraqi Treaty of 1927. The views of the present Prime Minister in Baghdad upon that document are not known, but even if he were opposed to it, it might still appear to him to be dubious wisdom openly to denounce it in Iraq. For the fact is that the Iraqi who denounces the Anglo-Iraqi Treaty of 1927 denounces King Faisal, and a policy of such denunciation can in the present circumstances lead nowhere. Sir Abdul Muhsin, although he himself has on a former occasion declared in favour of a measure of Conscription for Iraq, has too great a reputation as a successful administrator, and is too keen a realist not to know that against certain pricks it is useless to kick. That, doubtless, is why he is postponing until the next Parliamentary Session the debates on the Anglo-Iraqi Treaty; that is why there was no direct reference to conscription in the King's Speech last Saturday; that is why he intends to concentrate upon economic issues, the "bread and butter" problems of the country. A period of political quiet and of more earnest economic endeavour may, in the opinion of some politicians in Baghdad, have the effect of cooling brows now puckered or lowering through over concentration on severely political and highly controversial matters. Nor would he who is trained in politics of the Western model be disposed to deny that there is wisdom in such delaying tactics. The hope underlying this course which Sir Abdul Muhsin is pursuing is, we take it, not so much that the Anglo-Iraqi Treaty will be ratified by a large and enthusiastic majority, but that it will eventually be ratified as an unexciting matter of course.

Doubtless the attitude of the Majlis towards the Anglo-Iraqi Treaty, and, in particular, the attitude of Sir Abdul Muhsin to certain other authorities in Iraq, may become clearer in the extraordinary session which began on May 19. So far the Prime Minister has scarcely delineated the precise position which he intends to occupy as between the King of Iraq and the High Commissioner—a position which calls for an expert in the matter of bridging and balancing. But it is difficult to imagine that Sir Abdul Muhsin, if he adopts the plan of avoiding the controversial issues which came to a head last autumn in London, will suffer any "interference" from any reasonable quarter. Nor is it fair to say that he, or anyone else for that matter, is the less an Iraqi "Nationalist" because he realises that for the present certain aspects of independence are impossible of obtaining for Iraq. He is a tried administrator; Iraq knows him and his record well; and if Iraq returns his Government in numbers that are overwhelming it is surely not for any outside observer to reproach Iraq as a whole with being insufficiently "Nationalist."

Now as far as we can see, there are three possible courses open to Iraq. They are, first, incorporation within the British Empire, a solution desired by, and in the interests of, neither the British nor the Iraqi peoples. Secondly, Iraq might join up, theoretically, with an independent Arabia, being an autonomous part of an independent whole. This solution, which has manifest advantages and certainly appeals to the imagination, is equally manifestly and certainly no practical solution. It could be achieved at the present time, if it could be achieved at all, only under the ægis, the supervision, and the control of the Wahhabis; and though the might of King Ibn Saoud may greatly attract certain non-Wahhabi Arabs at present in opposition to the Governments of the countries in which they live, these same Arabs would assuredly not hold out this solution were they themselves in actual power. That a confederation of Arab States is the ideal future for Arabia is an axiom, but since it could be immediately achieved only at the price of submission to the dictates of him who to many parts of Arabia appears to be the "unprogressive" ruler of the Wahhabis, this solution is in effect a barren one. There remains the third and actual policy of Iraqi-British collaboration, to be pursued until the independence of Iraq is an unconditional fact. This policy, it is to be admitted, now often fails to stir the imagination, gives rise to jealousies and suspicions, and is open to misinterpretation. It has the merit, however, of being founded in the facts of the situation, of having been tried and of now being recognised by the Iraqis in general as the only feasible policy. Not as a supporter, therefore, of the British, still less as a supporter of his King's infallibility, has Sir Abdul Muhsin been triumphantly returned, but as a known and trusted Arab who, basing his programme in the roots of reality, hopes so to till the soil that the plant of independence, on which some Iraqis would impose forcing methods, may grow more slowly, perhaps, than had been hoped by other Arabs possessed of a quite comprehensible and not unworthy impatience, but all the more surely for that.

The Near and Middle East*

From Our Own Correspondents.

Jerusalem, May 10.

Mr. H. C. Luke as Chief Secretary.

Over four years ago, in THE NEAR EAST of April 3, 1924, in the course of comments on certain changes in the personnel of the Palestine administration, was written the following:—

The loss of Mr. H. C. Luke, the Assistant District Governor of Jerusalem, who is transferred to Sierra Leone, is especially felt. It may be no compliment to him to say so, but his peculiar gifts and interests seem so admirably apt and so particularly desirable in a higher Palestinian official that it seems a misapplication of human material to transfer him to Sierra Leone. Palestine is a particularly odd kind of country, with problems often petty and always perplexing; the ordinary rule-of-thumb official would only befuddle himself and the people if he ever attempted to penetrate beneath the surface of things to causes and motives, instead of carrying out his routine duties along the line of least resistance. But Mr. Luke's knowledge, experience, and personality are such as to give him a much firmer grasp of the complications and a much deeper sympathy with the seeming pettinesses of much of local difficulties than could fairly be expected in the average British official. The peace of Palestine badly needs officials of Mr. Luke's attainments, and it is greatly to be hoped that in due course the Colonial Office will see fit to transfer him back to us.

And now comes the happy news that Mr. Luke is to come back as Chief Secretary—news which goes some way towards reconciling us to the transfer of Colonel Symes to Aden.

"Anti-Missionary" Activities.

It could hardly have occurred to the innocent minds of the organisers of the International Missionary Council (or to the mind of anybody else) that the meeting in Jerusalem early last month would seriously affect internal Palestinian Arab politics. Yet it was so. The local ecclesiastical leaders of Islam, roused by a fear that the Council's meetings were a threat to the faith of their followers, or (which is the theory put forward by their political opponents) moved by an ambition to win for themselves a reputation as proved "Defenders of the Faith" in time for the now imminent new elections to the "Muslim Supreme Council"—the present Muslim leaders stirred up a popular outcry against the Missionary Council's presence in Jerusalem, culminating in a small riot at Gaza and "anti-missionary" demonstrations and "strikes" up and down the country. This activity is now being followed up in more positive fashion by the establishing in the larger towns of branches of a "Young Men's Muslim Association," to counteract any supposed Chritianising effect of the "Young Men's Christian Association" and Christian missionary labours generally. And since, as seems to be the nature of the present-day East, all such societies take to themselves a nationalist and political tinge, the older "Muslim-Christian Associations" which were so prominent and active in the 1920-1923 stage of Palestine's politics, have lost whatever semblance of life which still remained in them. Still more, the three most influential local Arab newspapers which for long most ably fought for the Arab cause (the Jaffa *Falastin*, the Jerusalem *Mirat ash-Sharq* and the Haifa *Al-Karmel*), being under native Christian editorship, are perforce driven into opposition. The Christian-Muslim Arab combination, which in the past had been of considerable value in winning outside sympathy for the Arab anti-Jewish cause, is no longer in existence, and the plans which were beginning to mature at the beginning of the year for summoning a "Seventh Arab Congress" are once more in abeyance.

Invasion of Locusts.

It used to be the custom to blame Palestine's natural barrenness and poverty to four and a half centuries of Turkish slackness and misrule. Recent events, however, serve to remind us that earthquakes, and, still more, locusts must shoulder some at least of the blame. The present locust invasion is the first of these periodical plagues which has been scientifically fought in Palestine; the wholesale scale of the invasion opens our eyes to what have been the terrible consequences in the past when every twelve years or so locusts were able, unresisted, to wipe up completely a season's or even two seasons' crops. The present "defence of Palestine and Trans-Jordan," as described in the daily bulletins issued by the Department of Agriculture, reads like military operations on a wide scale against a new Mongol invasion; only this time, fortunately, it is the defenders who have all the resources and the organisations, the attackers having nothing more on their side than their huge numbers and their appetites and egg-laying powers. But for the Department of Agriculture's well-thought-out schemes of preparation and well-organised "Intelligence service," and the wholesale destructive powers of flame-guns and prompt measures of mobilising local man-power with nets and sacks, and ploughing up egg-bestrewed areas, the locusts must have had as complete and devastating a victory as any Jenghiz Khan.

Palestine's troubles from locusts are still at their height, and the campaign is likely to last till the end of June.

Jidda, May 7.

THE HIJAZ.

The King's Movements.

Discussions with tribal and other leaders appear to have delayed King Ibn Saoud's progress through his northern territories, but he arrived somewhat unexpectedly at Madina on the afternoon of May 2. Leaving there after the Friday prayers, the King arrived at Jidda at 11 a.m. on May 5, the town being gaily decorated in his honour. After receiving the notables of Jidda in special reception tents set up for the purpose near the barracks outside the Madina gate, His Majesty proceeded to the house arranged for his residence, whence shortly afterwards he continued his journey to Mecca to perform the customary religious rites, on account of which he arrived here in *Ihram* gar-

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

ments. He returned to Jidda on May 7 and was accorded a salute of 21 guns by H.M.S. Dahlia. The same evening the Jidda Municipality entertained His Majesty to an official banquet.

The Clayton Mission.

Sir Gilbert Clayton and his mission arrived at Jidda from Port Sudan by H.M.S. Dahlia on May 2 and are accommodated by the Hijaz Government in the spare villa of Kandara on the outskirts of the town, earmarked to become ultimately the King's Palace. Apart from its leader, the Mission consists of Mr. K. Cornwallis, Adviser to the Ministry of the Interior in Iraq; Mr. G. Antonius, of the Palestine Secretariat; Flight-Lieutenant Moore, of the Air Ministry; and Captain I. C. Glubb, an Administrative Inspector in Iraq and expert in questions relating to the Iraq-Najd frontier. The strength of the Mission's personnel indicates a welcome desire on the part of the British Government to get to grips with the important problems involved, but, in the absence of the King, it has so far not been tested except in various social fields, on one of which it has served very gallantly to help the British community here to avert its customary defeat by the Dahlia's cricket team. The first match ended in an honourable draw, in which Mr. Antonius and his chief and a not unimportant ally in the form of sunset deprived the Dahlia of a probable victory. The second match is yet to be played as I write. [*Stop Press.*—This ended in a hard-earned victory for the Dahlia, after an excellent match.]

The Yaman.

Recent advices from the South indicate that there has been and still continues a recrudescence of difficulties between the Zaidi Imam and various sections of his Shafii subjects of the Tihama. Few details are forthcoming, but traffic on the Hudaida-Sanaa road is said to be at a complete standstill owing to the action of Ahmad Fudain of the Zaraniq group, who appears to have taken up a position astride the road by way of forcing conclusions with the Imam. The immediate cause of this rising is not clear, and no political importance need be attached to the circumstances.

The Pilgrimage.

The number of pilgrims in the Hijaz is now 70,644, as compared with 85,006 at the corresponding date last year. The Egyptian pilgrimage is expected to reach 13,000 at an optimistic estimate, but it seems improbable that the total number of overseas visitors will much exceed 90,000 this year. The scaremongering newspapers of Great Britain and India have done definite injury to an excellent cause by deterring from pilgrimage the foolish people who pay attention to them.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for the post of Assistant Master to teach English in Egyptian Government Secondary Schools.

Candidates should be between 24 and 34 years of age, must have University Degrees (preferably in Honours) and should have experience of teaching in Secondary Schools. Diploma in Education is desirable.

Initial Salary L.E.450 (about £461).

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1

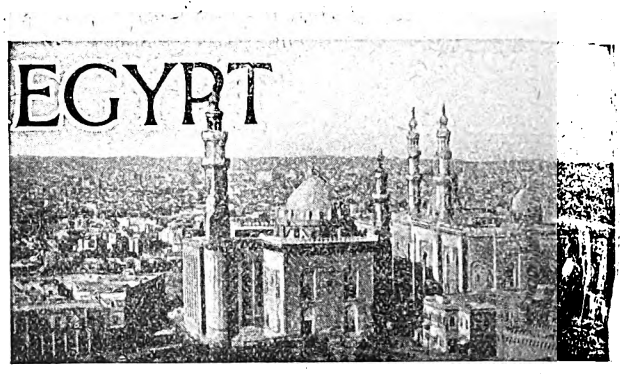
EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for the post of Assistant Mistress to teach English in Egyptian Government Secondary Schools.

Candidates should be between 25 and 34 years of age, must have University Qualifications, with a Diploma in Teaching, or the Higher Froebel Certificate.

Initial Salary L.E. 25 per month (about £307 per year).

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1



Cairo, May 12.

Egypt and the League.

The *Siassa* has been pressing the Cabinet to take steps to obtain the admission of Egypt into the League of Nations. In many circles this is regarded as intended to place Nahas Pasha and the Wafd in a difficult position and, coming from the organ of the party which is a member of the Coalition, it is somewhat severely criticised as not being altogether a very loyal gesture on the part of the Liberals. The proposal was made, it must be admitted, at the time when Mohamed Pasha Mahmoud tendered his resignation from the Cabinet and his action was regarded as the forerunner of a rupture in the Coalition, since the retirement of the Liberal Party's senior Vice-President from the Cabinet was, in the general opinion, bound to be followed by the secession of the Liberals, the more influential members of whom have all along been against a continuation of the Coalition. Mohamed Pasha Mahmoud in the end withdrew his resignation under pressure from the King, and for the time being the Coalition continues, although whether the alliance will last much longer is a moot question.

As regards the question of the admission of Egypt to the League of Nations, those who bring it forward appear to overook the fact that politically Egypt is as yet not in the position to qualify for admission to the League. In the first place, although an independent Sovereign State with a Constitution, her independence is subject to certain restrictions laid down in the Declaration of February 28, 1922, which granted her her present political status and, until Egypt has been able to come to a settlement with Great Britain in regard to these restrictions and embodies such settlement in the form of a treaty, she cannot reasonably expect to obtain a seat on the League; she certainly would not have the support of Great Britain in putting forward her application. That this suggestion should be advanced at the present moment within barely two months of the rejection of the Treaty, one of the provisions of which was that Great Britain would assist Egypt to secure admission to the League of Nations, is but one further illustration of the amazing inability of many, even of the more intelligent, Egyptians to face and to appreciate facts, and of their lack of patience in political matters.

The Ramleh Railway.

The Alexandria Municipality have engaged the services of Mr. Spencer, General Manager of the London United Tramways, to advise on the valuation of the Ramleh Tramway system, the future of which has been under discussion for some time now, and on the offers which have been received for the concession, which is at present held by the Alexandria-Ramleh Railway Company. Mr.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of E. H. Keeling, Hon. Sec.

74, Grosvenor Street W.1.

Digitized by Google

Spencer arrives here on the 16th instant, and it is understood that the work will occupy him about two months.

It is to be hoped that when the Municipality has Mr. Spencer's report it will lose no further time in taking the necessary action, and that the handling of this question will no longer be characterised by the secrecy which has at periods surrounded it. The public is, after all, not concerned with the personality of the concessionnaires to whom the running of this important suburban line may henceforward be entrusted. Its chief interest lies in having an efficient service from which both the residents and the Municipality will derive the utmost advantage, and it will welcome any decision which, while assuring what it wants, will set a term to an unhappy condition of things.

Incidentally a proposal has been laid before the Municipal Commission for the raising of a loan of one million pounds to enable the City to carry out various improvements which are essential to its future development, the loan to be secured on the royalties, which accrue to the Municipality from the various monopolist concerns. It should be pointed out, that the powers of Alexandria, so far as the raising of loans is concerned, are regulated by international agreement. The City has already reached the limit fixed in the agreement, and for the raising of this further loan it will have to sue for, and to secure, the assent of the Powers concerned, which include Great Britain. Until the question of the Alexandria-Ramleh Tramways, still under consideration, is settled, it will be, of course, impossible for the City to open up negotiations for the new loan. It would seem, therefore, to be in the interest of the Municipality to set a term to the tergiversation which has characterised the handling of this question, and to deal with it speedily and in a businesslike manner, for the attitude of London and other financial centres towards the application for powers to make a new loan must entirely depend on whether the settlement of this question inspires it with confidence in the capacity of the Municipality to handle its affairs in a satisfactory and businesslike manner.

The Savoy Hotel.

Another of Cairo's landmarks, one intimately connected with the brilliant pre-War seasons and with the active conduct of the War, is about to disappear. On the 1st instant housebreakers took charge of the old Savoy Hotel, and gradually that fine old building is disappearing behind hoardings, which for the next six or eight months will advertise the latest cinema film or most efficient face-cream, and will only be removed when all traces of the old edifice have gone and in its place have arisen the very modern buildings which are to replace it. Savoy Hotel will always be associated in the minds of those who frequented Cairo before the War, with some of the most brilliant functions which always marked the winter season. It was the centre towards which gravitated all moving in the highest circles of every nationality, and it has probably housed in its time as many royal personages as any of the Paris or London hostelries of that period. On the outbreak of War, the Savoy Hotel was at once closed and shortly after, when the scale on which hostilities were conducted on this front developed, it was taken over by G.H.Q., in whose hands it remained until after the Armistice, when the Government rented the building to house various of the services for which the increase in activities left no room in the old Government buildings. Recently, when the Egyptian Hotels combined with the Grand Hotels group, to which the Savoy Hotel belonged, the managing director of the former, Mr. Baehler, took over the building under a special arrangement, and his plans are to erect two new buildings on the spot for flats and offices above and shops with colonnades below. This will make of it one of the finest edifices in the city. The place of the Savoy Hotel since the War has been taken by the Semiramis Hotel, but although that hotel is the most fashionable of all which Cairo boasts, it does not approach the old Savoy, for the simple reason that times and tastes have changed completely.

Mazlum Pasha.

A familiar figure and one identified with Government and political affairs for over thirty years passed away this week in the person of Ahmed Mazlum Pasha, who died in Cairo after a long and painful illness, and was buried with military honours in Alexandria. Mazlum Pasha was the oldest of the large number of ex-Ministers now existing in the country. He first obtained Cabinet rank under Mustapha Pasha Fahmy and last held the portfolio of Agriculture in Zaghloul Pasha's Cabinet. He was President of the Legislative Assembly which came into being in 1913, and quite naturally was elected President of the first Chamber of Deputies under the new Constitution in 1924. Latterly he was nominated to a seat in the Senate, where he should long ago have found a place on account of both his age and his experience. Mazlum Pasha was not what one would call an active politician, but he was an exceedingly shrewd student of politics, and no crisis ever occurred but his advice was sought by his Sovereign and the various political leaders. On several occasions, when it looked as if no party Cabinet could be formed, he was seriously considered for the presidency of a Ministry which would either have no political colour or needed the support of all parties.

Communism in Egypt.

The Egyptian Government is to be congratulated on its success in rounding up the band of Communists responsible for the revival of the Egyptian group which had been dispersed in 1926 by the arrest and deportation of Russian Jews who had founded and were directing it. The new formation had assumed a serious aspect owing to the return from Moscow of the first batch of Egyptians sent there six years ago for training in Communist propaganda. The removal of the leaders will no doubt mean a set back to the movement, but in face of the new feature afforded by the Egyptian recruits, the authorities will have to watch developments very closely to ensure that the movement does not make progress underground through this new local element. The success hitherto achieved in this connexion has been entirely due to the European Department of the Ministry of the Interior, a section of which is specially occupied with Bolshevist activities.

Tirana, May 8.

Italian Enterprise.

An air service has been inaugurated between Brindisi and Valona, which brings the two coasts of the Adriatic within forty minutes of one another. The service operates twice a week. It is carried out by the Italian company, Adria Aero-Lloyd, which has replaced the German company in Albania, and the Brindisi-Valona flight is regarded as the first stage in an air-route which will connect Italy and Constantinople via Salonika.

It is understood that the Italian Government has made proposals for the re-opening of a School of Arts and Crafts at Skutari. This institution existed under the Turkish régime, but had since been closed.

In connexion with these enterprises it may be mentioned that Syrega Bey Vlora has recently ceded to an Italian company for a period of twenty years (the law forbids the sale of land to foreigners) his property situated between Valona and the River Viora. The area of these estates is six thousand hectares. It is noticeable that Italian companies are continually increasing their holdings of large estates in this way.

In addition to the construction of roads, to which reference has been made in former letters, Italian companies will shortly be undertaking a large work, the canalisation of the Boyana, the river which carries the waters of the Lake of Skutari to the sea. The effect of these works will be to render the Boyana and part of the Lake navigable; at the same time a considerable extent of land will be reclaimed and opened up to agriculture. As Yugoslavia is directly interested in these works—in respect of both the Boyana and the Lake, which are common to the two countries—she put forward a proposal to share the expense with Albania. The Albanian Government, however, has not accepted the offer, and in all probability the work will be entrusted to an Italian company.

The Council of Metropolitans.

The four Metropolitans (Albanian Bishops of the Orthodox Church) are at present in conference at Tirana, with a view to settling the question of the Albanian Autocephalous Church. As is known, this Autocephalous Church was created by the Congress of Berat in 1922 and has endeavoured in every way possible to gain recognition at the hands of the Œcumenical Patriarchate of Constantinople. Owing, it is understood, to pressure exercised by Greece, this recognition by friendly agreement has not materialised, and the object of the present conference of the Albanian Bishops is to regularise the situation.

Greek Clubs in Northern Epirus.

During the War a number of political Clubs (*syllogoi*) existed in Greece, some of whose members hailed from Northern Epirus (i.e., Southern Albania), which were intended to serve as centres of Greek irredentism. These clubs were subsidised by the Greek Government; until in 1926 General Pangalos brought about their closure by cutting off the subsidies. It has recently been reported here that the Greek Government has authorised the re-opening of these Clubs as centres of propaganda. The information, it is to be hoped, is not correct, as any such step is calculated to cause a very bad impression throughout Albania.

A Skanderbeg Exhibition.

The daily life of the Albanian capital is normally so uneventful and so unmarked by any intellectual movement that one may be allowed to mention as a local "event" the opening of an Exhibition in honour of the national hero Skanderbeg (George Kastrioti), under the auspices of the Albanian review *Diturija*. The exhibition, which is held in the Lumo Skendo Bookshop, comprises ancient and modern works on Skanderbeg, prints, engravings and pictures. For three days the exhibits attracted much attention and evoked real interest.

THE CENTRAL ASIAN SOCIETY.

The lecture which Wing-Commander Hill gave at the anniversary meeting of the Central Asian Society at the Royal United Service Institution on May 16 was preceded by a reading by the Hon. Secretary of a report on the year's working, during which the necessity for further popularising the Society's *Journal,* which is "its chief recruiting agent," was emphasised, and by the election of the Council for 1928-9 Viscount Allenby was re-elected as Chairman of Council; Sir Edward Penton was re-elected as Hon. Treasurer; Lt.-General Sir Raleigh Egerton, Lt.-Colonel Sir Wolseley Haig, and Sir Denison Ross were elected as Vice-Presidents; and Field-Marshal Sir Claude Jacob and Lt.-Colonel Sir Arnold T. Wilson were elected as Members of the Council.

Colonel F. E. Fremantle, who presided, then introduced the lecturer, whose address was in the main identical with that already reported in THE NEAR EAST AND INDIA on March 8 last. Afterwards Air Vice-Marshal Sir John Higgins, in adding that very valuable work had been done by Wing-Commander Hill himself in improving the organisation of the Service Air Mail, spoke of the ease with which the track across the desert (from Amman, or Ziza, to Rutbah, after which the Nairn motors had made an unmistakable track) was missed by an aeroplane, and of his belief that the route described by the lecturer was but a link in a long chain which would ultimately extend to Australia.

EXCAVATIONS AT UR.

Lecturing to the Royal Asiatic Society at the School of Oriental Studies on May 15, upon "The Excavations at Ur," Mr. C. Leonard Woolley, after describing, with the aid of excellent lantern slides the finds in the "Royal Tombs" in the cemetery at Ur, claimed that Sumerian culture long antedated Egyptian culture. The objects which he had excavated—arrows, daggers, helmets, bowls, and so on, upon which much work in the adorning with gold, silver, copper, alabaster, lapis lazuli, and cornelian, had been lavished proved that in the fourth millennium B.C. the Sumerians had attained to a very considerable degree of culture.

The greatest find of the last year's excavations (conducted under the auspices of the British Museum and the University of Pennsylvania) was made on the last day, namely, that of the Royal Standard. This was a most remarkable work which would give rise to innumerable books upon the mythology of the time. Mr. Woolley in conclusion reaffirmed his conviction that Sumerian culture was the basis of much of the Egyptian civilisation.

THE WORLD'S LOWEST LEVEL.

By G. E. Arrowsmith.

An early pilgrim describes Palestine in these glowing terms: "The Holy Land flourished like a garden of delight. The wildernesses were so fat that where dragons and serpents once had their dwellings, there were now green reeds and cane."

This may have been true in his day of some of the more fertile localities, but surely even to his devout eyes the gigantic cleft in the Judaean mountains known as the Dead Sea Valley, with its waste of uninhabited and sterile land, can have borne no resemblance to a "Garden of Delight." The level plain that stretches from the foot-hills to the seashore is one of the weariest, dreariest, and most forsaken spots on the face of the earth.

The heat-laden air trembles like thin vapour: scarcely anything that is green meets the eye—no grass, no gay-hued flowers will grow in the poisonous soil; a few hardy plants have managed to struggle above the ground, but they are miserable specimens, dun-coloured and cheerless, and merely add to the dead and dry aspect of the land.

Away to the left there is welcome gleam of white, an old fortress, now used as a monastery by the Greeks—the one sign of life in all this parched and panting wilderness.

The heat is tropical in its intensity, for this is the lowest surface in the whole world—some 1,300 feet below sea-level. Nowhere else on the earth's crust can we get so near those internal fires that rage and roar beneath our feet—small wonder, then, that the temperature is high!

In this Dantesque setting lies the most mysterious sheet of water known to man—the Sea of Death. It stretches away in front of us, "spreading its winding sheet over the engulfed kingdoms of Sodom and Gomorrah." Dead Sea in name only, for often it is quite spirited, rippling and sparkling as its tiny waves splash on the shingly shore. Its waters are very beautiful—a deep blue and wondrously clear.

This weird water seems to recede the more it is approached; every moment we expect to reach its shore, but every moment finds us still as far away as ever. It is the lake of Tantalus—a miragic phantom of the desert, aways visible but never attainable!

As we advance across the plain the near presence of the Sea of Salt makes itself apparent in a curious way. The ground is no longer grey or tawny, patches of white appear on the surface, patches that glisten like hoar-frost in the sun. It is the salt-encrusted soil that gives this mid-winter aspect to a plain that is sweltering under a mid-tropical sun!

At last we reach the lake at its northern end, and pull up in the shade of a ramshackle shed built upon the stony beach. A board advertises the fact that here refreshments may be obtained. This broken-down shanty is the one and only "hotel" that the Dead Sea can produce on the whole of its one hundred miles of shore. It is flanked by half a dozen rude shelters where a few sun-scorched Bedouin eke out a miserable existence: one or two sailing boats drawn up on the beach suggest that their trade may be that of fishermen—but this can hardly be so, for the sea is so salt that no fish can live in it. It is "a sea the bed of which is as sterile as an alchemist's crucible: it is a thing abnormal, bewildering. Some dead fish lie here and there, hardened like the woods, mummied by the naptha and the salts: fish of the Jordan, brought so far by the current to be stifled at once by the cursed waters." (Pierre Loti).

The shore of the Dead Sea is not unlike that of any other, save that here and there the ground is covered with salt crystals sparkling like diamonds in the sun. Moreover, dead branches of trees and other wooden wreckage swept down by the Jordan in its tumultuous rush from the Galilean lake litter the beach as with the white bones of a mighty army, for every twig and fragment is encrusted with the saline deposit, making it glitter ghastly white in the glaring sun.

Apart from these peculiarities there is nothing unusual about this low-lying littoral: it is composed of small, round pebbles, but there is no seaweed to break the stony monotony—no shells, no limpets, no scuttling crabs, none of those tiny living creatures that delight the soul of the seaside youngster. No creature, however low in the organic scale (with the exception of the Tetanus germ) can live in the saturated waters of this mysterious lake. Some early travellers even asserted that nothing could live above it; owing to poisonous exhalations birds dropped down dead if they attempted to fly from shore to shore, so they said. But such is not the case, for the upper air is as innocuous as the lower depths are deadly.

The extreme buoyancy of the water has always been commented on by those who have had experience of its strange properties. Thus Aflalo in his entertaining "Idler in the Near East" says:

> In the embrace of this singular sea a man loses control of his actions and behaves like a cork. The water is warm, even in April, and after a long ride the dip is refreshing. . . The water is so buoyant that ordinary swimming is out of the question. The body tilts over at angles that it would never assume under other conditions. If the swimmer lies on his back, his feet, instead of remaining on the water, shoot up in the air and point to the sky. If he lies on his face, taking good care to keep his mouth and eyes shut tight, he can remain motionless in a position familiar in frogs for just as long as he can hold his breath. Yet in our seas or swimming-baths at home, such an attitude will be found exceedingly difficult to assume, even for a moment. The one thing the swimmer in the Dead Sea cannot do is to sink. Even the "Dictionary of National Biography" would float, and a baby could meet Mr. Holbein on equal terms, for neither could do more or less than keep afloat. Suicide is as impossible as speed. It is less a bathe than a wallow.

History tells us that the Emperor Titus, doubting the stories he had heard about the water's wonderful buoyancy, put it to the test by chaining several of his slaves together and flinging them into the lake. He was pleased to see that they bobbed up and down like corks and refused to drown even though they were non-swimmers—no doubt the pleasure was shared by the unfortunate slaves, but as to this history is silent!

I do not like to disparage the evidence of the Roman Emperor, and the host of latter-day globe-trotters of whom Mr. Aflalo is representative, but my own opinion (after personally testing the density of the water) is that "suicide by drowning" is quite feasible in this lake if anyone is really bent on self-destruction. Indeed a friend of mine has told me that he found it possible to swim under the water. This, I should imagine, is a difficult feat, for the water is very salt, the density being about five times greater than that of any ordinary sea (the average salt water has six per cent. of solids in solution, whereas that of the Dead Sea holds 25 per cent.) This saturated solution is naturally very unpleasant to swallow, and he who bathes is wise if he keeps his mouth shut. To the touch it is thick and oily, and after a dip it is well to be washed down with fresh water, otherwise a thick crust of irritating salt will be left on the body, causing acute annoyance to any whose flesh is sensitive.

In spite of these peculiarities and drawbacks, I thoroughly enjoyed my bathe in the Dead Sea. After the heat of the sun-scorched earth the water was delightfully cool and invigorating; its clearness was amazing, at a depth of twenty feet the bottom could be seen distinctly. True we found swimming difficult—if we attempted the breast-stroke our feet remained out of the water behind; do what we would it was impossible to keep them under, and so instead of making any progress we simply splashed about inanely—like stern paddle-steamers gone mad!

There is something strangely fascinating about this sheet of water; you cannot look at it without thinking of the ruined greatness that it covers like a shroud. Sodom and Gomorrah, those wicked cities of the plain, whose sin brought this terrible blight upon a valley once so fertile, lie hidden somewhere within its depths—depths so profound that as yet no diver has been able to plumb them.

There is a curious rock on the eastern shore which the Arabs call "Lot's Wife." It is an isolated column of

Digitized by Google

volcanic origin that bears a rough resemblance to a human form, and may well recall the fate of the Patriarch's disobedient spouse. On the western coast, to the south of En-Gedi, there is another famous rock of vast size and strength; Masada was its name in Roman times, Sabbeh it is called to-day. It is a notable feature of the landscape, standing in isolated grandeur, a natural fortress impregnable in its strength. Its summit can only be reached by winding paths, up which an attacking force must toil in single file. Jonathan Maccabeus was the first to recognise its suitability for defensive purposes. He transformed its summit into a strong redoubt, and to this fort King Herod fled in 42 B.C. when the Parthians seized Jerusalem.

In 70 A.D., when the Holy City fell into the hands of Titus, a band of the Sicarii—the most fanatical of all the Jewish patriots—fled with Eleazar to Masada. They were the last survivors of the garrison at Jerusalem. Flavius Silva, one of Titus's lieutenants, followed them up and invested the rock on every side. He set fire to the wooden rampart that Eleazar's followers had hurriedly erected, and allowed it to burn through the night. Next day he prepared for the assault: but when his men reached the tops of their scaling-ladders, they could see no one on the platform. Nothing stirred except the still smouldering fire. Then two women were seen emerging from a cave accompanied by five frightened children, and from their lips the tragic tale was heard. They said that when Eleazar realised the hopelessness of his position, he induced his followers first to slay their families, and then over their bleeding bodies to masacre themselves. Ten of the men were chosen by lot to do this butcher's work, and when all their comrades had been despatched. one of the surviving ten was selected to finish off the remnant. This done he set fire to all the valuables that had been gathered into a pile, and then fell on his sword and perished in the flames. "The two women, who now met the Romans, had hidden themselves with five children, and those were the only survivors of a garrison of nearly one thousand."

The story of this gallant defence and last stand of the faithful thousand, and their heroic self-immolation stirs the imagination. The great rock should be enclosed as a Jewish memorial for all time. As it is it is almost unknown. From the northern point at which most travellers have their first and only view of the Dead Sea it is invisible. There is always a thick haze over the lake, due to rapid vapourisation, and this confines the view to a few miles of foreshore. Masada is hidden by this mist—an eternal shroud enveloping the funeral pyre of the heroic dead.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE BULGARIAN EARTHQUAKES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—A telegram has been received from the Bulgarian Minister for Foreign Affairs expressing his cordial thanks for the help which we have already been able to forward to Bulgaria, but leaving us in no doubt that the need remains very great. The following passage from a letter just received from a lady, resident in Sofia, speaks for itself:—

"The poor people whose homes have been either destroyed or rendered dangerous by the upheaval are camping out in the rain. Babies are being born in the mud, and sick and wounded people are being nursed under the downpour. Floods are threatening to be the next calamity. The American Red Cross have sent fifteen thousand dollars, which will be an enormous help, and most of the other countries have contributed either in kind or in money. But far more help is needed to build light shelters, to buy tents, clothing, medical stores (5,000 dollars' worth of the latter caught fire during the second earthquake and thus the entire supply for the next few months was destroyed), and food for the destitute. Added to the other miseries we are having a very cold spring, which makes many deaths from exposure almost a certainty in the near future. Here, in Sofia, everybody is doing their best to alleviate the sufferings by collecting funds, but the country is too small and too poor to cope with the magnitude of the disaster. Every little collected may save the life and reason of some of these stricken people. I say the reason, because besides the frightful shock of the earthquake itself and the fires which broke out in the darkness (the lighting system fused), the unfortunate inhabitants of this formerly most fruitful part of Bulgaria have felt in the last twelve days something like 260 shocks of varying intensity accompanied by underground noises of a sinister sort—of which the most terrifying are a sound as of a bombardment and the hissing and roaring of water beneath them—and the appearance of small geysers emitting sand and vapours and floods of water. This accumulation of horrors will undoubtedly affect many brains, which a few material comforts could do much to relieve and brighten. One of the gravest misfortunes is that the tobacco factories, which were the chief enterprises of the region, have been completely wrecked, which leaves thousands workless for many months. Here, where we felt enough of the shock, we can imagine the rest."

As the need is so urgent, the amount received day by day is telegraphed to the Agent of the Save the Children Fund (London Headquarters, 6, Gordon Street, S.W.1), who is on the spot.

Subscriptions may be sent either to the Dowager Lady Boyle, 64, Queen's Gate, S.W.7, or direct to the account that has been opened at the Westminster Bank, 25, Sussex Place, S.W.7. Cheques and postal-orders should be crossed "Bulgarian Earthquake Fund."—We are, etc.,

PERCY ALDEN, HENRY CAVENDISH BENTINCK, EDWARD BOYLE, NOEL BUXTON, CHARLES RODEN BUXTON, GLADSTONE, EDWARD GLEICHEN, ELLINOR F. B. GROGAN, ROBERT KINDERSLEY, NADEJDA MUIR, HENRY W. NEVINSON, BRUNO SCHROEDER.

64, Queen's Gate, London, S.W.7. May 19.

"A JEW ON PALESTINE."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your issue of April 19 you summarise an article of mine on Palestine which appeared in the March issue of the *Menorah Journal* under the title, "The Stark Land." In justice to myself and to the Editors of the *Journal*, will you not allow me to call attention to a misquotation in one place and a misinterpretation in another place of your abstract?

You wrote: "The Labour-Capital dogma [this should have read *drama*] in Palestine 'seems to be a tragedy without a villain; the Zionist immigrants wish, nevertheless, to govern, while America subsidises them.'" This, if it is not a *non sequitur*, is certainly obscure; and I confess that I cannot find any such statement in my article. It is a telescoped summary of two points discussed in my essay in separate categories. Up to the word *villain*, the quotation is accurate and conveys one of my ideas, but the second half of the sentence is not mine, though it does sum up one of my ideas. I drew this conclusion, however, in that part of the essay which considered philanthropy as it manifests itself in Palestine: it had nothing whatever to do with the Labour question.

The misinterpretation I refer to is contained in the concluding sentence of your abstract. You infer, "He does not care greatly for Palestinian Jewry," from my statement that "in the present self-conscious formative years its principal cultural products are overweening conceit and ferocious egoism." This is an incorrect inference, though I can understand how it was made. But I must say that I found a great many admirable people in all walks of life among the new Palestinians, and the possibility of developing great folk qualities. It was to deflate the overstressed, vague notions about Palestine as a cultural centre for world Jewry that I set down, rather harshly, the passage you quote. But, of course, egoism and conceit are quite widely distributed over the earth's surface. While I do detest a certain class of Palestinian Jews who possess these qualities and nothing more—nothing to justify them!—I never intended to say that that is all most Palestinian Jews have. Otherwise I should not be looking forward to another extended trip to Palestine—which I am.—I am, etc., WILLIAM SHACK.

910, West End Avenue, New York City, U.S.A.
May 8, 1928.

[We much regret the misrepresentation of Mr. Shack's stimulating and urgent views.—ED.]

PERSONAL AND GENERAL

TO-DAY

May 24, 1928 (New Style).
May 11, 1928 (Old Style).
Dulheggia 4, 1346 A.H., of the Muslim Calendar.
Sivan 5, 5689, of the Jewish Calendar.

Viscount and Viscountess Inchcape arrived last week at 4, Seamore Place from the Continent.

Lady Demetriadi left 41, Hans Place last week for her Sussex house, The Cote, near Lewes.

Mr. and Mrs. Cecil Harmsworth have returned to London from their two months' tour in Greece.

Lady Helen Brocklehurst is staying with Viscount and Viscountess Hambleden at 3, Grosvenor Place, S.W., which is her address for the present.

The Lady Irwin had the honour of being invited to luncheon with their Majesties the King and Queen at Buckingham Palace on May 14.

The Persian Minister received the guests at the reception which the Persia Society held at the House of Lords yesterday (Wednesday).

Colonel G. S. Symes (upon his appointment as Resident and Commander-in-Chief, Aden) had the honour of being received by the King at Buckingham Palace on May 15.

The Rev. F. D. O. Roberts, with thirty-five years' missionary service in India (where he received the Kaisar-i-Hind medal), has been inducted to the living of Bledlow Ridge by the Bishop of Buckingham.

H.H. the Maharaja of Patiala left Bombay on May 19 for England, in his official capacity as Chancellor to the Chamber of Princes in connexion with the Indian States Inquiry Committee.

The Ven. S. E. Swann, lately Archdeacon of Nairobi, Kenya Colony, has been appointed Chaplain of All Saints' Pro-Cathedral, Cairo, and Archdeacon in Egypt. He expects to arrive in Egypt towards the end of September.

Mirza Ali Mohammad Khan Scheybany, Third Secretary to the Persian Legation in London, has been promoted to Second Secretary to the Persian Legation in Berlin, and is leaving London next month to take up his new duties.

The Marquis of Linlithgow arrived at Marseilles, on May 18, in the P. and O. liner Rajputana from Bombay. Among the other passengers were Major-Gen. Sir George and Lady Franks, Sir Oswald Bosanquet, Sir William Phillips, and Sir Victor Coutts-Trotter.

Lord Sinha arrived at Marseilles at the end of last week from Calcutta by the Rajputana to join his family at the Grand Hôtel des Alpes, Montreux, Switzerland. Lord and Lady Sinha expect to be in residence at Queen Anne's Mansions, St. James's Park, by July 1.

The King has granted permission for the undermentioned foreign decorations to be worn: Order of the Nile.—Grand Cordon.—Sir George Ernest Schuster, K.C.M.G., C.B.E., M.C., late Financial Secretary to the Sudan Government. Insignia of the Third Class.—Major David Johnston Wallace, T.D., Deputy Director-General of the Egyptian Frontiers Administration.

The agreement of April 19, by which France and Yugoslavia decided to submit to arbitration the question as to whether pre-War debts are to be paid in gold or paper francs, was ratified in Paris on May 16.

NEWS IN BRIEF.

A census was taken throughout Greece on May 15.

M. Achard, a former French Consul in Alexandria, has been appointed French Consul in Jerusalem.

Poland and Yugoslavia have exchanged ratifications of the Pact of Friendship which was concluded in Geneva on September 18, 1926.

According to a Constantinople message it is stated that King Faisal of Iraq will visit Angora some time next month.

Señor Alejandro Escudero, Spanish Consul in Athens, has been transferred to Dublin; and Señor Jose Sempere, Spanish Consul in Bombay, to Athens.

Dr. R. Seton-Watson, Masaryk Professor of Central European History in the University of London, gave on May 14 the first of two lectures which he is delivering at Prague University on the foreign policy of Lord Palmerston (1784-1865).

A commemorative medal is to be struck by the Greek Government and awarded for service rendered by the crews of foreign warships in earthquake relief at Corinth. A similar medal was awarded by the Italian Government in connexion with the Messina earthquake in 1908.

The War Office announces that Major-General Sir W. E. Ironside, K.C.B., C.M.G., D.S.O., has been appointed General Officer Commanding, Meerut District, India, in succession to Major-General Sir G. McK. Franks, K.C.B. (October 20, 1928). Sir Edmund Ironside commanded the Ismid Force (1920) and the Northern Persian Force (1921).

It has been decided to erect new telegraph lines, where necessary, and extend existing lines to the Russian and Turkish frontiers, according to Reuter's Teheran correspondent. About 1,000 miles of new lines will be needed; most of the material has already been purchased in Russia. The Government is also considering the question of purchasing ships to prevent smuggling in the Persian Gulf. It is stated that the officers of these ships will be Italian.

The death occurred on May 16 of Major-General Sir Charles Edward Callwell, K.C.B., the distinguished soldier and author, at the Queen Alexandra Military Hospital. When the Great War broke out Sir Charles was appointed Director of Military Operations at the War Office, a position which he held until 1916, when he was sent on special service with the Allies. He prepared the plans for the Dardanelles expedition. He was the author of "Military Operations and Maritime Preponderance," "Tirah, 1897," "Service Yarns and Memories," a life of Sir Stanley Maude, and "The Dardanelles."

THE ID UL AZHA.

To celebrate the Muslim Festival of Id ul Azha, Mr. A. R. Dard, Imam of the Mosque at 63, Melrose Road, S.W.18, is giving at the Mosque a Garden Party on May 31 at 3.30 p.m. Sir Edward Maclagan will preside, and Sir Denison Ross will speak on "Islam." Id prayers and sermon will be begun at 11.30 in the morning.

THE WEEK AT HOME

London, Tuesday Morning.

An Ugly Case.

The House of Commons is but seldom moved as a body, but moved it was last week when what is now known as the "Irene Savidge" case was discussed. This case touches at its most vital point the question of the liberty of the subject, and the very thought that it may have been violated by the police was sufficient to set Conservative, Liberal, and Labour alike boiling with indignation.

Nor was the country itself, which in recent years has seen so many of its privileges filched away from it by an unwise Executive, behind the House in anxiety lest the charge of the using in England of "Third Degree" methods by the police be justified. The only possible course, of holding a judicial inquiry into the whole procedure of Miss Savidge's questioning by the police, has been insisted upon, and until the findings are known one can keep only an open mind.

No case that I can remember has aroused such universal interest as this, an interest which is by no means pathological, since it is a principle rather than a particular person that is involved. The reputation of England as a free country is, in fact, at stake.

The Commons' Indignation.

That the indignation expressed in the Commons is no mere momentary ebullience is proved by the fact that the first motion, announced by the Home Secretary on Friday, has been dropped, owing to the uncompromising opposition of the House, in favour of a new one, which is to be introduced to-morrow. The old English sense of liberty, which in these days of caucuses, Party Systems, and the rest of the machinery of "democracy," is so often overlaid, has strongly and most encouragingly been reasserted.

In this manifestation all parties have been prominent, but the most insistent, I think, or perhaps the most conspicuous, because it was in a sense against the Government of the day, have been the Conservatives.

Sir Edmund Gosse.

Sir Edmund Gosse, who died last week, had almost become an institution in the literary world. Not that his critical faculty was quite of the first-rate, incandescent order, but it was always marked by honesty, moderation, and breadth if not depth of view. As a creative artist I do not think that he ranked very high. His poems, which, as we used to say in our pre-War undergraduate days, wholly lacked passion, are, I believe, scarcely read now; but there are his autobiography and his critical studies of men greater than he himself was to carry his name on to the coming age.

And he was, indeed, a very considerable figure, who conserved his reputation through various and very different generations. It was his catholicity and his sincerity which were the foundations of a position that seemed to grow progressively unassailable. Criticism such as his, that has temper and poise, is a rarer feature of our literary life than it was during last century.

Agriculture in England.

The decline of agriculture in England is taken generally as an inevitable fact; it is sad, nevertheless, to see the decline set out in figures. The Ministry of Agriculture has just published the records of production during last year. In 1927, we learn, the hopes were set upon sugar but turned ashes; in other words, although the acreage was increased, the amount of sugar per acre of beet was the lowest on record.

Almost without exception the record is a gloomy one. In 1914, for instance, England had 10,998,000 acres of arable land. As everyone knows, the War gave a much needed and desirable fillip, and in 1918 there were 12,399,000 acres under plough. Yet nine years later there were only 10,310,000 acres of arable. That means, of course, that the number of workers on the land is decreasing; there are fewer than half a million men at work on the land in England and Wales together.

One has only to use one's eyes to see that arable is becoming pasture almost every day. There are more cattle in England now than there ever were before: 6,275,240 to be precise. Of sheep we have over seventeen million, and yet we produce less beef and mutton than before the War! It is the same story in regard to pigs.

Only in milk and eggs and poultry is the national output increasing. In 1913, 941,000,000 eggs were laid; in 1927, 1,679,000,000. But do not the shades of men like William Cobbett rise in scorn of our generation?

Weather Ineffable.

Our shouts of joy at sight of the unwonted sun were premature, for the weather has slipped hopelessly back into direst winter. It is cold; it is wet; it is dark; it is stormy; it is, in fine, ineffably dreary.

May has no right thus to afflict us with snow, hail, thunder, and lightning; but there exists no sign yet that she will desist from her lawless ways. There is scarcely an unmistakable symptom now that we are not living in February, except the newspapers which monotonously announce:—"No play at Lords. No play at the Oval. Fairway still favourite for the Derby."

Cricket Centuries.

It is perfectly obvious that, even with the rain, the smaller cricket ball cannot get in the way of the making of centuries. Practically every first-class batsman in County games has already made a century; some of them have several.

The weather has until recently been in favour of runs, but it is true that at the present time excellent bowlers are few. It may be another matter if the wickets continue softer, but the number of men who can really spin a ball and maintain a length is far smaller than it was before the War.

Yet one has the impression that cricket this year is brighter than it was last year; the other day, for instance, Lancashire scored over 500 in about six hours!

ALTER EGO.

It is announced in Angora that His Higness Mirza Mohamed Ali Khan Farughi, the Zoka ul Mulk, a former Persian Prime Minister and Minister of War, has been appointed Persian Ambassador to Turkey.

Book Reviews

RUSSIA'S TRAVAIL.

"STORMING HEAVEN." By Ralph Fox. (London: Constable. 7s. 6d.)

To all who would understand the inner, human side of the great experiment in Russia known as Bolshevism, we cordially recommend this novel, the title of which is taken from the words of Karl Marx. But apart from its informative aspect, there is to the book an amazingly artistic aspect: the work is in fact of vital force, possessed at times of elemental vigour and cunning technique.

That Mr. Ralph Fox knows how to write, or how to conjure up with broad sweeps of the brush the vast plains of Russia, how to touch in the minute details of Asiatic character, was recognised by everyone who read his "People of the Steppes." But this novel is a distinct development upon that book.

It begins with a scene on the American shore of the Pacific, where the "hero" of the book learned something of revolution and repression. He reached Vladivostok in 1922, about the time when the "Allied" troops were evacuating in favour of the Bolshevists. There he joined up with a travelling party of players, wandering over the great Amur country. These players he left at Chita, and went roving on to Omsk. After that came perhaps his most interesting experience: a visit with the Kirghiz, and living as the Kirghiz, across the steppes to Tashkent. On to Samarkand he went, back to Tashkent, and then—to Moscow.

We have thus briefly sketched the itinerary to show that there is a very definite local interest for readers of THE NEAR EAST AND INDIA. The local interest, however, is the least considerable thing in the book, which rings clamantly, really, with the life of the Bolshevist Revolution and of its post-War ambitions and achievements. How curious, how unreliable, how talented is the human material in Russia, through which the faith of Bolshevism is being expressed; how the animal and the spiritual or the mystical are interwoven; and what is the earthy material (largely "the lone and level sands" which are quoted from Shelley in this book) upon which the processes of Bolshevism are to be imposed—all these things are explained with a splendour, a magnificence, and a veracity that have not to our knowledge been surpassed in any other work dealing with post-War Russia. Dreams and dust, love and legend, orgy and ordeal, all these things common to Russia are dovetailed into the pulsating frame of Bolshevism, with the result that a story has been written that is at once affecting and memorable.

AN EXPOSITION OF FASCISM.

"THE UNIVERSAL ASPECTS OF FASCISM." By J. S. Barnes. With an Introduction by Signor Benito Mussolini. (London: Williams and Norgate. 10s. 6d. net.)

It is a commonplace that as a result of the War two conceptions of capital political volue were evolved: Fascism and Bolshevism. Both systems in a violent way upset the preconceived ideas of Western Europe upon the running of a modern, civilised State; both have met with bitter opposition on the part of a considerable section of the people, Italian and Russian, primarily involved; and both, it is true to say, have endured for longer than many observers had believed possible.

But this immediate consideration of the "new" theories of life is of far less value than a consideration of them in the universal aspect, a consideration, that is, of the problem: how far is either of them applicable to countries other than that in which the unprecedented experiment is being made? It is, therefore, a work of importance, and of especial importance to certain countries in the Near East and to India, in which the system of parliamentarism is either virtually untried or is a failure, that Major J. S. Barnes has essayed.

The author believes implicitly that Fascism represents a new political and social synthesis which it is in the power of every civilised country to attain. He is a realist in the sense that he batters at the Rousseau conception of the State, of original liberty, of inherent right, and so on; and above the authority of the State he puts the Moral Authority. This last is a point in the philosophy of Fascism which he emphasises with advantage, because it has been superficially thought by outside observers that the ultimate end of Fascism was identical with the end of Hegel, namely, the deification of the State.

This journal, however, is not a fit place in which to discuss the philosophic basis of political theory. Suffice it to say that Fascism, as represented by Major Barnes, appears to derive in unsuspected measure from Catholic notions of sovereignty and of the State and from Syndicalist and Guild-Socialist doctrines. The author has made his subject an attractive one, despite a slip-shod style and a certain *naïveté* in statement, and we confidently recommend his book to anyone satiated with modern parliamentarism and anxious to comprehend a possible alternative that is neither barbaric nor unproductive. It is in the nature of things, perhaps, that an ardent disciple of Fascism should be forced to depreciate other political systems or theories, such as that which provoked the French Revolution; and one could have wished that he had been able to discover newer authorities than men like Durkheim, Sorel, Ramiro de Maeztu, Le Bon, and so forth. With the exception of the Spanish thinker, there appears to have been rather a dearth of independent political theorising since before the War. Can it be that the theoreticians have for once waited on the men of action? Certainly Major Barnes keeps close to what has actually been done under the ægis of Signor Mussolini in Italy.

THE SMELL OF LEBANON.

A book of an unusual character is announced by Mr. Francis Walterson, of Capel-y-ffin, Abergavenny, South Wales. This is a collection of love-songs of Palestine and Syria made by Mr. S. H. Stephan and rendered into English verse by Mr. E. Powys Mathers, an expert in this kind of literature. The Arabic originals and the English version will be printed facing one another, and the book will be sold at the price of one guinea.

THE CENTRAL ASIAN SOCIETY "JOURNAL."

The current issue of the *Journal* of the Central Asian Society (Vol. XV., Part II.) is full of excellent reading matter, containing, in addition to the full reports of lectures of some of which a brief account was given at the time of their delivery in THE NEAR EAST AND INDIA, not only book reviews, but also instructive articles on "Transport Routes in Persia," and on "An Extempore Government in Syria" and notes on Turkestan, Azerbaijan, Waziristan, and Trans-Jordan. The *Journal* is making itself increasingly indispensable to the serious student of Central Asian affairs.

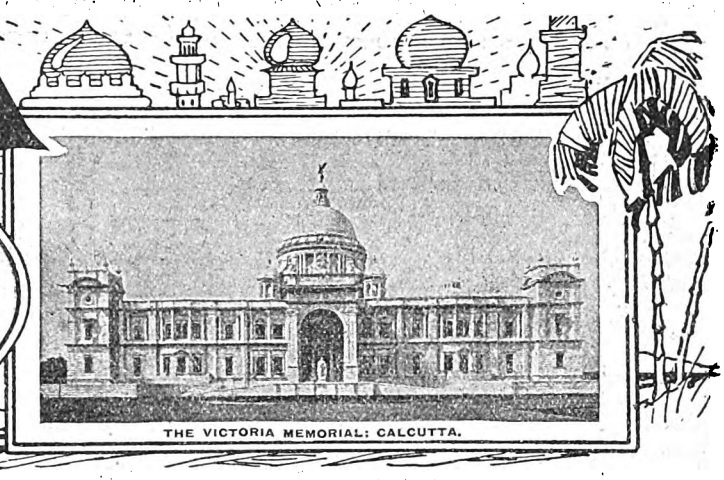
THE GATEWAY OF INDIA: BOMBAY.



THE VICTORIA MEMORIAL: CALCUTTA.

INDIAN LABOUR UNREST.

After a short period during which India has been relatively free from labour troubles of serious dimensions or a protracted nature, the bogey of industrial disputes is again raising its ugly head. The 128 separate strikes reported in 1926 represented a smaller number than in any of the six years during which regular statistics have been kept. Moreover, although the total number of working days lost was about 1.1 millions, the figures also compared very favourably with the average of the preceding quinquennium, which was 7.4 millions. Practically all the disputes occurred in the Bombay and Bengal Presidencies, each of which reported 57, the industries chiefly affected naturally being cotton and jute. In less than one-fifth of all the strikes were the workmen successful in gaining any concessions. This comparatively peaceful state continued into 1927, only about 25 strikes, most of them very petty, being reported during the first quarter of the latter year. And a notable and very satisfactory feature of all these disputes was their almost entire freedom from acts of violence and sabotage. Unfortunately, whether the recent visits of British labour and trade union representatives to India have had the effect of stimulating—if not actually encouraging—industrial turmoil or not, the fact remains that the improvement was not maintained. It is true that the total number of disputes over the whole twelve months was only one more than in the previous year and that the actual number of workpeople involved was slightly smaller. On the other hand, the number of days lost was practically double the 1926 total. The increase in that all-important respect was, of course, due to the two protracted strikes on the Bengal-Nagpur Railway, which alone accounted for a loss of 880,218 working days. Once more Bombay earned the unenviable distinction of having the largest number of single disputes, the 54 in that Presidency contrasting with 34 in Bengal, 19 in Madras, 12 in Assam, 4 in Bihar and Orissa, 3 in Burma and the United Provinces, and 2 in the Central Provinces. The wide area covered is largely explained by the fact that one of the railway disputes extended to Bengal, Bihar and Orissa and Madras.

Unfortunately the current year has witnessed not only a recrudescence of the trouble but also one upon more extended lines and, as our Calcutta Correspondent points out, in a much graver form. The baffling character of the disputes hitherto has been that they are so often sporadic, breaking out without warning, grievances being formulated after the cessation of work instead of before. When such strikes occur there is no organised body of workers with whom the employers can negotiate, but the three major disputes now in progress, while possessing many of the old familiar features, also mark a new and more sinister phase on account of the avowedly communist aims of the self-constituted leaders, the clearly proved complicity of outside agencies, and the use by the strikers' organisations of funds furnished by Moscow and other sources known to be hostile to British rule in India. The question whether legislation can be usefully attempted, and machinery devised, to prevent or settle labour disputes has been under the consideration of the Government of India for many years past. In particular the desirability of legislating on the lines of the laws in force in this country and certain other parts of the British Empire has from time to time been examined; but, apart from the differences in the state of the organisation of industry in the two countries, it was early decided that the provisions of none of those enactments were suited to the wholly different Indian conditions. At the same time it was left to the local Governments to design some local machinery for effecting the purpose which the Industrial Courts Act of 1919 is intended to achieve, though it was recognised that any measures adopted to that end could be only of an experimental nature. The lead was taken by the Bengal Government, which in March, 1921, appointed a Committee, as a result of whose inquiries a system of Conciliation Boards and a panel on which the Government could draw when constituting a board to investigate any dispute, were instituted and the system has met with some success. Subsequently the Bombay Government, which had already explored the ground through its newly-formed Labour Office, appointed a similar Committee, presided over by Sir Stanley Reed. In its report, issued early in 1922, the Committee, after consideration of various measures, including "a wise and statesmanlike attitude towards the nascent Trade Union movement," likely to contribute to the prevention of industrial disputes, refused to subscribe to the view that the State has no right to intervene on such occasions. "But we are agreed," the Committee added, "that no outside agency, and in particular the agency of the State, should be used until all other means have been employed and failed, or unless it is invited by one or other of the parties to the dispute, or unless the situation is such that peace, order and good government are prejudiced. If such conditions should arise, then there should be formed an Industrial Court of Inquiry, to be followed, if necessary, by an Industrial Court of Conciliation. We deliberately place the function of inquiry first and separate from the rôle of conciliation, for we desire to avoid the facile opportunism which seeks to patch up an industrial dispute by proposing a compromise between the views of the two parties without going down to the economic issues which are at stake."

Although they were based on recognised and well-established principles, the Committee's constructive proposals were open to serious objection in many cases, mainly on account of the impracticable nature of the machinery which they contemplated, and no further action in the direction indicated by the report was taken until early in 1924, when the Bombay Government appointed a small independent Committee in connexion with another serious dispute which had arisen in the cotton mill industry, respecting the payment of an annual bonus. This Committee was not required to do more than record its findings on certain questions of fact in dispute between the two parties. Despite the obvious objections to the appointment of such a body by executive action and the restrictions placed upon its powers and the scope of the inquiry by the impracticable character of the terms

Digitized by Google

of reference, which were severely criticised by the Committee itself in its report, it is interesting to note that the promulgation of the findings, although undoubtedly inevitably incomplete and indecisive, marked the termination of the critical period of the strike, which was shortly afterwards settled in favour of the millowners, whose contention had been in the main substantiated by the Committee's findings. At the same time the gravity of the situation created by almost annual disputes in the premier industry of the Presidency clearly emphasised the necessity for a declaration on the part of the Government of a settled and definite policy in relation to industrial disputes in general. Accordingly it was eventually announced that in so far as the Reed Committee had envisaged the appointment of Committees both of Inquiry and of Conciliation on which both interests should be represented, the recommendations were impracticable on account of the impossibility of securing in the latter case any adequate or satisfactory representation of labour, but that Government had decided to take statutory powers as soon as possible to set up Courts of Inquiry on the lines of the relative sections of the Industrial Courts Act. A draft of a Bill was published in the following May, but the measure was subsequently withdrawn in favour of an All-India Bill prepared by the Government of India. Like the earlier Bombay draft, the first part of the latter Bill, which was afterwards suspended until experience had been gained of the result of the legislation for the registration of trade unions which came into operation last year, was based on the principles of Part II. of the English Act. It empowered (but did not compel) the Government, when any dispute arose or was apprehended, to constitute a Board to inquire into the dispute. At the same time the proposals went somewhat beyond the relative provisions of the English Act in that they sought definitely to impose upon the Board the duty not merely of investigating the dispute, but of endeavouring to bring about a settlement, though the Government of India expressly disclaimed any intention of providing for compulsory arbitration, a principle which they recognised to be unsuited to Indian conditions. The remaining clauses, which referred specifically to public utility services, however, went considerably further and endeavoured to render illegal the stoppage of work in such services pending the promulgation of the Board's findings. Although the avowed intention of the Government was merely to put it in a position to offer to the parties involved in a dispute the services of an impartial tribunal to assist them in coming to a just settlement of their respective claims, it is obvious that the methods proposed were open to serious criticism, and it was largely in view of the opposition of the mercantile community to the several objectionable features that the Government of India ultimately decided to suspend further consideration of the measure. It will therefore be interesting to see how far the original proposals have been modified when, as is anticipated, a revised measure is introduced at the autumn session of the Central Legislature.

CURRENT TOPICS.

The Sukkur Barrage.

A recent report shows the steady progress of this great undertaking during the year 1927. The expenditure has already reached the figure of 6¼ crores; and, as some indication of the magnitude of the work, it is stated that the amount of masonry laid for the head regulators of the great canals which take off from above the barrage was a world's record for a work of a like nature. An enormous amount of earthwork has also been done in the excavation of the new canals and distributaries. A very difficult engineering problem remains yet to be solved, in the proper diversion of the mountain streams into the river. They cannot be allowed to run as they do at present into the great Manchar Lake, the paradise of the wildfowler, because that would entail the flooding of much of the land which it is proposed to irrigate from the canals. The most difficult questions, however, are economic and social, rather than engineering. The problem is how to distribute the land with a due regard to existing rights on the one hand, and to the necessity of making the work remunerative, and of bringing in new classes of cultivators on the other. It is here that the remoteness of the Government of Bombay from the scene of operations, and the absence of authority from the hands of the Commissioner in Sind, are likely to cause administrative difficulty. So far, however, as the execution of the work in hand is concerned, it appears to be thoroughly satisfactory.

Bombay's Municipal Commissioner.

The administration of Bombay differs from that of Calcutta in the important respect that in the former city the head of the Executive is an officer appointed by the Provincial Government, though for the time being in the service of the Municipality, whereas the Calcutta Corporation, under Sir Surendranath Banerjee's Act, enjoys the right of electing its own Administrative chief in the person of the Mayor. The fact is sometimes galling to the extreme element in the Bombay Corporation. The results of the respective systems would, however, seem to indicate the superiority of the Bombay arrangment which owes its inception largely to the wisdom of the most distinguished of Bombay's sons in the sphere of politics, Sir Pherozeshah Mehta. While the political administration introduced by the Swarajists in Calcutta has been an admitted failure, the administration of Bombay has been, under a distinguished sequence of officers drawn from the the Indian Civil Service, successful almost without interruption. The expiry, however, of the three years period for which, under the Act, Government must appoint the Commissioner, has recently given rise to brief controversy. The present incumbent, Mr. H. B. Clayton, has held the post for the unexampled term of nine years, that is for three successive periods. He has on the whole administered his difficult post with success, though the financial condition of the Municipality, for which the Commissioner, as framer of its Budget, is primarily responsible, is somewhat confused.

Be that as it may, Government has now decided to appoint in his place a Parsi member of the Civil Service, Mr. A. R. Dalal, an officer with a good record of service in the Secretariat. The first permanent appointment of an Indian to the post ought to be and, doubtless is, acceptable to the Indian ratepayers and Councillors. Unfortunately, Mr. Dalal is not available for another eight months, and Mr. Clayton's further appointment for this period led to objections from the extreme portion of the Councillors. Probably something, as in most Indian matters, was due to sectional feeling. A Hindu member of the Civil Service, Mr. Kirpalani, had once acted temporarily as Commissioner, and it is probable that the Hindus in the Corporation would have preferred his appointment to that of Mr. Dalal. On the other hand, the latter officer is of considerably longer standing and experience than Mr. Kirpalani. At the same time, it appears that there has been a regrettable lack of care or foresight on the part of the local Government. It should have been possible so to arrange Mr. Dalal's leave as to coincide with the expiry of Mr. Clayton's appointment, the term of which had been known for three years. It is satisfactory to observe that the good sense of the Corporation approved of Mr. Dalal's appointment, though coupled with the retention of Mr. Clayton for a further eight months. And it is certainly appropriate that the first Indian to be appointed permanently to this most important office should belong to that community which has done so much for the rise of Bombay, and for the success of its municipal life.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 3.

Strikes.

In the dearth, in India, of political news, whether Imperial or local, and with nothing more arresting coming over the cables than the news of the British-Egyptian tension over the Assemblies Bill, or the dropping of the kerosene tax, we have given all our attention to the Indian strike situation. It is sufficiently grave. "India to-day," wrote the *Statesman* in a leader yesterday, "presents a depressing industrial picture. The steel industry at Jamshedpur, which the Legislature has so lovingly fostered, is convulsed by a strike which has now become a lock-out, the East Indian Railway workshops at Lilloah are idle, and over on the Bombay side the cotton industry is paralysed." That is not the whole tale, either. There are disputes between Messrs. Jessop's and Messrs. Burn's and their workers, and ten thousand men of Ludlow Jute Mill at Ulubaria are on strike. These have followed on the heels of other strikes, as among the sweeper forces of the Calcutta and the Howrah Municipalities, or among this or that group of the Port Commissioners' workers.

The situation in Bengal was thought by the Indian Chamber of Commerce to be sufficiently serious to justify the sending of a telegram to His Excellency the Governor, requesting his presence in Calcutta, with a view to bringing about an early termination of the Lilloah strike. The telegram went on to suggest a reference of the disputes between Messrs. Jessop's and Messrs. Burn's and their workers to the Bengal Conciliation Panel. His Excellency replied that the railway strike is the concern of the Railway Board, which is true. "As regards the disputes between Messrs. Jessop's and Messrs. Burn's and their workers and at the Ludlow jute works," the message continues, "the condition for appointing a panel has not been fulfilled."

His Excellency, it is reported, receives a daily communication regarding conditions in the strike area and is watching the situation keenly. He will not hesitate to return to Calcutta immediately he is satisfied that his presence will conduce to the restoration of peace and good will. That, it may be thought, is such an official pronouncement as is always made in like circumstances. This time, however, the pronouncement may be accepted as true.

The Marwari Association.

The Marwari Association in Calcutta held its annual meeting last Saturday. Mr. Nagarmull Rajgarhia presided. Mr. Rajgarhia was convinced, he said, that if the Statutory Commission's note inviting memoranda from various bodies was as fully dealt with as it ought to be, the next constitution of the country would be a substantial advance on the present one. The exclusion of Indians from the Commission was a mistake, but that was no reason why the Commission should be left severely alone, as had been decided by a section of the *intelligentsia*. The Marwari Association had acted wisely in deciding to co-operate with the Commission.

So far good, but Mr. Rajgarhia went on to show (not that he meant to) how impossibly difficult is the Commission's task. He drew the attention of the orthodox Hindu community to the "repeated onslaughts" now being made, both in the Central and the Provincial Legislatures, upon their religion, and advised them to organise themselves and tell the Commission that the legislatures should have no power to legislate on social or religious questions. That was seriously meant. "What," Sir John Simon and his colleagues might ask, "is one to think?" The question was answered in part in Sir John's recent address to his constituents, the report of which is the last thing to reach us from your side. He declared that the Commission was only at the threshold of its labours. He was the last man to minimise the difficulties before it, but it was no small satisfaction to feel that, after three anxious and laborious months, its members were absolutely united, and that their efforts and attitude had the solid support of every party in the State.

Indian Cinemas.

Madan Theatres, Ltd., are reported to have ambitious plans for the first "indoor" film-producing studio in India, the initial expenditure involved being about three lakhs of rupees. The studio will, of course, show a close study of the structural plans used by the leading American and European producing corporations. American methods and practices will be instituted, and an American technical staff of producers and electricians, and a leading actor and actress from Europe will form the nucleus of an ultimate personnel that it is hoped will be predominantly, if not entirely, Indian. There has already been some production of films in India, with Indian casts, and, if I may judge of them all by one that I was once taken to see, both the acting and the technical work have been of a higher quality than might have been expected.

Indian Broadcasting.

The first annual report of the Indian Broadcasting Company, Ltd., to the shareholders discloses a loss of Rs. 1,67,563. The debit balance is due in the main to the usual and unavoidable expense incurred in the shape of salaries, wages, rent, etc., during the preliminary and unproductive stage of such a company's working. The directors of the Indian Broadcasting Company point out that a loss was inevitable from the fact that the development of broadcasting involves a very considerable amount of propaganda and education. In a vast country like India, with a population speaking many different languages, it is but natural that various kinds of difficulties should be met with in popularising broadcasting. The directors are glad to say, on the other hand, that, considering that the company has been working for only seven months in Bombay and for six months in Calcutta, the progress made has certainly been encouraging. Piracy, the report says, has affected the revenue of the company to a considerable extent.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, May 5.

Law and Politics.

The Simon Commission controversy has been revived in another form. The *Pioneer* of Allahabad which has for some time past been inviting opinion from prominent leaders on the scheme put forward in its columns for "bridging the gulf," recently published statements from Pandit Motilal Nehru and Mr. Srinivasa Iyengar, two prominent Swarajists, declaring that they would be satisfied if India were granted swaraj within the Empire, i.e., Dominion status. This has transpired from a protracted but nevertheless interesting controversy between the Pandit and Sir Charles Ross Alston in the columns of the *Pioneer*. Sir Charles Ross Alston, in the course of a letter, says that if he is not hopeless about the political situation in the country it is because he knows the difference between what opposing counsel say in court in the sight and hearing of their unfortunate clients and what they say in the privacy of their retiring room. While Sir Charles Ross Alston is merely pointing out that bargaining is a method often used in politics, it cannot be forgotten that many political leaders in India—even the most moderate—claim that Britain has no intention of helping India to Dominion status. India must have freedom to shape her own destiny and, so runs their contention, it is because she will not have that freedom so long as she remains within the Empire that "complete indepen-

Digitized by Google

dence" is urged. That very briefly is the political gospel of the Congress Party and the Liberals are beginning to feel that after all the Congress may be right. All this in the sphere of political speculation.

The Educational Committee.

I had failed to mention last week that the *Indian Daily Mail* published a list of names as the personnel of the subsidiary committee on Education to be appointed by the Simon Commission. The names are: Sir Philip Hartog, Sir George Anderson, Sir Sultan Ahmed, Dr. (Mrs.) Muthulakshmi Reddi, Mr. K. T. Paul, and a Hindu member the absence of whose name from the list, I have no hesitation in saying, is due to the boycott. The *Statesman* suggests that the delay in the announcement of the personnel may be due to the difficulty of finding a suitable chairman for the Committee, but I have good reason to state that Sir John Simon has already made up his mind about that. It would be more correct to say that the vacant seat on the Committee is responsible for the delay in the announcement. The Committee itself is not the best that could have been selected. Sir George Anderson, Sir Philip Hartog, and Sir Sultan Ahmed are all educationists whose experience is confined to Muslim education, the two officials coming from provinces that have a Muslim majority; Dr. Muthulakshmi Reddi has probably been selected for dealing with the problem of women's education; Mr. K. T. Paul represents the Indian Christian community. There is no need to state that on such a committee the interests of the Hindus, who have had the largest share in the solution of educational problems in the country hitherto, will be completely swamped.

The Textile Crisis in Bombay.

Athough the situation in Bombay has not appreciably improved, there has been a distinct step forward. Both the millowners and the strikers have formulated their terms. The strikers, who up to the present have been divided into two parties, have now formed a joint strike committee, consisting of thirty members representing both the parties. This committee has opened negotiations with the Millowners' Association and placed its demands before them. The terms in the main are that there should be no cut in wages and no increase in the hours of work. A split among the strikers was narrowly averted when the representatives of the depressed classes demanded that untouchables should be admitted into the weaving department in the mills. They were requested by the other leaders not to raise questions which would divide the strikers into hostile communal groups. So far the depressed classes have not been admited into the weaving department because the workers there have to work in pairs and both have to wet the thread of the cloth they are weaving in their mouths alternately; the men of the higher castes object to others being admitted purely on grounds of caste prejudice. The joint committee, however, have now adopted this demand also and in their letter to the millowners have included it among their other terms. The millowners, in replying to the strikers, have declared that, while they are willing to negotiate with the representatives of the strikers, they refuse to discuss the question with any of the leaders who are not members of some labour organisation. This has placed the strikers in an awkward situation as the majority of their leaders are outsiders. The situation in the Sholapur Textile Mills is not any better. A couple of days ago news came from Sholapur that half the strikers had resumed work, but to-day the strikers are again out and it is not known why the workers have suddenly changed their attitude. From Jamshedpur we hear that the boilermen have gone back to work and that the sweepers and scavengers who had gone on strike have also resumed work. The Company took a firm stand and declared a general lockout of the departments affected by the boilermen's strike and this has undoubtedly impressed the strikers. They realise that they have small chance of getting their grievances redressed as long as they stay out.

The Bardoli Agitation.

Enhanced taxation on the agriculturists has given rise to Satyagraha, or civil disobedience, in Bardoli, Alibag, Pen and Deoghad in the Bombay Presidency. The villagers in these parts have refused to pay the taxes and police officers have been put to great inconvenience in discharging their duties. They have had not only to attach the property of the persons who have refused to pay their dues but in many cases they have been compelled to provide for the removal of the goods to the police station. The villagers refuse to take care of attached property and warn the officers that they are not responsible for any damage to the goods which the authorities have forfeited. The movement is well organised and has among its leaders some of the best men of the Non-Co-operation party. There is a general feeling that the Indian members of the Bombay Government have not done their duty by the people. They have been either entirely out of touch with Indian opinion or have not conscientiously represented the point of view of the people to the Government. Mr. Vyas, one of the leaders of the movement in Bardoli, was charged before a special magistrate with trespass and obstruction. When some police officers were asking a villager to drive a few carts to the police station Mr. Vyas informed the man that he was under no obligation to do so. Mr. Vyas refused to defend his case and was convicted on both the charges. He was sentenced to two months' rigorous imprisonment with a fine of Rs.25, or in default an additional period of twenty days' imprisonment on each count; as Mr. Vyas is not likely to pay the fine, the full term of his imprisonment will be five months and ten days. The situation in these districts is very tense and unless the people in the villages are conciliated there is every danger of the movement spreading to the rest of the coutry. The fact that the strikers in Bombay are being advised by their leaders to return to their villages introduces fresh complications.

THE MAHARAJA OF BURDWAN ON BRITISH RULE IN INDIA.

Although the Maharaja of Burdwan's many recent references to the present political situation in India have evoked widespread and somewhat acrimonious comment in the Indian Press it is significant that none of his critics has challenged either his sincerity or his authority to speak on such matters. Addressing a meeting of the East India Association at the Caxton Hall last week on "Indian Reforms: Past and Future," the Maharaja dealt in the same forceful and direct manner with the problems confronting the Simon Commission.

"It is no good," he said, "shutting our eyes to the fact that there is in India to-day a volume of opinion, small, perhaps, but yet not negligible, which is growing every day, not only in strength, but in intensity, which desires to get rid of British rule at all costs. If India is tired of white rule, and if the British be tired of ruling India, then India must be prepared either to be ruled by the yellow races, by those brown races whose religion is other than Hinduism, or by Soviet Russia. Let India choose.

"I may be called unpatriotic, or even a traitor, by those who in their idealism want an independent India, which geographically and racially cannot, alas, so easily crystallize; but I take the British connexion as the only solution of India's problems."

Proceeding, he declared that in any recommendations that the Simon Commission may have to make they must put the question of the official position and the personal comforts, not only of the Viceroy, but of all the Provincial Governors above and beyond criticism, and beyond the ken of the vote of legislative bodies if these high dignitaries are to continue to maintain their prestige and

Digitized by Google

position as representing the Crown in India. "It may be amusing, even to an Englishman who likes a joke," he remarked, "to hear such things ridiculed as to whether a Governor should have a travelling saloon for himself, a new carpet in the Government House, should appear on a racecourse or a Durbar with a bodyguard, or have a band to entertain his guests, but it does not add to the prestige of the British Government or the King's representative."

While advocating further transfer of subjects to Provincial Ministers, the Maharaja said that the change should be accompanied by the establishment of second, or revising, Chambers in the provinces. In these Chambers (whose powers of revision should extend to taxation) there should be, in the beginning, a nominated majority over the elected majority, but only a small proportion of them should be Government officials. Under such a system the need for a Legislative Assembly at headquarters would disappear. The Government of India could work with a Council of Elders, or the Council of State, with a larger membership than at present. He suggested a method of virtual abolition of dyarchy by a system of unifying the two halves of the Provincial Government.

He was opposed to extensions of the franchise in the present low state of educational advance. He criticised the system of separate electorates for Muhammadans, largely on the ground that it raised suspicions that the British Government was not sufficiently in earnest in the effort to unite the two great races and religions of India. But with mixed electorates there must be some method of ensuring a very substantial proportion of seats—up to one half—in Muhammadan hands. He believed that joint electorates on the basis of a large proportion of seats held by Muhammadans would do much to remove communal strife.

THE PORT OF CALCUTTA.

(From a Correspondent.)

The Calcutta Port Commissioners anticipate that King George's Dock, which has been under construction since 1921, will be completed some time next year. It is estimated to cost Rs.8½ crores, and it is said to be the largest engineering undertaking of its kind at present in progress anywhere in the world. The scheme has been modified in certain important respects during construction, several expensive and unproductive features having been eliminated. And the design as now revised is such as will enable the Dock to be extended in the future at a reasonable cost.

The completion of the scheme will mark a definite stage in the progress of a great port. Calcutta stands on the east bank of the Hooghly at a distance of eighty-two miles from the Bay of Bengal. The Hooghly is a difficult river, but nevertheless steamers drawing as much as thirty feet of water are now able to move easily and safely up and down it between Calcutta and the sea. When it is remembered that in 1870 no vessels drawing more than twenty-four feet could use the river, it will be seen how enormous has been the development which has taken place in the interval. It was in 1870 that the existing governing authority—the Calcutta Port Trust—was constituted. At about that time the question of the municipal administration of the city was under consideration by the Governmen; and it was suggested that the municipality and the port might be controlled by one authority. But this idea, which was opposed by the commercial interests, was not persisted in, and ultimately there was constituted by legislation a body of nine "Commissioners for making improvements in the port of Calcutta." The Act of 1870 has been of course largely amended during the fifty-eight years which have passed since its enactment. The number of Commissioners has been increased; the elective principle has been introduced; the powers conferred upon the Trust have been enlarged and extended in numerous directions; and many other changes have been made. But there has been no alteration in the main structure of the administration; and the Trust has worked continuously for the welfare and development of the port. Very few port facilities had been provided before 1870. Endless inquiries and investigations had been made, and many projects formulated. But until 1868 practically nothing had been done. In that year, however, the construction of four screw pile jetties was begun; and at about the same time a riverside road and wharves for the convenience of the inland water traffic were built.

Shortly before the administration of the port was transferred to the Trust the construction of two additional screw pile jetties was begun. The position when the Trust entered upon its duties was, therefore, that there were in operation four screw pile jetties with two more under construction. There was also the wharf for inland vessels to which reference has been made above. The Trust was debited by the Government with a capital sum of Rs.10 lakhs, in return for which the works mentioned were made over to it, together with cash balances amounting to upwards of Rs.2 lakhs. In 1871-72, when six jetties were in use, the sheds at the four first constructed had to be doubled in size; sheds for the two new jetties had also to be built; the jetty heads had to be extended, and, as thus extended, the jetties were connected together so as to form a continuous wharf. During this, the first complete year of the Trust's administration, 143 vessels with a net tonnage of 222,446 tons were accommodated at the jetties, the receipts aggregating Rs.3,63,145.

By 1879-80 eight jetty berths were in use and hydraulic cranes were being substituted for the steam cranes that had been installed originally. As many as 192 vessels, with a tonnage of 315,263 tons, were berthed, and the receipts amounted to Rs.656,409. It was at about this time—1881—that a proposal for the construction of wet docks at Calcutta was revived. As far back as 1781 General Watson started a dock scheme, and spent a large part of his private fortune upon it. But the docks that he began to build were never finished; and although several other schemes were subsequently put forward by various authorities they came to nothing. It was rightly thought that docks would be safer for the shipping during violent storms than the jetties. And after the hurricane which occurred in June 1842, a Committee was appointed to examine the question of providing docks. The Committee reported in favour of the proposal, and they suggested Kidderpore as the site. As a result of their recommendations all kinds of plans and estimates were made, but eventually nothing was done.

The question was shelved for about ten years, when it was again raised, Howrah, on the west bank, being suggested as the best site for the docks. But again nothing resulted, and the idea of constructing docks seems to have remained in abeyance from the time when the Trust took over the port until about 1881. An investigation of the question was then undertaken by a specially appointed Committee. But unfortunately the members of this Committee failed to agree. Certain of them favoured Diamond Harbour as the site for the contemplated docks. But the commercial members objected for the reason that as Diamond Harbour is at a considerable distance from Calcutta the trade of the port would be inconvenienced. At this time also importance was attached to the possibility of utilising the Mutlah river, which was considered to be superior to the Hooghly as a navigable channel to the sea—a view which modern expert opinion does not endorse. But although jetties and sheds were built in 1863 at a place called Port Canning on the Mutlah, and a railway conection with Calcutta was made, no large scheme was undertaken. In 1833-84 Port Canning and the Mutlah were surveyed, but as a result opinion was against utilising them. Eventually a second inquiry into the question of providing docks for Calcutta was made in 1883 by another Committee who reported unanimously in favour of Kidderpore as the site. Their report was issued in September 1883,

Digitized by Google

but it was not until the end of 1884 that work on the docks was actually begun.

The difficulties experienced in providing the required funds greatly delayed the construction of the docks, and it was not until 1892 that Dock No. 1 was completed. It cost Rs.2.61 crores; and it was opened on June 21, 1892. But experience soon showed that the trade was most unwilling to utilise it. It had been constructed with the object of providing suitable accommodation for the export trade. Kidderpore is at some distance from the business quarter of the city, in close proximity to which the jetties are located. And the trade of Calcutta, which has always been distinguished for conservatism, did not take kindly to the idea of moving the steamers to Kidderpore. It accordingly continued to load them in the river. Indeed, from June 1892 to the end of March 1893 not more than sixty vessels entered the dock; and in the following year the number was as low as thirty-nine. Nowadays as many as 450 steamers go into the dock in a year for the general export trade alone.

It will be seen, therefore, what the reluctance of the trade to use the dock really meant to the Port Trust. The receipts were of course far below expectations. For the first year they were less than Rs.2¼ lakhs against an expenditure of more than Rs.15 lakhs. But the prejudice against the docks was gradually overcome, and the revenue from them was correspondingly developed. The growth of the export coal trade was also a contributing factor to this development. From a merely nominal figure in the early nineties coal exports increased to 877,995 tons in 1898-99. Wheat and seeds likewise began to be exported from the docks which, from the beginning of the new century, were fully utilised. No fewer than 537 ships with a gross tonnage of about 2 million tons went into them in 1898-99 as against 204 ships with a tonnage of half a million at the jetties. By that time most of the ships that discharged at the jetties went to the docks to load their export cargo; and most of the ships entering the port in ballast also went to the docks.

From 1900 to the outbreak of the War in 1914 the development of the port was continuous and rapid. Two new jetties were built and certain of the sheds at the other jetties were reconstructed on an improved plan. Many additional facilities were also provided at the docks. Large modern double-storied sheds were erected, and warehousing accommodation with an aggregate floor area of more than 900,000 square feet was provided at Kantapukur, near by the steamer berths, for the wheat and seeds, and the sugar and rice trades. Large warehouses were also erected for the use of the trade in hides and skins; and a river transit shed, and a tea sale warehouse were provided. When War broke out the docks were equipped with seventeen general berths, and ten coal berths, with special accommodation for the wheat and seeds, hides and skins and tea trades. All these facilities were being taken the fullest advantage of, and it was clear that further extensions would be required in the near future. Sufficient land for the construction of a new and larger dock system was accordingly taken up south of the existing dock. A long strip of river frontage was also acquired and on this it was decided to build five additional jetties.

The War interfered very seriously with this programme; but when it came to an end the Port Trust pressed on with the work. They have now completed the new jetties and, as we have seen, the dock extension scheme—King George's Dock—is well on the way to completion. Eventually the whole of the foreign import and export trade will be centred at Kidderpore, and the old jetties in the Strand-road will be used by the coasting trade.

The Petrie Medal has been awarded by London University to Sir Aurel Stein, who is on special duty with the Indian Archæological Survey. He has in the past carried out important archæological exploration in Chinese Turkestan, Kashmir, and the North-West Frontier of India.

NEWS IN BRIEF.

Sir Harcourt Butler, G.C.I.E., K.C.S.I., will be the chief guest, and Sir Alexander Murray will preside, at the Calcutta Dinner, to be held at the Hotel Cecil on June 5.

After a month's interval another cotton fire occurred in Bombay on May 14. The fire destroyed about 22,800 bales of cotton, stacked in the cotton depôt. The damage is estimated at about six lakhs of rupees (£45,000).

Kazi Bazlar Rahaman was committed to the Sessions for trial at Calcutta on May 16 by Mr. Sircar, Senior Deputy Magistrate of Chittagong, on the charge of murdering Mr. Davies, the District Magistrate of Chittagong, on April 20.

Lieutenant-Colonel J. Morrison, of the Indian Army Ordnance Corps, has been appointed Deputy Director of Artillery in India. He has been officiating in that appointment. Lieutenant-Colonel E. V. Sarson, D.S.O., becomes Assistant Director of Artillery.

Six Hindu members of the Bombay Legislative Council, representing Gujarat constituencies, have resigned because their appeal to the Government for the suspension of the measures for the collection of revenue and for assessments on a revised basis has been unsuccessful.

In a written answer on May 14 to questions by Mr. Lansbury and Mr. Saklatvala in regard to the Bamangachi (Howrah) shooting incident on March 28 and the comments of the Indian Resident Magistrate at Howrah, Lord Winterton, Under-Secretary of State for India, stated that the reply of the Government of India to the Secretary of State's telegraphic inquiry had been received, but had not then been deciphered. He asked that the question should be repeated at a later date.

The Air Vice-Marshal at Simla is formulating a scheme for securing employment for officers of the Royal Air Force as they terminate their service. A large number serve on short engagements and many of them wish to remain in India. Chambers of Commerce are being invited to assist in securing posts for those with technical, organising, and administrative ability. Most of them are public school men who have qualified in flying and have developed initiative and a sense of responsibility. They are recommended as the best material for developing commercial flying in India and bringing India's distant cities into close touch by rapid communication.

The Mechanical Transport Branch of the Indian Army Service Corps is to consist of eight companies with four-wheeled light lorries, one section with six-wheeled light lorries, six companies for motor ambulance work, four companies as mobile repair units, one depôt, one stores depôt, four heavy repair shops, and one workshop section. The staff at Army Headquarters will be increased and the inspectorate will be under a Chief Inspector with the rank of lieutenant-colonel. A number of home officers of the Royal Army Service Corps are taking up duty with the new mechanical branch, whose full establishment has been sanctioned and detailed in an Army Instruction.

Colonel J. D. Grant, V.C., D.S.O., is to succeed Colonel M. G. D. Rowlandson, D.S.O., as Deputy Director of the Auxiliary and Territorial Forces in India, and will be responsible for carrying out the new legislation for those bodies. Colonel Grant is on the Adjutant-General's staff, and served in the 8th Gurkha Rifles, winning the Victoria Cross in Tibet for scaling a cliff face under fire and ensuring the success of the assault. He was one of the officers sent with General Sir Alexander Godley to organise the New Zealand Force on a war basis. He served with Force "D" in Mesopotamia.

Fleet orders announce that the annual Indian Empire Garden Party, for all officers and civilians who have resided in India, Ceylon, Iraq, Aden, Malaya, and Hong-kong, and their wives and daughters, will be held at the Ranelagh Club, Barnes, on Wednesday, June 27, from 2 to 6.30 p.m. A polo match, India *v.* The World, will take place at 3 p.m. Tickets, 5s. each, can be obtained on application to Lieutenant-Colonel C. C. Anderson, 10, Gilston Road, S.W.10, not later than June 20, stating name, initials, rank, and service, if any, and enclosing remittances. Proceeds, after paying expenses, will be given to Lord Haig's Fund and the London Children's Fresh Air Holiday Fund.

His Majesty received at Buckingham Palame on May 8 Major A. K. Macpherson, 10th/2nd Bombay Pioneers (Officer-in-Charge), and The King's Indian Orderly Officers, as follows, who were presented to His Majesty by Lieut.-Colonel Sir Arthur Bannerman (Political Aide-de-Camp to the Secretary of State for India):—Subadar-Major and Honorary Lieutenant Ram Rup Singh, Sardar Bahadur, King George's Own Bengal Sappers and Miners, Subadar-Major Manajiro Palande, 2nd/5th Mahratta Light Infantry, Subadar-Major Atmaram Ghadge, 1st/5th Mahratta Light Infantry, and Risaldar Jai Lal Singh, The Royal Deccan Horse (9th Horse).

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Ottoman Debt Again.

It will be small wonder if the course of the Ottoman debt negotiations should inspire a deep-rooted suspicion of the motives actuating the present rulers of Turkey. For about three years now these negotiations have dragged a tortuous course, and while a settlement has appeared certain on a number of occasions there has always been something to cause a further delay. The position when I last referred to the matter was that a few points remained for agreement between Angora and the representatives of the bondholders. A complete agreement was reached over all questions, and all that was required was the ratification by the Turkish Grand National Assembly, but it has now been announced that as the session of the Assembly is coming to an end the Turkish authorities do not consider that it will be possible to present the settlement for ratification until the following session. The effect of that is that the payment of the coupons will be postponed until June, 1929, a date which will be dependent, of course, on no new development occasioning some further delay. I have no wish to do the Angora authorities any injustice, but the history of the negotiations is bound to leave the impression that a Fabian policy has been deliberately pursued throughout though with what end in view is obscure. It is quite certain that Turkey has as great need of financial assistance as the Balkan countries, and it is equally clear that there is no prospect of raising a loan in Europe so long as the debt settlement has not been brought into effect.

Cotton Growing in Cyprus.

One of the most interesting developments in Empire cotton growing in 1927 was the considerable expansion of the crop in Cyprus. In a year when cotton growing in so many regions was adversely affected by the fall in prices—the cotton production in the Empire excluding India falling from 413,438 bales to 361,318 bales—this increase is particularly noteworthy. Cotton growing in Cyprus since the War, incidentally, made be divided into two phases—from 1918 to 1822 when the production steadily declined from 3,325 bales to 1,505 bales, and from 1922 to 1927 when, with the exception of one year, there has been a steady advance from 2,233 bales to 7,029 bales. Further development in Cyprus is dependent on the question of irrigation, and if that can be satisfactorily solved it is evident that Cyprus will have a very valuable crop on which to depend.

Trade Barriers.

Beyond bringing into clear relief the effect of the existing trade barriers in impeding the revival of trade it is doubtful whether the attention paid by the Economic Consultative Committee of the League of Nations at its recent session to this matter will be productive in the near future of any positive results. Still it is something that attention should have been concentrated on the importance of this question, and provided it is kept steadily in the forefront it will help to bring about that changed atmosphere in international relations which is evidently the essential prelude to the removal of these barriers. It was stated at the conference that the movement to increase trade barriers had definitely been arrested, but it would seem that this is going too far, for while it is true that in a number of countries notably in the Near East tariffs have been lowered and restrictions lessened, it is equally true that in some countries the tendency to impose new tariffs still persists, and it cannot be said that the latter policy is incomprehensible in view of the great change in economic conditions since the War. Thus a country which finds itself faced with a large number of unemployed due to the impossibility of finding adequate markets must naturally tend to consider whether its position cannot be improved by safeguarding its home market. That in turn means a decreased outlet for the products of other countries, which brings one to the crux of the problem that the world demand for commodities has not yet expanded sufficiently to absorb the existing production. Put in another way, purchasing power has not yet recovered, and until it does so any measures taken can only be of limited influence. The proposal of the conference to deal with the question of tariffs by commodities is undoubtedly sound, and is probably the best way of approaching this difficult question. Certain foodstuffs, textiles, and metallurgical and building products, which are, as it was justly pointed out, the basic commodities of industry were instanced in this connection, and as regards the first and the last of these commodities, at any rate, it should be possible to obtain a substantial measure of agreement among the various countries as to the advisability of trade in them being as unhampered as possible. But as I have suggested the position with regard to tariffs is such that it is difficult to make rapid progress in the removal of restrictions, and as M. Theuris pointed out a more favourable atmosphere must be created in all countries.

Roumanian Loan Negotiations.

Roumania's attitude towards Germany has been the obstacle hitherto to the successful issue of the Paris negotiations for a loan, and it is significant as showing that Roumania appreciates the importance of this question that it is now reported that the Roumanian Government is willing to enter into pourparlers with Germany for the settlement of questions outstanding between the

Digitized by Google

two countries. This, of course, would include the German share of the 1913 Loan, over the settlement of which the Bank of England, whose participation is essential for the loan, is said to have been so insistent. Given that the report is correct, the path would be clear for the negotiation of the loan, but it is possible, indeed very probable, that political developments in Roumania may result in the postponement for the time being of the question of a stabilisation loan. If that should prove to be the case it is to be deplored, for the sooner stabilisation is a *fait accompli* in all the Near Eastern States the sooner will there be a real prospect of a permanent and substantial trade revival in that quarter.

Anglo-Egyptian Oilfields.

At the meeting of the Anglo-Egyptian Oilfields the Chairman, Sir Reginald Macleod, gave some interesting details of developments during the year. Most of the increase in the production of crude oil took place in the last five months of the year, and the increase, it may be noted, has been subsequently maintained. The net profit at £328,099 showed a considerable advance on the figures for the previous year, and in view of the conditions which the oil industry has had to face it is clear that the company has been exceptionally fortunate in the results obtained. As regards production Sir Reginald Macleod pointed out that the operations had been very successful on the Hurgada field, but as regards outside areas no success was achieved with the Ashrafi well. The Chairman dealt in some detail with developments with regard to the Red Sea Petroleum Company. Drilling was commenced in June on one of the Farsan Islands, but while a petroliferous gas was encountered at 850 and 1,521 ft. an unfavourable formation was encountered, and it has been decided to abandon this well for the present and to drill one on another island which has a definite oil seepage near the proposed location. As mentioned in the report, the company has accepted an offer to take part in a concession for exploration in Somaliland, where Sir Reginald Macleod stated there are indications in at least one district which in the opinion of the company's geological advisers are worth a close investigation. It is possible that by the time of the next meeting some interesting news will be available both with regard to this territory and the Farsan Islands.

Sudan Trade.

Elsewhere in these columns will be found a report of the speech of Mr. Bostock at the general meeting of the Sudan Chamber of Commerce, in the course of which he pointed out, first, that the import trade had not been greatly affected by the prosperity in the Gezira region, and secondly, that there are as yet small signs of the improvement of trade. The trade figures for the first two months of this year, which are now available, are not very encouraging as to the outlook except in one respect. The volume of trade at £E1,924,434 is down by £E102,790, there being a decrease in respect of exports of £E140,402. On the other hand, the value of the public imports at £E622,752 showed an increase of £E83,927, which suggests that the Sudan is gradually recovering from the trade depression. While a good deal naturally depends on cotton, the position with regard to the production and marketing of the other staple products of the Sudan is more important at this stage of its development in view of the fact that the cotton area is limited in extent.

COMMENTATOR.

Sir Thomas Strangman has joined the board of the Eastern Bank.

The Egyptian State Railways have received twenty English and Continental offers for the supply of ten bogie passenger underframes (says a Cairo message). The lowest tender was submitted by the Birmingham Wagon Works, at £E800 each, without SKF roller bearings, and £E930 with SKF roller bearings, and the highest tender by the Familleureux concern at £E992 and £E1,162. Germany quoted £E864 and £E1,036.

ROUMANIAN BROADCASTING.

Roumania is the latest entrant into the ranks of broadcasting nations. A new broadcast transmitter is to be erected by the Marconi Company at Bucharest this year. Marconi broadcasting transmitters are established throughout the world and the building of the Roumanian station will bring the number of countries in which they are being used up to 20.

The Bucharest station, which will be operated by a recently formed national company to which broadcasting rights in Roumania have been ceded, will be of the latest Marconi type and when complete will constitute one of the most efficient of the more powerful class of broadcasting installations in Europe.

The working wavelength of the station has not yet been decided, but the transmitter has been designed to broadcast on any wavelength between 200 and 545 metres. It will have a rating of 12 k.w. unmodulated energy to the aerial system, and will incorporate several new features of Marconi design.

The new Bucharest station will provide the first opportunity for wireless listeners in Roumania to hear organised national wireless programmes. Until 1925 the use of private wireless sets was practically unknown in that country, but since the removal of restrictions a wide demand has grown up among amateurs and would-be listeners for a national broadcasting system. Several wireless clubs have for some time been doing experimental work; and with the encouragement of good programmes, this nucleus of enthusiasts will doubtless expand into a multitude of regular listeners, as has been the experience in other countries when facilities are provided for the reception of high-class programmes in every home.

THE BRITISH COTTON GROWING ASSOCIATION.

Presiding at the annual general meeting of the British Cotton Growing Association, held in Manchester on May 16, Lord Derby said it was a great pleasure to him to be able once again to congratulate them upon a successful year, and considering all the circumstances in which they had had to work, the result was one of which they could justly be proud.

In the course of a résumé of the work in the various centres Lord Derby said the crop in the Sudan, being grown under irrigation, cultivation had not been affected by the unfavourable weather conditions which had characterised other areas in Africa. The cotton was the best class Sakel, and commanded a good price. They had, therefore, in the Sudan an increase in the outturn.

On the irrigated areas on the Gezira Plain, so ably controlled by the Sudan Plantations Syndicate Ltd., the cotton crop amounted to 113,169 bales from 100,058 acres, as compared with 90,309 bales from 80,031 acres in the previous season. For the present season the Sudan Syndicate had 105,622 acres under cotton in the Gezira, and for 1928-29 season it was hoped that the area would be 135,000 acres, whilst for 1929-30 it was expected that 150,000 acres would be planted with cotton.

Iraq showed a falling off in production, which wass accounted for by the lower prices paid to cultivators for the crop the year before, although this was accentuated by bad weather towards the end of the 1926 season.

In the Chairman's remarks at the last annual meeting they were prepared for a slight setback in the amount produced, and although the actual results in terms of bales produced were a little disappointing, he might say at once there was no justification whatever for pessimism as to the future. It had always been recognised that one or two unfavourable season climatically, coupled with low buying prices, would be the acid test for Empire cotton growing, particularly in the districts which had only been developed in recent years.

Engineering Topics.

By G. B. B.

The 7-h.p. Morris.

Perhaps the most interesting engineering topic of the week has been the announcement that Mr. Morris, of Morris-Cowley and Morris-Oxford fame, has decided to commence production, on a large scale, of a 7-h.p. car, thus entering the field which has been cultivated so long and, incidentally, so profitably by the highly successful Austin Motor Co.

It is not easy to find a reason for this course which is not open to some objection or other. The Morris had practically its field to itself; no one was seriously competing against it, and the same remark applies to the Austin "Seven." The Austin did no harm to the Cowley nor did the Cowley enter into competition with the Austin. Now the case is altered and the Morris has deliberately entered the Austin field and has loudly flourished its trumpets while doing so. Well, we shall see what all this leads to, and before long the underlying reason for what seems, on the face of it, to be a curious procedure may be made manifest.

I may go so far as to say this. There is in some quarters a disposition to regard this move as a very natural, in fact well-nigh inevitable, result of hire-purchase finance.

Fuel Costs.

Manufacturers of to-day "think" gas when investigating possibilities of improvement in existing furnaces or obtaining new specifications. But there are still many applications of fuel which would be far more satisfactorily carried out with gas than by present methods.

So much was made evident by Mr. H. R. Hems, of the Birmingham Corporation's Industrial Research Department, in his paper on "Town Gas and Industry," which he read a few days ago at Redditch. Fuel costs, he said, should be considered conjointly with other important factors of capital, cost of plant with interest charges, labour costs, waste, transport of fuel, controllability, and cleanliness. Taken together, these costs give an overall figure high in comparison with fuel costs alone.

Mr. Hems quoted a typical instance illustrating the help given by the gas industry in simplifying heat treatment processes. A firm requiring tools of special steel had obtained full details of a treatment which gave satisfactory results and passed these details on to the Birmingham Gas Department for experiment and report. One sample of the steel was submitted to the firm's own treatment, involving packing in a box to prevent oxidation and exceptional care in handling.

The other sample was placed in a gas-sealed Muffle furnace without any packing or other special treatment. The results of the two tests were identical. But the second method occupied less than half the time to carry out that the first did, in addition to the fact that it required no special labour. The cost of the actual process itself was also considerably less. Mr. Hems gave it as his opinion that a man with average intelligence should be able to produce satisfactory results with gas on a production basis once a decision had been reached with regard to the exact treatment that was necessary.

A Concrete Mixer.

One of the largest firms of steel piling makers in existence are also makers of a popular concrete mixer which deserves to be better known than it is in the Near East and India. The makers say that they have hitherto supplied these mixers in a wide range of sizes, but that they have learned from experience that fewer models would meet all ordinary requirements. For that reason they have decided to concentrate on making sizes that are in everyday demand. This limitation will simplify factory work, and will also reduce costs, and as a result an immediate reduction of price in one of the models has been possible.

One of the failings of some British engineering firms is to produce a number of types of some particular machine, with the result that production is slow and costs unduly high. The example of this big British concern is well worth following by other makers.

A New Tractor.

A new British tractor was recently tried out under exceptionally difficult conditions. The machine has a water-cooled engine of 16 b.h.p., and the drive is taken through a single plate clutch to a 3-speed gear-box, with reverse, of the ordinary design. The chassis suspension is unusual: auxiliary quarter-elliptic springs are anchored to the driving axle in addition to the under-slung semi-elliptics, whilst the steering axle carries a coil spring which is air-cushioned, the cylindrical housing for this being situated immediately in front of the radiator. There are other novel features incorporated in this tractor and the tests it so successfully underwent show that it is a sturdy, well-designed, and thoroughly well-constructed tractor, suitable in every way for use in both the Near and the Far East.

It is understood that the Egyptian State Railways will shortly invite coal tenders for 140,000 tons of coal, without specifying the category, so that Germany is likely to become a keen competitor (says a Reuter message).

The Greek Government has decided to allot contracts for drainage and irrigation works in Macedonia, Thessaly, and the Philippi Plain to two American groups, consisting of Monks, Seligman, and Ulen and the Foundation Company, who are to collaborate with a number of Greek contractors.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Dredgers.—Tenders are invited by the Ministry of Public Works of the Egyptian Government for the construction of (a) two dipper dredgers each capable of an output of spoil in free-getting material of 80 metres cubic per hour measured in the solid, and (b) two suction pump dredgers each capable of an output of spoil in free-getting material of 200 metres cubic per hour measured in the solid; including re-erection in the Sudan and for the delivery thereof in working order safely afloat on the River Nile. Builders may tender either for the two dipper dredgers, or for the two suction pump dredgers, or for both groups. The contract documents and the rules for, and full information as to, tendering may be inspected on and after June 1 at the offices of Messrs. Goode, Fitzmaurice, Wilson and Mitchell, Consulting Engineers to the Egyptian Government, 9, Victoria Street, Westminster, London, S.W.1, or the Legation of the Egyptian Government, Bute House, 75, South Audley Street. October 1.

Locomotive Workshop.—The Administration, Egyptian State Railways, Telegraphs, and Telephones will call for tenders, on or about July 1, for the design, construction, and erection of a portion of a new locomotive workshop at Abou Zaabal, covering approximately 18,000 square metres.

Bridge over the Nile at Samanoud.—The Ministry of Communications, Egyptian Government, invites tenders for the construction of a metal bridge over the Nile. August 23. (D.O.T.)

Asphalt.—The Tanzim Department of the Ministry of Public Works invites tenders for the supply of liquid asphalt (bitumen) required during the year 1928-1929. (D.O.T.)

Weighbridge, Etc.—The Physical Department, Ministry of Public Works, Cairo, invites tenders for the supply of a weighbridge, platform weighing machines, counter balances, and Beranger balances. June 30. (D.O.T.)

Mechanical Filter, Etc.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of a mechanical filter, 2 low-pressure and 2 high-pressure centrifugal pumps, 1 semi-rotary double-piston hand pump, also suction and delivery piping, a 10 h.p. electric motor, sterilising apparatus, etc. June 3. (D.O.T.)

Ironmongery, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of ironmongery, metal tin and zinc sheets, wire metal iron, metal iron pig or scrap, metal lead old pipes, metal bronze pig or scrap to the Department of Ordnance Services, Citadel, Cairo. June 11.

Book Binding Cloth, Stc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 9,350 yards book binding cloth, imitation leather cloth and imitation leather paper; 31 lockers operator steel, 85 zenith telephonometers (3-minute clocks) and 10 stop watches No. 3 with split seconds; 300 laminated side bearing springs; and 87 tons steel, viz., angles, flats, round, rivets and bolts and nuts. Firms interested should communicate with Chief Inspecting Engineer, London, for information.

Tank Engines.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of twenty-2-6-4 type side tank engines for miscellaneous service. July 12.

Fertilisers.—Tenders are invited by the Ministry of Agriculture, Cairo, for the supply, *inter alia*, of the following:—32,000 tons nitrate of soda; 10,000 tons nitrate of lime; 1,200 tons sulphate of ammonia; and 5,000 tons lime super-phosphate. June 5.

GREECE.

Steel Schooners.—An Athens firm desires offers in respect of four steel schooners of between three and four hundred tons, fitted with auxiliary motors. The vessels should not draw more than ten or twelve feet of water. (D.O.T.)

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS,
carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.
This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

FURS IN GOOD DEMAND.

The report of the London Fur Trade Association (Inc.) on the spring raw fur skin sales states that despite the existence of political uncertainties, owing to the elections in France and Germany, the results of the London spring fur sales show that the market, as a whole, remains very firm. Generally speaking, fine furs fully maintained their values, and good competition was experienced for the offerings of staple lines, which showed little alteration in price. The weakening of Russian furs, previously noticed, especially in so far as America is concerned, is still apparent, and is likely to continue until prices have been adjusted in conformity with the real requirements of the market. With the steady improvement of the European trade situation, the present level of fur prices seems likely to be maintained, and the outlook for a satisfactory season is therefore encouraging.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—A steamer for Bombay (Birkenhead), June 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Calcutta (Birkenhead, May 27).

Bibby Line.—S.s. Lancashire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 30).

British India Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, June 2); s.s. Nohata for Bombay and Karachi (London, June 9).

Cunard Line.—S.s. Bosnia for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow and Swansea June 5, and Liverpool June 7); s.s. Bothnia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool May 26, and Swansea May 29); followed by the s.s. Brescia (closing in Liverpool June 23 and Swansea June 26).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 16); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 5).

P. and O. Line.—S.s. China for Bombay (London, May 25); s.s. Nagoya for Calcutta (London, May 26); s.s. Morea for Bombay (London, June 8).

Prince Line.—S.s. Egyptian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, May 30); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 6).

Ellerman and Papayanni Lines.—S.s. Algerian for Oran*, Algiers*, Malta, Smyrna, and Constantinople (Liverpool, May 26). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Tieste.

The Russo-Oriental Chamber of Commerce is organising an exhibition of Soviet export goods in Afghanistan.

M. Constation Olanesco, a former Minister and President of the Roumanian Chamber, died in Bucharest on May 14 at the age of 80.

The Yugoslav Chamber of Deputies adjourned on May 17 until May 29 in order to permit the various Parliamentary committees to devote more time to the questions with which they are dealing.

Sir Alfred Mond, at the annual meeting of the Institution of Mining and Metallurgy, at Burlington House on May 17, was presented with the Gold Medal of the Institution—the highest honour which the Institution can confer.

In the presence of Lord Lloyd and other members of the Diplomatic Corps and of his Ministers, the King of Egypt on May 20 unveiled the statue entitled "The Awakening of Egypt," which had been erected in the Station Square, Cairo. The statue shows a modern Egyptian *fellah*, unveiled, standing with his hand on a Sphinx which is in the act of rising from a recumbent position. The sculptor is Mahmud Effendi Mukhtar.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 22.

The volume of business in the Stock Markets fell this week from its recent high level, and considerable reaction took place in the quotations of many of the industrial favourites, which in past weeks have been the centre of the keenest speculative attention. Thursday, indeed, saw the first real attack of weakness in the industrial sections that has been seen for many weeks, this being mainly caused by the heavy sales of favourite securities in Wall Street. Then on Friday came the news of the raising of the Federal Reserve discount rate in New York, which not merely affected gilt-edged securities, but was taken by the investment world in general as a factor which clearly inculcated the desirability of a little more caution than has recently been displayed. It is too soon to say that the bubble of Stock Exchange buoyancy has been pricked, but the set-back at least provides a suitable occasion for investors to regain a balanced mind and to review very carefully the extent to which the upward movement in industrial securities has already discounted huge profit increases in many cases. On the other hand, those who may be unduly depressed by the unfavourable turn in the monetary outlook, should be encouraged to take a long view, which suggests that—although there is the possibility of the New York rate going up to 5 per cent.—the duration of the dearer money period in Wall Street is, in the view of many authorities, not likely to be protracted.

Marconi Price Movements.

During the past week there have been interesting movement in the price of Marconi ordinary shares. In the earlier part of the week the shares showed distinct weakness, but subsequently there was a recovery, the present price being 65s. The recent strength of the shares has been largely due to rumours that they are to be written up from their present level of 10s. to £1, the fall in price following the growing impression that this step was not imminent. The matter is understood to have been discussed at a recent meeting between representatives of Irish shareholders and the company. No official statement has been issued, but in usually well-informed quarters the early writing up of the shares is regarded as improbable. It is pointed out that the immediate writing up is improbable for the simple reason that the necessary resources are not available. The impression that the company could restore the shares out of the large profits from the beam system is apparently not well-founded, since the beam stations in this country are not the property of the company but of the Post Office. It would seem that the merger plan will only go through if the beam stations are acquired, but the beam stations may remain the property of the Post Office if the merger does not go through. The question of the distribution of the shares in the merger company has been seriously engaging the shareholders' attention, and there appears to be a strong case for the contention that the division will be by units of shares and not by their nominal amount.

Distillery Profits.

The reports published during the past few days by leading distillers would seem to indicate that the past year has been more favourable to this industry than its predecessor. The profits of John Walker and Sons for the year ended March 31, were £929,773, as compared with £838,425. The ordinary dividend is maintained at 25 per cent. The net profit of Buchanan-Dewar advanced from £1,155,563 to £1,166,792 for the year ended March 31. The carry forward is increased from £98,413 to £104,437. The ordinary dividend is maintained at 28 per cent. These reports lend interest to the accounts of the Distillers Company, which are expected to be available in July. In market circles there is some expectation that the dividend will be raised from 20 per cent.—a figure at which it has remained for some years past. The company is undoubtedly a progressive undertaking and is making special efforts to expand its sales in the Dominions. Whether the distribution will be increased this year remains to be seen, but it is noteworthy that in the meantime the shares give the not unsatisfactory return of £5 18s. per cent. The 6 per cent. cumulative preference shares yield £5 13 per cent. A good prior charge investment in the distillery industry can be obtained in the 6 per cent. first mortgage debenture stock of John Walker and Sons, which returns £6 per cent.

Prosperous Cable Makers.

During recent years the electric cable manufacturers have enjoyed a prosperous period. There is every indication, however, that the future will not be less prosperous, and in all probability more so. Tenders for electric equipment amounting to over £7,000,000 are shortly to be invited by the Central Electricity Board. These contracts will follow upon those of the Midland Counties scheme, which were for about £8,000,000 initially and which will be between £15,000,000 and £16,000,000 ultimately. The leading British companies are understood to be working in close agreement, particularly in regard to prices and so forth. Indeed, it has from time to time been rumoured that this is the preliminary to a thoroughgoing combine, and share prices have advanced accordingly. In certain quarters the need for amalgamation in the electric industry has been realised and there are few groups which are better suited for action on these lines than the leading cable makers. The shares of these companies, however, discount the immediate future. Thus, the ordinary shares of British Insulated Cables return £3 11s. per cent., those of W. T. Henley's Telegraph Company £4 9s. per cent. and those of Callender's Cable and Construction Company £3 8s. per cent. These companies occupy positions of exceptional financial strength and capital bonuses or higher dividends are possible sooner or later.

Tenders are invited by the Bulgarian Ministry of Agriculture for the supply of a considerable quantity of agricultural machinery, including 6,000 ploughs, 6,000 harrows, 5,000 drilling machines, 1,000 rollers, 19 tractors, etc.

SUDAN CHAMBER OF COMMERCE.

Annual General Meeting.

In his address at the recent annual general meeting of the Sudan Chamber of Commerce, Mr. W. T. Bostock, the President, pointed out that the increased earnings of the native cotton cultivator have not so far been greatly reflected by increased imports, and that, in spite of the good rains and increased cotton cultivation in the Gezira, there has not been much improvement in the local trade. He said :—

The Customs statistics for 1927 show an increase in turnover over 1926 of £E700,000. £E523,000 of this sum is in Government imports, of which £450,000 is under the heading of metal and metalware, including railway trucks. Sugar shows a decrease of £E97,000; 17,000 tons were imported against 22,000 in 1926, but even the lower figure is larger by 4,000 tons than the import in 1924 or 1925. Tea is also less by 100 tons and £E50,000 value, but the figures again compare favourably with previous years. Cotton piece-goods were higher by 600 tons but only £E6,000 value.

It is, of course, impossible to draw any certain deductions by comparing the figures of just two years, but for the sake of interest I have extracted the figures for two three-yearly periods, 1925-7 and 1922-4. The figures I have taken are those of the principal imports for native consumption, cotton piece-goods, sugar, coffee, and tea. For the period 1922-24 the value of these articles imported totals approximately £E4,950,000; for the period of 1925-27 approximately £E5,420,000, an increase of £E470,000, or something under half a million. I have taken the particular periods to coincide with the very large extension of the Gezira scheme. During 1922-24 the value of cotton lint exported was £E2,200,000, during 1925-27 it was £E7,600,000. Here we have an increase of £E5,400,000, of which the native's share is 40 per cent., or £E2,160,000. Other exports, such as gum, practically balance during the two periods, but there is an increase in the value of cotton seed by £E400,000, which may be looked upon as covering cost of ginning and transport, and is, therefore, spent in the country.

Against this we have the cost of imported dura during the past two years of £E440,000, and we still have the balance of a million and a half unaccounted for. This shows at any rate that whatever the native cultivator is doing with his money it is not reflected to more than the extent of 25 per cent. in the increase of imports for native consumption.

Last year I mentioned that one of the suggestions put forward by the Committee of the Central Economic Board was for a flat rate on dura to encourage cultivation in places other than the Northern rainbelt. The Government have recently announced three zone flat rates for dura and dukhn. Under the new schedule dura can be carried, say from Rejaf to Khartoum, for P.T.70 per ton. Nothing could be better designed to open up the outlying districts, and I hope that, the theory having once been established, it will be extended to cover other articles where desirable. For instance, I would suggest similar zone rates for imports, such as tea, sugar, cotton goods, etc., to pay for the dura sent from the various zones and also to provide return freight.

The question of railway freight and royalty on gum is now under discussion; whereas the price of El Obeid to the native is only P.T.53 per kantar, the Government take about P.T.85 in royalty and rail freight. Previously we have not put forward any suggestions for the reduction of these rates, holding that gum was a commodity which could bear the burden, but the recent increase in gum production in Senegal and other places raises the question as to whether we may not lose our supremacy in this market if we allow our competitors to establish themselves. At the meeting with the Central Economic Board next week we are asking them to examine the question.

Now as to the local trade situation. In spite of the good rains and increased cotton cultivation in the Gezira we cannot record much improvement in the local trade here. Medani district is buying regularly, but we see no signs of an immediate increase in turnover worth mentioning. The exporters are in no better position than last year. Dura cannot be exported, the ground nuts crop was negligible and sesame under the average. The arrivals of gum up-country are bigger than ever before, but the native is getting only the miserable price of P.T.53 per kantar and the exporter is working on a fractional margin of profit. I admit that the difficulties attaching to any combination between exporters are very great, but are they absolutely insurmountable? Some years ago there seemed the same impossibility in controlling the amount of arboon on produce, but an agreement was eventually reached and proved of very great benefit. Competition in this country is often of the kind that merchants not only cut their competitors' throats but are liable to cut their own as well. I cannot help thinking that some sort of arrangement would be worth a trial even if the ring were not complete. To avoid any possible misunderstanding, I must say that I am not advocating anything in the form of a trust to force up prices. There is not the slightest danger of anything of this kind. I am only suggesting any arrangement that will ensure a reasonable margin of profit which, as is well known to you, is not the case at present.

Another need for co-operation, I think, is among the sellers of cars and lorries on the hire-purchase system. To attempt to restrict business to cash sales is now impossible, but reasonable terms of credit could surely be agreed upon, and I think that a similar arrangement would be very beneficial in the case of pumping and other agricultural machinery.

Mr. Bostock proposed, and Mr. G. Lorenzato seconded, a vote of thanks to the Hon. Secretary, Mr. E. C. Reed, and to the Assistant Secretary, Mr. T. Thomson, for the work they had done during the past year and expressed regrets that as Mr. Thomson was leaving the Government service on retirement this year the Chamber might not have the benefit of his services much longer. The splendid work done by Mr. Thomson would long be remembered by the members of the Chamber and particularly by the Committee and he wished Mr. Thomson a happy retirement.

Mr. W. E. Law proposed a vote of thanks to the President and congratulated the Committee on the work they had carried through during the year. He thought that sometimes ordinary members did not fully appreciate or realise the amount of time the members of the Committee gratuitously spent in carrying on the work of the Chamber, and he considered members generally ought to be proud of their Chamber, its building, and the fact that the Committee, in spite of difficulties, managed to keep their finances on the right side.

The motion was seconded by Mr. Sarkis Kurkijian, and was duly carried.

P. and W. MacLellan, Clutha Works, Glasgow, have obtained a contract for a bridge for India.

The board of directors of the Suez Canal Company have decided to recommend at the ordinary meeting, to be held in Paris on June 4, the payment of the following dividends for the year 1927: Capital shares, 577.52 francs gross, 455 francs net; "Jouissance" shares, 565.02 francs gross, 488.045 francs net; Founder's shares, 636.642 francs gross, 521.841 francs net.

The death took place recently, at his residence at Hampstead, at the age of 95, of Mr. Falconer Larkworthy, for many years Chairman of the Ionian Bank. Mr. Larkworthy was born at Weymouth on March 22, 1833, and was the son of Dr. Ambrose Larkworthy, of Bombay, and Amelia, daughter of Mr. John Cooke, shipowner, of Calcutta. He was educated at Liverpool High School, and went into business in 1849, and was at first with Messrs. Frith, Wallace and Co., East India merchants. He joined the Oriental Bank Corporation in 1852, in the service of which he was at Mauritius, and later at Kilmore, Victoria, Australia. From 1865 to 1890 he was managing director of the New Zealand Loan and Mercantile Agency Company, Ltd. Mr. Larkworthy, who had a special knowledge of Greek finance and business, was a strong advocate of a new national and international currency and exchange system. In 1924 he published his reminiscences, entitled "Ninety-one Years."

EMPIRE COTTON GROWING CORPORATION.

Lord Derby presided at a meeting of the Administrative Council of the Corporation held in Manchester on May 16, when the report of the Council and the accounts of the Corporation were adopted for submission to the general meeting, which followed the Council meeting.

The following extracts are taken from the report:—

India.

The Royal Commission on Agriculture, which was appointed in 1925, is now, after two years of inquiry and investigation, employed in preparing its report, the publication of which is expected at an early date. The scope of the committee's inquiry was exceptionally wide, covering practically the whole range of agriculture, with the exception of land tenure, revenue assessment and irrigation charges.

It is anticipated that among the many important recommendations which are bound to result from so comprehensive an inquiry, those relating to marketing and research are likely to find a specially prominent place.

Both these problems in their special relation to cotton have been consistently kept in view by the Indian Central Cotton Committee during the past year. On the research side, the labours of the committee have followed two main divisions; the first relating to the evolution of better strains, to which five investigations have been devoted, the second to the combating of diseases and pests, three inquiries dealing with diseases and two inquiries with pests. In regard to new varieties, the report of the committee rightly emphasises the necessity for patience; only one cotton generation can be produced in a year, and a period of from three up to eight years may be required before a new variety can be definitely fixed. It can be easily recognised, therefore, that the substitution on a field scale of an improved variety is a matter of considerable time. Wilt disease and the pink and spotted bollworms were the chief diseases and pests investigated, and an investigation carried out by the Agricultural Department of the Central Provinces has reached the stage at which 7,500 lb. of seed of a cotton highly resistant to wilt has been distributed to selected growers.

On the marketing side there has been considerable progress during the year. An experimental market was opened in Indore State, one of the chief features of which was the representation of cotton growers on the market committee. This was so successful that it is to be followed by four similar markets at other important centres in the State. A Bill on the lines of the law already in force in Berar was introduced and passed in the Bombay Legislative Council. Important developments dealing with matters relating to standards, contracts, and wholesale cotton grading are under discussion in Karachi. The Indian Central Cotton Committee, in co-operation with the local Agricultural Departments concerned, are carrying out detailed investigations into the financing and marketing of the cotton crop in the Bombay and Madras Presidencies, Sind, and the Punjab.

The Indian Cotton Transport Act, which aims at the prevention of the mixing of different staples of cotton and so enables protected areas to maintain definite standards for quotation, remained in force in the same areas in British India mentioned last year, viz., six zones in Bombay and three zones in Madras. Similar legislation is in force in Baroda and Rajpipla States. During the year action was taken on similar lines in Chota Udaipur and Hyderabad States. The difficult question of the fixation of a protected zone for the Central Provinces and Berar still remained undecided by the close of the year. The Cotton Ginning and Pressing Act continued, on the whole, to work satisfactorily.

The subject of cotton intelligence continued to receive attention. The re-introduction of the railborne traffic returns for exports of cotton by trade blocks was effected from October, 1926, but for the purpose of testing the estimates of production, import figures are also required, and a request for the publication of the latter has been made to the Government of India. The cotton press returns have been found a very useful check on provincial estimates, and cases of substantial errors in these forecasts have been by their aid brought to the notice of provincial authorities, enabling the latter to locate the sources of the errors. Until, however, all native states introduce such returns, a full check on Indian cotton cannot be obtained. In this connexion it is satisfactory to note that eleven states are now publishing returns against eight last year.

Changes, if any, subsequent to the publication of the final forecast in February are now brought to the notice of the Director-General of Commercial Intelligence in April. Lastly, the large import of American cotton, for which last year was remarkable, necessitated the publication of reliable information regarding such movements. Weekly information was accordingly obtained and published from voluntary advices received from importers, showing the amount of such cotton purchased, arrived, and at sea.

The cotton cultivator has had a distinctly brighter season in 1927-28 than in the previous year in relation both to price and yield. The final official forecast for this season's crop, published in February, 1928, showed an area of 23,812,000 acres and an output of 5,480,000 bales, compared with 24,676,000 acres and an output of 5,003,000 bales last year. Unofficial estimates are inclined to think that the Government figure is too low, and to place the total crop in the neighbourhood of 6,000,000 bales. The official forecast would undoubtedly have been higher but for unpropitious weather met with late in the season.

The Sudan.

The appearance of exportable quantities of rainfall cotton from the Sudan is especially noteworthy. Unfortunately the rains have been very poor in the south this season, and the Government estimate of the crop is less than 5,000 bales. The Government have had to surmount serious difficulties before they could advocate a wide extension of this crop among the natives of the Southern Sudan. Chief among these were the provision of ginneries and transport, upon the adequacy of which would depend the price that could be paid to the native cultivator. In this connexion it is reported that in some of the districts in the south the natives are now taking a decided interest in the crop, having grasped the fact that by growing sufficient cotton they can pay their taxes without having to part with any of their cattle—a powerful piece of propaganda for cotton-growing among these people. In the first Report on the Sudan since his appointment, Sir John Maffey, the Governor-General, states that, according to the results achieved up to the present, it appears that with a price of 7½d. a lb. for Middling American in Liverpool, production of rain-grown cotton in the Southern Sudan can be carried on with a reasonable margin of profit.

An important event in the development of the growing of cotton under rainfall in these Provinces is the announcement that now that the new railway from Kassala to Gedaref is nearing completion, the Government have decided to proceed immediately with its extension to Makwar, a distance of 145 miles. Cotton from the Nuba Mountains, Mongalla, and the Upper Nile is at present carried by river, camel, or motor transport to the railway at Kosti on the White Nile. The new railway extension will enable it to travel thence via Makwar direct to Port Sudan. At the same time it will open up the country between Gedaref and the Blue Nile, which is a potential cotton-growing area.

The personnel of the London Committee for the co-ordination of agricultural research in the Sudan, of which Sir James Currie is Chairman, has undergone modification, Mr. Arthur Huddlestone, Financial Secretary, succeeding Sir George Schuster. The representatives of the Sudan scientific organisations will consist of Major Archibald, Director of the Wellcome Tropical Research Laboratories, Mr. Davie, Director of Agriculture, and Mr. Hewison, Agricultural Adviser in the Gezira. In addition, the following have been appointed as technical assessors: Dr. E. J. Butler, Mr. F. L. Engledow, and Dr. E. M. Crowther.

On the recommendation of this Committee the Government are appointing a plant physiologist and an additional entomologist in the Sudan.

The collected reports on the research work bearing on agriculture in the Gezira for the season 1926-27 have been printed and published; the work of editing them and preparing them for the press was entrusted by the Government to the Secretary of the Corporation. The volume forms a record of work which is probably unique in the sphere of tropical agriculture under irrigation.

This season the climatic conditions have been unfavourable in most parts. In the Gezira the Government report that the crop will be smaller than in the last two years, the estimate being 360,000 kantars, or approximately 85,500 bales of 400 lb., as compared with 113,000 last year. Black Arm is reported to have done much damage, while "sooty mould" *(Cladisporium sp.)* is believed to have been harmful also.

In Tokar and Kassala the prospects are good; from the former a crop of 12,000 bales is expected, and from the latter, about 12,500 bales.

A crop of nearly 12,000 bales of irrigated American cotton is expected, and, as mentioned above, about 5,000 bales of rain-grown American.

Cyprus.

There was a notable increase in the production of cotton in Cyprus in 1927, the output amounting to 7,029 bales. In the last annual report it was stated that any increase in the area devoted to the crop appeared to be dependent on irrigation. In January last a report from the engineers who had been investigating this question was received, from which it appeared that there are fairly large areas where moderate supplies of water can probably be obtained from bores below the sources tapped by native wells, while there are some areas from which very large volumes of water could be pumped the whole year round. The Morphou district, in particular, seemed especially promising.

A request has been submitted to the Governor for further information as to the action which the Government is prepared to take in carrying out irrigation work, and as to the rate at which they would be prepared to sell such water to cultivators. This and other questions will have to be settled before the time is ripe for acceding to the Governor's request that the Corporation should send out an expert to establish an experiment farm. Until all the preliminaries for organising agriculture by irrigation have been settled by the Government, it is felt that little assistance could be given by an expert cotton agriculturist. On the other hand, in a scheme of any size for agricultural development by irrigation, an experiment station must form an integral part, for as soon as irrigation is undertaken, many scientific problems arise that need to be solved. The Government has been assured that if they are prepared to embark on such a scheme, the Executive would consider a request for assistance in this direction.

Company Meeting.

ANGLO-EGYPTIAN OILFIELDS.

Increased Net Profits.

Sir Reginald Macleod's Speech.

The seventeenth ordinary general meeting of the Anglo-Egyptian Oilfields, Limited, was held on May 18 at Winchester House, Old Broad Street, London, E.C. Sir Reginald Macleod, K.C.B. (the chairman), presided.

The Secretary (Mr. W. A. Turner, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—From the report you will already have learned that your directors are able to recommend to you the payment of a dividend on the "B" shares at the rate of 17½ per cent. for the 12 months ended December 31, 1927, and I trust that this recommendation will meet with your approval.

The production of net crude oil during the year was 180,230 tons, showing an increase of 11,019 tons over that for the year 1926. The greater part of this increase occurred durnig the last five months of the year, and you will no doubt have noticed from the publication statements which are published weekly that the increase has been well maintained during the first part of 1928.

Having dealt in detail with the accounts, the Chairman proceeded:—The fact that we have been able to earn a net profit of £328,099 in a year which has been a very difficult one for the oil industry as a whole is one on which I think that we may congratulate ourselves, and I think that you will wish to hear from me some particulars of the reasons which have led up to this achievement. (Hear, hear.)

Assistance of "Shell" Group.

From the figures in the profit and loss account you will have seen that we have benefited by a comparatively small increase in oil proceeds and a substantial reduction in working expenses. In both of these we have received an intangible but very real assistance from our close association with the Shell Group. I think that the ordinary shareholder and the general public can have very little conception of the magnitude of that group's technical organisation. In whatever direction we may require advice or technical assistance the group have never failed to supply the man or the material which have enabled the problem to be solved. Thus our geological problems have been elucidated for us, and the advice given to us on various occasions in recent years has undoubtedly saved us many thousands of pounds.

Our dehydration plant, as I have mentioned on a number of previous occasions, is a brilliant achievement, whereby a novel method of electrical treatment was brought to our aid at a time when methods in successful use in other fields had entirely failed.

We have also received great assistance in the development of our drilling and production methods on the most modern lines, combining the latest developments evolved and practised in other fields. Similar help has been given to us in modernising our refinery plant and in adapting our refinery operations to enable us to turn out a range of products to meet altered market conditions. Finally, I may say that our selling agents, the Shell Company of Egypt, have worked hard and successfully in a difficult year in finding satisfactory markets for our products.

It is largely owing to assistance of this nature that we have been able to reduce our working expenses and to dispose of our products at prices which, while low, have been, on the whole, remunerative.

On the Hurghada Field our operations were very successful, and, while we drilled a smaller footage than in the previous year, we were able not only to maintain but to increase our production. In this we were helped also to some extent by obtaining an increased production from some of the older wells on the Main Field, due to experiments with our production methods utilising the latest scientific discoveries in this branch of the petroleum industry.

The electrical dehydration plant continued to give excellent results throughout the year.

The gas compression plant has also worked most satisfactorily, and we propose to make still further additions to it during the present year.

With regard to operations in outside areas, we achieved no success with our Ashrafi well, which was plugged and abandoned in July.

The Red Sea Petroleum Company, Ltd., particulars of which were given at our meeting last year, was able, by drawing men and material from Hurghada, to commence drilling in June on one of the Farsan Islands. The location was selected on geological grounds on a dome-shaped formation on one of the smaller islands, which, as far as surface indications were concerned, was an admirable site. In course of drilling a petroliferous gas was struck at depths of 850 ft. and 1,521 fet., but it became apparent that the well was entering a salt mass of unknown thickness, and, while deep drilling might have pierced this mass and reached a more favourable structure, technical difficulties were encountered with the well, and we have decided for the present to abandon this well and commence drilling on another island, which, while not possessing so apparently favourable a structure, has a definite oil seepage near the proposed location. The transport of material to the new location will entail considerable delay in the commencement of the new well, and I must ask shareholders to exercise their patience, and to remember that, as I indicated at our last meeting, this is rather a long shot, which, whilst we must have the courage to take some considerable risks, is justified by the material advantage which a successful discovery of oil in commercial quantities would bring to the company.

You will already have seen from the report a reference to a concession in British Somaliland. The Anglo-Saxon Petroleum Company were in negotiation with the authorities for a considerable period with a view to obtaining the right to explore for oil in Somaliland, and, with their approval, devided to offer to your company a participation on equal terms, which your directors had no hesitation in accepting. Somaliland covers a large area about which not very much is known from the oil geological point of view, but there are indications in at least one district which, in the opinion of our geological advisers, are well worth a close investigation.

Arrangements have been made to send an expedition, in charge of a highly experienced geologist lent by the Shell Group, to Somaliland in the autumn to commence an examination of the country. In view of the large area to be covered and the short season during which such work can be done, it is unlikely that any results will be available before our next meeting. Should any shareholder feel a doubt as to the wisdom of taking part in such undertakings as the Red Sea Petroleum Company and the Somaliland Petroleum Company, I would remind him that, while our Hurghada Field is one from which, with prudent and experienced management, we may hope to secure for many years to come a satisfactory return, it cannot last for ever. It is for that reason particularly that it is so desirable to make every endeavour to find some additional productive territory within a reasonable distance from your field at Hurghada and your refinery at Suez.

Prospects for 1928.

Having dealt at some length with the results obtained during 1927 and with the new areas in which we are now interested, I will say a few words as to the prospects for 1928, so far as they are known at present. Those of you who follow the statements of production published weekly in the Press cannot fail to have noticed the very satisfactory rate of production which has been attained during the first part of the year. In the first 18 weeks the production has been 27,506 tons in excess of that for last year, and, while prophecy is dangerous, I am not without hope that our production for the whole of 1928 will be in excess of 200,000 tons. (Cheers.) This favourable result is largely due to the success which was obtained in January by deepening one of the producing wells on the northern extension of the field. This has disclosed the existence of a previously unknown level which gives a much higher rate of production than that obtained from any other well in that area. The extent of this level is not known, but it is hoped that it will be encountered by deepening certain other wells in the same area.

At Suez we commenced in 1927, and will shortly complete, the erection of two entirely new Trumble distillation plants of the most up-to-date pattern, and also reconstructed two of the older Trumble plants, as a result of which we are now in a more favourable position than ever before to turn out a range of products to meet current and future market requirements.

You will be interested to hear that I was able myself to pay a short visit to the refinery at Suez and to the Hurghada Field in March of this year, and I am able to confirm in every respect the very satisfactory report given to you last year by Sir Robert Waley Cohen as a result of his visit in 1927. (Cheers.)

I am sure that you will wish me, as on previous occasions, to express on your behalf to our managers and staffs at Hurghada and Suez your appreciation of their strenuous, devoted, and successful

services throughout the year. We must not forget to add on this occasion a further expression of appreciation to the driller-in-charge and staff of the Red Sea Petroleum Company, who have carried on admirably in the Farsan Islands under conditions of extreme heat and without many of those aids to comfort which are available at Hurghada.

The Chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr. Alexander Mackay and carried unanimously, and the dividend recommended was declared.

The auditors (Messrs. Turquand, Youngs, and Co.) were re-appointed, and a cordial vote of thanks to the chairman, directors, and staff concluded the proceedings.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY.

Satisfactory Progress.

Sir Henry McMahon's Speech.

The thirty-fourth ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held on May 22 at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, E.C. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (Chairman of the company), presided.

The Secretary (Mr. T. K. Brown) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—The directors' report and the accounts for the year 1927 have been duly circulated, and as you have had an opportunity of perusing them, I presume that you will adopt the usual course of taking them as read.

As you have gathered from these, the business continues to make steady and satisfactory progress, the balance of the year's revenue being £72,118 as against £68,282 for 1926.

The revenue account shows a gross increase in subscriptions, rentals, etc., at our own branches of nearly £13,000, while the working expenses and maintenance have increased by only £600, which may be considered very satisfactory. Dividends from our associated companies are up by £3,418, due, principally, to the Bengal Corporation having paid a dividend on its ordinary shares of 7½ per cent. as against 6 per cent. the previous year, and to the Madras Company having raised the dividend on its shares from 7 per cent. to 8 per cent. The Bombay Company's accounts have been considerably delayed for various reasons, and it is not yet known whether the results of the year's working will permit of the payment of a small dividend, so that nothing has been allowed for on this account. A dividend of 1 per cent. from that company means an addition of some £2,500 to our revenue account, and should it eventually be decided to make any distribution, the amount, whatever it may be, will have to be included in the accounts for the current year—1928.

Turning now to the other side of the revenue account; working expenses and maintenance I have already referred to. Depreciation this year is higher. You will observe a new heading—that of staff provident fund £1,512, which amount now represents the company's annual contributions to the fund, based, as are those of the staff, on a percentage of the salaries drawn, and takes the place of the sum of £2,000 allotted to a staff pension fund in former years. I may say in passing that the new staff provident fund is now in thorough working order, greatly to the relief and satisfaction of those whom it has been designed to benefit, and that we are more than ever convinced of the utility and of the advantages to the company, as well as to the members, accruing from the establishment of such a fund.

The increase under the heading of income tax is due partly to tax on additional profits and partly to the alteration in the basis of assessment, which, as you know, is now on the income of the preceding year, instead of, as hitherto, on a three years' average.

Coming now to the balance-sheet, I think there is very little that calls for comment, save that I may mention that the valuation of the shares and debentures in the associated companies, which you hold, is made on a very conservative basis, which, for the present at least, your directors consider it prudent to adhere to. The increase of £6,955 over the corresponding figure for last year is due to the acquisition of certain shares in the China and Japan Company which had hitherto been in other hands, so that your company now owns the whole of the issued share capital of that company.

As you are aware, both the Oriental and its associated companies have been pasing through somewhat difficult times during the last few years and it has been deemed inadvisable to make changes either in the form of accounts or balance-sheet until matters had settled down and become normal again. I think I may say with confidence that this time is now approaching; fresh capital will shortly be needed both for our own requirements, as well as for those of our associated companies in which we are so largely interested, and during the course of the year we hope to be able to consider and formulate proposals which will be laid before you in due course.

As you will have observed from the report, the Bombay Company shows a gratifying increase in the number of exchange lines, though since the greater part of this increase took place during the latter half of the year, their accounts for 1927 cannot show the full benefit which has accrued to their revenue. I am glad to say that more recent returns show that the increase is being maintained. Since the report was printed we hear that their annual general meeting has been fixed for June 21.

The Bengal Company also shows further expansion with an increase of 957 exchange lines during the year. That company is taking steps to open another exchange in the South-Eastern district of Calcutta, which, together with other work needed to cope with the development of the system in that city, will render necessary the issue of fresh capital, in which your company will doubtless have the opportunity of participating.

Perhaps I may mention at this point that our colleage, Sir Thomas Catto, made one of his periodical visits to India towards the close of last year, and whilst at Bombay and Calcutta he took the opportunity of making the acquaintance of the directors and officials of the Bombay Telephone Company and the Bengal Telephone Company. He discussed with them the position and prospects of the companies and inspected the various telephone exchanges. He reports to us that he formed most favourable impressions of the energy, ability, and loyalty of all those connected with these companies and of the great progress of the telephone services in the respective areas in the last few years.

The Madras and Rangoon companies continue to progress, surely if slowly. The work of reconstruction and modernising which has been in progress in Rangoon for the last two years, under circumstances of considerable difficulty, is now practically completed, and with this out of the way, it is hoped that the question of a revision of the tariff will meet with similar attention.

It will, no doubt, interest you to know that the total number of exchange lines, private lines, and extensions added during 1927 by the Oriental and the associated companies amount to 4,092, which constitutes a record so far, but one which we hope may shortly be surpassed.

The motion was carried unanimously.

CYPRUS TRADE IMPROVEMENT.

The returns of imports, exports, and shipping for the first three months of this year show that Cyprus trade has well maintained its recent upward tendency. Imports total £430,548, an increase of £142,512 over those for the corresponding period of 1927, and exports amount to £323,532, an increase of nearly £51,000.

Among imports the most notable increases were in flour, cotton piece-goods, petrol, machinery, and fertilisers, and £8,000 is represented by specie. The principal increases among exports were in carobs, wines, asbestos, copper pyrites, and raw silk.

In the foreign trade there was a total increase of 15,860 tons, though the actual number of vessels entered and cleared was lower.

The output of the Anglo-Egyptian Oilfields for the week ended May 11 was 5,294 tons.

The Ionian Bank has declared an interim dividend at the rate of 6 per cent. per annum (3s. per share), free of tax, payable June 5.

It is announced that the United Glassworks Company of Zagreb has acquired one-half of the shares in the Serbian Glassworks at Parachin. The Parachin works produce glass of all kinds to the extent of over 3,000 tons per annum.

The trade agreement between Germany and Persia having expired on May 10, a provisional agreement was concluded on May 16 which gives to Germans living in Persia the same legal guarantees as have been conceded to Great Britain (says a Reuter message from Berlin). Consular jurisdiction has been prolonged for one year. Negotiations for a new commercial treaty are proceeding.

The official opening of the Bank of Greece, which is to be the new bank of issue, took place on May 17. M. Alexandre Zaimis, the Prime Minister, in reply to an address delivered by the Governor of the Bank, M. Diomede, said that the help received from the League of Nations in the restoration of Greek credit was an act of justice which would not only consolidate the position of Greece abroad, but encourage development at home (says a Reuter message).

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 16:—

Egyptian Futures.—Sakel Contract.—We have again experienced a quiet week in this market with operations mainly confined to small orders; under the combined effects, however, of poor trade support and the decline in American values prices have gradually slipped away, to-night's close being 44 to 59 points down for near and 52 to 59 points for distant positions on the week. At the moment our contract is suffering from lack of outside interest, and we cannot see any immediate developments to give the market a decided bias one way or the other. As far as the local trade is concerned, business in fine counts appears to be at a low ebb, consequently the offtake for actual is on a much reduced scale. This in itself is causing the majority of operators to look upon the present level with a certain amount of distrust; at the same time there is nothing in the position at present to encourage any short selling of sufficient importance to materially depress values. Whilst, no doubt, Alexandria is beginning to feel the absence of an active trade demand from this country, this is counterbalanced to a great extent by the satisfactory exports to other centres; these endorse the good reports that we have latterly been receiving regarding the position of the Continental fine trade, especially in France, where we understand spinners are well booked up throughout the summer months. Another item which has probably contributed to the recent steadiness in Egypt is the publication of the final ginning returns, which show only 2,362,999 kantars ginned up to the end of April, at which date the factories close down for the season. The above quantity is considerably below earlier anticipations, and as the Sudan crop from recent reports will show a decrease of nearly 40,000 bales from last year, the statistical position should from now onwards attract increasing attention, especially in the event of the fine trade in this country starting to pick up again. New crop news received during the week shows that normal progress has been made, and reports regarding the water supply are of a more reassuring character; in fact, the position in this respect has improved so much that indications are now for a sufficient supply during the summer months. Cables to hand from the other side complain of the poor spinners' demand, but at the same time point out that stocks are firmly held and give the opinion that recent liquidation has improved the technical position of the market and anticipate a steadier tone developing. For the immediate future we do not expect any decided change in the situation; fluctuations will probably be governed to a great extent by the movements in the American markets. However, should any decided easing take place we think that the opportunity might be taken to effect moderate purchases by those who are prepared to take a long view of the market.

Upper Contract.—We have to report on a series of quiet markets in this option, and most of the business that has come in has been of an unimportant character. Near positions have hardened slightly in comparison to new crop deliveries, due mainly to the fact that the few hundred bales tendered on the current month have been readily taken up by spot houses. In spite of poor trade reports the Upper varieties continue to meet with a fairly consistent offtake and, at the moment, we are unable to foresee any developments likely to cause any falling away in the takings. We maintain our opinion that at ruling differences with competitive outsiders this contract appears a reasonable proposition, and on this account consider that purchases of old crop options on easy markets are to be recommended.

Egyptian Spot.—Throughout the week the spot demand has only been of a moderate character, the declining tendency of the markets and the recent poor offtake for yarns both combining to make spinners cautious and to curtail fresh purchases as much as possible. The Sakel inquiry has been very limited, except for the inferior qualities ranging in value from 14d. to 15d.; the top grades appear to be quite out of favour for the time being. On the other hand, the Upper varieties have been in consistent request and the majority of the business transacted during the week has taken place in these; cotton ranging in value from pass to 50 on contracts has been mainly favoured, with only occasional transactions noticeable in the more expensive classes. The local selection of Pilion is limited, but the improved demand for this quality noticeable last week has hardly been maintained, as only occasional sales have been reported.

Offerings of Sudan Sakels are restricted to the lower grades, and these, in conformity with the general demand, have only moved off slowly during the week. Tokar Sakels continue to be readily taken up as soon as they are placed on the market; supplies, however, are limited to occasional consignments, as the bulk of the crop has been purchased by Continental consumers. The inquiry for shipment cotton, both Sakel and Uppers, has been restricted and only those shippers sending really cheap offers have been able to make contracts. Forwardings to spinners for the week ending the 11th inst. were 6,161 bales Egyptian and 1,731 bales Sudan. Estimated sales for the week, 1,200 bales Egyptian and 1,450 bales Sudan.

Quotations of Sakel have been reduced 45 points on the week and those of Upper and Pilion 30 points. F.G.F. Sakel to-day, 21.15d. F.G.F. Upper to-day, 15.45d. F.G.F. Pilion to-day, 16.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 10, state:—

Since our last report the futures market has been a little heavy, and prices show a slight decline on the week. The week's summary of price movements is as follows:—Sakellaridis: May, 41.66 dollars, 0.69 dollars down; July, 42.60 dollars, 0.43 dollars down; November, 43.44 dollars, 0.18 dollars down; January, 43.40 dollars, 0.05 dollars up. Ashmouni: June, 28.58 dollars, 0.32 dollars down; August, 28.85 dollars, 0.30 dollars down; October, 29 dollars, 0.36 dollars down.

Sakel.—This market has been fairly active, but the apathy shown by spinners has discouraged some of the local spectators and has induced them to liquidate their position. Another factor which has contributed to the selling out of speculative long positions is the improvement in the Sudan river levels, which improvement is materially confirmed by the decision of the Government to allow the present planting of 50,000 feddans of rice, with a hint that this area may be increased in the near future. If there was the slightest danger of the supply of water being insufficient for the cotton crop, the Government would never grant permits for rice cultivation, and with this in mind growers have now entirely banished the anxiety of the last few weeks.

The liquidation during the week has not been very happy, many operators keeping their positions in view of the firmness of American where October stands at well over 21 cents; but for the strength of American, we should have seen much more selling. The statistical position shows little change on the week. The quantity of ginned cotton up-country on the 30th ult. was larger than generally expected and the arrivals during the present week have more or less balanced the exports. In spite of the somewhat heavy tone of the market, we do not look for any serious drop in prices as long as American remains at about present levels, for the local spot stock is very firmly held and no pressure from this quarter seems likely.

Uppers.—There is nothing special to say on this market: prices are slightly lower in sympathy with Sakel. The demand from abroad has been on the poor side this week, spinners having shown hardly any interest at all in this variety.

The week's receipts amount to 139,464 kantars, against exports 149,904 kantars; the stock in Alexandria stands at 2,738,762 kantars.

Spot: Total sales this week amount to 13,000 bales, of which we estimate 6,500 bales Sakellaridis, 5,700 bales Ashmouni and Zagora, 700 bales Pilion, and 100 bales other varieties.

Sakellaridis: There has been considerable increase in the demand for this variety during the week; this applies especially to the low and medium grades. Although some business has been done in the good grades, there has been no continued demand for these qualities. Spot differences have hardened slightly for all grades.

Ashmouni and Zagora: Up to yesterday these varieties were almost entirely out of favour; to-day, however, brought a good demand for all grades, more especially from Good Fair to Fully Good Fair to Good. Spot differences remain more or less unchanged.

Pilion: The good grades grow daily scarcer and premiums correspondingly higher. There is no demand for cotton under Fully Good Fair.

Other Varieties: There are several buyers in the market for Nahda but very little cotton offering. A small business has been done in White.

Crop, 1928.—Weather conditions have been favourable during the week and the plants are progressing satisfactorily. As we have mentioned above, the river levels are showing good rises all along the line, and, as a consequence, irrigation is now more regular and generous and complaints, accordingly, much less in evidence. The river gauges, on the 9th inst., marked: Malakal, 10.44 metres, against 10.08 metres last year; Roseires, 12.60 metres, against 11.06; Wadi Halfa, 0.92 metres, against 1.01. The discharge from the Assouan Reservoir, on the 10th inst., was 788 cubic metres per second against 825 cubic metres last year and 802 cubic metres in 1926. The level of the Reservoir on the same date was 107.90 metres against 111.53 metres last year and 110.93 metres in 1926.

COMPANY NOTES AND REPORTS.

ABOUKIR COMPANY.

The report of the Aboukir Company for the year ended March 31, 1928, states that there were no sales of land during the period. An area of 77 feddans, 18 kirats, 2 sahms has been added to the estates account, having reverted to the company at a cost of £2,048. The gross receipts from purchasers amounted to £15,325, as against £26,931, of which £10,459 went to reduce their instalments, as against £22,484. The profit amounted to £5,905, as against £13,178. During the summer there was a very severe shortage of water. In the result the cotton crop suffered severely; there were 2,000 kantars less than in the previous year and the average yield per feddan was only 1.66 kantars, as against 2.66 in 1926. The price obtained was fortunately higher at £7 3s. 7d. per kantar, as against £4 17s. 5d. The poor crop prevented the tenants from paying their rents in full, and the amount passed to the credit of profit and loss is £24,381, as against £26,468 for 1926-27. The profit was £13,245, against £18,860. A dividend of 5 per cent., free of tax, is proposed, carrying forward £9,675.

Beyer, Peacock and Co., Manchester, have obtained a contract for nine shunting locomotives fitted with six-wheeled tenders from the Indian Stores Department.

At a meeting of the Banque de Crédit Roumain, Bucharest, it was decided to increase the bank's capital from 125,000,000 lei to 200,000,000 lei, by the issue of 150,000 shares of 500 lei each, at the price of 750 lei.

Notes of the Week.

The Dead Sea Salts Concession.

On May 23 the House of Lords gave a considerable amount of attention, or at least talk, to the question of the Dead Sea Salts concession. The motives behind the criticism levelled at the Government were diverse; speakers were variously anti-Semitic, the mouthpieces of one or more financial groups which are disappointed at not having picked up "a good thing," or genuinely concerned lest for one reason or another an important world commodity should have its output restricted. In some quarters there was a vague misgiving that the Government was being unduly reticent in the matter and that there was, therefore, something which had to be concealed. The impression also existed that negotiations in regard to the concession were being unduly protracted—a circumstance which in itself was a further cause of suspicion. If there was any reserve shown by the spokesmen of the Government in their replies it was only what was inseparable from negotiations of the kind involved. The business men in the House will have realised that there are necessarily limits to the amount of publicity that can be given to the details of negotiations, which from the nature of the problem are of State and international importance. One point, however, could be cleared up. It had been supposed that the concession, or at least an option on it, had been in existence for eighteen months and that it had been the subject of investigations for five years. Lord Lovat pointed out that applications for the concession were originally invited in 1925; none of those then received was suitable, and the whole matter had to be reopened. In January 1927 fresh applications were investigated; in April 1927 Mr. Novomeysky and Major Tulloch were informed that it had been decided that their application was the only one that merited consideration, and negotiations on the details of the concession were begun in September 1927. At first sight eight or nine months do seem an unnecessarily long period for settling these details, but the chief suffers are, presumably, the concessionaires. The Governments of Great Britain and Palestine, however, would probably justify the delay on the ground of the complicated nature of the concession and of the inevitably slow methods of departmental procedure, when reference between London and Jerusalem is involved.

A Straightforward Issue.

The story of the Dead Sea Salts concession was told in some detail in THE NEAR EAST AND INDIA last January, but in view of the debate in the House of Lords it may not be amiss to recapitulate it here. The potentialities of the Dead Sea have attracted attention for twenty years or more; it has never been disputed that they are enormous, but the possibility of successful commercial exploitation has remained extremely doubtful owing to a multiplicity of adverse conditions. As was stated by Lord Lovat in the House of Lords, four applications for the concession were made in January 1927. Only one of these, we believe, had attempted to work out the problem from A to Z and, as it were, to the decimal of a penny. It was common ground that the contents of the Dead Sea were so and so, that solar evaporation is cheaper than mining, and that a profit, however small, on a gallon of sea water must mount up to big figures, if the whole of the Dead Sea's contents were to be subjected to treatment. The application that was selected for further consideration represented the investigations of an expert extending over a number of years, in which matters of labour, transport and marketing had been worked out in detail. Other applications, it is understood, were more concerned to win acceptance by emphasising the lucrative nature of the concession. Having decided in favour of the Novomeysky-Tulloch scheme, the Government had first to satisfy itself as to the financial capacity of the would-be concessionaires and then to draft an agreement which would conform with all the requirements, scientific, economic and political, of a complex undertaking. It was an essential part of the Novomeysky-Tulloch proposal that, instead of launching out at once on a gigantic scale of output, based on the known contents of the Dead Sea, the Concession should be worked at first on relatively small lines, until provision

Digitized by Google

had been made for coping with all possible conditions and developments that could not be foreseen at this stage. This cautious procedure, it is to be inferred from the reports of official investigators, is one which particularly commended itself to the Governments concerned. Consequently, for the terms of what may be called the preliminary concession, it would be necessary for the concessionaires to be able to show that they had adequate backing for the restricted output, fixed by Government experts at one hundred thousand tons of potash a year. Thereafter, when the commercial soundness of the proposition had once been established, there would be no doubt as to the necessary financial support for more extensive operations being forthcoming.

The Challenge.

The challenge thrown down in Parliament to the Government regarding the Dead Sea concession embodied various points. The main grievance of the mover of the motion was that a strong financial group whose cause he was championing had not been allowed by the sheer weight of their money-bags to obliterate the claims of those who had devoted years of scientific study and practical experiment to the Dead Sea problem. The attempt to beat the patriotic drum in support of this grievance was, of course, ridiculous, unless the members of the group were named, as experience in the case of the Mosul oil negotiations will have shown. It was also suggested that in some way the exploitation of the Dead Sea concession might be carried out by means that might not meet with the approval of the Arabs of Palestine. No mention was made of any Arab application for a concession, and it is difficult to see why the Arabs, who owing to their numerical preponderance stand to reap the greater part of the benefits accruing to Palestine and Trans-Jordan from the working of the concession, should be concerned with anything else than the most efficient, the quickest and the fullest exploitation of the potentialities of the Dead Sea. The same concern must actuate the Governments of Great Britain and Palestine, and it is at least reasonable to suppose that the various considerations put forward on different occasions in the two Houses of Parliament help to account for the protracted nature of the negotiations. When the qualifications, scientific as well as financial, of the would-be concessionaires are challenged, it is no less reasonable to conclude that the Governments' first step would be to satisfy themselves on these points. The interests of Palestine require that there should be no attempt to retard the working of the concession, and British Imperial interests are concerned to see that the products of the Dead Sea should not be in danger of being merged in some monopoly that would restrict their distribution unduly or enhance their price throughout the Empire. So far there is no ground for supposing that the British and Palestine Governments are not capable of safeguarding all the interests involved. They would probably escape further criticism, if they could bring the negotiations in regard to the concession to a speedy conclusion.

The Greek Crisis.

The return of M. Venizelos to political life in Greece has not brought about the smoothing of the political waters that was its declared intention. During his absence from the country the Monarchists had agreed to accept the *status quo* for the time being and to co-operate with the Republicans under a republican régime without raising the constitutional issue. Clearly, political co-operation could not be proof against all possible divergence of opinion, but, however the parties or their leaders might disagree on particular issues, the subject of the actual régime was tabu. By returning to Greece and interesting himself in the political questions of the day, M. Venizelos first of all provoked discord in the ranks of his own Liberal Party. He considered himself obliged to take over the leadership of the party, only to find that the Monarchists, with his returns to politics, would no longer hold themselves bound to keep silent on the constitutional issue. M. Venizelos's offer to them is that if they will accept the republican régime for all time, he will leave Greece. Not unnaturally, the Monarchists do not accept this offer. Their contention is that the republican régime was, by the consent of all parties, under trial for a period of years; that it was at least in the spirit of the understanding that M. Venizelos should remain away from Greece just as much as that the Monarchists should not bring back to the country a member of the Royal House to weight the scales in favour of a Monarchy; and that M. Venizelos, by deliberately breaking his pledge, has freed the Monarchists from their promises. It is significant of the general attitude of the nation that the proposal that M. Venizelos should assume the reins of Government met with no ready acceptance but gave an impetus to Republicans and Monarchists to make the attempt to compose their differences, in order to bring about a fresh coalition under M. Zaimis. This has now been achieved, but it is evident that the presence of M. Venizelos in Greece is destined to have a further unsettling effect.

Italy and Yugoslavia.

The refusal of various Yugoslav Governments to ratify the Nettuno Conventions with Italy has been shown by the recent course of events in the country to have been based on fairly substantial grounds. An announcement that M. Voukitchevitch's Ministry had desided to ask the Skupshtina for ratification has been the signal for serious demonstrations in Dalmatia and elsewhere. There has always been in certain districts a sufficiently strong current of anti-Italian feeling to lend itself to immediate reaction to any specific stimulus. At the same time more sober opinion in the country is troubled over the Government's proposal to ratify the Conventions without any *quid pro quo* from Italy. It is true that Yugoslavia has no real claim on the Italians for any return for the carrying out of a formal act long overdue; but the Nettuno Conventions were associated with the Treaty of Friendship and Co-operations between the two countries, and it is notorious that the subsequent agreements made by Italy with Albania were not altogether within the four corners of that Treaty, at least in regard to the manner of their conclusion, whatever may be said of their contents. As Italy claims to be actuated only by general pacific intentions, it is an opportunity for her to give practical effect to her claim by meeting the difficulty that the Yugoslav Government is now encountering. The differences between the two countries turn on their respective attitudes towards Albania, or rather on the fears entertained by

Digitized by Google

each of the other's attitude towards the republic. In these circumstances it would be a simple matter for the two Governments to exchange views in order to reach a common undertaking. In certain Yugoslav circles, however, it is suggested that the Government is prompted by other motives than a desire to obtain a friendly settlement with Italy, that the decision to ratify the Coventions is linked up with loan negotiations, and that in taking the step in the way proposed an opportunity of a satisfactory settlement of Italo-Yugoslav-Albanian relations will be lost.

The Pilgrimage.

The day on which these lines will be published coincides with the culminating day of the Pilgrimage, for it is the tenth of the Dhulhijja, when Mussulmans stone the Devil and animals are sacrificed at Mecca. But the *Id ul Adha*, "Day of Sacrifice," is, of course, a time of unusual significance to the millions of Muslims not now present in the Hijaz. It is, however, to the Holy Land of Islam that the direction of non-Mussulman observers of Islam will probably be now directed, for the spectacle of the third real *Haj* to be conducted under Wahhabi auspices is an impressive one, containing lessons not to be lost on those Western Powers whose interests lie in or by or with Muslim lands. So far as it is possible to gauge at the present moment, the Pilgrimage of 1928, while not attaining the unusual dimensions which were reached last year, has still been considerably successful. Various political difficulties have been incompletely overcome—such as those pertaining to the Egyptian *Mahmal*, the passage of Persian pilgrims to Mecca across Iraq, the attitude of certain politically-minded Indian Mussulmans, and last but perhaps most important of all, the scare raised during the earlier part of this year over the possibility of internal warfare in Arabia between the Najdis and the inhabitants of Iraq and Trans-Jordan. That the *Haj*, in these circumstances, should have achieved the success which is already reported, is really a remarkable achievement, which would seem to prove conclusively that the leader of the Wahhabis, whatever his political opponents may say against him, has the cause of Islam genuinely at heart.

The Holy Carpet in Mecca.

It may be remarked, incidentally, that the refusal of the Egyptian authorities to consent to King Ibn Saoud's conditions for the dispatch of the *Mahmal* appears to have led to an enhancement of the Wahhabi King's personal prestige elsewhere in Islam than in the Land of the Pharoahs. For it is reported that, at a great assembling of Mussulmans at Mecca on May 25, the *Kiswah* which was this year made by King Ibn Saoud's order, and at his expense, in India, was the subject of much approbation. Delegates at this meeting when the Holy Carpet was displayed were present, it is said, from India, Java, Syria, the Yaman, Algeria, Tunisia, Egypt, and South Africa. It is distinctly interesting, by the way, to note that at this gathering the Watanists of Egypt, who, whatever may be said of their political views, can scarcely be accounted less good Mussulmans than the majority of the more moderate Zaghloulists, strongly supported the Wahhabi King's point of view in connexion with the Egyptian *Mahmal*. To the Watanists' expression of regret at the conduct of the Egyptian Government, King Ibn Saoud is reported to have claimed that he was a Muslim first and an Arab afterwards. It is perhaps natural that as yet nothing should have been reported from Mecca at all derogatory to the Wahhabi King, but in this respect, at any rate, there seems to be no reason to doubt his word. He has his finger on the pulse of Islam without doubt, and if that contact is advantageous to him personally, it is perfectly obvious that it is advantageous to Islam also. For who is there besides him now in a position fitly to govern the Holy Places?

The Control of the Desert.

It was a pity that an agreement between the Wahhabi authorities and the British Mission under Brigadier-General Sir Gilbert Clayton on the subject of the control of the inner deserts of Arabia could not be reached before the advent of the Pilgrimage, but there is no reason, as yet reported, at any rate, to suppose that the suspension of negotiations announced by the Colonial Office on May 22 implies their resumption in the summer—perhaps in July—in a more unfriendly atmosphere. On the contrary, every account emphasises the good-will in which these negotiations were conducted, and the departure of King Ibn Saoud to Mecca gave to the British Mission an opportunity, which will scarcely not be wasted, of, so to speak, serving up hot the Wahhabi King's possibly peppery views upon some of the points at issue. In any case, the British Mission intends to return to Jidda "at the earliest opportunity." It is to be hoped, therefore, that what was sown in the vernal breezes may come to fruition in the æstival calm; but we think, all the same, that Sir Gilbert Clayton is to be commiserated on having to revisit a land with the beauties of which he may be familiar, but the climate of which cannot be an irresistible attracton in the month of July.

The Y.M.M.A.

As reported by our Palestine Correspondent in our last issue, one of the unexpected results of the International Missionary Council recently held in Jerusalem was the establishing, in the larger towns of Palestine, of a "Young Men's Muslim Association," with the object of counteracting the effect of Christian institutions in the Holy Land. This Muslim Association was formally inaugurated at Jerusalem on May 22, its purpose being stated as engaging, along non-political lines, in constructive social and cultural work. That this is no mere fanatical *riposte* to such endeavours as the "Young Men's Christian Association" would seem to be guaranteed by the *personnel* of its governing committee, which includes Ahmed Effendi al Khalidi, Principal of Government Arab College, Auni Bey Abdul Hadi, formerly Adviser to King Faisal, and Omar Effendi Salih al Barghuthi, a serious student of Palestinian folk-lore. One may say, therefore, that whatever the causes which appear to have impelled its formation, this "Young Men's Muslim Association" is a notable sign of the times in Palestine and one to be welcomed by all who wish the Holy Land well. Palestinians who are proud of their country can do infinite good in attempting to lead their old yet ever new land along the lines of progressive culture, and the more strictly the somewhat sterile political controversies are eschewed, the more surely and beneficially will that culture permeate the country.

M. VENIZELOS'S RETURN TO POLITICS.

If M. Venizelos was under any illusion regarding the effect of his resumption of political activities in Greece, he has been quickly undeceived. In recent Greek history his name is associated with the cleavage of the country into two fiercely hostile camps, which did not stop short of murder, judicial or otherwise, in the furtherance of their political vendetta. It required the iron hand of General Pangalos to bring the warring groups to a saner frame of mind. Stirred by the extravagances of his régime, they composed their own differences sufficiently to make common cause against the Dictator, and after his downfall carried through the original purpose of his dictatorship by voluntary co-operation, Republicans and Monarchists, in a coalition Government. Political stability is not a characteristic of Greek public life. In the twenty months that have elapsed since the incarceration of General Pangalos, who still remains without a trial, there have been several changes of Government, and the harmony of Monarchists and Republicans has worn thin; but there had been no revival of that white-hot passion which prompted the members of each group to regard the others, individually and collectively, as the sworn enemies of their country. There is every prospect that a return to this state of affairs will be the ultimate outcome of the re-entry of M. Venizelos into Greek political life. For the moment the hatred of his political opponents may be concentrated on his own head; but the Greek is ever an ardent partisan, and as M. Venizelos's followers rally round their hero to defend him from attacks and abuse, so they will attract to themselves some of the fire of the opposing camp, replying in full measure on their own account, until the engagement has once again become general, and Greece reproduces the unhappy spectacle of a few years ago.

So long as M. Venizelos remained out of the country the co-operation of the formerly hostile parties was maintained, albeit in an ever-weakening degree. Such political changes as took place were due to the fissiparous tendencies of Greek political life rather than to any definite recrudescence of the Monarchist-Republican vendetta. M. Venizelos's return to Greece threatens to bring the political cauldron once more to boiling point. The trouble began in his own Liberal Party, or rather in the largest section of it, which exists under the name of Progressive Liberals. The leader, M. Kaphandaris, noting the increasing interference of M. Venizelos in Greek politics, realised that the latter's *ex cathedra* judgments could be delivered only by virtue of his former leadership of the Liberal Party, and he refused to continue his own equivocal position. If the Progressive Liberals could think of themselves only as the former Liberal Party that sat at the feet of M. Venizelos, let them return to their former allegiance, and M. Kaphandaris would form a fresh party—an easy matter in Greece. This step entailed his resignation of the Ministry of Finance, as he could no longer contribute the same quota to the Coalition. The withdrawal of the Progressive Liberals meant the fall of M. Zaimis's Government and necessitated the formation of a new Cabinet with a possible regrouping of parties. In the meantime M. Venizelos assumed the leadership of the Liberal Party, and thus as head of the largest group of deputies in the Chamber he becomes a candidate for the post of Prime Minister. The instinct that warned him not to set foot in Greece for several years, when party passion was at its most unbridled stage, caused him at first to hesitate to assume the Premiership. In a public statement he justifies his return to politics, after repeated pledges not to resume his political activities, on the grounds that he could not leave the Liberal Party without a leader, that Greece runs the risk of the suppression of her free institutions by a return to dictatorship, and that his intervention as head of the Liberals constitutes the best guarantee against any attempt to suppress the free régime. He concluded by recommending the formation of a Cabinet from the Republican parties under M. Sophoulis, for the purpose of passing the Senate Bill and for holding a simultaneous general election in September, both for the Chamber and for the Senate to be constituted by the Bill.

M. Venizelos's proposal, however, could not be carried out, on account of the hostility which his return to politics at once engendered. The ups and down of his political career are due in large measure to a failure to understand his own people. It was as a comparative stranger, although a name to conjure with, that he arrived from Crete in 1910, to rid the country of the Military League and to reimpose constitutionalism. In the face of the danger from within that then threatened he imposed his will on his countrymen by sheer force of character. For a political following he had to attract to his standard the bulk of those who, in the changes brought about by commercial and industrial development, found themselves debarred in spite of pecuniary qualifications from social and political prominence. Under the ægis of M. Venizelos they obtained suddenly a position in the country which previously they had striven for in vain. Thus—to give names to the new groupings—M. Venizelos became the hero of the middle classes, to the upper classes he was the "upstart," while the rank and file remained indifferent, retaining its traditional leanings. The military successes of the Balkan Wars provided the two latter groups with their hero in the person of King Constantine, and forthwith the rivalry that was to lead to such fatal results for Greece was joined. In the Great War M. Venizelos played his cards more cleverly than King Constantine; he gained the ear of the Allies and identified himself with the grandiose scheme of Greater Greece, that fired Greek imagination. When his house of cards fell about his ears, there came a revulsion of feeling, and he withdrew impotently from the welter of civil life for which he was primarily responsible. Mistaking the relative calm since restored as a sign of his own rehabilitation, he has returned only to find the first show of resentment among his own Liberals. M. Venizelos has served Greece well and also very ill. For the good that he has done Greece is prepared to bury the past and to give him honour, on condition that he does not revive and perpetuate the ill. It seems a pity that he should let loose again the passions that had with such difficulty only just been damped down.

The Near and Middle East*

From Our Own Correspondents.

Belgrade, May 24.

Politics and the Loan.

Last night the Belgrade Government met and discussed the Nettuno Conventions, which, although they were initialled in 1924, have not yet been ratified by the Skupshtina. After their contents had been explained by Dr. Marinkovitch, the Cabinet accepted the Conventions and empowered the Foreign Minister to bring them before Parliament for ratification. It was the question of the Nettuno Conventions which broke up the last Governments in which the Croatian Peasant Party took part. In view of the extreme unpopularity of these Conventions not only in Slovenia and Croatia, which are most nearly affected, but in Serbia too, this is a very bold stroke of the Government's and shows its great eagerness to prove its desire for friendship with Italy and for the renewal of the Pact of Friendship, signed in 1922, which must be either renewed or denounced by the end of July. Italy has made it clearly understood that the ratification of the Nettuno Conventions is a condition antecedent to the opening of negotiations for the renewal of the Pact, and it is reported that certain of the Great Powers, Great Britain to the fore, have urged the Yugoslav Government to take this step. But in the face of the weakness of the present Government, which is due to the differences again growing up between the Democrat and Radical sections of which it is formed and to those still existing between the various factions of the Radical Club, it is a matter of doubt whether the Skupshtina will ratify the Conventions. It is possible even that this matter may be one on which the Opposition, which is fanatically against ratification, may win the support of one or other of the Government groups and defeat the Government.

In some quarters the question of the ratification of the Nettuno Convention is bound up with that of the £50,000,000 loan which the Yugoslav Government is now negotiating in London with the Anglo-American financial group. It is suggested that the ratification of these Conventions and the renewal of the Pact of Friendship, which this would make possible, are claimed as guarantees that the Anglo-Saxon bankers seek before investing their money in Yugoslavia.

If this be true, it becomes all the more clear that in every way the future of the Yugoslav Government is bound up with its success or failure in obtaining the loan. During the last fortnight the Government has been threatened from many quarters and especially from behind, from the dissatisfied element in the Radical Club. But for the time being an agreement has been reached that they shall withhold their attacks so as to give the Government every chance to succeed in concluding the loan so necessary to the economic well-being of the country. If the negotiations fail, then the Government is certain to fall immediately. If they are too slow, the impatience of the dissatisfied elements may prove too great and it may fall. But if they succeed, the prestige which it may thereby win may enable the Cabinet to retain office and to defeat the attacks of its fierce opponents in the Opposition as well as those of its dissatisfied supporters. Nevertheless, the general conviction is that when the question of the loan is definitely settled one way or the other there will be great changes in the Government.

Trouble in the Ministry.

Two new features in the internal political situation are the renewed dissatisfaction of M. Davidovitch with the work of the Radical section of the Government, and the organisation throughout the country of great "non-party" meetings of peasants.

M. Davidovitch has just returned from a tour of South Serbia, made in company with one of the Democrat Ministers, and it is reported that he is profoundly dissatified with the present régime there, which was, according to the conditions on which he re-entered the coalition after the last crisis, to have been greatly ameliorated. This may lead to new difficulties for the Government.

Recently a number of so-called "non-party" meetings have been held in Valyevo and other centres and have been packed with masses of peasants who enthusiastically passed resolutions calling on the Government to deal at once with such matters as the indebtedness of the peasants and agricultural credits. The movement is supported by the independent Radical, M. Nastas Petrovitch, and by certain of the Serbian Peasant Party members of Parliament. It may have considerable effect on political developments and lead either to the foundation of yet another political party here or else to the great growth of the Serbian Peasant Party.

Yugoslavs and Czechs.

Many bonds exist between the Yugoslavs and the Czechoslovaks—blood ties, common experience under Austro-Hungarian domination, and common dependence on the Peace Treaties which ended the World War for their existence and safety, to mention a few. Even before the War many Yugoslavs chose to study at Prague rather than to go to Berlin, Vienna, or Paris, and M. Stephen Raditch lived for many years there and took a Czech wife. In order still further to strength the political, economic and cultural bonds between them a parliamentary committee has been established in each country and regular meetings are held at which problems of mutual interest are discussed.

A delegation of Czechoslovak members of Parliament is now visiting Yugoslavia. It received a truly Slav welcome

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

EGYPTIAN MINISTRY OF EDUCATION.

APPLICATIONS are invited for the post of Assistant Master to teach English in Egyptian Government Secondary Schools.

Candidates should be between 24 and 34 years of age, must have University Degrees (preferably in Honours) and should have experience of teaching in Secondary Schools. Diploma in Education is desirable.

Initial Salary L.E.450 (about £461).

Full particulars and form of application may be obtained from The Director, Egyptian Education Office, 39, Victoria Street, London, S.W.1

EGYPTIAN MINISTRY OF EDUCATION.

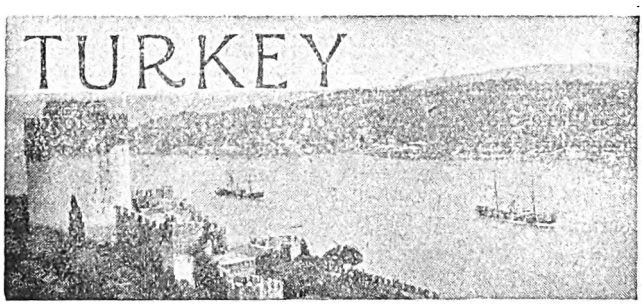
in Belgrade, where meetings of the various sections dealing with commercial matters, navigation and railway problems, Customs and postal difficulties, art and education were begun. The commercial section decided that intensive action should be taken to ensure the sale of Yugoslav products, such as hops and tobacco, in Czechoslovakia and of Czech products, such as manufactured goods and beer, in Yugoslavia. To this end a new Czechslovak-Yugoslav Commercial Treaty should be concluded; a new convention of transport matters should be made, and Czechoslovak-Yugoslav Chambers of Commerce should be founded. In other fields it was decided that the teaching of Czech should be encouraged in Yugoslavia, that a Yugoslav Students' Home should be founded in Prague, that exchanges of professors should be arranged, and that exhibitions of Yugoslav art should be arranged in Czechoslovakia and of Czechoslovak art and industry in Yugoslavia.

The delegation has now left for a tour of Bosnia, Herzegovina, and Dalmatia and will conclude its meetings in Dubrovnik, oldest of Slav republics and most beautiful of all the Adriatic towns.



Constantinople, May 22.

The Royal Afghan Visitors.

On May 19, King Amanullah of Afghanistan and his consort, Queen Suriya, arrived in Constantinople from Sebastopol. The Izmir or Smyrna—a British-built vessel, one of the latest additions to the fleet of the Seir-i-Sefain, Turkey's P .and O.—which had been specially fitted out for the journey, was escorted across the Black Sea by two Turkish destroyers up to within a dozen miles of the Bosphorus entrance, when a squadron, headed by the cruisers Hamidieh and Mejidieh, met the Royal visitors and piloted them down the Bosphorus to Haidar Pasha, the terminus of the Anatolian Railway, whence the Royal couple proceeded to Angora by the President's *train de luxe*.

A flight of sea-planes showered bouquets and posies around the Izmir on her passage down the Straits, whilst the thunder of saluting batteries and the booming and bellowing of ships' syrens intermingled with the *Tchok Yashas* ("long may they live") from the throats of thousands of school-children lined up on the shores of the Bosphorus for the occasion.

An interchange of compliments, duly provided for in the programme, took place on the departure platform at Haidar Pasha, when King Amanullah, in the Turkish language—for his want of proficiency in which he apologised—addressed the assembled dignitaries, consisting of the Governor-General of Constantinople, the Commander of the Third Army Corps, the Mayor of the City and the leading lights of the Bench, as his "dear brothers," and told them that the freedom-loving Turk was the very *Gheuz-babeghi*—the "apple of the eye" of every freedom-loving Afghan. The King wore the undress uniform of an Afghan General, whilst Queen Suriya, simply attired, but wearing the most fashionable and coquettish of Parisian toques, became the cynosure of all eyes.

At Angora the King was received on the railway platform by Mustapha Kemal Pasha, admirably attired in morning coat—the handiwork of a well-known Saville Row artist—plus the now officially prescribed top-hat. The first handshake between King and President was immediately followed by the "accolade"—which is a customary form of salutation between males in this country and is resorted to on meeting after long separation by even the humblest in the land. The Royal visitors are to spend about a week in Angora, whence they will return to Constantinople for a short holiday, a special suite of rooms having been reserved and re-decorated for them at the former Imperial Palace of Dolma-Baghtche on the shores of the Bosphorus. It is expected that the Royal party will return to Afghanistan via Batum and Persia.

The Orient Express.

The recent speeding up in the time table of the Simplon Orient Express—which took effect as from May 15—and which has shortened postal communication between this country and Western Europe by some two hours, has had the pleasant effect of placing the London daily newspapers in the hands of Constantinople readers a whole day earlier than formerly. The express, up to a week ago, arrived at Stamboul at 5.15 p.m., and papers were delivered the following forenoon, generally about 11 a.m. The train now runs into Sirkedji station at 3.30 p.m., and by hustling a little it has been found possible to deliver in the town the same evening—a creditable performance of the Turkish Postal Authorities.

Railway Problems.

It is anticipated that a further saving of time may eventually be made as an outcome of the deliberations of a number of railway specialists now assembled round a baize-covered table in Constantinople at the "Trans-Continental Railway Conference." The immediate object which these men have in view is to solve the problem of linking up the normal-gauge European with the multi-gauge Anatolian, Syrian, Palestinian and Egyptian systems.

The question of spanning the Bosphorus at its narrowest part with a railway bridge has been vaguely mooted at various times, but it would appear that, if on no other than financial grounds, the linking up of Sirkedji and Haidar Pasha by a service of railway-ferry-boats stands a much better chance of early realisation.

It has been freely rumoured that some of the visiting railway dignitaries of the Western world—notably those of the P.L.M. and the Southern Railway—accustomed as they are, no doubt, to comfortable Victoria-Dover Pullmans and luxurious "Blue Trains"—did not find the accommodation in the poor old "Simplon Orient" particularly in the Balkans, a tedious sector at the best of times—quite as comfortable and entertaining as could be desired, whereby we, of the older generation exiled out here, with vivid memories of pre-War railway journeys across Western Asia Minor or down the length of Syria, have had one more of our fast-disappearing illusions hopelessly shattered. We did think, we did feel, on stepping into our reserved coupé at Sirkedji station homeward bound in the good old "Orient Express," that we were in the very lap of luxury, that we had been suddenly transplanted into the heart of civilisation, and in this frame of mind—a clattering and nerve-shattering "reverie" towards the end of the journey perhaps—we would continue, in complete oblivion of all Continental impressions, until "Anything to declare, Sir?" and the twinkle in the blue eyes of the Dover pier policeman gave us just that incipient little lump in the throat, that twangy

little catch in the breath which Britons from overseas visiting the homeland after years and years without furlough are so prone to suppress and dissimulate with either the nervous little cough of the timid and reserved or that ostentatious clearing of the throat of the blustering and bold.

TRANS-JORDAN.

Amman, May 17.

The Organic Law.

Great satisfaction has been shown here at the new Organic Law, which has recently been published, and which follows that of Iraq in almost every particular. This is especially a matter for congratulation, as the wording of some of the clauses of the recent Treaty gave rise to a certain amount of discontent.

The Locusts.

Unhappily Trans-Jordan has not escaped the long-threatened plague of locusts, which arrived about the middle of April, and, in spite of the fact that flame-throwers are being used very effectually, great damage has been done to the crops. This is a very serious matter, following as it does, on a bad season, owing to the lack of late rains.

Social Activities in Amman.

Those people who only knew Amman in the early days of its life as capital of Trans-Jordan, when social amenities were practically unknown, would hardly have recognised it during the course of the last few weeks, when gaieties have followed rapidly upon each other. On April 19 a delightful 'cello recital was given at the Amman Sports Club by Dr. Tezio, who is in charge of the Italian Hospital in Amman. The annual R.A.F. sports took place on April 21, and were followed in the evening by a dance at the club. On the 28th the R.A.F. gave a most enjoyable dance, which was kept up till the early hours of the next morning. On May 5 "The Importance of Being Earnest" was performed by some of the residents of Amman, in aid of the club, certainly the first entertainment of the kind ever seen in Trans-Jordan. It proved to be such a success that it is hoped it will be followed by others. A still greater innovation was inaugurated in a performance given solely for the Muslim ladies, at which the audience was provided with an Arabic synopsis of the plot. From all accounts they followed the story with the greatest interest.

General News.

By permission of Lieut.-Colonel Bewsher, O.C. the Trans-Jordan Frontier Force, a Military Tournament, which has been touring Palestine and Trans-Jordan, gave a performance at Amman on May 7. All the items were wonderfully well carried out, and the Musical Ride on camels, in particular, was most effective. It seems a pity that the difficulties of transport make it impossible that the whole show should be repeated at the Military Tournament in London, where it would certainly prove a great attraction.

On May 13 the High Commissioner, Lord Plumer, and Lady Plumer visited Amman, and spent the night at the new Residency with the British Resident, Lieut.-Colonel Cox, and Mrs. Cox, who gave a tea-party for the British in the afternoon, and later entertained the Amir Abdullah and the Muslim Executive Council to dinner.

CYPRUS.

Nicosia (delayed).

The Legislative Council.

The address in reply to the Governor's "exceptionally important speech" is published. The Council expresses gratitude to the Governor for his endeavours in the interests of the country. It agrees that a loan of £500,000

should be contracted, for the service of which it is held that the surplus revenues should suffice, if economies are effected. Referring to the artesian water found at Syrianokhovio, it hopes that further experiments will be carried out throughout the island. It looks forward to the transference of fiscal burdens from agriculturists. Various suggestions are offered. As regards tobacco, the settlement of families expert in tobacco growing from Macedonia is advocated, so that the methods followed there may be introduced. If this is difficult, skilled men and women from that country should be introduced for a fixed period. Full co-operation is offered in respect of a radical reorganisation of island municipalities. It is asked that the new Chamber of Commerce may be adequately subsidised.

Water Rights in Cyprus.

Water rights have, no doubt from time immemorial, given rise to disputes between communities and individuals. The flow of streams, especially those that do not run dry in summer, is portioned out for all days and hours of the week, and villagers in many places work all night over the distribution. A serious quarrel at night between two villages, near a river that flows into the great Morphou Bay, led to protracted litigation, which cost one village over £12,000 before it was finally fought to a finish and settled in London on appeal to the Privy Council.

Control of Wine Exportation.

A recent Bill to restrict the exportation of wines manufactured in Cyprus met with some opposition. Export to Great Britain, Ireland, and British Colonies is prohibited, provided that the Governor may authorise such export by licence, subject to such conditions as may appear to him desirable. The object is to ensure a quality of wine equal to the standard required for sale and competition in British markets. While our young Dominions, Australia and South Africa, have succeeded in producing wines of uniform types, which find an increasing sale in Britain, Cyprus, which has produced wines for hundreds, indeed thousands, of years, has not, in general, improved upon the crude processes which impede the production of wines of uniform quality. Much adulteration, moreover, is practised. The law is a beneficial one. It must be hoped that some day the island will produce wines which will find their way to favour in British markets. The excellent brandy exported by a Limassol firm now finds an increasing sale in Britain.

General News.

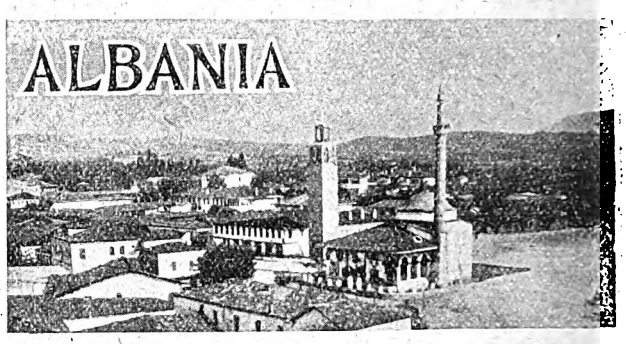
The King's Birthday will be celebrated on June 4; and early in June Sir Ronald, with Lady Storrs, will proceed, on three months' leave, to England.

The Bishop in Jerusalem, Dr. MacInnes, is paying a visit to Cyprus.

A draft law is being prepared for the suppression of Communism.

The Patriarch, Meletios, is expected from Egypt to visit Cyprus for the summer season. His Eminence was for some years Bishop of Kitium, in Cyprus. He will probably choose as residence the Monastery of Mesopotamos, which is beautifully situated in the Troodos forest—a forest that he did much to enlarge and improve when he was on the island.

ALBANIA



Tirana, May 18.

The New Ministry.

On May 11 Albania was accorded a new Government. The change was sudden and unexpected. The real causes of it are not yet known, for during the last three years changes of Government have not originated either owing to or in Parliament. As on previous occasions, the outgoing Cabinet merely announced its resignation. At the beginning of the year the likelihood of a change was mooted, and the names of those who would probably become the new Ministers were mentioned, and these have now been appointed; so that the changes may be said to have been contemplated some time ago.

Outwardly the Ministerial resignations originated in a difference of opinion between the Minister of Public Works and the Minister of the Interior over a new Law regulating the toll tax for the construction and maintenance of roads. The divergence of view cropped up in the Chamber of Deputies on May 9, and two days later the President of the Republic nominated the following as the new Cabinet:—

HIQMET DELVINA	Minister of Justice.
KOSTAQ KOTA	Minister of the Interior.
ILIAS VRIONI	Minister of Foreign Affairs.
XHAFER YPI	Minister of Public Education.
SALIH VUCHETERNI ...	Minister of Public Works.
MILTO TUTULANI	Minister of Finance, and of Agriculture *ad interim*.

M. Delvina is a Deputy, M. Vucheterni a Senator. M. Kota was formerly President of the Chamber of Deputies; MM. Vrioni and Ypi held the same portfolios in the previous Cabinet. It has been a custom for the last three years on the formation of a new Ministry to leave at least one post vacant for the time being.

The Ministerial Programme.

The new Cabinet has presented itself to the Chamber and the Senate to announce its programme. In regard to foreign relations it was stated that "the treaties and conventions in force will be strictly observed, especially the treaty of defensive alliance concluded with Italy. In this way, inspired by the ideas of the principles of the League of Nations, Albania will contrive in every way

possible to show to the civilised world that she is truly an element of peace in the Balkans, while always safeguarding her independence."

The last sentence is, without doubt, significant.

The programme also refers to the two questions outstanding between Greece and Albania, i.e., the protection of Albanian minorities in Greece and the question of properties belonging to Albanian subjects in Greece which have been confiscated.

In regard to internal affairs, the Government, after a reference to the laws to be drawn up for the communes, laid special stress on the importance which is to be attached to physical education. On this subject it may be mentioned that nine Italian officers have already been distributed in the nine prefectures for the introduction into Albanian schools of the Italian Balilla system.

A Rumoured Dissolution.

For the last two weeks a rumour has been in circulation of the pending dissolution of the Chamber of Deputies. The present Parliament comes to an end in six months' time; consequently it is not apparent why dissolution at this particular moment should take place. The alleged motive is given as a conflict over the manner of nominating the members of the State Council, for the establishment of which a project is now before Parliament. Some of the clauses of the Bill have been modified by the Senate, but the Chamber sets store on retaining them in their original form.

Albania and the League of Nations.

MM. Ilias Vrioni, Mehdi Frasheri and Xhafer Villa, that is, the Minister for Foreign Affairs, an ex-Minister and the General Secretary of the Ministry for Foreign Affairs, are going to Geneva to represent Albania at the next meeting, on June 5, of the Council of the League of Nations.

ITALY AND THE NEAR EAST.

Under the auspices of the Near and Middle East Association, a lecture was on May 21 delivered by Dr. Camillo Pellizzi upon "Italy and the Near East," at 63, Queen's Gate, by kind permission of Lady Boyle. The substance of Dr. Pellizzi's lecture we are privileged to publish below. He said:—

"I can speak on this subject only as a man in the street who belongs to the Italian nation and follows his country's policy through the Press and, sometimes, through the conversation of well-informed politicians. This is bound to be, therefore, a very general survey that has no claim to technical precision and exactness of details.

"The general foreign policy of Signor Mussolini's Government has been the subject of frequent misunderstandings and misgivings in the public opinion of foreign countries. It must be stated beforehand that the so-called 'Imperialism' of Fascist Italy is of a moral and demographic character. Italy is the youngest of the great European Powers, and has found practically the whole surface of the world already distributed among the pre-existing nations; she also suffered from a severe diplomatic *débâcle* at the Peace negotiations of Paris, following the Great War. So even this last chance that she had of sharing in the development and exploitation of the world's less civilised countries was lost to her. But, if the whole surface of our planet is now politically occupied, it is by no means economically exploited and culturally developed. There are still large possibilities, on all the Continents of the world, for the employment of the qualities of the Italian people: readiness to do hard work, thrift, social discipline. Only, the Italians find themselves at a disadvantage over against other civilised nations, as they have to emigrate into foreign countries and must renounce their own nationality if they want to live and to work on equal terms with the labourers who come from more fortunate lands. The Fascist régime aims at levelling this incongruous disproportion of rights and possibilities, without necessarily involving violent changes in the present balance of political power all over the world.

"Anyone who has studied modern Italian conditions knows that present-day Italy is a nation of labourers, *la grande Proletaria*, and not a military organisation of conquerors. Now labour wants peace, if it has to get full possibilities for its employment and development; but it also wants equality of moral and material rights all over the world.

"It follows that the Italian policy in the Balkans cannot be one aiming at territorial occupation or at a military supremacy. The Balkans may be, and always have been, a serious danger to the pacific development of Italian life, but they have never been, and could never be, the 'promised land' of Italian colonisation, industrial, agricultural, or otherwise. Every Balkan adventure of an imperialistic nature would always cost much more than it could pay. Italy is, therefore, in a negative and defensive attitude towards the Balkan Powers. The difference between Signor Mussolini's policy in the Balkans and that of his predecessors consists in the fact that Signor Mussolini thinks a defensive policy in the Balkans must not be passive and, so to say, fatalistic, but that it must be active and energetic. It must foresee and prevent the dangers that may hover over a distant future.

"The main problem is that of Serbia: a nation with glorious and ancient traditions, but mainly of a military kind; a nation, therefore, inclined to rely on her military qualities alone for the fostering of her future fortunes. Yugoslavia is a not altogether happy family of three different nations, very closely controlled, as far as politics go, by the least developed among them, Serbia; they are kept together much more by the fear and instinctive (and sometimes unreasonable) hatred of neighbouring nations than by a positive and constructive feeling of solidarity. The Serbians consider that the maintenance of the threefold State, and their pre-eminence in it, can be secured only if the life of the nation is always kept in a state of outward tension and military strength, militarism being her main contribution to the existence of the whole.

"It happens that all the Yugoslav ports on the Adriatic are within the borders of Croatia, and that Serbia could secure ports of her own only by annexing at least the northern part of Albania. Besides, it appears that there are as many Albanians within the present-day frontiers of Yugoslavia as there are in the free State of Albania; hence the continuous fear in Belgrade that an Albanian irredentist movement may spread within Yugoslav territories, morally or even materially supported by the danger of Serbian interference in Albania, if only by means of those half-nomadic *komitajis*, whose nationality and allegiance seem apt to change according to the personal interests of their leaders and the rivalries between conflicting tribes.

"The geographic and strategic position of Italy in the Adriatic Sea and along her eastern frontier does not allow her to maintain a neutral attitude on the events of Albania, so she had to take steps to secure that Albania should in no case fall under the direct or indirect power of any of her neighbouring countries. This is the inspiring motive, as far as Italy is concerned, underlying the Tirana Pact. On the eastern shore of the Adriatic Italy is in a purely defensive attitude; Albania is not a *tête de pont* for invading the Balkans; even strategically, it could never be made one, in view of the dangers to a conquering army represented by the safe and near harbours of the Dalmatian archipelago, entirely controlled by Yugoslavia and

by her present or future Allies. The Pact is also very advantageous for Albania, both politically and economically (1).

"With Yugoslavia, the Treaty of Rapallo proved insufficient; most of the points agreed upon in that document did not prove quite workable in practice, unless further agreements were to be reached. This led to the meeting at Nettuno, and the drafting and initialling of a more detailed Covenant, which was then submitted to the Italian Chamber, was approved of by it, and thus became efficient as far as Italy was concerned, provided that an equal approval of it were granted by the Yugoslav Parliament. So far the Yugoslav Parliament has not so approved, and the matter is at a standstill. The *modus vivendi* between the two Governments was renewed for another six months at the end of last year, and conversations are in progress through the ordinary diplomatic channels. If the Nettuno Agreements were never to go through the Yugoslav Chamber, the political situation between the two countries would become, not preoccupying or serious, but certainly unpleasant. It seems that the Government of Belgrade is careful to maintain itself on good diplomatic terms with Italy, but the Press, largely inspired by the military *cliques* and *camarillas*, keeps the public opinion of Yugoslavia in a continuous state of unrest and foments a Chauvinistic hatred of Italy that is apt to explode in unpleasant demonstrations and popular movements conducive to political complications. The Government of Belgrade seems to be, in this respect, far wiser than the public opinion of its country; and one is kept wondering how far this discrepancy of attitude is encouraged, willingly or not, by those responsible for Yugoslavia's fate and by her foreign Allies and supporters.

"The fact that the British Foreign Office has not raised objections to Italy's policy in Albania, and that Signor Mussolini is even supposed to have hinted at his future policy concerning Yugoslavia and Albania in the Leghorn meeting with Sir Austen Chamberlain (September, 1926), should lend further evidence to the assertion that Italy's policy is defensive and inspired by a desire for peace. The most sceptical of politicians would never suspect Sir Austen of pursuing covert imperialistic aims in the Balkans; besides, if such aims existed, they could be hardly reconcilable with the alleged 'Imperialistic' policy of Signor Mussolini.

"The alliance between France and Yugoslavia has created a certain sensation in Italy, and is still a cause of public anxiety there. Italians ask themselves whether France aims at creating and maintaining a 'balance of Power' in the Balkans (which seems to be the only sound policy, if the independence of all the Balkan nations is to be secured), or whether she intends to develop Yugoslavia's power still further at the expense of the safety and the prestige of Yugoslavia's neighbouring countries. Only time and the future course of events will give an answer to this question.

"Italy is among the most important nations in the foreign trade of Yugoslavia, and that country has so many possibilities of internal and economic development that she might become one day one of the main centres of Italy's commerce abroad, importing manufactured goods and exporting agricultural and mineral products. If the present misunderstandings and misgivings were ever to be cleared away, and if the megalomania of certain Yugoslav quarters were not to be further encouraged from abroad, Italy would probably become a helpful neighbour and a friendly supporter of Yugoslavia's progress.

"Roumania seems to be, at the present moment, much more concerned with her internal problems than with international politics. By the recognition of her annexation of Bessarabia, Italy proved her friendly intentions towards Roumania, and closer commercial and diplomatic relations ensued. Roumania need not sever her allegiance with the 'Little Entente' to foster her friendly connexion with the country whence her people came in ancient days; Italy's alleged suspicions against the 'Little Entente' are but one of the many unwarranted commonplaces of international propaganda against Italy and her present régime.

"Towards Bulgaria, the Italian people are inspired by the same sentiments which made them approve of the loan made to Austria after the War, and of the Italian diplomatists' firm attitude at the Peace Conference of Paris, through which the new State of Austria was secured a better chance of existence. If Bulgaria was misled and made to enter the War on the side of the Central Empires, much against her true interests, this should be no reason for keeping her under political and territorial conditions which no nation could endure that had not the Bulgarians' qualities of thrift and self-sacrifice. Bulgaria's gallant fight against the disruptive forces of Bolshevism that were busy at work within her national body aroused all the sympathies of the Italians. At present, relations between the two countries are most friendly; the 'Commercial Bank of Bulgaria,' closely connected with the 'Banca Commerciale Italiana,' comes second in importance after the National Bank. Signor Mussolini has lately suggested that the Allies should alleviate Bulgarian Reparation payments, in view of the recent calamities that befel that country; it is to be hoped that the other Powers concerned will adopt a similar policy.

"A Pact of friendship between Italy and Greece has already been signed; it is authoritatively reported that two similar treaties are now to be initialled, between Italy and Turkey (probably the result of the recent meeting of Signor Mussolini with the Turkish Foreign Minister in Milan), and between Turkey and Greece; this last treaty involving the final solution of claims and difficulties arising from the settlement of the war of 1920. This system of defensive alliances will play a great part in securing the peace and prosperity of the eastern shores of the Mediterranean for many years to come. The fairy tale of a proposed Italian occupation of Anatolia has finally appeared as an obvious absurdity even to the Angora Government; it was one of the many inventions which a certain kind of journal and of telegraphic agency made it their business to spread at appropriate moments, and which they will continue to launch at intervals, to the detriment of sane and clear understanding between the public opinion of different nations. It must also be said that there are many points of similarity, and many chances of a good co-operation, between Mustapha Kemal Pasha and Signor Mussolini; not because, as some say, they are both *dictators*, but because *les grands esprits se rencontrent*.

"Italy's interests in Asia are especially centred on the Mediterranean and the Red Sea coasts. As far as Syria, Mesopotamia and Palestine are concerned, there seems to be no essential disagreement between the Governments of Italy, Great Britain, and France, although Italy might still claim some of her rights on a better distribution of the Mandates. Iraq, the Hijaz, and the Yaman have been, lately, the cause of some apprehension. There is there a tendency to hoist the flag of pan-Arabian warfare and, what is worse, Russian agents seem to speculate on it, trying to create disorder and to worsen the relations between those new kingdoms and the Western Powers. For example, the Soviet Government have created a Russo-Arabian Commercial Trust, whose emissaries do not seem to confine themselves to purely financial undertakings. Italy is more especially interested in the Yaman, whose geographic position on the Red Sea makes it important

(1) The Italian loan to the Government of Albania has already proved very beneficial to the latter. There is no truth in the rumour, widely circulated from unreliable sources, that the whole of the loan is being spent on war preparations. In fact, not a penny of it has been devoted to military purposes; it is entirely employed in the construction or betterment of ports, roads, bridges, etc., for which Albania had an urgent need. The capital sum is now invested in the Bank of Albania, and gives interest sufficient to cover the interest and refunding quotas which are due to Italy. Tolls on roads and bridges that are being built by means of the loan are even now a considerable cause of the improvement of Albanian finances. If the present policy be carried out without interruption, Albania may hope to become, in a few years time, the best organised country in the Balkans.

Digitized by Google

also for the commercial development of the Eritraea Colony, which faces the Yaman on the opposite side of the sea. Friendly relations between Italy and the Yaman have been well established, with mutual advantage, for a considerable time now; this makes it more difficult for Italy to grant the *de jure* recognition to King Ibn Saoud's newly-born kingdom of the Hijaz, until the differences between the Hijaz and the Yaman, mainly concerning the district of Asir, have been settled in a way that may prove satisfactory to both the parties concerned. However, Italy is already connected with the Hijaz and has appointed a Consul there.

"To sum up, Italy in the Near East is only seeking peaceful relations and fair play for all, especially for those minor States that have been, justly or unjustly, weakened and sacrificed by the Peace Treaties and Conventions. The general problem of the Near East is one of peaceful work and progress for all; as culture and economy will develop in those lands, they will be brought nearer to our Western civilisation, and they will gradually cease to be what they have always been in the past, a constant danger to the peace of the world. But as long as Western Powers will play on the lower instincts of their Eastern friends or allies, in order to forge instruments of war that may come useful in the differences that exist between the Western Powers themselves, there will never be peace in the Near East, and there will be a continuous and grave danger for the peace of the whole world. Justice and progress ought to be the inspiring principles of European policy in the Near East. I take it that these are already the principles of British policy there, and the fact that there seems to be friendly co-operation between the British and the Italian Governments on so many questions concerning those lands ought to dispose of so many indictments that we are accustomed to hear of the foreign policy of Signor Mussolini."

The following were among those present:—The Bulgarian Minister and Mlle. Micheff, the Hungarian Minister and Baroness Rubido-Zichy, the Albanian Chargé d'Affaires, the Egyptian Chargé d'Affaires, Prince and Princess Soumbatoff, the Earl of Cardigan, Viscountess Dupplin, Lord Lamington, Count Vittorio di Rovasenda, Lord Danesfort, Baroness de Knoop, the Hon. Lady White-Thomson, Sir John and Lady Brunner, Constance Lady Boyle, Sir William Vincent, Sir Harry and Lady Lamb, Sir Henry and Lady Penson, Sir Frederick Graham, Lady McCallum, Sir Thomas Arnold, Lady Tighe, Mrs. L. S. Cobham, Mrs. E. N. Bennett, Chevalier Sambucetti, Mrs. Gordon Watson, Dr. and Madame Lessinoff, Major Vitez Beldy, Chevky Pasha, Colonel Uggla, and Mrs. Arthur Webster.

THE PERSIA SOCIETY.

The President and Council of the Persia Society held a reception in a Committee-Room of the House of Lords on May 23 to meet the Persian Minister. Among those who accepted invitations were:—

The members of the Persian Legation in London, Mirza Elisa Khan Fayz, Sir Thomas Arnold, Mr. P. G. Allen, General Sir Edmund Barrow, Sir Montague Barlow, Sir M. M. Bhownaggree, Sir Hugh and Lady Barnes, Major-General Sir William Beynon, Mrs. Thornton Butterworth, Captain J. McI. Borland, Sir George Barnes, Colonel G. T. Brierley, Mr. R. F. O. Bridgeman, Air Vice-Marshal Sir Sefton Brancker, Major and Mrs. W. L. W. Bird, Sir Edgar Bonham-Carter, Sir John Cadman, Lieutenant-Colonel G. Chenevix-Trench, Viscount Chelmsford, Sir Thomas and Lady Comyn-Platt, Sir William Crundall, Major-General Sir Percy Cox, the Hon. Mrs. John Cross, Dr. Evelyn Constable, Lady Moya Campbell, Mr. and Mrs. Dorabjee, Major-General J. A. Douglas, Sir Louis Dane, Mr. A. T. Davies, Général M. Duprés, Major-General A. M. S. Elsmie, Sir George Stuart Forbes, Lieutenant-Colonel F. E. Fremantle, Captain A. C. Gotham, Lord and Lady Greenway, Mr. H. Gathorne-Hardy, Captain A. Hamilton, General Sir George and Lady Kirkpatrick, Sir Basil Kemball-Cook, Captain P. F. Knighley, Dr. and Mrs. H. M. Leon, Lord Lamington, Colonel H. E. Medlicott, Lord Montague of Beaulieu, Captain E. O. Mousley, Brigadier-General E. W. S. King Maconchy, Captain Massie-Blomfield, Lord Muir Mackenzie, Sir Michael O'Dwyer, Dr. Jal Dastur C. Pavry, Lieutenant-Colonel F. B. Patterson, Major-General Sir C. H. Powell, the Persian Consul, Brigadier-General E. M. Paul, Lieutenant-Colonel A. C. Parker, Lieutenant-Colonel H. P. Picot, Lady Ross, Lady Robson, Lady O'Grady Roche, Lieutenant-Colonel W. J. P. Rodd, Admiral Percy Royds, Rear-Admiral Cecil M. Staveley, Sir Henry Stone, Sir William Sheppard, Mrs. Alec Tweedie, Colonel J. K. Todd, Major-General Sir Louis Vaughan, Sir Arnold and Lady Wilson, Colonel Sir W. H. Willcox, Mr. J. W. Wilson, Lieutenant-Colonel J. T. Woolryche-Perowne, Colonel C. L. Willoughby-Wallace, Dr. and Mrs. P. C. Woollatt, and Mrs. R. F. Yorke.

Book Review

A SERVANT OF INDIA.

"THE INDIA WE SERVED." By Sir Walter R. Lawrence. (London: Cassel. 21s. net.)

Sir Walter Lawrence has done well in giving this book to the world, and its many readers will thank him for it heartily. But it ought to have far more readers than a large, beautiful volume costing twenty-five shillings will reach. The author's object has been "to help young men who are going to India to make their lives helpful, useful, and happy." We know of no book more likely to have this effect, but, unless generous uncles or aunts are more frequent and judicious than they used to be, we fear that its friendly and wise guidance is only too likely to miss the very men who would most benefit by it. This one little criticism means, after all, only that Sir Walter must set to work as soon as possible to get out an edition which can be sold at a "popular" price.

No one who knows the author, even superficially, can doubt that he "has a way with him." His personal charm is largely due to the real human interest he takes in all with which he comes in contact. He is entirely devoid of class or colour prejudice. While he has always loved seriously to discuss anything which interested his companion, it has ever been a matter of indifference to him whether the talk was with a Syce about horses, with a Maharaja about grave political affairs, or with a Bairagi about deep religious matters. This is the very simple secret which has enabled him to see deeper into the Indian mind than most and, if the young reader can follow his example, he will ever be grateful to his teacher.

We should like to have enlarged on this aspect of the book, and after all it is its most important aspect, but we doubt whether we could possibly convey to our readers the delights of the author's simple account of his career in the Indian Civil Service without quotations which would occupy far too much space. And, if we began quoting some of his racy little stories, we should not know where to stop.

Whatever he set his hand to, he did it with all his might, and the years spent in Rajputana, as Assistant Settlement Officer, and finally his colossally difficult job of Settlement Officer of Kashmir, not only gave him wide and intimate experience, but also coloured his whole life and views. He has always been a bitter enemy of what its friends call "Western Education" in India. He has felt keenly that the old ideal of a kind of uniform drab "efficiency" was wrong. Both were out of place in India and therefore harmful. While the supreme Government of India must remain British, he would prefer to see Local Government

The Working and Scope of the Minorities Treaties under the League of Nations.

THE PROTECTION OF MINORITIES

By L. P. MAIR,
M.A.
ASSISTANT IN INTERNATIONAL STUDIES, LONDON SCHOOL OF ECONOMICS.

With an Introduction by Professor GILBERT MURRAY, F.B.A., Litt. D.

"Written with sound knowledge; it is admirably arranged, and a very useful addition to the political library."—*Manchester Guardian.*

"There is no other book in English which gives exactly this material so impartially and so fully."—*Daily News.*

carried out by Indians, on the lines of Native States and assisted by English advisers, just as the Raja has the advantage of the advice of the Resident. The present Provinces, too large even for professional and experienced European administrators, would be quite impossibly large for administration by Indians and would require to be split up into twenty-five or more. We gather that existing Native State territory would be included in the number and that the author would welcome large additions to such territory.

Fortunately in the Provinces there are still the heads of the old families, who would be regarded as the obvious and natural Rajas of the new States. Recently the new State of Benares was constituted, and it would be easy to find in every part of India names as suitable, such as Durbhanga, Burdwan, in Bengal; and Jeypore, Vizianagram and Ramnad in Madras. Moreover, if it should happen that the present road of reform leads to an *impasse*, it might be deemed advisable not only to create new States, but in addition to enlarge the boundaries of the old States.

Whether such a policy is capable of being carried out in practice is a matter on which different people will have different opinions. Few, however, will differ materially from Sir Walter's estimate of experiments in Democracy in India.

Democracy (he says), like most forms and fashions of man, is very much a matter of climate. In the West we praise it, sometimes from the heart, and often from the lips. To make the world safe for democracy we have staggered under a heavy and cruel burden, and it is natural that the English, so pledged to this form of governance, should desire to pass on its boons to the people of India. But so few know how different India is, how unlike in temperament, outlook and experience. There are certain essentials to happy stability in the East, among them continuity and cohesion. Democracy does not always assure these, even in the cool and practical countries of the West.

Many, delightful, and understanding are the little sketches of the author's Indian friends, specially of the two Pratab Singhs, of Jodhpur and Kashmir. The present writer is specially gratified to find justice done at last to this latter very remarkable and lovable man, as also to find appreciative mention made of another very notable Indian of the days which many of us remember, Daulat Ram of the Kalka-Simla mail service. Naturally, however, his many years of personal friendship with Lord Curzon, whose Private Secretary he was, too, for five eventful years, cause him to dwell at length on him. Never blind to his faults, he well knew the greatness of his ideals and the almost incredible industry displayed by him in carrying them out. No Viceroy of India can share his private life with those around him to any considerable extent and Lord Curzon did so, perhaps least of all. But Sir Walter Lawrence was his intimate friend and saw what the public and the officials knew nothing of, and manages to convey something of his knowledge to the reader. We cannot wonder that the great man selected him to be his biographer, and feel sure that, had he not thought it wiser to decline, he would have done the work well, though indeed we have nothing to grumble at in the way Lord Ronaldshay has treated his grateful but difficult task. Perhaps a short quotation will illustrate how Sir Walter manages to convey a good deal about his Chief in a very few lines.

If, when he first came out, he had devoted himself to what all thought was his special subject—the Frontiers of India—all would have been satisfied. But he seemed eager to explore fresh fields into which others had never strayed, plunged with delight into dark pools and often found bottom.

His comparison of Lord Curzon and Kitchener seems to us full of interest.

There was a likeness between these two remarkable men. They both lived for work, and cared nothing for the susceptibilities of others. Neither could tolerate inefficiency nor be lenient to failure. Lord Curzon was the greater student and could work longer than Lord Kitchener. Both were equally impatient of criticism or opposition. Both loved pageantry, loved beautiful surroundings, and took an almost feminine interest in the details of domestic arrangements. Both were determined and acquisitive collectors, and both had an extreme reverence for rank. Lord Curzon loved debate and revelled in logical and masterly minutes. Lord Kitchener distrusted and despised all such official exercises. The conflict between them was like a fight between an elephant and a whale. Both were great lovers of their country and devoted to duty. Many probably regarded them as hard, strong men; yet I saw Lord Kitchener in tears as he watched some old veterans of the Mutiny totter by at the Delhi Durbar; and I knew of a case where he had punished an offender harshly, and soon after had found him congenial work on better pay. From the old Balliol days to the time of his death, I knew how gentle and affectionate Lord Curzon could be when he was off duty. The world saw him in caricature, and unfortunately he was apt to play up to the caricature.

To Sir Walter India is a Hindu land, Hinduism is Brahmanism and the Brahman has ruled India in spite of the Muhammadans and English. He seems to think that the Hindu tribes which have been converted to Islam can be got back to the Hindu fold without difficulty, and appears once to have hoped that the feud between Hindus and Mussulmans would in time have died out, had it not been for the recent political developments which have meant a race for votes. With all respect we doubt it. Sir Walter had heard Pratab Singh of Jodhpur's confidences and his astonishing statement that "one of his ambitions was to annihilate the Muslim people of India. I deprecated this prejudice and mentioned Muslim friends known to both of us. "Yes," he said, "I liking them too, but very much liking them dead." And again: "As I write, there comes a letter from an old Muslim friend. He is writing in grief, for he has just lost his best and greatest friend, a great and good Hindu. . . . My friend writes thus. . . . The Muhammadans are being kept back by the Government curb, which if loosened, there will be thousands of Hindus shot in India in a day." We fear that history is responsible for these wild sentiments which are strongly rooted all over India. It may well be, however, that our acquiescence in the introduction of democratic methods has done something, and may do more, to bring them to the surface.

To return to what we said at the beginning. Will Sir Walter see to bring out a really cheap edition of part, at least, of this very valuable book? Such a book might well be called "The Griffin's Vade Mecum" and would do untold good both to India and to England. We must not omit to thank Mr. Rudyard Kipling for spurring on the author to write it.

THE WEEK AT HOME

London, Tuesday Morning.

The Government's Record.

Eyes are being fixed with real earnestness now upon the Election next June twelve-months; and the supporters of the Conservative Government are looking up the records to justify their reappearance as candidates for honours. To judge from a speech which the Prime Minister made yesterday at Welbeck Abbey, this justification is to be made in general rather than in detailed terms; nothing has been promised that has not been accomplished; if it had not been for the mining trouble, the General Strike, and so on. . . .

It does not seem to me particularly impressive, this cataloguing of the Government's virtues, unless one can persuade oneself that the enfranchising of women of twenty-one was a stroke of genius; but it is perfectly obvious that a great number of people have convinced themselves that no alternative Administration could have done better. The majority of people, I should say, do not consider that the primary responsibility for the disastrous events of 1926 was the Government's, and, given that premise, the claim that much has been accomplished *in spite of* the General Strike and its effects is certainly not preposterous.

The Liberty of the Subject.

Upon the general aspect of the "Irene Savidge" case most people have already made up their mind, but it does not seem to be widely known that, although no such procedure as is alleged to have been indulged in at Scotland Yard towards Miss Savidge is permissible under Common Law, there do exist the Official Secrets Acts under which the police may search or question whom they will. The frequent assumption had been that no Englishman could be arrested without a warrant; but that is by no means so.

Of course, the ordinary person is not likely to come into close connexion with anything which might justify an investigation by the police preliminary to a prosecution concerning an "official secret." But the ordinary person will await with impatience the findings of the tribunal which has wisely been set up to probe this case, which concerns essentially the liberty of the subject, to the bottom.

Labour's New Programme.

With the General Election of 1929 in sight, the rift between Right and Left in the Labour Party appears to become more pronounced. A draft programme has been drawn up by the Executive Committee of the Party, and has at once been denounced by the Communists as milk and water. And it must be admitted that a policy of "Go Slow" seems to be foreshadowed for the Labour Party.

Adherence is made, naturally, to the policy of "Gradualism," but the suggestions made for nationalisation are not the full-blooded things that they once were, but tentative, vague statements. On the general policy of converting industries at present marked by "a sordid struggle for personal gain" into industries carried on "for the service of the community and amenable to its control," more details will have to be forthcoming before the public is persuaded that private enterprise is an inferior conception.

For the rest, it is stated—what will cause no surprise and little resentment—that one of the first acts of a Labour Government must be to repeal the Trade Union Act recently passed by the Conservatives.

Whitsuntide.

It is quite remarkable the way in which the English weather can pull itself together when it likes. Realising, I suppose, the scurvy tricks it had lately played upon the most unoffending and most patient people in the world, it turned from its wicked ways in time for the Whitsun week-end, during which it outdid itself in the most noble way.

Such a comment upon or account of the English weather would be insignificant did it not involve a phenomenon which causes increasing wonder: the spectacle of English men, women, and children on holiday. Out-door places of amusement in the towns on these occasions are thronged by the perspiring but perfectly happy crowds; and upon the country it is as if a deluge had descended. Upon the London roads yesterday evening the returning hosts were travelling in every conceivable vehicle, from Juggernaut char-à-banc to gallant little Austin, with but a few yards' interval between each. Where they all came from and where they all go to, Heaven alone knows; but there they indubitably are. And one must presume that, so long as Whitsuns keep fine, they will go from strength to strength. Which only means that those who do know of rustic retreats as yet uninvaded will never, never tell anyone else of their secret knowledge.

Men and Monkeys.

Perhaps it is bad luck for Dr. Voronoff, whose theories of rejuvenation intigue a certain class of mind, apparently, in every country, that his visit to England should have been made about holiday-time, when it is utterly impossible to get Englishmen to treat serious things seriously. For no one will deny that to have one's life normally prolonged to twice the Biblical span is a serious thing.

But so far as I have seen the tendency is rather to laugh at this monkey gland treatment, and to dismiss it by speculating on the future of our simian natures. The trouble is that cranks of all kinds, both of the anti-Vivisectionist sort and of the sort who welcome always the latest scientific fad as an infallible revelation, leap in in the first few days to fill the arena; so that the more sober observers, whose minds are free of prejudice, or are capable of being freshly made up, are crowded out.

The Death of C. E. Montague.

To all those who still cherish the notion that the form should count as much as the content of an article, the death (which occurred yesterday) of C. E. Montague, who for so long—over thirty years—had spread his gracious influence in the *Manchester Guardian*, will cause sorrow. No doubt that influence will survive in what many people consider to be England's best newspaper, but the precise turn of memorable, flowing praise which was Montague's *forte*, will surely be found less abundantly than before.

His books—"Disenchantment," "Rough Justice," and the rest, will preserve his name; and no doubt for many mornings to come, when we pick up our *M.G.*, his shy memory will steal wistfully before us.

PERSONAL AND GENERAL

TO-DAY

May 31, 1928 (New Style).
May 18, 1928 (Old Style).
Dulheggia 11, 1346 A.H., of the Muslim Calendar.
Sivan 12, 5689, of the Jewish Calendar.

The Aga Khan spent the Whitsun holidays at Le Touquet.

The Raja of Pudukota left the Berkeley Hotel last week for Paris.

Sir John Maffey, Governor-General of the Sudan, left Alexandria for London on May 27.

Sir Kay and Lady Muir left Scotland last Sunday for Bulgaria, via Vienna and the Danube, and will be abroad for five weeks.

Air Marshal Sir John Salmond sailed in the s.s. Ormonde, which left Tilbury on May 26 for the Mediterranean ports and Australia.

Lord Lloyd, High Commissioner for Egypt, left for Jerusalem on May 26 on a week's visit to Field-Marshal Lord Plumer and Lady Plumer.

Prince and Princess Paul of Serbia, and Princess Marina of Greece visited the King and Queen at Buckingham Palace on May 24 and remained to luncheon.

Captain and Mrs. Duncan McCallum were due to arrive to-day (Tuesday) at 9, St. Leonards Terrace, Chelsea, from their long motor journey from Peking.

On the occasion of the Qurban Bairam, Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires, received members and friends of the Egyptian colony in London at the Legation, 75, South Audley Street, on May 29.

Admiral Sir Frederick Field (upon his appointment as Commander-in-Chief, Mediterranean) had the honour of being received by the King at Buckingham Palace on May 23.

Dr. A. W. Wigram is lecturing before the Central Asian Society to-day (Thursday) on "The Position in Northern Iraq." The address is to be given at 5 p.m., in the Royal United Service Institution.

Hassan Sadek Effendi, of the Egyptian Mines Department, and Mr. Neville, of the Survey Department, have been appointed delegates of the Egyptian Government to the Mines Congress which is to be held in the Transvaal in July 1929.

General Sir George Barrow (upon relinguishing his appointment as General Officer Commanding-in-Chief, Eastern Command, India) had the honour of being received by the King on May 22.

Major-General Charlton Spinks, Inspector-General, Egyptian Army, had the honour of being received by the King at Buckingham Palace on May 22, when His Majesty conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the Most Excellent Order of the British Empire (Military Division).

At the dinner given by the Persian Minister at the Persian Legation on May 21 to celebrate the anniversary of the coronation of his Majesty the Shah, the guests included Sir Austen Chamberlain, Secretary of State for Foreign Affairs, the Turkish Ambassador, Lord and Lady Greenway, Mr. W. C. Bridgeman, First Lord of the Admiralty, and Dame Caroline Bridgeman, Lady (John) Gilmour, Sir John and Lady Cadman, Sir Denison and Lady Ross, Sir Arnold Wilson, Mr. Lancelot Oliphant (Foreign Office), and Mr. G. Gulbenkian.

The Maharanee of Cooch Behar arrived last week at the Cadogan Hotel.

Abdul Rahman Fikry Bey, First Secretary at the Royal Egyptian Legation, left London last week for Geneva. He will proceed subsequently to Egypt on leave.

The fifty-third Annual Conference of the Société Internationale de Philologie, Sciences et Beaux-Arts, of which Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires in London, is President, began on May 29 and is being continued, at the Rooms of the Société, 8, Taviton Street, Gordon Square, W.C.1, until June 7. Of particular interest at this conference were some selections of Egyptian and Albanian music given after the official reception by the President on May 29; the inaugural Presidential Address, given on May 30, on the subject of "The Founder of Modern Egypt"; a lecture, to be given to-day at 4 p.m., by Dr. H. M. Leon on "Pukhto—The Language of Afghanistan"; and a lecture, to be given to-morrow (Friday) at 8 p.m., by Mr. Charman Edwards on "The Gypsies—Their Origin, Language, and Customs."

CANON GAIRDNER.

The death occurred in Cairo on May 22 of Canon W. H. Temple Gairdner, of the Church Missionary Society. Canon Gairdner, who had lived in Egypt for the last twenty-nine years, was a missionary of very rare qualifications. He was a first-rate Arabic scholar, and did much in the presentation of Christianity to the world of Islam. Upon Christianity and Islam he wrote abundantly; and in founding the International Literature Bureau in Cairo, for the provision of literature in Arabic, he took a prominent part. As missionary, scholar, and man he was admired in a field far transcending the borders of Egypt.

Where to stay in the East

CYPRUS.

Miss Young's Camp, Troodos.

There are summer quarters, for a limited number of paying guests, on Troodos (Miss Young's) in the midst of forests, 6,406 ft. above the sea—the summer resort of the Troops and Government Officials. 20 hours from Port-Said.

Pitched in the pine forest in a lofty and secluded situation, on the upper slopes of Mount Olympus—25 minutes from the summit. Perfect climate, dry, cool and bracing air, enchanting panoramas; no mosquitoes; completely equipped with every comfort and convenience.

Troodos is 35 miles from Limassol and 45 miles from Nicosia. From both towns there are good carriage and motor roads. The summer climate is dry and healthy. The nights are often rather cold after the end of August. As regards dress, Ladies should be provided with washing skirts, as there is a good deal of red dust on the hills; white is much worn, but dust-coloured costumes are advisable. A warm woollen coat and skirt are essential. Riding and motor excursions, Tennis and croquet are the chief occupations of the Visitors. An English Club provides Newspapers, Telegrams (Reuter's) and Books. The water supply is good, and there is plenty of fresh milk. Inclusive terms £3 10s. a week. *Open June 15.*

Apply to Miss Young, 38 Victoria Street, Nicosia, Cyprus.

CYPRUS.

SAVOY HOTEL: Port of Famagusta.
PALACE HOTEL: Inland City of Nicosia.

OLYMPUS HOTEL: Port of Limassol.
(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)
(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:
NAJEM HOURY & SONS, LIMASSOL, CYPRUS.
Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

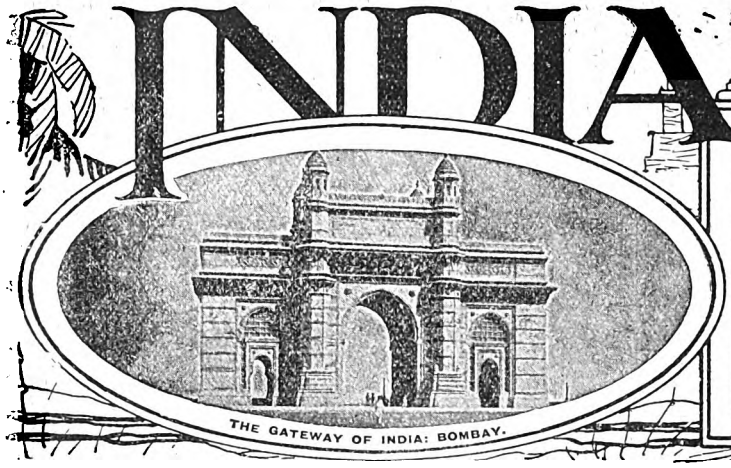
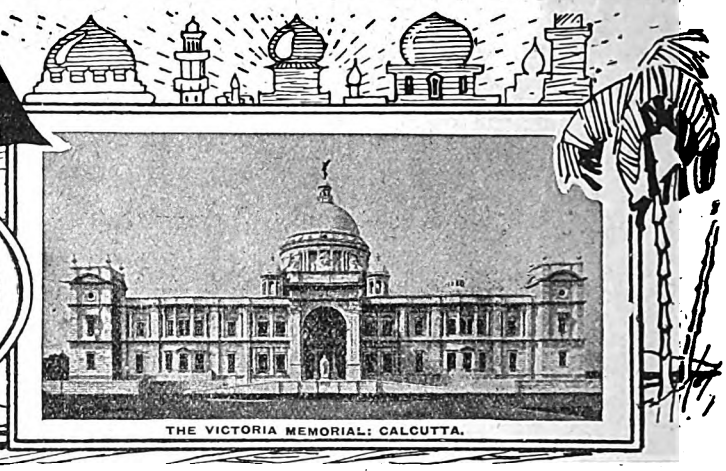
INDIA



THE GATEWAY OF INDIA: BOMBAY.



THE VICTORIA MEMORIAL: CALCUTTA.

THE RULE OF *DAMDUPAT*.

It is generally accepted that one of the serious factors in the promotion of the existing Indian labour unrest, on which we remarked last week, is the money-lender. Indeed, during the past few days a competent observer on the spot has described the money-lender as "the curse of the factory" in India. "No means has been discovered," this writer continues, "of preventing the Indian borrowing at an excessive rate of interest to the limit of his credit, and in present conditions to raise wages is to induce him to borrow more and to ensure that more of his monthly takings will go to those Kabulis who, in their picturesque dirt, have become such familiar figures in the industrial areas. The evils resulting from the borrowing of money at excessive rates of interest are not, of course, restricted to factory workers. They have for very many years affected numerous other classes of the Indian population also; and serious efforts have been made to find a remedy for them. These efforts are still being continued by the Central Legislature, and by the Government of India. In fact, during the last session of the Legislative Assembly, an Interest Bill was introduced by a private member, and was ordered to be circulated to the Local Governments for their views. And no fewer than four other Bills concerned with the subject were introduced in the Assembly during the last five years, none of them, however, getting beyond the introduction stage. The principal object of the Bill which is now before the Local Governments is to extend what is known as the rule of *damdupat* to the whole of British India irrespective of race or creed. In the town of Calcutta, in Berar, in the Bombay Presidency and in certain of the Indian States there has been for a very long time, and there is now in operation as between Hindus only, a rule whereby the total sum recoverable as interest by a lender is limited to the amount of the principal lent. This is known as the rule of *damdupat*. The proposal to extend it so as to make Muhammadans and other races amenable to it is not new. It has been put forward again and again. In fact each of the four Bills referred to contemplated the extension of the rule; and the question of making it of general application was closely considered before the Usurious Loans Act of 1918 was passed.

Restrictions on the rate of interest in loan transactions were formerly in force in India, but they were abolished in 1855. And nothing seems to have been done in the way of imposing any new restrictions until about forty years afterwards. In 1891 the need for checking usury was one of the important matters referred to the Deccan Agriculturists Relief Act Commission. The Commission reported in favour of an amendment of the law, and in the result the Indian Contract Act was, in 1899, so modified as to indicate the circumstances in which a contract may be said to be induced by "undue influence," and to empower the civil court to set aside a contract so obtained. The problem was also attacked in another way by the Government of India. As a result of the inquiries of the Deccan Commission the Government framed—in 1895—a Bill for the protection generally of agriculturists, and in this measure they touched incidentally on the subject of usury. But some of the local governments did not view the Bill favourably, and it was eventually abandoned. At about the same time a private member introduced in the Imperial Legislative Council a Bill the practical effect of which would have been the extension of the rule of *damdupat* to all races. But this Bill also met with opposition, and it was not proceeded with. It is not surprising that in such discouraging circumstances nothing further was attempted for a long time. And it was not until 1914 that the Government of India tried again. They then said that they had come to the conclusion that the time was "ripe for the reconstruction of an admitted evil in the hope, if possible, of discovering a remedy." The principal remedies usually suggested for the restriction of usury were, the Government went on to say, the fixing of a legal maximum rate of interest recoverable; the determination of a legal maximum amount of interest recoverable—*damdupat*; and the bestowal on the courts of authority to go behind a contract, to re-open a transaction, and to reduce the rate of interest to what was thought to be equitable. The Select Committee of the Houses of Parliament had reported in 1898 against the first course. The rule of *damdupat* was a rough and ready remedy, perhaps more suitable to the simpler times in which it originated than to the more complicated stage now reached. But the third proposal was that embodied in the English Money Lenders Act of 1900, and the Government of India were inclined to think that legislation based upon it might have a good chance of succeeding.

The legislation was delayed by the War, but in 1918 a Bill, drawn on the lines indicated, was passed into law by the Imperial Legislative Council under the title of the Usurious Loans Act. It enabled the civil courts, when they believe that the interest charged on a loan is excessive, or that as between the parties any transaction is substantially unfair, to inquire into the history of the transaction and to revise its terms. But, as passed, the Act applied only when the lender is suing for the recovery of his loan, or to enforce his security. Further, it was restricted to new loans, or to new obligations entered into on the basis of old loans made after the passing of the Act. And it was so framed as to limit the period in respect of which the Court could open up the history of a transaction. In 1923 the provisions of the Act were extended to suits for redemption brought by mortgagors; and they were also amended so as to admit of agreements, purporting to close previous dealings and to create new obligations, being re-opened up to twelve years instead of three. The Government of India offered in 1923 to give an undertaking that they would obtain a complete report on the working of the Act so that steps might, if necessary, be taken to remedy any defects brought to notice. It is not known whether this investigation has been carried out, and we observe that the Bengal Chamber of Commerce has lately made an inquiry regarding it. But whether the Act is or is not working satisfactorily, it does not appear to have had much effect on money lending in the industrial areas as is evident from the quotation with which we began this article. The rule of *damdupat* is said

Digitized by Google

to have worked well in some areas, of course as between Hindus. It is certainly simple and automatic, and what is more it is in accordance with Hindu sentiment. But the consensus of opnion when the Usurious Loans Act was passed in 1918 was that the rule had no great prospect of success, and we gather that this view still prevails.

CURRENT TOPICS.

Medical Services in India.

The scheme sanctioned by the Secretary of State for the reorganisation of the Medical Services in India, which was published in a recent issue of THE NEAR EAST AND INDIA, will have given great satisfaction to those who believe that a continuation of the European elements in the Medical Department is essential for the welfare of the country, as well as for the proper care of the military and civil servants of the Crown. The scheme itself fulfils one of the most important recommendations of the Lee Commission, that the British personnel of the Civil Services and their families should be able to obtain adequate medical attendance. It allows, moreover, of a sufficient reserve for war emergencies of medical officers of British race. Out of the 287 civil posts under the Central and the Provincial Government, 143 will now be reserved for British officers. At the same time, the number of posts reserved for the Indian Medical Service in the Provinces will be reduced from 268 to 178, so that a much larger number of places will be available for the local medical services than was formerly the case. The most pleasing feature of the scheme, however, is the recognition that the British element in the Medical Department is intended to be a permanent feature of Indian administration, and—not a transient and uneasy phantom. It may be hoped, moreover, that so broadminded a scheme will do much to regain the confidence of the great medical schools of Great Britain, and will ensure the recruitment of a type of officer worthy of the great traditions of the Indian Medical Service.

The Need for Unity.

Under the stimulus of the boycott agitation and the co-operation of the leaders of all parties, the constitutional experts have been applying themselves for some time past with renewed vigour to the formulation of proposals which they hope will ultimately provide some basis for united action. At its last session the Congress, it will be recalled, "authorised the Working Committee to confer with other similar Committees to be appointed by other organisations —political, labour, commercial and communal—in the country and to draft a Swaraj Constitution for India on the basis of a declaration of rights and to place the same for consideration and approval before a special convention to be convened in Delhi not later than March, consisting of the All-India Congress Committee and the leaders and representatives of the other organisations above mentioned and the elected members of the Central and Provincial Legislatures." Unfortunately none of the draft constitutions, a summary of which was given in these Notes in January last, really grappled with the communal issue, and this weakness became painfully apparent when the so-called All-Parties Conference met at Delhi in February and March. The Hindus were willing to concede the continuance of communal electorates but refused to agree to communal provinces; Mr. Jinnah and his supporters insisted upon communal provinces while ready to agree to joint electorates. Whether Mr. Jinnah would have been able to implement his undertaking, for his following is drawn from a very small section of the Muslim community, is, to say the least, highly improbable. In any case, the opportunity never arose, for the negotiations, although technically suspended *sine die*, really resulted in complete deadlock.

Our anticipation that the adjourned meeting which was held recently at Bombay would be little more than a gathering of the extremist element in the Congress, a predominantly Hindu body, has unfortunately proved only too correct. Liberal politicians of moderate views, like Sir Tej Bahadur Sapru, Sir Chimanlal Setalvad, Sir Siwaswami Iyer, and Sir Phiroze Sethna, appear to have been conspicuous by their absence, and even Mr. Jinnah seems to have deserted the Conference, the cabled reports of the proceedings of which make strange reading. There was apparently no agenda nor any concrete proposals, for the discussion of which the gathering had been convened. Reports from two sub-committees, according to *The Times'* correspondent, were expected, one dealing with the separation of Sind and the other with the formation of electorates. Neither report apparently was forthcoming. The members of the Sind sub-committee had not held a meeting, and the other sub-committee, it was announced amidst laughter, had not discussed the matter of the electorates because its members were unfamiliar with the subject. After considerable dissension it appears that recourse was finally had to the time-honoured expedient of appointing another Committee to undertake the very task for which the Conference had itself been convened. As despite its obvious shortcomings and somewhat chequered history Mrs. Besant's Commonwealth of India Bill still holds that particular field, there was an element of irony in the fact that the resolution "appointing a Committee to draft a Constitition for India and report by July 1" was entrusted to that indefatigable lady herself! We are, in fact, forcibly reminded by the proceedings at the Bombay gathering of the warning in this connexion delivered by Mr. C. B. Chartres at the annual dinner of the Madras Branch of the European Association last January. The best work so far accomplished by the Swaraj Party, the President of the Association declared, was its attempt to promote unity, and he desired nothing better than that the resolution passed at the Madras session of the Congress should prove effective. "Unfortunately, however, for the success of the resolution on unity," he proceeded, "the chief fertilising agent used by its sponsors for promoting the growth of mutual trust and good-will between the two great communities of India is no other than a campaign to inspire suspicion of the British, and I fear this agent, instead of proving beneficial, will prove an absolute poison to the plant we are all so anxious to develop."

India's Overseas Trade in 1927-28.

Echoes of last year's heated controversy over the exchange ratio are evoked by the overseas trade statistics for the past fiscal year now available. "What do the champions of the 1s. 4d. exchange ratio—who were so gravely apprehensive concerning the effects of the Blackett ratio on export business—make of the fact," pertinently remarks the late Mr. Pat Lovett's successor in "A Ditcher's Diary," "that in the official year just closed (1927-28) Indian exports increased by nineteen crores, and the visible balance of trade by nine crores, and that this increase occurred despite a drop of over eleven crores in the value of shipments of raw cotton wholly accountable to international influences over which the ex-Finance Member could not exert the slightest control?" Actually the grand total of imports, exports and re-exports amounted to Rs.579 crores, as against Rs.541 crores in 1926-27, an increase of Rs.38 crores, or 7 per cent. Certainly so marked an improvement can no longer be explained away, as Sir Purshotamdas Thakurdas attempted to do in his minority report, solely by reference to "the low holding power of the grower in India" and the fact that, the bulk of Indian exports consisting of raw materials, "if the crops are grown, they have to be sold before the next harvest, and this must be done whatever the rate, so long as there is any demand for them in the world markets."

On the contrary, an increase of over Rs.19 crores, to Rs. 250 crores, in the value of imported merchandise shows that the purchasing power of the people, so far from suffering any reduction as a result of the stabilisation of the rupee at the *de facto* level of eighteen pence, has in fact been improved. Nor, as the same contemporary aptly remarks, will it suffice to point to the parlous condition of the Bombay cotton mills and declare that foreign mills are profiting at their expense. For, although measured by yardage, imports of cotton piece-goods reveal a substantial

Digitized by Google

increase, the amount expended by India on such imports remains unchanged, which means that, owing to the fall in values—the index number of wholesale prices of cotton manufactures in Calcutta at the end of the year was only 4 points below the December, 1926, figure of 153, the lowest on record since 1915—the ryot has obtained more for his money. It is true that in some lines the Indian-made articles are more in evidence, but the day is far off when Indian mills will be able to produce more than a small fraction of the total imports of 2,000 million yards, even if the present duties were doubled.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 10.

The Statutory Commission and Education.

It was reported recently that an Auxiliary Committee would be appointed to take over the task of inquiring into and advising the Statutory Commission on the growth of education in India, and this morning it is stated that the Chairman of this Committee will be Sir Philip Hartog, one of the members of the Indian Public Services Commission. There could not be a better choice. Sir Philip Hartog was a member of the Commission that investigated the position of the Calcutta University under the presidency of Sir Michael Sadler, and he served subsequently as Vice-Chancellor of the Dacca University. He is now a man of ripe experience in the major problems of education in India.

The Auxiliary Committee, it is understood, will be a small body, composed of a chairman and three others, one of them a woman. Dr. (Mrs.) Muthulakshmi Reddy, a member of the Madras Legislative Council, will be the lady member of the Auxiliary Committee; Sir Sultan Ahmed, the Vice-Chancellor of the Patna University, will represent the Muslims, and there will be a Hindu member. All this, be it added, is only a forecast of the official announcement, which has not yet been made.

Maharashtra Provincial Conference.

One does not quite see why Mr. Subhas Chandra Bose, a comparatively young Bengali, should have been chosen to preside over the Maharashtra Provincial Conference at Poona; but he was. Still less does one know what to make of his utterances. There is reported to be a great divergence between those he makes in public and those he makes in private. He is one of the leaders of a Party, and in public he must speak as the members of that Party expect its leaders to speak. In private, so at least says report, he may say such a thing as "Don't take anything I may say in public seriously." One does not feel disposed, after reading the reports of his recent Poona speeches, to take them seriously. Far from it, indeed. He stood, he there said, for an independent federal republic, with "her own flag, her own navy, and her own ambassadors." "If we want to make India really great," he said in another part, "we must build up a practical democracy on the pedestal of a democratic society. Privileges based on birth, caste, or creed should go, and equal opportunities should be thrown open to all, irrespective of caste, creed, or religion." Nothing is easier than to say such things, but mere talk will not make India so much as begin to be a democratic society. A hundred years of such speeches as Mr. Bose's at Poona would find India no more democratic than he was a thousand years ago, and she was then the least democratic country under the sun.

The Strikes.

The news of the strikes during the week has been, part good, part bad. Thus on Friday it was reported that some four thousand of the Ludlow Jute Mill workers had returned to work the day before, and there is news this morning of another large batch having resumed work yesterday. The East India Railway strike situation shows no improvement, unfortunately, if the air may have been cleared a little by a conference yesterday between the Agent and the men's leaders. No agreement was reached, but the conference gave the Agent his opportunity to make the Railway's case public in a statement that fills nearly two columns in this morning's newspapers.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, May 12.

The New Conciliation Bill.

In view of the recent protracted strike among the Bombay cotton operatives, it is expected that Government will introduce a new Bill in the autumn session of the Legislature to provide some form of conciliation procedure. Several years back, when Lord Lloyd came out to India as Governor of this Presidency, serious cotton mill strikes occurred in Bombay and a Committee was instituted to consider the question. On the basis of the report of this Committee a legislative measure was prepared but the Central Government would not give the necessary sanction to the introduction of the Bill in the Provincial Legislature because the problem was an all-India one. The Industries and Labour Department of the Central Government, taking the view that unless the workers as well as the millowners were well organised the conciliation measure would not be effective, first introduced legislation for the registration of trade unions. Two years back a draft was submitted to the Provincial Governments for criticism. The Bill has now been revised in the light of the suggestions of the Provincial Governments and the next step will most probably be a motion for circulating the Bill.

The Situation in the Bombay Textile Mills.

Meanwhile the strike situation in Bombay is getting more serious every day. Two members of the strike committee waited on the Police Commissioner to request him to permit peaceful picketing at the mill gates. The Commissioner has agreed to allow a maximum of two volunteers at each gate, provided the volunteers keep on the move and do not collect a crowd or intimidate the men who are going to work. The strikers are making good use of this concession and the presence of even two volunteers at the gates is enough to keep the workers from approaching the mill gates purely through moral pressure . Although the picketing appears to have proceeded on peaceful lines, the millowners state in their recent letter to the Press that the strikers are "giving the citizens an exhibition of what is termed 'peaceful' picketing." They point out that the Tariff Board found that the Bombay mills were not able to compete with the up-country mills, not to speak of Japan, because of the high cost of labour in the city, and that, as a direct cut in the wages was not advisable, certain reforms which will have the same effect were recommended. To these suggestions the millowners are determined to adhere and they have made it clear that they will not give in to the workers without a grim fight.

The strike committee have taken as uncomprosing a stand. A resolution that a lakh of rupees should be devoted to relief work was thrown out in the Bombay Municipality by four votes. Help has come from another quarter—Russia. Mr. N. M. Joshi, President of the Bombay Textile Labour Union, has received the sum of Rs.201916-12-9 from M. Vounoff, Moscow. Whilst most of the labour leaders regard the gift more as a token of good-will and are willing to accept it as such, the *Times of India* is strongly against accepting the money on the grounds that it is not sufficient to provide adequate help to the strikers and that the money is sent not for purposes of relief but solely to help the strikers to keep up the struggle.

Strikes in Other Industries.

There is every danger of the strike in the textile mills

Digitized by Google

spreading to the other industries in Bombay. Already the G.I.P. railwaymen have sent an ultimatum to the agent of the railway threatening that if the demands of the workers are not conceded to within eight days the men will go on strike. They ask that the system of medical examination of the workers at regular intervals should be abolished, as many workers were discharged after twenty or thirty years' service on the ground that they had not come through the medical examination; they further demand that the legitimate increase should be given to the workers who have been blocked on salaries ranging from Rs. 41 to Rs. 74 for the last several years, that leave with pay should be given for all gazetted holidays, that the minimum living wage should be raised from Rs.25 to Rs.30, that five and ten per cent. increases should be given to all skilled workers and that the Union should be recognised. Mr. N. M. Joshi, one of the most prominent Labour leaders in India, has advised the workers not to resort to strikes unless they had exhausted all other avenues of settlement. The agent will meet the representatives of the G.I.P. Railway Workmen's Union in a few days to discuss the question.

At Jamshedpur, Tatas are taking drastic action. The management has issued two notices—one dismissing all the workmen who went on strike in the middle of April and refused to resume work, and the other notifying that all these men will receive the wages due to them. Over a thousand men are affected by these notices.

INDIAN BANKING.

By The Hon. Sir Phiroze Sethna, O.B.E.

[The present exceptional stringency in the Indian money market invests with particular interest the plea for the early institution of the proposed Banking Commission advanced in a recent article in *Capital*, extracts from which are reproduced below. Sir Phiroze Sethna, who is Chairman of the Central Bank of India, the foremost Indian banking institution, and presided over the Joint Select Committee of the Central Legislature on the Reserve Bank Bill, is well known to readers of The Near East and India as an able and forceful exponent of the moderate Indian point of view on commercial and economic questions of the day.]

There is no doubt that there is enormous scope for the development of Indian banking. What has been achieved so far is comparatively very little indeed and, as a writer in the *Economist* once pointed out, there are still approximately five hundred towns in India with populations of 10,000 and upwards which do not as yet enjoy any modern banking facilities at all. The External Capital Committee observe in their report as follows:—

"India possesses a vast store of dormant capital awaiting development, and in order to make this available for investment banking facilities must be increased and extended. The examination of the various technical measures suggested in the replies with this object in view, is outside the scope of the Committee, but we would emphasise the importance of a co-ordinated survey being undertaken at the earliest opportunity of the whole field of banking in India. This should be followed by a detailed examination by an expert committee or committees of the lines along which progress should be effected."

The first thing, therefore, is to make a thorough and careful survey of the existing state of banking in India. A consideration of the requisite measures to increase and extend banking facilities must necessarily be preceded by such a survey. And after the survey is made, we shall be better able to map out definite lines of progress.

In his very suggestive lecture on "Indian Banking and Monetary Problems" delivered to the Delhi University in 1925, Sir Basil Blackett envisaged India not only as supplying her own capital requirements, but also as becoming a creditor country. "For a century, and more," he said, "India has been accustomed to rely mainly on external capital both for her Government capital expenditure and for the development of her industrial resources. To some it may seem fantastic, in view of this historic habit, to talk of India's not only supplying the whole of her own capital requirements but also becoming a lender of capital for the development of other countries. Yet, I firmy believe, that given the necessary development of banking and credit facilities and good will and readiness to profit by the counsel and assistance of European businessmen, the time is not very far distant when India will be doing both these things. India would seem by nature to be destined to be a creditor country, if only her people will it so."

There is a good deal of force in what Sir Basil Blackett has said, and we may well look forward to the realisation of the idea that India should lend money to other countries for the development of their resources, but whether this goal is attained or not, it is certainly essential that she should supply her own capital requirements. It is in this way alone that she can be economically free, and at the same time able to develop her own national resources. The extension of banking facilities is thus necessary in the interests of India's economic development. Whatever may have been the merits or demerits of the Reserve Bank Bill which had to be dropped, whosoever may have been responsible for the strong opposition it had to encounter and for its ultimate withdrawal, there is now a consensus of opinion in this country that the failure of the implementing legislation for a Central Bank emphasises the necessity for an early and exhaustive survey into the whole field of banking in India. An extensive and scientific survey of banking conditions in the country formed one of the recommendations of the Currency Commission. That recommendation, be it remembered, was merely a reiteration of the suggestion made before by the Industrial Commission and the External Capital Committee for the extension of banking facilities in the country. Two years ago, at the annual meeting of the shareholders of the Central Bank of India, I had suggested that Government should appoint a Committee to devise ways and means whereby indigenous banking may be greatly helped and people educated to adapt themselves to the system of modern banking. A resolution to that effect was also moved in the Central Legislature. Sir Basil Blackett was in sympathy with the idea, but in view of the prospects of establishing a Reserve Bank and also in view of the recommendations of the Agricultural Commission which were then eagerly awaited, it was decided, and decided rightly, that the appointment of such a Committee should be deferred. Now that the Reserve Bank Bill has been dropped and the recommendations of the Agricultural Commission will shortly be announced, and we may take it that one of its recommendations will be to take steps immediately to improve and extend credit facilities for the agriculturists, it is but right that Government should appoint at an early date a Committee to embark on the long deferred survey of banking conditions in the country.

The financial policy of a State and its monetary organisations are important contributory factors in the sum-total of a nation's prosperity. Such organisations develop in response to needs. It is the existence of different needs that accounts for the existing differences in the banking systems and financial organisations in Great Britain and other parts of Europe and America. A close investigation into the needs of India in this respect should therefore be the first point of reference to the proposed Committee. Banking facilities are a *sine qua non* for the economic regeneration of the country.

Even after one makes due allowance for the varying density and needs and income of the population, one is struck with the gross inadequacy of banking facilities in this country. Even amongst the small number of banks that exist, there is lack of co-operation. Their operations are confined mostly to commercial banking and foreign exchange business. Their activity is directed mainly towards securing deposits for use at Presidency towns and other larger commercial centres. Branch banking presents

Digitized by Google

most serious difficulties. Government imposed on the Imperial Bank the duty of opening a prescribed number of branches within a specified period. Instead of opening branches at places where there was no bank or where banking facilities were inadequate, the Imperial Bank in many cases went to centres where other banks had already established branches and thus with the Government Treasury funds at its disposal entered into what cannot but be regarded as unequal competition with those branches. This renders the problem of extension of banking facilities more and more difficult. The indigenous banks are, as can be readily understood, unable to meet the competition of the Imperial and the result is that local needs for accommodation are left to other agencies as before. No wonder, the rate of interest in the Indian Bazaars is as high as 10 to 12 per cent., while the Imperial Bank's Hundi rate varies between 3 and 7 per cent. The other day Mr. M. M. S. Gubbay, a distinguished retired member of the Indian Civil Service and now connected with an Exchange Bank, observed that the part played by organised banking in the financial life of the people of India is inconsiderable when contrasted with that which is played by the private Indian Banker. There may be differences of opinion as to whether the contribution of organised banking towards the financing of internal trade may be regarded as quite inconsiderable. The endorsing shroff provides a link between the organised banks and the private bankers and through him the organised banks finance a fairly large portion of trade; but there is no doubt that the share given by the banks is far smaller than one might expect under a system of banking fully organised and systematised. Mr. Gubbay's appeal that means should be devised for broadening the channel between the Bazaar and the Banks has not therefore been made a day too soon. It is time an inquiry is now set on foot as to the possibilities of quickening the contact between the two elements in the Indian banking system and thus bringing the indigenous system into line with modern joint-stock banking.

The need for agricultural and industrial banks and the types of institutions required for this country should be a further item of reference to the Committee. It will also be for the Committee to consider the question of starting Land Banks and Land Mortgage Banks. Between July and October there is a glut of money in the principle banking centres. This is also the time of the year when money is in demand for financing the agriculturists. Co-operative Credit Societies play an important part in this matter and how to secure the best means of co-operation between the different types of agricultural banks and the joint stock banks, it will be for the Committee to suggest.

By far the greatest need of the country is a Central Banking Institution. There is no bank in the country to which the other banks can look for succour in case of a crisis. The Imperial Bank as a banker's bank has failed. Government have forced upon it the desertion of such a function and the assumption of commercial banking by multiplying branches. The want of a central banking institution is, therefore, keenly felt to-day. The discussion on the defunct Bill for a Reserve Bank has cleared the atmosphere and it should not be difficult for the proposed Committee to indicate the lines on which a fresh Bill should be prepared irrespective of the considerations of the contract with the Imperial Bank which loomed large in the last Bill. Perhaps the best course will be to convert the Imperial Bank of India to a Reserve Bank which will avoid some of the difficulties so apparent during the recent controversy and will also do away with an unfair competition between it and other indigenous banks.

The banking inquiry will not be complete without an investigation into the causes of the recent failures of banks and the lessons to be drawn from those tragedies. Such an inquiry is essential to the co-ordination of the indigenous banking system with the modern banking system and the evolution of a well-developed and organised banking system for the country. It will also indicate whether the existing legislation governing banking institutions requires modification, and if so, in what directions.

THE STATUTORY COMMISSION.

The Indian Statutory Commission is meeting from time to time for the purposes of conference on various aspects of its inquiry, in preparation for taking evidence on its return to India in October. Its itinerary has been provisionally settled as follows:—

Poona, October 12; Lahore, October 30; Karachi, November 11; Peshawar, November 16; Delhi, November 21; Lucknow, November 28; Patna, December 12; Calcutta, December 21; Shillong, January 2; Calcutta, January 12; Rangoon, January 29; Madras, February 18; Nagpur, March 13; Delhi, March 25.

The Commission is not proposing to make any fresh announcement as to the scheme of procedure already proposed, which it considers provides a suitable basis for co-operation.

THE DEHRA DUN COLLEGE.

The annual report of the Prince of Wales's Royal Indian Military College at Dehra Dun, which has just been issued, shows, according to *The Times'* Simla correspondent, that in the earlier part of last year there were 78 cadets in residence, which is only two short of the authorised number. Of these, 11 joined for a second term.

The Indian Sandhurst Committee made various recommendations for the expansion of the College and the improvement of its curriculum with a view to providing an education which would enable those cadets who eventually do not enter the Army to qualify for other forms of employment. The Government accepted these proposals, and the new report shows that the College buildings have been lately extended so as to accommodate 120 cadets and that cadets are now permitted to study for the Chiefs' College diploma examination. This will supply the long-desired examination equivalent to matriculation and will entitle a cadet to go straight into a University if he does not go to Sandhurst.

BRITISH INDIAN UNION.

Sir Harcourt Butler, late Governor of Burma, and at present Chairman of the Indian States Committee, and Sir William Marris, late Governor of the United Provinces, who has since accepted a seat on the Indian Council, were entertained at luncheon on May 23 by the British Indian Union. The Marquis of Reading presided.

Introducing the guests of honour, the Chairman said that Sir Harcourt Butler had left behind in the two great provinces he had ruled a notable record as a peacemaker and administrator. He succeeded in his great crusade against slavery in a remote part of Burma, where it had now been rooted out and had also induced certain Naga chiefs to abandon the practice of human sacrifice. Sir William Marris, before going to the United Provinces, played a considerable part in the shaping of the present Constitution in India, and was known as a man of great scholarly attainments.

Sir Harcourt Butler said that whatever he might have achieved in his service in India was due in the main to those with whom he worked. In his 38 years as a member of the Indian Civil Service he had seen many changes and more were approaching. On the whole these changes had been good, and they had brought Indians and Europeans together in a way that would have been thought impossible when he first went out.

Sir William Marris also paid tribute to the loyalty and solidarity of the great public services in India and said he looked forward in a constant spirit of hope to the future.

The Rev. John Redmond Bacon, who has died at Eastbourne, was for nearly 40 years one of the Indian missionaries of the London Missionary Society. He first went out to India in 1875 and worked at Gooty and Bangalore. He was the chief adviser and translator of the Bible in the Telugu language.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Ottoman Debt.

It is scarcely necessary to say that the latest development with regard to the Ottoman Debt has produced great discontent among the bondholders, who naturally see in it merely another instance of the Fabian policy adopted by the Turkish authorities in regard to their liabilities. An explanatory statement issued by the Turkish Embassy in London, so far from smoothing matters over, has rather served further to irritate the bondholders. In this statement it is declared that the bondholders' delay in accepting the Turkish Government's offer justifies a slight modification of the dates for making the payments. This remarkable explanation has drawn the statement from the representatives of the bondholders that no delay has occurred on their part and that no action of theirs can excuse any further postponement, with which reply no one who has followed the extremely trying course of the negotiations can fail to be in agreement. Naturally the representatives of the bondholders do not intend to accept the present situation quietly. They have passed a number of resolutions which have been forwarded to the Turkish Government whose reply will be awaited with interest.

The Bondholders and Turkey.

These resolutions constitute what may justly be termed an absolutely complete reply to the Turkish Government, and it is difficult to see how in the face of them it will be possible for the Angora authorities to persist in their tactics of delaying a settlement. Thus it is pointed out that the clauses of the agreement were discussed at great length and were adopted by the Turkish Government one by one, and that the date for the payment of the first coupon was fixed at the request of the Government itself. It is further justly argued that the session of the Grand National Assembly could have been prolonged for such important business or that the Government could take other effective measures to secure ratification. As regards the suggestion that the Turkish exchange rate would be affected by the sudden collection of funds in foreign currency it is pointed out that the Council of the Debt already possesses the necessary funds in foreign currency and that the sums necessary for the second payment will also be similarly available. Finally the bondholders ask for the payment of the first coupon by the date fixed for the second payment. Though it seems strange to suggest it in view of the circumstances there is to my mind not the slightest doubt that the Turkish authorities are really genuinely anxious to make the necessary payments, simply because a settlement is an essential preliminary to the re-establishment of Turkish credit. A settlement is in their eyes, in fact, a matter of Hobson's Choice, and these incessant delays are no doubt to be attributed to the financial difficulties with which the Turkish Government is confronted. There is no question at all, it may be added, that Turkey is going through a very serious financial crisis, and the trouble is that while a settlement of the debt must precede a loan the Turkish authorities want a loan first before they commence paying their liabilities. If they have appreciated the fact that the first two payments can be made without affecting the exchange they are probably apprehensive as to the effect of subsequent payments. The position it will be seen is thus an impasse which is bound to endure so long as the Turkish authorities fail to realise that a loan cannot be forthcoming until it is evident to foreign finance that Turkey is endeavouring to meet her liabilities.

Progress in Greece.

Developments in Greece during the past year were the subject of interesting comments by Sir Eric Hambro at last week's annual meeting of Hambros Bank. He paid unstinted tribute to the all-round progress made in that country, and pointed out that an important contributary cause to this advance has been the political quietude which has enabled the Government to carry through necessary measures without controversy. A significant sign of the appreciation of the improvement generally in the situation in Greece is the considerable advance which has taken place in Greek securities. Owing to the way in which she has unfailingly met her liabilities Greece's credit stands high abroad, and it is this fact which is making it an easy matter for her to obtain the financial facilities she requires for the purposes of reconstruction and development. To-day a large number of important projects are either in progress or on the tapis in Greece, and it is emphatically satisfactory to know that British enterprise is likely to play no small part in these developments.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET, LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI BUCAREST.

Directors :

E. W. H. BARRY. Esq.
C. De CERJAT, Esq.

Burmah Oil Profits.

The results obtained during the past year by the Burmah Oil Company (whose report has now been issued) reflect the conditions arising from the over-production of oil in the world and the difficult sales position in India owing to the importation of Russian kerosene by the Standard Oil Company of New York. The net profits for the year were £1,914,773 as against £2,502,819 for 1926, the total being reached after writing off £396,533 for depreciation as compared with £491,254. On account of the situation in India the directors decided to place on a permanent basis, and with the addition of the economies and strength of unified marketing, the marketing arrangement which has existed since 1905 with the Royal Dutch Shell group which has given to the Burmah Company's products the first call on the Indian trade. Accordingly the Burmah Shell Oil Storage and Distributing Company of India, in which the Burmah Company hold half the capital, was formed, and commenced business on January 1. Under the existing disturbed market conditions the outlook must naturally be uncertain; and the report merely states that except for the marketing difficulty the company's position is unchanged.

Guardian Eastern Insurance.

Special interest attaches to the report of the Guardian Eastern Insurance Company for the past year as a dividend is proposed for the first time since the formation of the company. It will be recalled that the company was established nearly eight years ago, and the fact that no dividend has hitherto been declared is due to the fact that those responsible for the policy of the company prudently decided that it was essential to see that the company was firmly established before there could be any question of a distribution of profits.

Motors in the Near East.

It is always useful to hear the views of other countries on trade in the Near East and if the opinions come from the other side of the water they are of special value for the Americans since the War have shown that they are second to none in the art of developing trade and in seeking out the most likely markets. A recent issue of the United States "Commerce Reports" contains a survey of the expansion of the use of the motor in South-Eastern Europe, showing very clearly that the motor is coming into its own in that region. Thus at the end of 1926 the registrations of motor cars and lorries in Roumania, Greece, Turkey, Yugoslavia, and Bulgaria totalled 46,477 (the countries are given in their order of importance as markets for motors), and the sales during 1927 amounted to 11,820 or 25 per cent. of the registrations. Of the latter total it is interesting to note that 8,220 motor cars and lorries were of American origin, or roughly 70 per cent. The Americans, in short, have realised the potentialities of this market, and as a result of their enterprise in catering for it are reaping the harvest. As it cannot be maintained that the Americans have any advantage over our own motor car manufacturers the predominance of America in the market can only be explained by the indifference of our traders to the Near East as an outlet. As I have indicated the countries are placed in the order of their importance. Thus Roumanian registrations at the end of 926 were 16,700, while the sales to that country in 1927 were 6,000, figures which indicate very plainly the growing competition that the railways are meeting with there. The figures for Greece are also striking, the registrations being 11,222 and the sales 2,000.

A Favourable Outlook.

It is to be noted that in the article in question stress is laid on the favourable outlook for the sale of cars and lorries in the current year owing to two or three particularly important factors. Of these one is the expansion of the market among the peasants, who now, it is stated, present a much more important market than is to be found in the large towns in South-Eastern Europe. A second factor is the growth of the instalment system of payment, which, whatever its merits or demerits, undeniably tends to promote the development of trade. A third factor, on which emphasis is rightly laid, is the movement to improve roads in the Near East. Thus Greece has just allocated an important contract for road construction, while the other countries, in particular Roumania, have in train plans for the provision of better roads. As I have pointed out the American sales of motor cars and lorries in 1927 totalled 8,220, those of all other countries being 3,600, and as the latter total merely represented the sales of French and Italian cars it can be realised how small a part the British motor industry plays in the Balkan markets. There is no reason why this should be so, and at a time like the present, when Great Britain obviously needs all the trade outlets which can be found to enable work to be found for the unemployed, it is not understandable why these markets should be so neglected. It would appear that the current year will witness a further substantial increase in the sales of motors in the Near East, and it can only be hoped that the knowledge that there is an increasing market in that region will induce our traders to see to it that in future British cars play a more prominent part in that region.

COMMENTATOR.

A tyre census of the motor cars attending Their Majesties' third Court of the season shows that, out of a total of 219 cars, 194 were fitted with Dunlop tyres.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended May 10 totalled £E7,029, making the total from the commencement of the year £E27,921.

A recent Syrian Decree adds the following to the list of machines and requisites which are admitted into Syria duty free when destined for agricultural purposes: machines for cracking, sifting and shelling almonds and nuts; grain-cleaners, driers and winnowers; vegetable manures; fruit trees; anti-pest serum destined for inoculation of cattle.

A Palestine Government notice adds the following articles to the list of those exempted from the payment of Customs duty under the Customs Duties Exemption Ordinance, 1924:—Aircraft, including aircraft engines, spare parts and material for repair of such aircraft and engines, and fuel and oil for consumption by enterprises operating air services in and through Palestine when imported by the said enterprises; provided that the fuel and oil shall be imported in bond subject to such regulations as may be prescribed.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, May 23.

Shares and the Loan.

As a result of the confident statements in the Press that the loan negotiations had been practically concluded there was a great rush on the Stock Exchange some ten days ago, and a consequent rise in values. The shares of the Banca Nationala rose from 6,000 to 17,000, but have dropped again to 15,000. The shares of the Reshitza Iron Works have risen from 5/600 to 1,400, and of the "Mica" Company from 5/600 to 1,100. This company owns the most important gold mines in Europe, i.e., the Twelve Apostles Mine in Transylvania which was worked by the Romans, the remains of their shaft being clearly visible to-day. The 1913 4½ per cent. Roumanian Loan is also gradually rising, and may improve further if the expected settlement with Schroeders is made in the near future.

The Agricultural Situation.

During the last three or four weeks Roumania has been visited by most inclement and unseasonable weather. The temperature was exceptionally low for the season which greatly retarded the spring vegetation. The trees budded a month later than usual, and even then the fruit tree crops were destroyed in some districts by violent winds and hailstones. Reports from Cluj state that a hailstorm passed over the town some ten days ago which was of unprecedented violence, nearly all the windows in the town being broken by the hailstones (as large as walnuts) including those of the University. In areas visited by these storms the autumn crops suffered severe damage but, fortunately the damaged areas are not very large, and according to the latest bulletin of the Ministry of Agriculture the general situation of crops is promising, abundant rain having fallen all over the country, which was favourable to the spring sowing.

Trade Crisis.

Trade in Roumania is passing through a severe crisis and almost every week some important firm is forced to apply for a moratorium in the hope of being able to re-establish itself if the situation improves in the autumn. If the stabilisation loan is successfully floated, and if the harvest promise is fulfilled, there seems every reason to predict a revival of trade towards the end of the year.

The grain export trade from the Danube ports has been more than usually dull this spring, but timber and cattle exports showed a slight increase over last year.

The petroleum industry is also struggling through hard times, and as though its trials were not enough, one of the Moreni wells recently caught fire and is still burning, throwing up a jet of flame to a height of some 200 feet. The sparks ignited several neighbouring wells, and the heat created all round the burning area was so great that it was long found impossible to approach near enough to adopt the usual methods of extinguishing the fire.

Aviation Meeting.

A great aviation meeting was held at the Baneasa Aerodrome on Sunday, May 20, in honour of the French airmen Costes and Le Brix, who are at present on a visit to Bucharest. Among the attractions there were some remarkable demonstrations of parachute descents. Thousands of people flocked to the aerodrome to see the flying exhibitions.

YUGOSLAVIA'S COAST AND RIVER PORTS.

The current issue of the *Belgrade Economic Review* contains an interesting article by M. Slavko Sirischevich, comparing the coast and river ports of Yugoslavia. We give the following extracts: —

The number of ports along the rivers varies considerably, but in the main it has been growing. In 1926 it was 144; the number of ports on the coast was considerably larger—altogether 363. Of these, however, only 167 are ports of call for steamships, which is only half of the total, and very little more than the number of river ports. Some of the sea ports are at the same time the ports of the Dalmatian navigable rivers, as, for instance, Metkovitch, Opuzen, and Komin in the Neretva, Obravac on the Zrmanja, Skradin on the Krka, as well as a number of small ones on the Dubrovacka Rijeka, the Bojana, and the Lake of Skadar. Since, however, they are visited by sea-going ships, they must be considered as mixed river and sea or lake ports.

The length of the navigable rivers exploited, apart from rivers in Dalmatia, is 1,779 kms., whereas the length of the sea coast of Yugoslavia (including the islands) is 5,172 kms., or three times as great. Without the islands, however, the length is practically the same as that of the navigable rivers, namely, 1,562 kms.

But in spite of the greater number of ports on the Adriatic coast the amount of goods handled is much larger in the river than the sea ports. The Danube takes well over half of the river traffic, with a total in 1925 of 1,750,553 tons, and in 1926 of 2,010,983 tons. The large river ports are those with over 100,000 tons of traffic annually. There are six of these, with altogether 1,552,752 tons, or nearly 50 per cent. of the total for all the rivers. Taking the same standard, there are five large ports on the Adriatic, one (Metkovitch) being a mixed port, and these take 85 to 90 per cent. of the registered traffic. The following are the comparative figures for 1926:—River ports: Belgrade, 737,857; Panchevo, 235,800; Veliki Beckerek, 211,362; Novi Sad, 130,999; Kostolac, 127,902; Zemun, 118,832; total, 1,562,752. Sea ports: Split, 735,618; Sibenik, 366,166; Sushak, 255,143; Dubrovnik, 188,926; Metkovitch, 165,877; total, 1,711,680.

There was, therefore, greater traffic in the small number of sea ports than in a larger number of river ports.

The kinds of goods carried by river and sea are very different. Local traffic between the ports along the rivers in 1926 was 1,784,727 tons, exports 1,370,262 tons and imports 567,937 tons. There was also a considerable amount of transit traffic, 717,718 tons, 687,608 of which went along the Danube.

Along the Adriatic, in contrast, the amount of local traffic in 1926 was very small, only 318,798 tons. This was probably also due to the lack of statistics for many of the small ports. Imports from other countries were even less—328,016 tons—though even thus coming very near to the figure for the rivers for exports. In the sea ports exports take the first place with 1,217,500 tons, or a little less than the exports by river. Transit naturally does not occur for the sea ports.

Agricultural products are the most important of the goods carried on the Danube and its tributaries. Most of these are cereals, namely, 1,149,463 tons. Less than half, 438,433 tons, was wood, after which came coal, naphtha, building material, and other goods. Sixty-six per cent. of the agricultural products were exports; 19 per cent. were transported between local ports, and the rest was in transit. Most of the wood, however (three-fourths), was carried between home ports, and (a remarkable fact) nearly 13 per cent. was imported wood, while only 8 per cent. was exports, and 4 per cent. transit. Most of the coal consisted of imports, but 40 per cent. was conveyed between local ports.

Motors and Motoring.

By G. B. B.

One of the finest Whitsuntides we have had for some years saw the roads crowded with cars, and one of the most noticeable features, at any rate in the district in which I spent the time, was a marked abating of the horn-blowing nuisance. Whether some remarks of mine in THE NEAR EAST AND INDIA and in other publications have borne fruit or not, I cannot say, but there was certainly much less of the irritating and senseless "tooting" on the part of small car owners. Another noticeable thing was the enormous popularity of the small car. The great reliability and marked hill-climbing and staying powers of the small car seem to be now generally recognised, and so far as the great mass of motorists are concerned the ten or twelve horse-powered car seems to fill every need. Motoring manners, too, are steadily improving; there is less cutting-in and fewer attempts to show everyone within seeing and hearing distance how fast one can drive up hill, and even the new-comers on the road seem to have little inclination to show others what dare-devil fellows they are. There are, of course, more chars-à-bancs and motor coaches on the road, and the fear of meeting one of these monsters at a blind corner may have something to do with the greater degree of care that is being shown. But lest I should be misunderstood, let me say here and now that I have never been one of those who termed these vehicles "juggernauts" and heaped anathema on the heads of their drivers. I regard the average motor coach driver as being about the most careful and considerate on the road, just as is his urban brother, the driver of a London omnibus.

Motor Coaching.

All of which leads up to the recent statement that the police are about to pay marked and possibly disagreeable attention to the speeds attained by some long-distance coaches. The really important point in connexion with the complaint that the speed of motor coaches exceeds the 12 miles per hour allowed by the Act of 1903 is that motor coaching is proving itself to be one of the most popular means for transport and recreation that have yet appealed to the public, and at this advanced stage of development it would be quite impossible to put a severe curb on coaching activities without causing a tremendous amount of hardship to many thousands of operators besides restricting public enjoyment and causing great inconvenience to the public. The motor coach must march with the times. It is sometimes said that the wider we make the roads the bigger they make the motor coaches, and the bigger they make the motor coaches the wider we make the roads. There is a germ of truth in that humorous idea. But at any rate, with the increasing state of congestion on our roads, particularly at holiday time, a slow-moving vehicle which could not keep up with the general flow of traffic would certainly be inconvenient and productive of accidents. Were it prohibited by law from keeping up the average speed, it would be no less dangerous and inconvenient. The modern coach, as the *Commercial Motor* reminds us, is a marvel of engineering design. It may be, and is, capable of high speeds, but at the same time it can be controlled with remarkable ease. In the majority of cases it is fitted with power braking, and it can, to my knowledge, be brought to a standstill far more quickly than many vehicles of the light car class.

The attitude of the politicians who long ago decided to proceed very carefully in the imposition of any restrictions upon motor coaching calls for support, says that paper. There is no need to harp upon the old subject of the coach being the poor man's motor car, as it is now nothing of the sort, but a public service vehicle just as the tube railway, car, or the London omnibus, but it is desirable to point out that any restrictions upon this means of transport would affect far more people than any suggestion that the light car should keep its speed down to the legal 20 m.p.h.

The Front Wheel Drive.

Something has been said about the adoption of the front wheel drive for private cars, not as an auxiliary as one might call it as in the four-wheel drive system, but a real front wheel drive, as is to be found in the Alvis system. In this system the direction in which the tractive effort is applied to the car is always that in which the vehicle is being steered. With a rear drive this is not the case, and when a corner is being taken or the car is being turned, the rear drive tends to continue the car in the old course and consequently power is wasted, as well as tyres worn with the present method. Again, on rough roads the front wheels, when driving, will pull themselves over obstacles and pull the rear wheels behind them, instead of, as at present, having to be forced over them. There is a good deal in this, and I should say that in such country as is found in the Near East in particular the front wheel drive would quickly prove popular were its existence and its merits made known to prospective users.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Caustic Soda, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of 25,000 okes of caustic soda to the Prisons Administrations, June 13; metal copper sheets and discs to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo, June 18; and wool hair for stuffing pads, hose canvas, burnishers steel, combs curry, shoes horse, slates, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo, June 17.

Steel Nuts and Washers.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 74.05 tons steel, nuts and washers for turnouts 47 kgs.

Automatic Telephone Exchange.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply and erection of a full automatic telephone exchange equipment in Cairo and associated subscribers' apparatus. Specification and drawings obtainable (price £E5) from Chief Inspecting Engineer, London. September 1.

Steel Sleepers.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 150,000 steel sleepers with clips and clipbolts. July 11.

Fans.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 22 ceiling fans A.C. 200 V and 10 desk fans A.C. 200/220 V.

Various.—The Stores, Egyptian State Railways, Telegraphs and Telephones, Saptia, Cairo, invites tenders for the supply of 60 loco. and tender tyres (May 15), and 5,000 metres cable submarine 1 pair, 4,000 metres 2 pair and 1,000 metres 28 pair to specification. May 22.

Various.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of the following articles required for 1928-1929:—(1) Cotton, cloth, clothing, sacks, etc. (2) Buttons, eyelets, needles, threads, etc. (3) Fuses for blasting, twines, miscellaneous, bedsteads, enamelled articles, etc. (4) Paints, metal polish, blacking boot, heel balls, chalk marking, naphtaline, tar, acids, etc. (5) Leathers native and English. (6) Fibres Indian, crin vegetal, can rattan, bassat, split rattan, etc. (7) Lamps and electrical articles. (8) Copper hardware. (9) Tools (carpenters', saddlers' shoemakers', and smiths'), machines, files ,etc. (10) Buckles, nails, ironmongery, fire hose, belting, plates steel, tools steel, etc. (1) Dyeing of clothing and cloth. June 20.

Materials for Railway Footbridge.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of materials for railway footbridge, viz., mild steel sections, rivets, bolts and steel troughing. Approximate cost £E720 to £E750. June 5.

Wire Line.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 200 tons wire line galvanised iron for telephones to specifications. June 13.

Printing Plates.—The Survey of Egypt invites tenders for the supply of 1,550 aluminium lithographic printing plates, required during 1928-29. June 27. (D.O.T.)

INDIA.

Metal Work, Etc.—The Agent, G.I.P. Railway, Victoria Terminus, Bombay, invites tenders for the supply of ornamental metal work and collapsible gates required for the new main line station building, Victoria Terminus, Bombay. June 18. (D.O.T.)

Sea-going, Steel, Steam Launch.—The Indian Stores Department, Simla, invites tenders for one sea-going, steel, single screw, single deck steam launch complete in all respects. Length approximately 87 feet and of suitable beam. Mean draft up to 6 feet. June 4. (D O.T.)

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS,
carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.
This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

CYPRUS CROP PROSPECTS.

The following report has been issued on Cyprus crops in April:—

Wheat.—Lack of rain and hot winds have affected the crop. Even if rain comes soon the production is estimated at from 15 to 20 per cent. less than last year.

Barley.—The production is estimated at the same as last year. The quality is good, except in certain localities where it has been affected by rust and the hot winds.

Oats.—For the same reasons production is estimated at 50 per cent. less than last year.

Vetches, Chickling Vetch, Ochrus Vetch, Lentils, and Chick Peas.—The growth has been seriously checked by lack of rain and hot winds. The harvesting of Chickling vetch and Ochrus vetch has started; production is poor.

Broad Benas.—The production is average.

Onions.—The production is average; the price is exceptionally high.

Cumin.—Unless rain comes soon, the production will be poor.

Potatoes.—The production is promising.

Carobs.—Considerable damage has been caused by brachycarpia; the production will be less than that of last year.

Oranges.—The flowers have been affected by frost and the crop is anticipated to be poor. The current price for export is from 65s. to 67s. per 1,000.

Lemons.—Also affected by frost. The demand is good; the price is about 25s. per 1,000.

Pomegranates.—Blossoming is good and the production is promising.

Almonds.—Owing to frost the expected production is small.

Vines.—Growth is normal; a good yield is expected.

Cotton.—Owing to insufficient rain during the winter only a small area will come under dry cotton cultivation. It is expected to have the same area of wet cotton as last year.

Sericulture.—The mulberry leaves are growing well, silkworm eggs have hatched out, and rearing promises to be favourable.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—A steamer for Bombay (Birkenhead), June 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maidan for Calcutta (Birkenhead, June 5).

Bibby Line.—S.s. Cheshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 13).

British India Line.—S.s. Mandala for Colombo, Madras, and Calcutta (London, June 2); s.s. Nohata for Bombay and Karachi (London, June 9).

Cunard Line.—S.s. Bosnia for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, June 7); s.s. Brescia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool June 23, and Swansea June 26).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 16); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 5).

P. and O. Line.—S.s. Morea for Bombay (London, June 8); s.s. Kaisar-i-Hind for Bombay (London, June 22).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 6); s.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, June 30).

Ellerman and Papayanni Lines.—S.s. Gitano for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow June 2, Liverpool June 9); s.s. Gerano for Cette, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool June 9, Swansea June 14); s.s. Lesbian for Gibraltar, Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 26); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, June 30); s.s. Andalusian for Oran*, Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 14). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, May 29.

There has recently been severe liquidation on the New York, Paris, and Berlin Stock Exchanges and something of a shake-out in Throgmorton Street, but the recovery which occurred towards the end of last week would seem to indicate that the reaction is a temporary matter and does not signify that the end of the boom, which has lasted for well over twelve monhts, is in sight. It is, perhaps, significant that no heavy volume of selling on the part of the public accompanied the setback in prices. Indeed, the reaction might be regarded as almost normal at the opening of a three weeks' account which includes the Whitsuntide holidays. It is certainly a healthy development after the long rise in prices which in some cases has been phenomenal. Gilt-edged securities are maintaining their steadiness, for there is nothing in the monetary outlook to suggest that money rates will be above their present level during the next few months. The recent rise in rates in New York is regarded as temporary, and shipments of gold from America to London confirms the view that the Bank of England is unlikely to follow New York's lead on this occasion.

The Textile Industry.

The past week has been eventful for the holder of textile shares. The eagerly-awaited report of the Balfour Committee on the textile industry has been published. The Committee find that almost everywhere Lancashire is able to hold her own in the higher and highest qualities of cloth, but that she is much less successful as regards coarse cloth. The future of Lancashire, it is concluded, will depend to a great extent upon her ability to retain a large share of the trade in goods of intermediate quality. There is no note of despair in the report, but it is obvious Lancashire will have to make a determined effort to regain prosperity. The Committee are evidently impressed favourably regarding the achievements and potentialities of the artificial silk industry. It was also made know this week that the necessary majority of employers in favour of forcing a reduction of wages had not been secured. This is undoubtedly a sensible decision, for there are other and more promising methods of achieving the end in view. Unfortunately, this satisfaction must be tempered by regret that a wages crisis has developed in the finishing section of the industry. It is to be hoped that the differences will be settled without involving a stoppage of work. The textile industry has made a fair recovery during 1927 from the extreme depression of 1926, and consequently any development which impeded this movement would be deplorable. During the past week or two J. and P. Coats, the Fine Cotton Spinners' and Doublers' Association, and "Slubbers" have published good reports. But there is ample scope for improvement, especially among medium-sized concerns, and this should be the task of the hour.

Imperial Chemical Industries Profits.

The directors of Imperial Chemical Industries regard the outcome of the year's trading as satisfactory and there will be general agreement with this view. Formed a little more than a year ago, it amalgamated British Dyestuffs Corporation, Brunner Mond and Company, Nobel Industries, and the United Alkali Company. The accounts covering the first year's operations show a profit, before providing for income tax, of £4,457,225. The ordinary shareholders receive a dividend of 8 per cent. and the deferred shareholders 1¾ per cent. The sum of £408,976 is placed to general reserve, while £82,681 is left to be carried forward. This concern is already one of the giants of our industrial world and apparently it has by no means reached the limit of its growth. The directors are seeking powers to increase the company's authorised capital by £10,000,000 in the form of 20,000,000 shares of 10s. each. At the forthcoming meeting the shareholders will naturally be interested to know, if only broadly, the purpose to which the new capital is to be put. The company is under very able and enterprising control and it will be surprising if it does not enjoy a career of considerable prosperity. In this connexion its shareholding in the Finance Company of Great Britain and America, a financing company, should prove particularly valuable. The shares somewhat discount the future, but they are among the most suitable industrial securities for the small investor.

The Revival in Westralian Mining.

One of the few bright features on the Stock Exchange during the past week or so has consisted in a revival of interest in the shares of Western Australian gold mining companies. Some readers may recall the "boom" of a quarter of a century ago, when enormous dividends were being paid by the leading mines of Kalgoorlie "Golden Mile," and companies were floated to work claims for miles around—generally without success.

In time, of course, the richer deposits became exhausted, and those mines which still continued in the producing list made little, if any, profit. But of late the State Government has come to the assistance of the gold industry; a cheaper treatment process is stated to have been evolved, and now a rich strike has been made in a property belonging the Lake View and Star which adjoins the once celebrated Golden Horseshoe. If the reef should continue to show the value of £12 to £13 per ton so far indicated, it would mean a spell of great prosperity for the company concerned, and would doubtless lead to a revival of exploratory work on the part of other undertakings. Meantime, quite a number of shares not long ago virtually unsaleable have come into demand at rising prices.

The exports of gum from the Sudan via Port Sudan in March amounted to one ton of bleached of the value of £E55, 2,982 tons of hashab of the value of £E97,154, and 228 tons of talh of the value of £E4,839.

THE MOTOR MARKET IN NORTHERN GREECE.

The automobile business in Macedonia and Thrace during 1927 was very satisfactory (says the American Commercial Attaché at Athens, Mr. Gardner Richardson, in a recent report). Reliable estimates indicate that the total number of motor vehicles actually in operation in this territory approximates 3,000, a considerable proportion of which represents cars abandoned in Salonika by the Allied Expeditionary Forces during 1918-19. Dealers' estimates place the number of motor vehicles sold during 1927 in Salonika, the distributing centre for this part of Greece, at about 550 units, 420 of which are passenger cars and 130 lorry chassis. Nearly 80 per cent. of the total number of motor vehicles sold in Salonika are of American manufacture. The ex-cab-drivers' associations have contributed considerably to the activity of the automobile market in Salonika. About 100 passenger cars were sold to these associations during 1927 for use as taxi-cabs.

What impresses a visitor to Salonika is the almost complete absence of high-price passenger cars. Practically all the cars sold there are in the low and medium price category. The poor street and road conditions prevailing throughout Macedonia and Thrace are in large measure responsible for the absence of high-price cars.

During the last half of 1927 the lorry market became particularly active. The old heavy lorries left in Macedonia by the A. E. F. have in the past constituted the principal obstacle to the development of the lorry market. These are now being replaced by a new light type of 1 to 1½ tons capacity—the only sizes that can operate satisfactorily under the unusually trying road conditions found throughout the northern Greek Provinces.

The used-car situation is of little concern to the automobile dealers in Salonika, as they are seldom called upon to trade in old cars.

The motor-bus and the motor-cycle market is practically nil, mainly because of the absence of good roads. In fact, because of the high operation and maintenance costs, buses in Salonika have decreased from 25 two years ago to about 10 at present.

Salonika is rapidly becoming a very important centre for the distribution of motor cars in these new Greek Provinces. Many American and European automobile manufacturers have found it advisable to divide Greek sales territory into two sections and appoint two independent exclusive distributors, one with headquarters in Athens, covering the old Greek Provinces, and another residing in Salonika to take care of Macedonia and Thrace.

The year 1928 opened with good prospects, especially for lorry chassis of 1 to 1½ ton capacity, for which there continues to be a fairly good demand in spite of the slack winter season.

Further development of the automotive market in Macedonia and Thrace will depend entirely on the construction of new highways which, in the absence of adequate railway facilities, are absolutely essential for the exploitation of the natural resources of the country. The proposed road-construction programme of the Greek Government aims particularly at the improvement of road conditions in Macedonia and Thrace and will undoubtedly give a strong impetus to automobile sales in that district. Until this improvement takes place the general situation, in all probability, will continue as at present without any decided change.

NEWS FROM ALL SOURCES.

The Bulgarian Budget exceeds seven thousand million leva (£10,500,000).

The output of the Anglo-Egyptian Oilfields for the week ended May 18 was 5,532 tons.

It is reported that a new bank is being established in Constantinople to finance enterprises engaged in the building trade.

It is estimated that the yield of cotton on the Gezira Irrigation Scheme is in the neighbourhood of 3.25 kantars per feddan.

Mr. Howard Carter, the Egyptologist, delivered last week two lectures in Madrid on the Tomb of King Tutankhamen, which aroused great interest.

A pair of Angora cats and two silk carpets have been presented by the municipality of the Turkish capital to their Afghan Majesties as a memento of their visit.

The directors of the British India Steam Navigation Company, Ltd., have resolved to pay, on July 2 next, an interim dividend of 2¾ per cent. less tax, on the 5½ per cent. preference stock, for the half-year ending June 30.

It is announced from Teheran that the Persian Minister for Foreign Affairs, Ali Ghuli Khan Ansari, the Mushaver-ul-Mamalek, who is at present in Czechoslovakia, has been appointed Ambassador to Moscow.

The Times Beyrout correspondent reports that in a recent fight between Druzes and raiding Bedouin on the southern frontier of Syria, 12 of the latter and two Druzes were killed, and several men were wounded on both sides.

The Bill for introducing the Western variety of the Arabic numerals was passed by the Grand National Assembly in Angora on May 21. The use of the Western figures will be optional until June 1, 1929, and compulsory thereafter.

The Majliss has passed a Bill in favour of sending a hundred Persian students to Europe every year for six successive years, in order to study different sciences. There will be an annual appropriation of £30,000 for this purpose.

It is announced by the Albanian Press Bureau that the United States Government has proposed to Albania the conclusion of an arbitration treaty similar to that which was recently concluded between the Washington Government and France. The Albanian Government has accepted the proposal.

The Holy Carpet, ordered in India by the Wahhabi King to take the place of that which is not to be sent from Cairo this year, arrived at Jidda on May 22 by sea from Bombay. It was taken ashore by a deputation of high officials and its arrival gave the signal for general rejoicings.

At a banquet on May 20 in Angora, Mustapha Kemal Pasha warmly welcomed the Afghan King in a speech in which he compared the recent history of Afghanistan with that of Turkey and expressed every good wish for the reforming policy which his guest is pursuing in Afghanistan. In reply, King Amanullah, addressing the Ghazi as "My dear and generous brother," expressed his pleasure at being the guest of the Turkish nation and his pride in its achievements.

The Bombay, Baroda, and Central India Railway Company proposes, in addition to the half-year's guaranteed interest of £1 10s. per cent., a final dividend of £1 10s. per cent., making a total payment in July next of £3 per cent., less tax. The return for the whole year will therefore be £6 per cent., less tax, the same as for previous year.

Presentation of the honorary silver medal and certificate of the Royal Humane Society to Mr. Charles McFarlane, Chief Officer of the British India Steam Navigation Company's s.s. Chakla, was made by Viscount Inchcape at the Company's offices on May 23 in the presence of the Board of Directors. The medal and certificate were awarded for Mr. McFarlane's gallantry in saving the life of the master of a native sailing craft at sea.

The Yugoslav Budget figures for the first nine months of the 1927-28 fiscal year have exceeded expectations. Direct taxes have brought in 1,364 million dinars, as against an estimate of 1,279 millions, and the tobacco monopoly 1,722 millions, as against the estimate of 1,590 millions. On the other hand, the Excise duties have declined by 135 millions, stamp duties, etc., by 69 millions, and the railway receipts by 608 millions. The total revenue is 7,860 million dinars, as against 8,608 millions estimated. The expenditure, however, was only 7,481 millions, as compared with an estimate of 8,608 millions—or an economy of 1,127 millions. There was thus a surplus of 379 millions, whereas the estimates merely balanced revenue and expenditure.

Company Meeting.

EGYPTIAN MARKETS.

Review of Year's Working.

The annual general meeting of the Egyptian Markets, Ltd., was held on May 23 at Winchester House, Old Broad Street, E.C., Lieut.-Col. A. St. John Cooke, D.S.O. (the Chairman), presiding.

The Secretary (Mr. F. R. Parker) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: I have just returned from a further visit to Egypt, where I have spent a good deal of time during the past three years and made a very close study of your company's work there in all its branches, as well as the rapidly changing conditions of life generally and of the Governmental organisation with which we must make our machinery dovetail.

The population of Egypt has grown in a remarkable manner since our concession was granted, with the result that there are now many more privately-owned markets. This increase in the number of centres for barter and trading reduces the numbers of persons attending our markets, as they find other centres nearer to their doors. Of course, as formerly, no new market is allowed at a lesser distance than 8 kilometres from one of our established markets.

When we last met Egypt was emerging from a political crisis, and the late Prime Minister (H.E. Sarwat Pasha) had just formed a new Cabinet. Since then another new Cabinet had been formed under the leadership of H.E. Nahas Pasha, and another political crisis has since arisen, so that to-day we find the position still undefined and political prospects uncertain.

However, as you have, I think, been informed upon previous occasions, the policy of your directors has always been to keep entirely clear of politics and party intrigues in Egypt, and it is not our intention to deviate from this main principle.

Our great desire is, however, to maintain the most friendly relations with the respective Ministers and heads of Government Departments and other officials with whom our business brings us into contact, quite irrespective of their political views.

Questions of a controversial nature do, of course, arise, but we hope and expect that we shall receive equitable treatment from the Government in view of the excellent manner in which our markets are administered and the very considerable revenue the Government derives from our activities.

In this connexion it may interest you to hear that, whereas for the year 1917 the Government of Egypt received from this company only £4,000 odd as their participation in the profits, this participation has steadily increased, until for the year 1926 the amount paid to the Government was £25,000 odd and for the year 1927 they will receive over £23,000. Egypt has not yet recovered from the acute financial depression it was passing through a year ago, and, as a consequence, we have suffered during the year under review through decreased gross receipts from all sources. There has not been as rapid an adjustment between the prices of cotton and other crops and the rentals payable for the land as formerly.

With regard to our markets generally, there is, I think, no question but that the movement of cattle and other merchandise through our markets is very seriously restricted, against the public interest, by the impost of octroi duties by the various municipalities. The question of this form of taxation for municipal revenue is, we understand, receiving the careful consideration of the Egyptian Government with a view to its ultimate abolition when a satisfactory substitute has been found. It will, I am afraid, be some time before it is possible to bring in effective legislation, though the movement against this form of tax is growing under the enlightened guidance of the Director-General of Municipalities.

A considerable amount of revenue is, as heretofore, being lost to the company in consequence of merchants squatting on the roads in the villages and outside our markets instead of coming into our enclosures, despite frequent and continuous complaints which we make to the municipal authorities. We are also suffering from the fact that a large number of cattle and general markets, the property of private individuals who do not share their profits with the Government, have been and are still being opened all over the country.

Representations have been, and are continuously being, made to the authorities. It is hoped that, in view of the very large financial interest which the Government has in the results of our activities, steps will be taken towards a suppression of these troubles.

Our trading business, too, is becoming increasingly difficult in consequence of the large number of merchants operating in the country and the resultant keenness of competition. This particularly applies to the business in artificial manures, in which the fluctuation in world prices has been a marked feature during the past year, demanding the hardest of work and closest attention to avoid still less satisfactory results. Two or three of the larger firms have lost heavily, but I am glad to say that our careful policy has protected us from any serious losses.

New legislation against adulteration of fertilisers is about to be put into operation. If properly carried out this should eliminate much competition of an unsatisfactory type and help the cultivators at the same time.

I shall not venture to make any forecast of prospects for the current year. As you are aware, much depends upon the cotton crop and the market price of cotton (which has risen latterly), which it is yet too early to foresee, also upon an adjustment of economic conditions, including land rents and the cost of living, in which, generally speaking, the tendency is towards improvement.

I can only repeat what was said at the last meeting, that Egypt, capable of producing about two and a-half crops annually from each cultivated acre, has great recuperative powers and is financially sound.

Our results depend mainly on the difference between the prices at which the fellaheen sell their crops and the rentals they pay for the land they are grown on. I now move: "That the report of the directors dated May 3, 1928, together with the audited statement of accounts and balance-sheet for the year ended December 31, 1927, be and they are hereby approved, confirmed, and adopted."

Mr. G. H. Redwood seconded the resolution, which was carried unanimously.

The directors of the Burma Railways Company have decided to pay on July 1, in addition to the guaranteed interest of £1 5s. per cent., an interim dividend of £3 15s. per cent.

An order has been received by C. M. Hill and Co., London, from the Bengal-Nagpur Railway Company for fifteen oil tank waggons, 5 ft. 6 in. gauge.

The adjudication for the supply of 140,000 tons of coal to the Egyptian State Railways has been postponed until August (says a Reuter message).

The traffic receipts of the South Indian Railway for the week ended April 28 totalled Rs.12,90,966, making the total from April 1 Rs.49,23,865. So far this year the traffic returns show an increase of Rs.2,46,355.

An Athens telegram states that it is reported that the Greek Government has decided to denounce the Greek-French Commercial Treaty, and that in the negotiations for a new treaty Greece hopes to obtain better terms regarding the importation of Greek wines into France.

The used-car market in Palestine is receiving far more attention than previously (says an American Consular report). Used cars are being overhauled, upholstered, repainted, and made attractive in order to be sold, in many cases, to private individuals. However, used cars are easily disposed of in Palestine, even though they are not overhauled and repainted.

Despite the tendency of certain elements of the Turkish population to cling to their traditional types of garments, the trade in suspenders and garters is showing a gradual increase (says an American Consular report). At the present time these articles are supplied chiefly by Italy, Germany, and Austria. There is a growing domestic manufacture of suspenders and garters from materials imported from Germany. The locally made products are reported to be gradually securing the cheaper trade, and imports are being confined more and more to the medium qualities.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended May 23:—

Egyptian Futures.—Sakel Contract.—Trading, during the majority of sessions since our last report, has been of a limited and featureless character, and few developments worthy of serious consideration have occurred. Perhaps the most noteworthy feature has been the very steady undertone in evidence throughout the week; the limited amount of fresh selling that has come into the market has been readily absorbed, and, with Alexandria consistently straddle buying against sales of Uppers, contracts have at times only been obtainable by paying enhanced prices. In addition, latterly, a fair line of Novembers has been covered by a spot house, and to this, combined with the above-mentioned straddle operations, we attribute the advance of 49 to 58 points for near and 42 to 45 points for more distant positions that has taken place on the week. Trade support, as far as the demand for tenderable grades are concerned, continues to be very limited; producers of fine counts are finding a retail inquiry for their output with margins unsatisfactory and quite out of line with ruling commodity values. On the other hand, mill stocks, especially of Sakels, have generally been allowed to run right down, so that spinners will soon be faced with the alternative of securing fresh supplies whatever the state of the yarn market, or else of cutting out this variety altogether. In the meantime, the market is feeling little pressure from existing stocks, holders of which appear quite content to await trade developments, evidently backed up by the view that the statistical position is such that any material decline is improbable during the next few months. Only small tenders have been encountered throughout the month, and owing to this the current position has latterly closed up in value with the more distant options. Crop reports from Egypt continue to show that satisfactory progress is being made, and little anxiety is now being expressed regarding the summer water supply. Unless there is a radical change in outside conditions, quiet markets with moderate fluctuations are likely to be experienced for the immediate future; we still consider, however, that moderate purchases on easy markets are to be recommended.

Upper Contract.—A fairly consistent business has been transacted in this contract throughout the past week. Alexandria straddle selling has been a feature; this has had the effect of rather creating an easier undertone, and is mainly responsible for the decline of 1 to 6 points that has taken place since we last wrote. Trade reports do not indicate much activity, but a fairly consistent offtake has been experienced for cotton out of the local stock and for shipment. Differences with the American contract have closed in somewhat on the week, but we think this move will only be of a temporary character. We still maintain our recently expressed "bullish" views of the situation and consider that moderate purchases of old crop months at the ruling level will later on prove profitable.

Egyptian Spot.—The demand for spot cotton throughout the past week has again been of a somewhat retail character, and it appears that spinners are still debarred from entering into any fresh commitments of weight by the present unsatisfactory state of the yarn markets. The inquiry for the tenderable Sakel grades has been negligible, but the demand for the Upper varieties, especially those ranging in value from F.G. Fair to Strict F.G. Fair (pass to 50 on contracts), has been well maintained. The lower Sakel qualities, ranging in value from 14d. to 15d., are still sought after, and the selection of these, as far as the local stock is concerned, is now much reduced. A similar state of affairs evidently prevails in Egypt, as attractive c.i.f. offers in this range are becoming increasingly difficult to obtain. Latterly, a revival in the Pilion demand has been noticeable, but holders are rather difficult to deal with. Some hardening in the basis of this variety has to be reported, a tendency which will probably become more pronounced as the season advances. In conformity with other long staple varieties, business in Sudan Sakels has been rather quiet throughout the week; would-be buyers, however, are keeping in close touch with arrivals, and this cotton will probably be sought after as soon as conditions permit of spinners operating more freely. Transactions in shipment cotton in both the Sakel and Upper varieties have been limited to small contracts, and shippers' competition to obtain the little business offering has been very keen. Forwardings for the week ending the 18th inst. were returned as 7,604 bales Egyptian and 5,637 bales Sudans. Estimated spot sales for the week, 1,300 bales Egyptian and 2,000 bales Sudans. Quotations of Sakel have been advanced 40 points on the week and those of Upper and Pilion are reduced 25 points. F.F.G. Sakel to-day, 21.55d. F.G.F. Upper to-day, 15.20d. F.G.F. Pilion to-day, 15.80d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 17, state:—

Since our last report the futures market has been fairly active, with a slightly easier tendency. The week's summary of price movements is as follows:—Sakellaridis: May, 41.50 dollars, 0.16 dollars down; July, 42.10 dollars, 0.50 dollars down; November, 42.88 dollars, 0.56 dollars down; January, 42.65 dollars, 0.75 dollars down. Ashmouni: June, 28.14 dollars, 0.44 dollars down; August, 28.34 dollars, 0.51 dollars down; October, 28.42 dollars, 0.58 dollars down.

Sakel.—The market has not shown any special features during the week; the turnover has been moderate and operators seem, for the present, to be content to mark time. Bull and bear factors at the moment seem to about counterbalance each other, which explains the quietness prevailing in the market. On the one hand, we have only a moderate stock of Sakel and this very firmly held, whilst the maintenance of the law restricting the acreage precludes any great increase in production this year; on the other hand, the demand from the consuming centres is poor, with spinners showing a tendency, because of the present high premium of Sakel, to use other cottons whenever, and as far as, possible. The local operators are of divided opinions, some inclining towards the bull side and some towards the bear side, but, on the whole, the open speculative positions are apparently not large.

The Government maintains a sphinx-like silence as to its intentions regarding its stock of cotton; whether the cotton will be released for sale or not in the near future, it is quite impossible to foresee. The statistical position shows a slight improvement on the week; the stock stands at about 2,700,000 kantars, of which about 1,250,000 kantars Sakel, including 350,000 kantars held by the Government. The cotton still held up-country cannot amount to very much. We repeat the opinion expressed in our last report, viz., that, for the time being, we look for quiet markets with little change in price levels.

Uppers.—The relative firmness of American has kept this market steady; quotations show a slight easing on the week, but the tone of the market is fairly good. The demand from spinners is still only moderate, but local stocks are not large and are well held, and it is unlikely that we shall see any pressure to sell the cotton.

The week's receipts amount to 58,104 kantars, against exports 110,763 kantars; the stock in Alexandria stands at 2,686,103 kantars.

Spot: The market has shown a fairly steady tone on the whole during the week. Total sales amount to about 13,200 bales, of which we estimate 6,200 bales Sakellaridis, 6,400 bales Ashmouni and Zagora, 500 bales Pilion, and 100 bales other varieties.

Sakellaridis: There has been a small demand for the high grades, but not sufficient to push up premiums. Medium grades are still actively in request and some business has been done in low-grade cotton. Spot differences have not altered to any extent.

Ashmouni and Zagora: Up to Tuesday these varieties were almost entirely neglected, but in the latter part of the week there was a good demand for all grades from Good Fair to Good, with a corresponding hardening in spot differences. Not much business was done in cotton below Good Fair, and discounts are perhaps a little easier.

Pilion: The active demand reported during the past few weeks for this variety is still maintained and spot differences have again hardened slightly.

Other Varieties: Apart from a few sales of Nahda and White, there is nothing fresh to report.

Crop, 1928.—Crop report from our up-country agencies are satisfactory; weather conditions have been favourable during the week and the crop is progressing well, having caught up much of the delay which the plants in some districts had been showing owing to the bad weather of early March.

Complaints of water shortage are no longer heard; indeed, the position has so completely changed that there is now talk of the Government shortly authorising a further 200,000 feddans of rice, so bringing the total up to 250,000 feddans. The rise of the river level is very marked. We give below the figures shown by some of the gauges on the 15th inst.:—Malakal, 10.56 metres, against 9.99 last year; Roseires, 13.34 metres, against 10.94; Wadi Halfa, 1.05 metres, against 1.03. The discharge from the Assouan Reservoir on the 15th inst. was 866 cubic metres per second, against 845 cubic metres last year and 854 cubic metres in 1926. The Reservoir level at the same date was 107.32 metres, against 111.01 metres last year and 110.49 metres in 1926.

COMPANY NOTES AND REPORTS.

MORTGAGE COMPANY OF EGYPT.

The net profit of the Mortgage Company of Egypt for the year ended March 31, 1928, after providing for interest on debentures and temporary loans and applying £1,500 in writing down the value of premises in Cairo, was £136,367, against £129,112. The directors recommend a dividend of 15 per cent. (being 3s. 9d. per share) on the amount paid up on the ordinary shares and a bonus dividend of 2 per cent. on the ordinary shares (being 6d. per share), addition to special reserve £13,867, leaving to be carried forward £185,000. By decree of the Egyptian Government, the area put under cotton in 1927 was restricted, with the consequence that the quantity produced is estimated not to exceed 6,250,000 kantars, against 8,658,000 kantars in 1926.

Barclays Bank (Dominion, Colonial, and Overseas) has received the following cable from its Alexandria office regarding Egyptian trade for April:—"The Statistical Department of the Ministry of Finance announces that total imports for Egypt for the month ended April 30 are £E4,590,089, against £E3,287,656 for the corresponding month last year. The exports amount to £E5,060,566, against £E4,135,677 in April, 1927. Cotton exports were £E3,483,531, against £E3,139,860 in April, 1927."

It is reported that the Yugoslav Discount and Mortage Bank, Zagreb, which was formed through the amalgamation of the Croatian Discount Bank with the Croatian Slavonian Land Mortgage Bank, is expected to amalgamate with the Bank of Bosnia and the Agricultural and Commercial Bank of Belgrade.

Notes of the Week.

The Adriatic Storm.

Italy and Yugoslavia will have disappointed the prophets who were looking for a war during the last week of May, in order to launch the eight years of tribulation that measurements of the Great Pyramid, based on a unit worked out to seven places of decimals, had fixed for this date. The storm that descended with such sudden violence on both shores of the Adriatic Sea a little more than a week ago rapidly spent itself, even if it may not as yet have abated altogether. The decision of the Yugoslav Government to present the Nettuno Conventions, signed in 1925, to the Skupshtina for ratification aroused strong indignation throughout Croatia and Slovenia, and in all probability rioting would have taken place sooner or later. It became inevitable when Fascist excesses at Zara, the Italian town on the Dalmatian coast, were reported. Anti-Italian demonstrations followed in various Yugoslav towns, and damage was done to Italian property at Sebenico, Split and elsewhere. Although latent hostility to Italy was behind the earlier outbreaks, there can be little doubt that a desire on the part of the Opposition to embarrass the Voukitchevitch Government was also a factor in the unrest. In Belgrade student demonstrations provoked vigorous action on the part of the police, and here the trouble was more definitely directed against constituted authority than against Italy. A pitched battle round a café led to casualties on both sides; but the police remained masters of the situation, and numerous arrests were made.

After Effects.

Fortunately for the Yugoslav Government the situation has not been complicated by "Corfu" action on the part of Italy. A demand has been made for compensation for the damage done to Italian property; and the Yugoslav Government, which would, in any case, have been obliged to express regret for the unseemly occurrences, has conveyed a suitable message. It is able to present a counter-claim for compensation in the case of the anti-Yugoslav excesses at Zara, and if Italy maintains a reasonable attitude, it should not be difficult to arrange for an immediate return to normal relations between Rome and Belgrade, particularly if, as seems probable, the Yugoslav Government persists in its resolve to secure the ratification of the Nettuno Conventions by the Skupshtina. The domestic position of the Voukitchevitch Cabinet is another matter; but if it continues to press for ratification, it must have decided that the advantages to be gained are an adequate counter-balance to the accession of strength that ratification will inevitably bring to its opponents. Although the reports that Italy had again been pressing for ratification, and that foreign financial interests which are being approached at this time suggested the same course as a desirable preliminary to a loan has been denied by the Yugoslav Foreign Minister, it is evident that the Belgrade Government has made up its mind that neither the foreign nor the internal situation can show much improvement until the Nettuno Conventions have been cleared out of the way. There can be little doubt that this policy is in the real interests of Yugoslavia, and represents a first step towards a constructive programme, looking beyond the immediate requirements of the political situation at home. Whether it will succeed remains to be seen. The conclusion of a foreign loan should strengthen M. Voukitchevitch's hands, but it will not suffice to keep him in office, if the cleavage in his own Radical Party continues to grow.

Turkey and Italy.

The text of the Italo-Turkish Treaty of "neutrality, conciliation and juridical settlement," signed on May 30, has been published. The most important clause binds the two parties not to enter into agreements of a political or of an economic nature with any third party, or into any combinations directed against the other. In the case of an attack on either by one or more States the other party will preserve neutrality throughout the duration of the war. Differences between the two parties not settled by ordinary diplomatic means will be submitted to a procedure of conciliation and, should this method fail, re-

Digitized by Google

course will be had to juridical settlement provided for in a Protocol of nine Articles. Questions affecting sovereign rights are excepted from this arrangement. The Treaty is for a period of five years, and any difference of opinion regarding its interpretation or execution is to be referred at once, on demand, to the Permanent Court of International Justice at The Hague. For the purposes of juridical settlement a permanent committee of one Italian, one Turk and three others who will be neither Italian nor Turk, nor domiciled in either country, will be set up within six months after the exchange of ratifications. The value of the Treaty lies more in the fact that it entails the acceptance by Turkey of Italian denials of aggressive designs on Asia Minor than in any of its specific terms. Italian trade in Turkey has been for some time on the upward grade, and the pact will presumably give it a further stimulus. For the Turkish Republic it provides the self-satisfaction that is to be associated with the first treaty concluded, as beween equals, with a Western Power. There is nothing to suggest that Italy has secured another ally in an attempt, so frequently attributed to her in Yugoslavia, to forge a chain of States that will completely isolate the Yugoslavs in the event of an Italo-Yugoslav conflict. Any country that deliberately provokes a war will find few, if any, allies to support it; if it is the victim of an unprovoked attack, it should be able to count on all the support that it requires within the League of Nations without appeal to any separate alliance that it may have made. From the actual terms of the Treaty Turkey seems to gain nothing concrete; its value to her will consist in her capacity to make use of her friendly relations with Italy to adjust her views on international comity to the practice of Western nations.

The Turko-Afghan Treaty.

The conclusion by Turkey of two treaties, with Afghanistan and Italy respectively, within the course of a few days inevitably challenges comparison between the two. There can be no doubt that the Turko-Afghan Treaty is the more substantial of the two documents as far as treaties go, and it must be inferred that the Turks were unable to obtain from the Italians the terms that the Afghans were prepared to concede. Both treaties pledge each contracting party to abstain from political or economic agreements directed against the other; but in the case of war the Afghan treaty provides for a joint study of the situation. Relations between Turkey and Afghanistan are intended to be much closer than those contemplated for Turkey and Italy. The Afghans are to look to the Turks for the loan of experts, in particular for education and justice. In the opinion of many well-wishers of Turkey it will be regarded as unfortunate that the Turks themselves do not look in the same way to the West for the advice that would enable them to fall more rapidly into line with the countries that they have set out to imitate.

The Hijaz and the Wahhabis.

The suspension of the British negotiations with King Ibn Saoud of the Wahahbis, owing to the Pilgrimage, has enabled members of the British Mission to testify to the conduct of affairs in the Hijaz under Wahhabi auspices. It is stated that Sir Gilbert Clayton in Jerusalem, whither he went for two days on May 31 in order to confer with Lord Plumer on points in the negotiations with King Ibn Saoud which affected Trans-Jordan, said that he was impressed with the material improvements that had been made. Seven hundred motor cars were now covering the journey from the coast to Madina in 36 hours, whereas in former days that journey took 15 days by camel; King Ibn Saoud's palace was now having electric light installed, and so on. Most important of all, Sir Gilbert is said to have expressed his belief that the negotiations would be concluded in a month or two in a spirit of conciliation. In regard to the numbers of the Pilgrimage itself, 200,000 is the figure provisionally given as being the total of *hajjis* by sea and land; which is a quite satisfactory achievement, and one which will have adequately filled the hopes of the Wahhabis and the coffers of the Hijaz. So far as it is now possible to make out, the provisions for the pilgrims were excellent; and the *Haj* of 1928 seems likely to redound to the credit of the Wahhabi régime.

Facts about Iraq.

It is not often that the mists of prejudice, of optimism, or of formal politeness are so usefully swept aside as they were in a lecture which Dr. W. A. Wigram delivered to the Central Asian Society on May 29 upon "Problems of Northern Iraq." There is little doubt that Dr. Wigram hit several nails on the head, so that they rang with the delightfully unofficial noise of truth. It is true that most of the difficulties in the administration of Iraq were not created by the British but were bequeathed by the Turk; it is true that administrative jobs in Iraq are largely used for personal aggrandisement—the fact is becoming increasingly notorious; it is true that it is the British, not the Arab authority, which is looked upon by Iraq at large as the ultimate salvation of the country; it is true that the failure to provide satisfactorily for the Assyrians was an indelible blot on the record of the League of Nations; it is true that the Kurdish problem advances to solution mainly because there has as yet arisen in Kurdistan no man strong enough to override tribal feuds. Honest Iraqi Arabs are as well aware of these things as is any foreign observer. One need not agree with all Dr. Wigram's observations to emphasise the unusual importance and outspokenness of his lecture, but as an offset to the mirage of sentiment in which certain Arabophils have at times been wont to indulge, its nature as a healthy corrective can scarcely be exaggerated. There is no one who wishes Iraq well more sincerely than we do; but in expressing that wish it is the most feminine folly to ignore the facts. A country that is at the moment largely desert cannot be built up on a succession of mirages; nor is it true that the majority of its inhabitants wish it so to be built. That there are tried and capable Iraqi administrators is fortunately true and obvious; and it is in the multiplication of their number that one of the main hopes of an independent and prosperous Iraq lies.

Dr. Weizmann and America.

It is impossible to take an intelligent interest in Palestine without following the activities of those American Jews who so largely contribute to the upkeep of Zionist colonists in Palestine. Now Dr. Weizmann, who has just returned from America, whither he went in connexion with the proposals for the extension of the Jewish Agency, has

PACTS AND PASSIONS IN THE NEAR EAST.

The signature of a Pact of Friendship and Arbitration between Italy and Turkey constitutes a landmark in the post-War history of the Near East. There may be little in the actual terms of the agreement to differentiate it from similar undertakings on the part of several pairs of States to observe between themselves the spirit of the Covenant of the League of Nations; but an Italo-Turkish Pact should prove to have a significance beyond the limits of the two countries which it concerns primarily. The Turkish feeling of hostility towards, or at least suspicion of, Western Powers has been in no small measure attributable to the fear that the Turks entertained of Italian designs on south-western Asia Minor, and it was supposed at Angora that, if ever an attempt were made to give effect to these designs, it would be because Western opinion could be relied upon to be in sympathy with Italy rather than with Turkey. The Pact signed at Rome on May 30 implies that the Turkish Government has accepted Italy's assurances that the alleged designs are not entertained by her. By no stretch of the imagination can Turkey pretend that her territorial integrity is threatened by any other Great Power of the West, and one cause of the anti-foreign spirit which official Turkey has cultivated to the country's prejudice falls to the ground. At the same time Turkish *amour propre* receives a useful solatium from a treaty with a Great Power. It is true that Italy has been lavish in the matter of such pacts, but this aspect will not detract from the merit of this particular one in Turkey's estimation.

With the multiplication of peace pacts in the Near East it might be thought that, in the place of the vulture for whose appearance the Balkan horizon was scanned so anxiously in the past at spring time, the dove was qualifying for selection as the bird symbolic of the Peninsula. Unfortunately, as the event has proved, a peace pact does not always entail active cordiality between the contracting parties, although in the case of the Italo-Turkish Pact it may be taken for granted that Italy will know how to take due commercial advantage of Turkish satisfaction. The anomaly of allowing what purports to be a formal endorsement of friendship to emphasize bitterness and ill-will has prevented M. Michalakopoulos, Greek Foreign Minister, from hurrying on an agreement between Greece and Turkey. In his opinion a treaty should follow and not precede the establishment of cordial relations. As Turkey and Greece neither want war nor can afford it, and have no adequate issue over which to go to war to-day, an undertaking between them to keep the peace would not be a difficult pledge to sign. When the Turkish Government found that the much-desired treaty with Italy might be delayed until Turkey had reached agreement with the Greeks, it was all agog to sign the conventional pact of friendship and non-aggression which has become the vogue in Central and Eastern Europe. The Greek Foreign Minister, however, set no great store on paper undertakings of only academic value. Turkey put forward the suggestion that the signing of a general agreement would supply the necessary good will on both sides for the settlement of outstanding points at issue. M. Michalakopoulos, however, held that, pending a settlement, a treaty between Greece and Turkey would have as little practical effect as the 1924 Treaty between Italy and Yugoslavia. So long as Italy pressed for a Greco-Turkish agreement as an antecedent condition of an Italo-Turkish Pact, the negotiations between Athens and Angora seemed to make fair progress. Italy, however, has suddenly waived her stipulation—prompted, it may have been, by developments both in Yugoslavia and in Greece—and has signed her Pact with Turkey. The political crisis in Greece has inevitably interrupted the Greco-Turkish conversations; but it is to be feared that the removal of the stimulus on one side to settle the outstanding questions may prove a more potent factor in delaying an agreement between Turkey and Greece, which was to establish friendly relations between the two countries and to make provision for a reduction of naval armaments.

Enthusiasm for pacts of friendship and arbitration in South-Eastern Europe is apt to be chastened by the spectacle now being afforded of Italo-Yugoslav relations. Genuine agreement between these two countries would represent an important contribution to the peace not only of the Balkans, but also of the whole of Europe; yet the proposal of the Yugoslav Government to ask the Skupshtina to ratify conventions signed three years previously has been the signal for serious anti-Italian outbursts throughout the Kingdom, and for counter-demonstrations in Italy. The political situation in Yugoslavia is so unsatisfactory, that it is difficult to determine whether feeling against the Italians has not been deliberately stirred for the sake of embarrassing the Government. If it should be the case, it suggests a certain incongruity between the official cult of peace pacts and the absence among the people concerned of a will to peace, whether among themselves or with other countries. The Italian Government was compelled to press for satisfaction for the anti-Italian excesses in various Yugoslav towns, and in a situation so electric there was the danger that the selection of an unfortunate word in a formal communication might prevent one party from accepting a demand, while the other would be unable to withdraw it. In the present instance this danger has been avoided. The Italian notes were couched in moderate terms, and Yugoslavia has wisely conceded the demands made. The fact, however, remains, that if less haste had been shown in drafting the Nettuno Conventions, it is at least possible that successive Yugoslav Governments would by now have been able to place Italo-Yugoslav relations on a happier plane. Yugoslavia's failure to ratify the agreements has annoyed Italy, and each country, while professing to be anxious for the establishment between them of cordial relations and good will, has contrived to give the other cause for offence. It would be unfortunate if a similar state of affairs were to be brought about between Greece and Turkey, and for this reason the two countries will be well advised to remove causes of difference out of the way before they seek to crystallize their relations in an undertaking which might not secure whole-hearted approval by both peoples. The rapid settlement, however, of the crisis in Italo-Yugoslav relations is a striking testimony to a more tactful handling of a delicate international situation than was formerly to be expected in the Balkans.

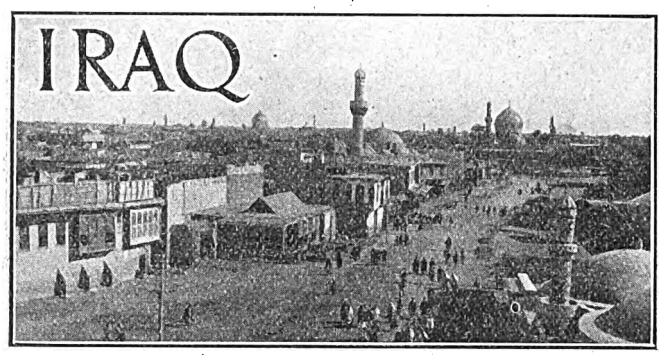
The Near and Middle East*

From Our Own Correspondents.



Baghdad, May 17.

The Elections.

The secondary elections for members of the Chamber of Deputies were held throughout Iraq on May 9, and resulted in a substantial majority for the present Government. The election for Baghdad Liwa was held in the Royal Cinema, where the strong police force on duty had no difficulty in keeping order. Some anti-Government demonstrations had been planned, but proved abortive except for a little stone-throwing. An eleventh-hour attack on the Government, stating that Sir Abdul Muhsin as Saadun had already resigned, was published in the vernacular paper, *Al Zaman*, but met with equally little success. Results of the election received by telegram from the provinces (not yet all to hand) indicate that the present Administration has the confidence of the majority of Iraqis.

Conscription.

Mr. Amery's statement in the House of Commons regarding the British Government's attitude towards the introduction of conscription in Iraq is regarded by the local paper, *Al Iraq*, as "a heavy blow" at conscription, and "a secret encouragement to Iraqis to reject the scheme." If, as this Baghdad journal claims, Iraqis are all clamouring for conscription, it is not clear why the British refusal to interfere in the matter—or in other words to lend its forces for the coercion of Iraqis into the army—should be considered necessary.

The Income Tax Law.

The Baghdad Chamber of Commerce has addressed to the Ministry of Finance, a protest against the provisions of the new Income Tax Law for Iraq, which it believes to be impossible of fair administration as far as the taxation of the merchant is concerned. One great difficulty of the Government in framing the law has been the fact that many considerable merchants conduct their business without any book-keeping, so that to ascertain their exact profits is almost impossible; the law provides in such cases for a system of estimation. As regards merchants who keep books, the Ministry of Finance is permitted by the new law to carry out inspections of accounts in special cases.

The Chamber of Commerce, in protesting against both these arrangements, asks for the substitution of a system of fixed taxation. In a letter replying to their communication the Ministry of Finance assured the merchants that inspection of books would be carried out only on exceptional occasions and with every care and precaution to respect the trader's natural wish for secrecy as to his accounts; as for estimation of profits, the Ministry "sees no reason to believe that this estimate will be made less fairly or less efficiently than it could be done under the fixed system."

The Chamber of Commerce objected to the Ministry's statement that the merchant community had hitherto failed to bear its fair share of taxation, since on foodstuffs and clothing they already pay the same indirect taxation as the rest of the community. It requested the Ministry of Finance to make special provision for exemption in the case of those who maintain large families, and to extend the period allowed for presentation of returns concerning business turnover to three months.

The Ministry promised its sympathetic consideration to these points and assured the merchants that every effort would be made to administer the law without unnecessary friction or hardship.

The Desert Route.

A tragedy in the desert between Baghdad and Syria comes as a reminder of the very real dangers and difficulties of the trans-desert motor route. On April 22 a six-wheeler Renault lorry left Baghdad carrying twenty-four pilgrims and a few passengers. It reached Rutbah (the half-way police post and rest-house) safely, but on resuming the journey the next day the driver apparently mistook the track and took the Amman route—now very little used—instead of the road to Damascus. A long series of punctures delayed the lorry until the radiator water gave out, making further progress impossible. Two passengers and the driver set out to walk to Amman for help, but both passengers died on the way for lack of food and water. The lorry was eventually found by an Imperial Airways aeroplane on April 29, and the pilgrims were taken in to Amman, where several—including the driver, who had been found—died in hospital. One of the victims was M. Palian, leader of a well-known orchestra in Baghdad, and during the War a Captain in the Russian Army.

Qaraghan Railway Bridge.

The Diyala river is now spanned by a new railway bridge at Qaraghan, the old timber pile bridge built by the railway authorities having been condemned. The new bridge, designed and carried out by engineers of the Iraq Railway Administration, consists of eight spans of 100 foot steel girders, supported on concrete piers. It will provide a road as well as a railway track. The work has taken eighteen months to complete, but would have been finished three months earlier had not the Railway Strike in England delayed delivery of some of the steel work.

Smuggling.

The regular smuggling of cocaine and hashshish has been for some time suspected by the Customs authorities, and last week an important capture was made. A careful examination of a consignment of olive oil from Syria packed in four-gallon tins revealed that each tin contained a smaller one under the oil; in these were 485 grammes of cocaine and 15 kilogrammes of hashshish.

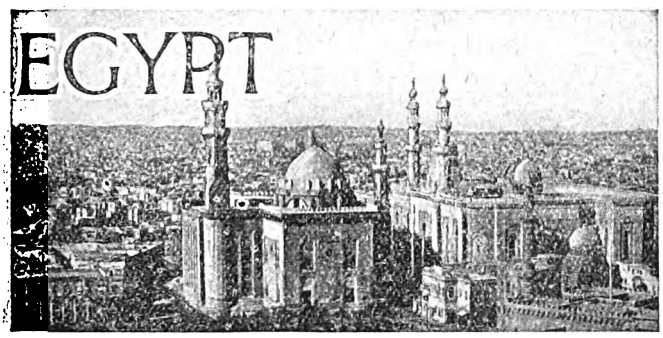
Irrigation.

The "Progress Report" issued by the Irrigation Department for March shows a considerable shortage of water owing to low river levels, particularly on the Diyala, where, in spite of every endeavour on the part of the canal staff to distribute fairly the water available for irrigation, the tails of many channels inevitably suffered. It is hoped that the construction this summer of the Diyala weir will overcome these difficulties. Work is being continued on the Khalis canal and on the Karbala drainage scheme, and a number of new works on other canals are in course of construction. The cutting of the Diwaniyah channel is to be carried out by means of a drag-line excavator recently purchased by the Department—the first mechanical excavator to be used in Iraq. A system of new loop bunds for the protection of Baghdad from flood was completed during the month of March.



Cairo, May 19.
(Delayed).

An "Incident" in the Chamber.

A regrettable incident in the Chamber, arising out of the question put by one of the Nationalist deputies to the Prime Minister in regard to his message of thanks to the British Secretary for Foreign Affairs, has to be recorded this week. While the Nationalist member in question certainly committed a breach of etiquette in laying hands on the Minister of Communications, the latter was not free from blame for the incident. The question before the Chamber was addressed to the Prime Minister, who alone of the members of the Cabinet was entitled to interrupt or make remarks on the Nationalist member's comments.

The week has been marked by a succession of incidents in the Chamber which at one moment threatened to produce the immediate break-up of the Coalition. It was only as a result of the most energetic efforts on the part of Nahas Pasha, the Prime Minister, and Mohamed Mahmud Pasha, the Vice-President of the Liberal Party, and of an eloquent appeal made by the President of the Chamber, Wissa Bey Wassif, that the two parties kissed and made friends again. But the reconciliation is in reality only on the surface, and it is but a question of time for the separation to become a fact.

The English School in Cairo.

The High Commissioner and Lady Lloyd attended the annual prize-giving of the English School last Friday. Lady Lloyd graciously distributed the prizes, and the High Commissioner delivered a rousing address to the scholars. It is a great satisfaction to be able to record the remarkable success which has attended the career not only of this British enterprise itself, but also of the boys whom it has sent either to other institutions and to public examinations or out into the world. The English School in Cairo had a terrible struggle in the early days. It was founded during the War in order to meet a much-needed want, at that time, among English parents in regard to the education of their children. It did its work admirably in spite of financial difficulties, and it has gallantly struggled on, until to-day, although it by no means pays its way, it has so justified its existence and become a part of the permanent organisation of the British colony that no member of the colony would for one moment tolerate the idea of its disappearance.

While a great deal of this success is due to the disinterested work of its committee and of the various High Commissioners, particularly the present High Commissioner, who very rightly regards the provision of education on British lines for the younger generation as a sacred duty, nevertheless it could never have been achieved had it not been for the self-sacrifice, energy and ability of the Headmaster, Mr. C. V. M. Grose, who has throughout displayed a courage and a faith which have been little short of inspiring to all who have been associated with him.

The British colony in Egypt is indeed fortunate to have found for the three educational institutions which it runs men of such calibre as Mr. Grose at the English School in Cairo, Mr. Martin at the English Mission School at Faggala, and, last but not least, Mr. Reed at Victoria College in Alexandria, the latter of whom on his return to work this week, after what was a wonderful escape from death, had a reception from the boys of his College which spoke as eloquently of the position he holds in their hearts as the concern of the British community during his long illness told of the high opinion which it has of his character and ability.

The "Sudan" Contribution.

Sir John Maffey, Governor-General of the Sudan, has arrived, and is at present the guest of Lord and Lady Lloyd at the Residency. Sir John will stay in Cairo about a week before proceeding on leave, and will, I understand, have an interview with Signor Gasparini, Governor of Eritrea, when he comes through Cairo on his way to Rome.

The Chamber of Deputies has passed the payment of the contribution of £E750,000, which Egypt annually makes to the Sudan as a contribution towards the cost of

administration. This credit was inserted in the Egyptian Budget on the occasion of the settlement of the ultimatum after the murder of Sir Lee Stack, the ground being that the maintenance of peace and good order in the Sudan was of paramount importance to Egypt's continued prosperity and that, as the duty of preserving peace would henceforward be carried out by the "Sudan Defence Force," which was being substituted for the Egyptian Army hitherto stationed there, it was only equitable that Egypt should contribute to the cost of the Sudan administration a sum at least equal to her past military expenditure in that area. The Cabinet then in office agreed to this because in itself it offered the additional advantage of strengthening the Egyptian claim to the Sudan.

On the resumption of parliamentary life in 1926 this credit was much criticised, but it was approved. Last year it was passed, after the opinion of Zaghloul Pasha, the leader of the majority, had been sought, with the reservation that the debt which the Sudan owes Egypt and the means whereby the amount thereof could be recovered, should be established and that, until the financial position between the two countries had been cleared up and the Chamber had received details of the manner in which this sum of £E750,000 is expended, the annual contribution should not be repeated. The conditions laid down last year not having as yet been complied with, the Finance Committee sought the advice of the present leader of the majority, Nahas Pasha, who advised that the credit should be approved but that the same reservations as last year should be repeated. The approval of the Chamber was given after somewhat violent attacks by the Nationalists, and, although the House agreed to the vote, it was very plain that the deputies as a whole disapproved of the payment and only refrained from opposition in order to facilitate the work of the Cabinet.

The Egyptian Nationality Law.

The new Nationality Law, which has long been awaited by the various communities who before the War were Ottoman subjects, is now before the Egyptian Parliament. It will be interesting to see what amendments are made in the text, which has already been passed by the Special Parliamentary Committee. The authors of the law have based themselves on the most modern legislation regulating the subject, and have endeavoured to conciliate the interests of Egypt with those of the large community of former Ottoman subjects which finds itself on Egyptian territory. It is the first law establishing Egyptian nationality. In elaborating the conditions under which Egyptian nationality is enjoyed or can be acquired, it lays down that ex-Ottoman subjects resident in Egypt since November 5, 1914—the date of the outbreak of war between the Allies and Turkey—shall, unless they opt for the new nationality of the portion of the former Ottoman territory to which they belonged, be considered as Egyptian subjects, provided that they were born or their parents were born on Ottoman territory.

One of the important amendments made by the Parliamentary Committee is the suppression of the provision that former Ottoman subjects who opt for a nationality other than Egyptian may be called upon to quit Egypt within six months of the exercise of that option. The legislator introduced what in most cases is a grave threat with the object of compelling as many members as possible of these communities, which contribute greatly to the economic welfare of the country, to throw in their lot with the Egyptians and so introduce a most valuable element into the Egyptian nation.

On the other hand, the Parliamentary Committee seems to have regarded the possibility of this element becoming Egyptian as likely to give rise to competition in the political arena which would turn to the advantage of this more talented element, and so this liability to leave within six months of the option for other than Egyptian nationality has been suppressed.

The Committee has likewise taken away from the authorities the power which the legislator gave them of refusing Egyptian nationality to anyone whom they consider undesirable, while they have imposed on those acquiring Egyptian nationality an apprenticeship of ten years before they can enjoy any political rights.

Finally, in regard to Egyptians who acquire foreign nationality the law as sent to the Chamber by the Committee allows their immovable property to come under the law of their newly adopted country, contrary to the view of the legislator, who wanted to ensure that their immovable property in Egypt should continue to be regulated by the law of this country.

Cairo, May 26.

The Chamber.

The proposal to amend the internal regulations of the Chamber, which caused such a scene on Wednesday of last week, has been referred to the Justice Commission for consideration and report. It is much to be hoped that the commission will not complete its work this session, for, if the proposal comes back to the Cabinet, it is certain to create trouble again. I understand that the Liberals are not in favour of any alteration being made at the present juncture, while the Nationalists, as the prime cause of the trouble which has prompted this proposed amendment, will not tolerate any action in this direction, since they consider that anything of the nature at the present moment cannot but be regarded as directed at them. Hafez Bey Ramadan, the leader of the Nationalists, has addressed a letter to the President of the Chamber on the subject, pointing out that so long as the idea of amending the regulations at the present juncture persists the cause of friction will remain, and appealing to him to use his influence in the interests of peace to get the proposal withdrawn. He adds somewhat facetiously that a good precedent for this exists in the Assemblies Bill, which, according to him, was "withdrawn" in order to preserve friendly relations between Egypt and Great Britain, and that, if there is really a desire to maintain friendly relations between parties, then there is all the more reason to adopt a similar course in regard to the reform of the internal regulations. There is no doubt that the Nationalists mean to give trouble whenever the opportunity presents itself, and Nahas Pasha, if he wants to avoid a repetition of the disgraceful scenes which marked last week's debates, will be well advised to let the proposal lie in committee at any rate until next session.

Al Azhar.

The appointment of Shaikh Mustapha Al Maraghy as Rector of Al Azhar has given widespread satisfaction, especially in those circles which are in favour of a forward movement, more in keeping with modern thought, in that great Muslim University. Shaikh Maraghy has throughout his career displayed an enlightened and broad outlook on life in general and on religion in particular, and both in Khartoum, where for some time he was Grand Cadi, and as head of the Superior Mehkemeh Sharia of Egypt, he has enjoyed widespread esteem and respect. Great things are expected from his nomination to Al Azhar and, as some have put it, we may be on the eve of a new "Mohamed Abdu era," which was so productive of good in the matter of religious reform in Egypt.

Empire Day.

Empire Day was celebrated in Egypt in traditional style by children's sports and a salute of the Flag by boy scouts and girl guides. For the first time on record the celebrations in Cairo and Alexandria were simultaneous. Usually Alexandria takes place on the 25th, so as to permit the High Commissioner to be present at both fêtes. This year Lord Lloyd attended the Alexandria celebration, taking the salute and making the customary Empire Day address, while in Cairo his place was taken by General Sir Peter Strickland and Lady Lloyd, the latter of whom delivered an address to the children. On each occasion a message of greeting was read from the Royal Colonial Institute. To-day the High Commissioner motored to Suez to attend the Empire Day celebrations there—the first time that a High Commissioner has been to Suez on such an occasion. Afterwards he continued his journey to Kantara, entraining there for Jerusalem where he will spend about a week as the guest of Lord and Lady Plumer.

The Late Canon Gairdner.

A man remarkable both in intellect and character passed to his rest last Tuesday when Canon William Henry Temple Gairdner died, after much suffering, and was buried in the cemetery here. Canon Gairdner had resided in Egypt for over a quarter of a century and during that period he wielded a singular influence, not only in the mission field but also in the world of culture and learning. He was undoubtedly one of the greatest Arabic and Islamic scholars of the day, having done much to reduce colloquial Arabic into systematic grammar and having written books on Christian theology which he approached by lines of thought acceptable to Muslim readers. Indeed his works have a wide circulation in the Islamic world, in India as well as in this country.

A lecture by Gairdner was sure to draw a large audience for he always spoke with the authority of knowledge, and no matter how dry the subject he never failed to introduce delightfully humorous touches expressive of the vivid interest of his own mind. An idea of the wide area over which his research and interest roamed can be gauged from a list of subjects which he submitted to a friend who had asked him to lecture in a large concentration camp during the War. They were as follows: "Mohammed; Mohammedanism; History of Egypt—Ancient, Middle and Modern periods; The Development and Structure of Music; Modern Novelists and H. G. Wells; Ancient and Modern Cosmogonies; R. L. Stevenson; The Cause of the War from Cæsar to Kaiser (Race Movements and European History); Shakespearean Plays; How the Hieroglyphics were Deciphered." Truly an heterogeneous list, but illustrative of Gairdner's diversity of interests—*Nil tetigit quod non ornavit.*

An inherited and practised power of concentration saved him in the midst of incessant interruptions—secretaryships, committees, calls. It is a fact that at least one of his plays—he dramatized several of the great epic stories of Scripture—was written on the third class deck of a steamer, hour after hour, oblivious of passing meals and dancing sailors, in intense sympathy with the characters who came to life under his hand. This was in the first hours of a furlough after Cairo life.

But apart from his culture and his amazing intellect there was the human side of Temple Gairdner, which was truly notable. Men, women, children, home, the Kingdom of God—these were his great realities, never lost sight of in movements or plans or thought. He lived among his people in a relationship of real and individual friendship, which awoke a deep response especially in the simple Egyptian homes of the Congregation in whose service he was unstinting. By his gentleness, his human understanding and the piercing integrity of his character he made a deep mark upon the people of this country.

The Awakening of Egypt.

On Sunday an interesting ceremony took place on the Station Square when King Fuad unveiled in the presence of Lord Lloyd, the Ministers and the Diplomatic Corps, the great statue which for some years now has been in course of erection there. The statue which is called "The Awakening of Egypt" is intended to symbolize the political and social renaissance of the country since the War. Sculptured in red granite on a pedestal of black granite, all of which was quarried at Aswan, whence the enormous blocks, some of them weighing 45 tons, were brought by water to Cairo, it shows a modern *Fellaha* in *Gallabia* and *Tarha* and unveiled caressing the head of an Egyptian Sphinx, which is in the act of rising from a recumbent position. The idea as well as the work are due to Mahmoud Mukhtar, graduate of the *Ecole Supérieure des Beaux Arts* at Paris, who exhibited at Paris in 1920 at the *Salon des Artistes Français* a rough model, which was much commended and gained for him the commission which he has now completed. The statue has taken over six years to erect. This long time was due partly to difficulties in regard to skilled labour, and partly to finance, the Government having had on several occasions to increase the credits to meet unexpected increases in cost. The new statue will be the first thing which visitors will see on leaving Cairo Station, and it is not without interest to recall that it has been erected on the spot on which the late Lord Kitchener wanted to set up the figure of Ramases II, which at present lies recumbent at Memphis. The experts are by no means favourable to this statue and, while the idea is applauded, there is a growing opinion that a mistake has been made in giving such prominence to what is neither a credit to Egypt's artistic taste nor worthy of the event it is intended to perpetuate.

Greyhound Racing.

Greyhound racing is still going strong out at Zamalek, and the other evening, when the proceeds were devoted to the sufferers of the Corinth earthquake, a most successful and interesting meeting was held. In spite of the ex-

Sofia, May 22.

Agrarianism, Alba Julia and Prague.

The Agrarian movement has to record during the past fortnight two important events, which will not fail to have marked repercussions in the Balkans, and more especially in Bulgaria: namely the monster meeting of Roumanian peasants at Alba Julia, and the notable congress of the Green International at Prague.

Of these two events the meeting at Alba Julia has made a deep impression on the Bulgarian Agrarians, but the Prague Congress has filled them with enthusiasm. The reason for this lies not only in the racial affinity between Bulgarians and Czechoslovakia, between whose peasant parties there exist very intimate relations, but also, and more especially, in the fact that the Bugarian and Czechoslovak Agrarians are the promoters of the Green International organisation, which manifested its power and its progress at its recent Congress. Moreover, the Bulgarian Agrarians were represented at Prague by a large number of delegates, no fewer than 30 important members of their Party, whereas they sent no one, not even a single observer or an ordinary reporter, to follow the vicissitudes of the meeting at Alba Julia. This was due to the fact that they had had slight relations, if any at all, with the Roumanian Nationalist-Peasant Party, to which they had not, hitherto, attached any great political importance, for the simple reason that the Roumanian peasant is not valued very highly in Bulgaria as a comrade—still less as a comrade ready to defend his rights. It may even be said that the Alba Julia meeting has been a revelation for the Bulgarian Agrarians, inasmuch as it has marked the beginning, according to the the statements of the best observers of events in Roumania, of a new era in the Peasants' struggle against the Liberals' clinging to power. It is in this new phase that the struggle of the Roumanian peasants will exercise the whole of its decisive influence on the dispositions of the Bulgarian Agrarians, who, naturally, are with them at heart and fervently wish their cause to triumph, although they still hesitate to identify themselves completely with them. In fact, the Roumanian peasants are, for the moment, formulating only a programme of political claims. The Bulgarian Agrarians, on the other hand, set special store on a programme of social reform. Moreover, Agrarianism does not identify itself with peasantry. The Bulgarian Agrarians constitute rather a class organisation with an economic basis, seeking to regain its place in the administration and political life of the country. The Roumanian Nationalist-Peasants (among whom the Transylvanians predominate) however, aim at constituting a purely political party, a party at war with the authorities to get rid of the corrupt administration at Bucharest and break away from the financial and economic hold of the Liberals.

Several points of contact exist between Roumanian Tsaranists and Bulgarian Agrarians and the fact that they are both peasants struggling for their freedom from two Governments which they regard as equally oppressive must alone create between them in the near future a formidable solidarity. This solidarity, which has already manifested itself in Yugoslavia among the Serbian and Croatian peasants and which vented itself in an outburst after the events at Alba Julia, would be particularly formidable in the event of the Bratianu Cabinet, driving its enemies to a revolutionary *impasse,* and if the National Tsaranists, finding themselves as a result obliged to turn their backs on the Regency and to repudiate the Monarchy, were to proclaim a Republic in Roumania. The movement which would result from this eventuality would be of such importance that it could rapidly gain over the peasants of the other countries of the Orient, notably Roumania's Balkan neighbours, where, since the War, the republican idea has always had followers. One thus sees the responsibility incurred in this matter by M. Bratianu and especially by M. Duca towards the peace of the Balkans.

This question would certainly not have arisen if Alba Julia had not been followed at such a short interval by the Prague Congress, where naturally, the Agrarian movement had been made much of by all the delegations attending the Congress as representatives of the Agrarian organisations of Central and Eastern Europe. At the Prague meeting the Roumanian Tsaranist cause indirectly received marked encouragement from the Green International by the emphasis laid on the great benefits that had been obtained over a long period by their Czechoslovak brother Agrarians when at the head of public affairs. In any case there would have been no prospect of it at all in Bulgaria, inasmuch as the Bulgarian Agrarians, still wholly disconcerted and deprived of leaders and divided by internal quarrels, are wholly absorbed in the organisation, or rather in the re-organisation of their party, and in no way wish to identify themselves openly with one cause or the other, and thus to arouse the suspicions of their powerful enemies in office.

The Congress of the Green International has stirred this passivity of the Bulgarian Agrarians and has thus made them more sensible to the fluctuations in the struggle of the Roumanian peasants.

ROUMANIA.

Bucharest, May 23.

The Political Situation.

Roumania has once more disappointed the sensationalists and overcome a political crisis with perfect calm. There is no sign of disturbance of any kind and the Liberal Government continues in office unperturbed. According to universal report, which appears to be well founded, the arrangements for a stabilisation loan have been almost completed, and it is expected that the loan will be floated next month. The contract will be signed by the Blair Group, which appears to be working in connexion with the Banque de France in this case. Up to the present it is not clear whether the Reichsbank and the Bank of England have withdrawn their original opposition—or at all events their passive resistance—to the loan; but it seems probable that the final delay in the negotiations is caused by the fact that these two great issuing banks are still unsatisfied on certain points of difference with Roumania. It is reported that the first loan will be for stabilisation of the currency and will amount to 60 million dollars, issued at from 85 to 90, at 7½ per cent. interest. It is hoped later on that a further loan will be obtained, possibly from the same source, for the reconstruction of the railways. The railway loan will, doubtless, be given partly in cash and partly in railway materials, which should bring a great advantage to the metallurgical industry of the lending country.

Peace Treaties.

The Press comments on the Italo-Hungarian agitation for a revision of the Peace Treaties with a view to return-

Digitized by Google

ing to Hungary some of the towns now within Roumanian territory are still very bitter, and satisfaction is expressed that a meeting of the Little Entente is shortly to be held in Bucharest, which will oppose a united front to this suggestion.

Congress of Thalassatherapy.

An international congress for discussion of the healing qualities of sea air and water was opened in Bucharest to-day under the chairmanship of Professor Theohari of Bucharest. The French medical and surgical professions are represented by Professors Marcel Labbé, L. Lavastine, Armand Delille, Etienne Sorrel, and Rothary; Dr. Delcheff is the Belgian delegate, while Drs. Maragliano and Ceresole are the delegates sent by the Italian Government. It is a well known fact that the healing qualities of the iodine mud baths at Techirghiol and other places along the Roumanian Black Sea coast are practically unequalled, especially for rheumatism, perhaps because the mud bath treatment can there be so happily combined with sun baths in the strong sea air. There is still great scope for the development of these mud bath institutions, some of which are still rather primitive, and a proposal is on foot to try to find capital to build a bathing institution and the necessary hotels at the little town of Balchik, some 50 miles south of Constantza, where a deposit exists of the iodine-containing mud. The surrounding country is beautiful and the coast most picturesque. Queen Marie of Roumania already has a summer residence there.

THE TURKO-AFGHAN TREATY.

A Treaty of friendship and security was signed in Angora on May 25 between Turkey and Afghanistan. The following is the text of the articles:—

ARTICLE 1.

True friendship and everlasting peace shall exist between the Turkish Republic and the Kingdom of Afghanistan.

ARTICLE 2.

Should any Power or Powers commit an act of hostility against either of the contracting parties the other pledges itself to use every effort to prevent an actual conflict, and, despite those efforts, should war ensue the two Governments shall consult together in a spirit of good will as to how they shall reach a solution which shall safeguard the essential interests of both.

ARTICLE 3.

Each of the contracting parties undertakes not to make with any Power or Powers any alliance or agreement, political, military, economic, or financial, directed against the other.

ARTICLE 4.

The contracting parties shall use every endeavour to ensure the progress and re-establishment of both countries concerned, and with this object in view shall make, as and when required, special treaties other than those already existing between them.

ARTICLE 5.

Turkey undertakes to place at the disposal of Afghanistan judicial, scientific, and military experts to assist her progress and development.

ARTICLE 6.

Turkish nationals residing in Afghanistan and *vice versa* shall enjoy the most-favoured-nation treatment as regards conditions of residence and commerce. The contracting parties shall, however, be free to conclude between them commercial, residential, Consular, postal, and telegraphic conventions, and a treaty of extradition.

ARTICLE 7.

Each of the contracting parties reserves for itself full liberty of action in its dealings with other Powers except as specially stipulated in the present Treaty.

ARTICLE 8.

The present Treaty has been drawn up in Turkish and Persian, and either text is valid.

ARTICLE 9.

The present Treaty shall be ratified with the least possible delay and shall enter into force immediately it is ratified.

The first article of the present Treaty is valid for all time; the remaining articles for ten years. Should the Treaty not be annulled by either contracting party six months before the expiration of the ten years mentioned it shall be considered valid for a further period of one year.

Signed and sealed at Angora, May 25, 1928.

Mr. Richard Ponsonby Maxwell, C.B., of Birdstown, Co. Donegal, late Senior Clerk, Foreign Office, who died at his residence in Whitehall Court on May 23 at the age of 74, in the early days of his career served as Secretary of Embassy at Constantinople for some time.

THE ITALO-TURKISH TREATY.

The following are the articles of the Italo-Turkish Pact of Arbitration, Neutrality, and Conciliation, which was signed on May 30:—

ARTICLE 1.

The high contracting parties mutually engage themselves not to enter into any political or economic agreement nor into any alliance directed against the one or the other.

ARTICLE 2.

If one of the high contracting parties, despite its pacific attitude, is attacked by one or by a number of other Powers, the other high contracting party binds itself to observe neutrality throughout the conflict.

ARTICLE 3.

The high contracting parties bind themselves to submit to conciliation all disputes of whatever nature which may arise between them, and which it has not been possible to settle through normal diplomatic channels. In a case where the method of conciliation breaks down recourse will be had to a juridical settlement.

The protocol annexed to this Treaty lays down the methods of conciliation and of juridical settlement. The foregoing article does not apply to questions which by existing Treaties between the high contracting parties fall within the scope of one of those Treaties. Neither does the article apply to questions under international law, nor to questions affecting sovereign rights. Each of the contracting parties will determine in writing whether a question affects sovereign rights.

Before a question can be submitted, either to conciliation or arbitration in conformity with the clauses in the annexed protocol, it must previously be recognised that the question conforms in its substance to the foregoing article. Judgment will be given in cases submitted to arbitration, according to the principles of international law.

ARTICLE 4.

Disputes which may arise, either as to the interpretation or as to the execution of the present Treaty, will be submitted directly on request to the Permanent Court of International Justice at The Hague.

ARTICLE 5.

The Treaty will be ratified as soon as possible, and will enter into force immediately following the exchange of the instrument of ratification, which will take place at Rome. The Treaty will remain in force for the five years following the date of the exchange of the instruments of ratification. If the Treaty is not denounced within six months of the date of its expiration it will remain in force for a further period of five years.

The Treaty is signed by Signor Mussolini and by Suad Bey, the Turkish Ambassador in Rome.

The Protocol provides that: "The high contracting parties shall create a permanent conciliatory commission composed of five members. Each shall appoint one member of their choice, and the other members shall be appointed by mutual agreement. None of these latter three shall be subjects of the high contracting parties, nor shall they reside in their territories, nor be in their employment. The parties shall designate by mutual agreement the chairman of this Commission from among the three members."

The Commission is to meet whenever its Chairman shall decide to call a meeting. If the appointment of the members who are to be designated by mutual agreement does not take place within the period provided, "the appointment shall take place in accordance with article 45 of the Hague Convention for the Pacific Settlement of International Conflicts under date October 18, 1907."

Other provisions include the following: "In the absence of any provision or convention to the contrary, the procedure of conciliation shall be regulated by the Hague Convention for the Pacific Settlement of International Conflicts of October 18, 1907."

"The commission of conciliation shall have the task of examining all special questions that may be submitted to it, and the results of its investigations shall be embodied in a report *ad hoc* which shall aim at establishing the facts, and thus facilitate a solution of the difficulty. In its report the commission shall clearly set forth the points at issue, and submit such recommendations as are calculated to bring about an agreement between the two parties. The report of the commission shall not have the character of a definite or obligatory sentence either as regards its presentation of facts, or as regards its legal opinions.

"If the contracting parties do not accept the recommendations of the commission of conciliation either of the them may, within the delay fixed by this latter demand that the question shall be submitted to the Hague Tribunal. In the event of the latter deciding that the question is not one of a juridical nature the contracting parties are agreed that it shall be liquidated *ex æquo et bono*.

"The contracting parties may, however, agree to submit any question to an arbitral tribunal constituted in accordance with article 55 and subsequent articles of the Convention for the Pacific Settlement of International Conflicts (October 18, 1907) or in accordance with any other agreement to which both are parties."

A CORRECTION.

The price of Sir Walter Lawrence's book, "The India We Served," reviewed in our last issue, should have been given as 25s., not 21s.

PROBLEMS OF NORTHERN IRAQ.

Under the auspices of the Central Asian Society, Dr. W. A. Wigram lectured at the Royal United Service Institution, on May 31, upon "Problems of Northern Iraq." Brigadier-General Sir Percy Sykes was in the Chair.

Dr. Wigram began his lecture by emphasising the fact that hardly any of the problems of Iraq were created. Not as in India, for instance, had the inhabitants been conscientiously educated, to become a Frankenstein. The main difficulties were bequeathed by the conscienceless Turk, who went on the principle of *eskissy gibi*, "in the same old way," collecting as much money as circumstances would allow, and putting up with incidental annoyances. The problems for the administration of Iraq were the problems set by the relations between the town Arab, semi-educated, and the Arabs in the desert on the one hand, and the Kurds in the mountains on the other. There was again, of course, the problem as between Sunni and Shiah; and there was the problem brought about by the general slackness of the Oriental character. The people of Iraq had any amount of desire for the fruits of progress, but precious little of the spirit that produced them.

Dr. Wigram then faced the problem of the British in Iraq. "Can we," he said, "carry out our ideal? To put things straight is comparatively easy. We were able to do that to admiration in Egypt, and could do it again in Iraq, for, as Milner put it, all that was required was the application of a reasonable amount of honesty and efficiency to a country that had been ruined by a total absence of both. But to make others put them straight and then keep them straight is quite another question." He then gave examples, from the Iraq Ministries of Auqaf and Finance, of the difficulty of keeping Iraqis "straight." The Arab of Baghdad was a lawyer born, accustomed to work a code to trick the Turk, and so quite capable of working one for his own benefit. The trick of the Unjust Steward of the Gospels was played all up and down the land, for the benefit of the wealthy. Nor could these habits be easily stopped by the Mandatory Power, for its Departmental Advisers were advisers and nothing more. The ordinary Arab official had a great power of disregarding good advice that did not happen to square with his own inclinations or immediate interest.

This system of "Advisers" was established by those who idealised the Arab, who wanted to run before he could walk. The Arab was not doing too well in administration, and he knew it; hence his advice to get rid of those who stood in the position of an inconvenient conscience.

Dr. Wigram then dealt with the problem of Sunni and Shiah. He pointed out that while the Press and the Administration of Iraq were largely Sunni, the populace was mainly Shiah; with the result that what Great Britain was in effect saying to the Arabs was: "In the sacred name of self-determination, you shall have the Government that you do not want, and on the holy principle of majority rule, you shall be administered by a minority."

Turning to the forces that made for order in Iraq, the lecturer described the King whom Great Britain had set over the country as well-meaning and friendly, whose influence, such as it was, was always on the British side. But no one could describe King Faisal as a great force: he had failed to strike the imagination of the people of Iraq. There he was counted almost as much a foreigner as an Englishman, and as possessing little belief in himself or in his own position and destiny. To the Air Force as a means of keeping order the lecturer paid a high tribute, but he asserted that it was insufficient either in desert or mountain conditions. There must be a ground force to back them up, and the only effective ground force in Iraq was the Assyrian Levy. The Assyrians were first-class fighting men, as light infanty in the very first class. They had not the instincts of the cavalry-men and (barring one tribe) were usually too light-built for gunners. Moreover, the Assyrians, unlike most Oriental troops, could produce good officers.

The settlement of the people to which these Assyrian soldiers belonged remained a problem. By a decision of the League of Nations, which "for cynical injustice" the lecturer considered "nothing less than iniquitous," the lands which were theirs in pre-Ottoman times had been handed over to the Turk.

The Arab Army, Dr. Wigram said, might become a quite effective one in time, but the plainsman was, he asserted, hopelessly at sea in the hills. But it was a question whether the Arab would consent to be taught. For example, the Arabs were anxious to have a Staff College for an Army that could never exceed a weak division in number. The Yezidis, though brave enough, were too thick-headed for use as soldiers.

Now the forces which these powers had to keep in control were the Arab of the Desert and the Kurd of the Hills. Of the first the lecturer disclaimed first-hand knowledge. Of the Kurd he said that, while he was content to obey the British, he despised the Iraqi. The Kurds did not relish the inroads made upon their feudal rights. There was discontent in the hills, where British officers had to coerce Kurds who might be willing to obey them into obeying somebody else! He then described the proclivities of Shaikh Ahmad of Barzan, who, according to Dr. Wigram, was a dangerous influence. If the Kurds were united under one man—which had never yet happened—they could probably sweep out Iraq. There was no sign now of such a man arising, although at Aleppo or under Turkish protection there existed a representative of the old house of Badr Khan, who claimed to be "the Prince of all Kurdistan."

We were gambling in Iraq, and keeping an Empire going with a corporal's guard. Should trouble break out in more than one place, the position would be dangerous. But if a rising were to come, it would come, not against the British, but far more against the people whom the British had put in charge.

Dr. Wigram, in closing his address, said:—"Can we carry our Iraq adventure through, and set up the State we wish to see there? We can do it, I believe, but it will take time, and more time than those Arabs for whose benefit we are trying to do it seem at present disposed to allow us. I, as an unrepentant and unregenerate Imperialist, believe firmly that Allah the All Great has called us to a certain work, and that we shall carry it through, provided always that we do not fail through any craven fear of being great." He concluded by explaining his outspokenness as being due to the fact that he had heard his friends in Iraq, both native and British, slighted and belittled. As he had personal knowledge of the facts, it was for him to put the truth as he saw it.

In the discussion that followed, Colonel Cunliffe-Owen said he agreed with Dr. Wigram with regard to administration among Eastern nations. It was to be regretted that the civil administration of Iraq could not be carried on directly by the British as it was up to 1919. He had been intimately connected with the Assyrian Christians, having direct control of them for something like four years, and he could safely support what Dr. Wigram had said about their fighting qualities. He would never wish to have better men under his command. It was sad that we had not been able to place them in the territory which formerly belonged to them. The difficulty was because that territory was in Turkey, and the League of Nations

could not insist that a large part of Turkey should be taken away.

Captain A. L. Rogers said he did not see why, at a time when there was no frontier at all, the League of Nations should not take a country from the Turks and give it to the Assyrian Christians. The difficulty of the League of Nations was because every one of its members had to consider the interest of his own country, and the interest of that country was that it should not be called upon to support the country which might be attacked by a fairly strong country like Turkey.

Colonel Barker, speaking of the Kurds, said these did not wish to come under the rule of the Arabs in Baghdad; and there had not been a year since 1921 when there had not been a fight to force that rule upon them.

Sir Percy Sykes, the Chairman, quoting from the lecturer that "Advisers without power are useless; they are put in an absolutely unfair position," said that he would not accept on any terms the position of Adviser to an Oriental. It would be impossible to get anything done, and it would not suit him to sit drawing his pay without getting a move on.

THE "ID UL AZHA."

On May 31, the second day of the *Id ul Azha*, a garden party was held, and an address on "Islam" given by Sir Denison Ross, at the Ahmadiyya Mosque at Southfields. The proceedings began with the chanting of a passage from the Quran. Sir Edward Maclagan, who presided, after thanking the Imam of the Mosque, Mr. A. R. Dard, for the "catholic comprehensiveness" of the invitations to the celebration of the *Id*—invitations which were extended to Muslims who were not of the Ahmadi persuasion as well as to Christians and Hindus—referred to the splendid spirit of patriotism and self-sacrifice shown by the Ahmadi community in the Punjab, particularly during the Great War. He added his regret at the impending departure of the Imam from London.

At the outset of his address, Sir Denison Ross referred to the dislike which Muslims entertained for being called "Muhammadans" or "Mahometans," and compared that dislike with that shared by the Chinese for being called Chinamen. The term "Islam," he went on, had a threefold connotation: the world of Islam, the religion of Islam, and, simply, Islam. To Islam the Western world owed an enormous debt, for it had kept learning alive at a time when Europe was in darkness. Yet it was the scientific study of the West which, beginning about the eighteenth century, discovered the unsuspected attractions of Islam: such men as William Wright, Lane, and Robertson Smith had been pioneers in the scholastic work. Sir Denison then recounted some of his own experiences in living among Muslims in the study of Islam. Dealing with the years 1900-1910, during which he was in India, he referred to his efforts to persuade young Mussulmans to make of the study of Islam at once a noble and a lucrative profession. These young Muslims, who at an early age knew their Arabic grammar backwards, had, he said, a great advantage over Western scholars, who usually began the study of Oriental languages later in life. His advice was for them first to gain a European reputation and then discover to the East the unknown glories of Islam. In this connexion he mentioned the pioneer work of Syed Ameer Ali. He then described the lamentable condition of manuscript collections in India, the preserving and cataloguing of which was so important. In the Madrasa Library at Calcutta he himself had discovered—what has hiterto been completely neglected—a large history of Muslim India, written in Arabic, during the reign of Akbar, by an Indian born in Mecca, who had lived most of his life in Gujerat. Sir Denison applauded the growing spirit of historical research among Hindus and Muslims, and he anticipated a time in the near future when Indian scholars would produce scholarly works such as in the past came only from men of the West.

Mr. Yussuf Ali, after paying thanks to the Imam for the invitation and to Sir Edward Maclagan and to Sir Denison Ross, took up the point of not calling a Muslim a Muhammadan. It was not, he said, that Muslims were not proud of being linked with the Prophet Muhammad, but that, in being called followers of Islam—"Submission to the Will of God"—they showed that they revered all Prophets. The word "Muhammadan" was nowadays often identified with ignorance and prejudice. A good Christian, he averred, was, in his resignation to God, a Muslim without knowing it. And it was in that spirit of catholic worship of God that such a gathering of Muslims and non-Muslims as that present would have excellent effect.

The Maharaja of Burdwan stated his pleasure at being present at such an undenominational assembly. Meetings of this kind, he said, where he could meet his Muslim friends, could not fail to cement the friendship between peoples of different faiths.

The Imam of the Mosque referred to his belief that all worshippers of the Heavenly Father—whether Muslim, Christian, or Jew—could fitly meet together on such occasions as this. Tolerance was one of the fundamentals of his Creed. He then announced the fact that he had, for reasons of health, been recalled to India by the Head of the Ahmadiyya community, and introduced to the audience, his successor, Mr. Farzan Ali, to whom he hoped that the same kindness and support which had been extended to himself would be shown.

The following were among those who accepted invitations to be present:—Viscount and Viscountess Allenby, Lord Leigh, Sir William Bull, M.P., Sir Clement Kinloch-Cooke, M.P., Lady Kinloch Cooke, Sir Park Goff, M.P., Sir Frank Sanderson, M.P., Sir Henry and Lady Cowan, Sir Murdoch MacDonald, M.P., and Lady MacDonald, Capt. Garro Jones, M.P., Mr. J. B. and Miss Couper, Colonel Applin, M.P., Mr. Rhys Davies, M.P., Mr. and Mrs. Reginald Clarry, Sir Stanford London, Dr. T. D. Ahmad, Mr. M. Naseem, Mr. H. D. Watson, Rt. Rev. Bishop James, Secretary, German Embassy, Secretary, Persian Legation, Lt.-Col. E. Murray, Secretary, British Empire League, Mr. G. R. S. Mead, Mr. H. R. Gibb, and Sirdar Ikbal Ali Shah.

Three years after the actual date of the millenary, commemorative postage stamps are to be issued in Yugoslavia this autumn in honour of the 1,000th anniversary of the founding of the native kingdom of Croatia, says *The Times*. They will consist of three values only, each to be sold at a premium in aid of the erection of a memorial church at Duvno. A picture of the proposed basilica will furnish the design of the 50 *plus* 50 para stamp printed in deep green. The 1 dinar *plus* 50 para red will bear the likeness of King Tomislaw of Croatia wearing his crown, whilst the 3 *plus* 1 dinars blue is to present twin portraits of King Alexander of Yugoslavia and King Tomislaw. Recess printed at the State Printing Works, Vienna, these stamps are uniformly inscribed "1,000 Jähre Kroatisches Königreich, 925-1925."

THE WEEK AT HOME

London, Tuesday Morning.

The Birthday Honours.

There was no tang of surprise about the Honours List, the main virtue of which was its brevity. For the most part rewards have been made for party services—a fact which never arouses much national enthusiasm.

Really the comment which one has heard most frequently was upon the result of the by-elections which are involved in the award of these honours. For those awards which involved no political changes were treated largely as a matter of course, and caused no one to express great happiness or great indignation.

Derby Sweeps.

For the past week or so every other man in England has been wondering what he would do were he to win one of the big Derby sweeps. Now, he has postponed that wondering until next year; and his interest in to-morrow's race is, comparatively speaking, of the academic sort—for no academician became rich through his science alone.

Myself, I have never met any one who has won thousands from the Calcutta or Stock Exchange sweeps, but the study of those who fain would have done so is amusing, especially as one cannot oneself be, so to speak, above the battle. We are all very much the same in our allocation of these dreamed thousands; so much to charity, so much given to relatives, so much set aside, so much spent almost immediately, and so on. We are the same, too, when our May dreams are in the following month proved jejune: down to the grindstone again we all smilingly get. And so our baseless, beautiful hopes undergo annual interment.

The Speaker's Resignation.

It has been said that Mr. Whitley, the Speaker since 1921, whose resignation is now announced, did not compare too favourably with his predecessors in office; but his record is satisfactory enough. Admittedly passions in the House do not commonly run so high as they used, but there have been one or two "scenes," the manifestation of burning sincerity on the part of some members unaccustomed to rigid procedure, in which firmness as well as tact was necessary.

I think that it has been an excellent thing to have a Liberal as Speaker during the queer post-War period, which has for the most part been dominated by the Conservatives, because the very fact that he did belong to another party than the ruling one has made Mr. Whitley exhibit more patience, more tolerance than might have been forthcoming from another man. This virtue is always liable to be called weakness, of course; but its record is its own complete justification.

The Cult of Morbidity.

In the olden days, of course, executions were public in England, but that is no reason why one should not feel disgust at the statement of hundreds of people collecting outside prisons while criminals were being hanged inside. Last week the two murderers of Police-constable Gutteridge were executed, and to gain a view of their end, it is said that men climbed telegraph poles, scaled roofs, bought up positions in overlooking buildings, in order to catch a glimpse of the interior of the prison.

This is, quite simply, beastly. Whether it is something fundamental in a certain type of mind or not, this morbidity is without doubt fostered by a certain type of journal, the criterion of whose success is merely circulation. It is a most unwholesome sign, which, however, is deliberately gloated over by the cheap Press. A most melancholy reflection it is that in what is supposed to be the "best" evening paper in England there should have been published a facsimile of the last letter which Browne, the murderer, wrote from his prison. For that sort of thing, the Press, not the people, is definitely to blame.

Prophets.

The prophets of gloom should have been badly shaken last week, for May 29, when dire things were to happen, came and went like any other inoffensive day. It is too much to be supposed, however, that these queer people who deduce the Future from the Pyramids will bashfully eat their words; in a few years to come something will be pointed out as having ratified their puerile prognostications.

Much more to the interest of the British people is the announcement that the official weather-forecasts, contained in the morning newspapers, are henceforth to relate to the period from 6 a.m. to midnight, and those contained in the "evening" newspapers, to date from midday to midday. These forefacts are usually reliable, and are the more believed in in that they do not pretend to infallibility and super-natural revelation.

"Life and Letters."

The purely literary journal in this country survives with difficulty, for the British public takes unkindly to brilliance, theorisation, and "advanced" accomplishment. In other words, the journal which has its feet firmly planted in traditionalism, whatever its hands may occasionally do, is less likely to fail than the impetuous sheets whose eyes are on the future alone.

It is to the first class that a new monthly, *Life and Letters*, belongs. Published under the editorship of Mr. Desmond MacCarthy at the price of one shilling, it stands, I should say, a considerable chance of reasonable popularity. One of the most welcome things in the first issue is the Editor's demolition of the reputation of Herr Emil Ludwig, the voluble German who appears to have captured the superficial, penny morning-paper mind of Great Britain. Mr. MacCarthy speaks in timely way of Ludwig's "vigorous and vendible talent," and of his "unbounded confidence in his own intuition of character."

ALTER EGO.

The Muslim fesitval of Id-ul-Azha, commemorating the sacrifice offered by Abraham, was celebrated at the Woking Mosque on May 30. A hundred and fifty Muslims were present. The Imam offered the customary prayers in Arabic and delivered a sermon dealing with the Muslim ideal of brotherhood and equality. Those who accepted invitations to the festival included the Afghan Minister, Sir Thomas Arnold, and Indian, Egyptian, and Iraqi cadets from the Military College, Camberley.

PERSONAL AND GENERAL

TO-DAY

June 7, 1928 (New Style).
May 25, 1928 (Old Style).
Dulheggia 18, 1346 A.H., of the Muslim Calendar.
Sivan 19, 5689, of the Jewish Calendar.

The Ranee of Pudukota has arrived at Claridge's Hotel from the Continent.

Lord Waring has been elected a vice-President of the British Empire Film Institute.

Queen Sophia, ex-Queen of Greece, widow of King Constantine, has arrived at Birchington, Kent, on a visit.

Sir Frederick Gebbie, who is returning to England from India, arrived at Marseilles on June 1 in the s.s. Kaisar-i-Hind.

The Maharaja of Patiala arrived at Marseilles from Bombay on June 1 in the P. and O. s.s. Kaisar-i-Hind, on his way to London.

Mr. Edward Thurlow Leeds, M.A., Brasenose, has been nominated by the Visitors of the Ashmolean Museum as Keeper of the Department of Antiquities and Keeper of the Ashmolean Museum in succession to the late Dr. D. G. Hogarth, to whom he had been Assistant for the past 20 years.

An exhibition of the paintings of Sarkis Katchadourian, whose work has already been very favourably commented upon in THE NEAR EAST AND INDIA, is being held at the Galleries of the Fine Art Society, 148, New Bond Street, W.1. It is being opened to-day (June 7) by the Persian Minister, and will remain open during June.

An exhibition and sale of Greek and Cretan Refugee and Peasant Handicrafts will be held at the Greek Legation, 51, Upper Brook Street, W.1., from June 11 to 14, from 11 am., to 6 p.m. The exhibition will be opened by Earl Beauchamp on June 11 at 12 noon. The exhibits will include weaving, embroideries, and Kutahia Pottery.

THE BIRTHDAY HONOURS.

The following selection of names from the list of Birthday Honours published on June 4 will interest our readers:—

BARON.

Mond, the Right Hon. Sir Alfred Moritz, Bt., LL.D., M.P. For public and political services.

PRIVY COUNCILLOR.

Locker-Lampson, Godfrey Lampson Tennyson, Esq., M.P. for Salisbury, January, 1910-18, and for Wood Green Division since December, 1918. Under-Secretary of State for Foreign Affairs since December, 1925, and for Home Affairs, 1923-24, and November, 1924-December, 1925.

KNIGHT.

Harari Pasha, Victor Raphael, C.M.G., Director of the National Bank of Egypt and of the Agricultural Bank of Egypt. A leading member of the British community in Cairo. For services over a long period in promoting trade and commerce between England and Egypt.

Lloyd, John Buck, Esq., Financial Director of the Anglo-Persian Oil Company.

K.C.B. (Military Division).

Higgins, Air Vice-Marshal Sir John Frederick Andrews, K.B.E., C.B., D.S.O., A.F.C., Royal Air Force.

C.M.G.

More, Richard Edwardes, Esq., O.B.E., Sudan Agent at Cairo.

Nalder, Lieutenant-Colonel Leonard Fielding, C.I.E., C.B.E., Anglo-Iraq Delegate on the Turco-Iraq Frontier Delimitation Commission.

HON. M.B.E. (Military Division),

Rab Khaila David D'Mar Shimun, Aide-de-Camp to the Commandant, Iraq Levies.

C.B.E. (Civil Division).

Butcher, Arthur Douglas Deane, Esq., Director of the Hydraulic Section, Egyptian Irrigation Department.

Northcote, Major Cecil Stephen, Governor of the Nuba Mountains Province, Sudan.

Wheatley, Major Mervyn James, O.B.E., Governor of Bahr-el-Ghazal Province, Sudan.

O.B.E. (Civil Division).

Footner, George Rammell, Esq., Director of the Omdurman Civil Hospital.

Havercroft, Cyril, Esq., Deputy-General Manager, Sudan Government Railways and Steamers.

MacDonald, Archibald Colin Christian Deleto, Esq., Director of the Equipment and Finance Department of the Egyptian Ministry of Interior.

Storrar, George Donald, Esq., M.B.E., Chief Engineer, Sudan Government, Railways.

Cooke, Robert Sutherland, Esq., Inspector-General, Ministry of Auqaf, and Honorary Director of Antiquities, Iraq.

Mavrogordato, Arthur Stephen, Esq., Commandant, Department of Police and Prisons, Palestine.

Plowman, Clifford Henry Fitzherbert, Esq., British Consul at Harar, Abyssinia. For services to the Somaliland Protectorate.

Sawer, Edward Reginald, Esq., Director of the Department of Agriculture, Palestine.

Stead, Kingsley Williams, Esq., Director of Customs, Excise and Trade, Palestine.

Watts, Bertram Tom, Esq., Director of Land Registration and Surveys, Cyprus.

Wilson, Major William Clement Francis Allan, Administrative Inspector, Ministry of Interior, Iraq.

Woodman, John, Esq., lately President, Court of First Instance, Iraq.

HON. O.B.E. (Civil Division),

Tahsin Beg Qadri, Rais al Awul, Aide-de-Camp to H.M. the King of Iraq.

O.B.E. (Military Division).

Lewis, Major Chilton Gresham, Royal Engineers, Superintendent, Indian Survey Department, attached to the Turco-Iraq Frontier Delimitation Commission.

Withers, Captain Bramwell Henry, The Loyal Regiment (North Lancashire), attached Sudan Defence Force.

K.B.E. (Civil Division).

Haworth, Lieutenant-Colonel Lionel Berkeley Holt, Political Resident in the Persian Gulf.

Symes, Lieutenant-Colonel George Stewart, C.M.G., D.S.O., Chief Secretary to the Government of Palestine; Resident and Commander-in-Chief Designate at Aden.

Where to stay in the East

Write for particulars of attractive offer for Advertising Hotels on this page.

BEYROUT—Hotel Metropole.
CAIRO—The National Hotel.
JAFFA—Hotel Jerusalem.
JAIPUR (Rajputana)—New Hotel.
JERUSALEM—St John's Hotel, *H. & F. Fast, Managers*
KYRENIA, Cyprus— Sea-View Hotel.
NICOSIA, Cyprus— George Hotel.
PORT SAID— Casino Palace Hotel. Grand Hotel de la Poste. Marina Palace and Savoy Hotels.

CYPRUS.

Miss Young's Camp, Troodos.

There are summer quarters, for a limited number of paying guests, on Troodos (Miss Young's) in the midst of forests, 6,406 ft. above the sea—the summer resort of the Troops and Government Officials. 20 hours from Port-Said.

Pitched in the pine forest in a lofty and secluded situation, on the upper slopes of Mount Olympus—25 minutes from the summit. Perfect climate, dry, cool and bracing air, enchanting panoramas; no mosquitoes; completely equipped with every comfort and convenience.

Troodos is 35 miles from Limassol and 45 miles from Nicosia. From both towns there are good carriage and motor roads. The summer climate is dry and healthy. The nights are often rather cold after the end of August. As regards dress, Ladies should be provided with washing skirts, as there is a good deal of red dust on the hills; white is much worn, but dust-coloured costumes are advisable. A warm woollen coat and skirt are essential. Riding and motor excursions, Tennis and croquet are the chief occupations of the Visitors. An English Club provides Newspapers, Telegrams (Reuter's) and Books. The water supply is good, and there is plenty of fresh milk. Inclusive terms £3 10s. a week. *Open June 15.*

Apply to Miss Young, 38 Victoria Street, Nicosia, Cyprus.

CYPRUS.

SAVOY HOTEL: Port of Famagusta.
PALACE HOTEL: Inland City of Nicosia.

OLYMPUS HOTEL: Port of Limassol.
(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)
(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

NOTES OF THE WEEK

(*Continued from page* 706.)

had the unhappy experience of seeing American Zionists divided among themselves. The precise causes of this important quarrel in American Jewry are obscure; it may be that a feud which manifested itself soon after the War has just broken out again with fresh bitterness, or it may be that irritation at certain alleged acts of the American Zionist Administration is of more recent growth. But whatever the cause, the rift is bound to cause anxiety among Zionists all over the world, and particularly in Palestine, which well realises that, but for continued American financial support, the chances of wide Zionist colonisation of the Holy Land would be slender. It is curious that this quarrel should just precede the meeting in London of the non-partisan Palestine Survey Commission, over which Sir Alfred Mond presides, and which was constituted as a condition of the co-operation of American non-Zionists, headed by Mr. Louis Marshall, with Zionists in the upbuilding of a "Jewish National Home" in Palestine.

The Future of Syria.

Whether designed or not, a signal obscurity surrounds the affairs of Syria. Several weeks ago the elections were completed, but no Assembly has yet been convoked. Why? Again, what is the policy of France upon the Constitution? Is Syria to be a Republic or a Monarchy? So far M. Henri Ponsot, High Commissioner, does not appear to have disclosed his mind on these matters, although one scarcely can conceive that it is not yet made up. In the meantime, as might be expected, active canvassing is reported in the interests of several men, either for the Kingship of Syria or for the Presidency of a Syrian Republic. The wishes of Prince Georges Lotfallah, for instance, are put forward unceasingly; in certain circles in the East the claims of Prince Abdul Majid, son of the Sharif Ali Haidar Pasha, are regarded with considerable favour; and, alternatively, the names of members of the Hashimite family, formerly of Mecca, of Muhammad Ali's family, and of the Wahhabi Saoud family, are constantly being mentioned. For all these names there is plenty of outside support, but of opinion in Syria itself, so far as it has made itself known, there appears to be a large portion in favour of a Republic. Possible candidates for the Presidency would be any of the four Nationalists, Shaikh Taj al Din al Hassani (now Prime Minister), Hashim Bey al Atassi, Ibrahim Bey Hannano, and Ahmed Nami Bey.

CYPRUS.

The following telegram, dated June 3, has reached us from Dr. Lanitis of Limassol:—

An assembly consisting of the Holy Synod, all Greek members of the Legislature and Executive, and all mayors of the island, on the occasion of the fiftieth anniversary of the Cyprus Convention, has issued unanimously a memorial to the Home Government claiming union with the mother country, Greece. The Archbishop, in accordance with the unanimous vote of the Assembly, telegraphed to the King submitting Cyprus congratulations on his birthday, and respectfully expressing a hope for the fulfilment of the union.

[On the last occasion when a similar communication urging union with Greece was sent to the British Government the Cypriot petitioners were informed that the Government's answer had already been given and that the matter must be regarded as closed.—ED.]

The Persian National Assembly has approved the War Office estimates, amounting to £1,973,460.

The death is announced from Bucharest, at the age of 73, of General Harjeu, who was twice Minister for War and was a member of the Roumanian Academy.

The new Bible House in Jerusalem, erected by the British and Foreign Bible Society, which was opened recently by Lady Plumer, is to be named "Connaught House," in honour of the Society's President, the Duke of Connaught.

NEWS IN BRIEF.

It is announced that Tewfik Bey, Turkish Ambassador to Moscow, who left for Batoum with the Afghan Kink on June 1, is to sign a treaty of friendship with Persia when he reaches Teheran.

Major G. Woods Humphrey, General Manager of Imperial Airways, left London on May 24 for the East in order to discuss with the Persian authorities the question of the passage of British commercial aircraft across Persia, *en route* for India.

The Greek Parliamentary Committee of Inquiry has decided to release General Pangalos, who has been imprisoned for twenty-one months, on bail of £600. The decision requires the Chamber's ratification.

Queen Marie of Roumania has recently been unwell, but has now completely recovered her health. On May 31 she attended a meeting of the Roumanian Academy in Bucharest.

A Mahratta Dinner will be held at the Trocadero Restaurant on Tuesday, June 26, at 8 p.m. All those wishing to attend should communicate with Major C. H. Standbridge, Mondello, Blackwater Road, Eastbourne.

Kikmet Bey, late Secretary in Chief to the Ghazi Pasha, has been appointed Turkish Ambassador to Kabul, where the Turkish representative has hitherto been only a Minister.

Flight-Lieutenant William Longstaff Fenwick, of the Armoured Car Wing, and Flying Officer Edward Beresford Forster, attached to No. 84 Squadron, both of whom were recently engaged in the southern frontier operations, were killed on May 26 in a motor accident at Baghdad, when two cars came into collision head on.

After consultation with the Reparation Commission the Inter-Allied Commission in Bulgaria has reported in favour of granting the Bulgarian Government's request that the loan authorised by the League of Nations should be increased to cover the work of reconstruction in the area devastated by the recent earthquakes.

The Jerusalem Court of Appeal has decided that Tel Aviv, although constituting a wholly Jewish unit within the "Jewish National Home," is powerless to enforce a by-law which insists on the Jewish residents and shopkeepers observing the Sabbath. Article 15 of the Mandate forbids any legislation based on discrimination in regard to religion or nationality.

During March, 299 immigrants entered Palestine, including 200 Jews; 289 left Palestine permanently, including 261 Jews, of whom 228 had settled there since June, 1920. Of the immigrants 215 persons (including 148 Jews) had come as tourists and were given permission to remain permanently.

The Bishop of Egypt and the Sudan, Dr. L. H. Gwynne, will be absent from his Diocese from the middle of July until early in November. During that period he will visit the principal cities of India, and will afterwards attend the Australian Church Congress to be held at Adelaide in October.

The Archæological Council of the Greek Ministry of Education has decided to carry on excavations in the coming year on the Acropolis (Athens) and Mycenæ, also at Kerameikos, Athens, Thebes, Lesbos, Stenimachon, Epidauros, Mistra, and Agrinion. From many ancient tombs unearthed close to the Sacred Way there have been recovered a number of bas-reliefs, steles, and funerary pottery.

The Roumanian Government have informed the Secretary-General of the League of Nations at Geneva that they have considered the terms of the decision of the Council of March 9 with regard to Hungarian optants in Transylvania, but cannot accept them. Roumania will make her reasons known to the Council meeting this week.

The Turkish National Assembly at Angora has passed an extraordinary new law prohibiting the use of calculating machines in Turkey. A large number of such machines is employed in banks. Henceforth, importation, manufacture, and use of such machines is reserved to the Government. Individuals or firms contravening the veto on their use are liable to imprisonment for from one to three years and a fine of 300 liras (about £31). Those who already possess such machines must arrange for their export by the end of July next.

The Turkish Assembly at Angora has just passed a new law regarding the nationality of the children of foreigners born in Turkey and the children of Turkish parents born abroad. The following are Turkish citizens: Children born in Turkey whose parents are unknown; either of whose parents is of doubtful nationality; and children born in Turkey or abroad whose Turkish parents are not married. All children of foreigners born in Turkey, from and after January 1, 1929, will be Turks; but they may apply for the nationality of their parents within six months of attaining majority, according to Turkish law. This provision, however, does not apply to the children of foreign Ambassadors, Consuls, or other official representatives of foreign States.

THE COUNTRY LEAGUE.

The need for the association of responsible British and Indian interests in a joint endeavour to impress upon the authorities at Delhi and Simla the views of men who can point to constructive work done for the progress and prosperity of the country has long been urged in these columns. The chief aim of such an organisation, we have pointed out on more than one occasion, should be to attract to its support that very important section of educated opinion which, at present, is insufficiently vocal, having been overshadowed by the exponents of political wisdom whom the peculiar character of the present Constitution has specially favoured. As Lord Irwin once remarked, the political ideals which are rooted in British traditions make it impossible for non-official Europeans to be indifferent to the Reforms scheme, and impel them to take a direct and important part in furthering it. And THE NEAR EAST AND INDIA can legitimately claim to have played a not unimportant rôle in the furtherance of India's desire for legitimate constitutional advance. But among responsible Indians there has for some time past been growing feeling in favour of cautious progress. The idea of democratic government is alien to India. And it cannot be denied that, for the reasons which are frankly recognised by the signatories to the manifesto of the newly-formed Country League, which appears on an adjoining page, the sudden introduction of Western representative methods in an Oriental country has not been attended in practice with all the consequences that the authors of the scheme looked for.

What has happened hitherto is that a vocal section of the community, which cannot be said to represent either the masses of the people or the conservative and stable elements of Indian society, has secured a position in the Legislatures out of all proportion to its numbers and importance. In the main it has been hostile to Government and without any justification has displayed not only an anti-British bias, but has indulged in merciless intimidation and invective of those of its fellow countrymen who have had the temerity to attach more value to their country's real interests, particularly in the economic sphere, than to the dictates of intemperate and unpractical idealists who have not scrupled to utilise their temporary ascendancy to further their own petty designs. We say "temporary" advisedly for, fortunately, in the movement, the inauguration of which we are able to record to-day, there is evidence that this grave defect in the polity of India is likely shortly to be remedied.

That the Country League will have to be reckoned with, for its activity is informed by enlightened self-interest, than which there is no more powerful human influence, is unquestionable. The formidable list of signatories, all men of the highest standing, of prudent and experienced judgment and patriotic outlook, representing every community, province and profession throughout the length and breadth of the country, shows how widespread and authoritative is the desire on the part of responsible Indians for the closest co-operation with those British elements whose interests and needs are similar to their own. The principles for which the League stands and the tentative programme designed to secure their promotion call for somewhat fuller treatment than is possible within the time at our disposal. That both will command general acceptance is certain, thought, naturally, the issues raised are of such vital moment that several points of detail have been wisely reserved for further consideration between the members of the League after its formation. The point which we would particularly urge upon our readers at the present juncture is the need for an early and effective demonstration of British support and practical co-operation in the new alliance. If the League succeeds in rousing the landed gentry and all who have a stake in the country from lethargy, and provides further evidence that the British mercantile community realises that it has other responsibilities than the distribution of profits, its influence upon the work of the Statutory Commission, and during the subsequent and even more critical period when the need for the steadying balance of the propertied classes will be most urgent, may well be profound. But, unless there are forthcoming an immediate response and consistent support on the part of the British element, particularly of the interests represented at the meeting, last July, of the East Indian Section of the London Chamber of Commerce, a unique opportunity will be lost.

CURRENT TOPICS.

Land Alienation in Sind.

The passing of agricultural land from its original cultivators to the moneylending or otherwise alien classes has for long been a serious problem in many parts of India. Before the advent of British rule, and in the Indian States to this day, the cultivator retained his land so long as he paid the State its due, but had no power to part with it to others. The fatal boon of ownership was bestowed by the British Government, together with a system of Civil Courts which could give the creditor possession of the land of the agricultural debtor; and the agriculturist was always in debt. In the Bombay Presidency the evil was particularly great, and such measures as the Deccan Agriculturists Relief Act, and the grant of land to the more backward races on a restricted tenure have been palliatives rather than remedies. In the Presidency itself, however, the political results were comparatively unimportant, since the Marwaris, who did the bulk of the moneylending, did not seek to cultivate the land themselves, and both the creditors and the debtors belonged in most cases to the same religion. The consequences in Sind, however, were much more serious. The mass of the population was and is Muhammadan, and the Hindus, at the time of the comparatively recent British conquest, were not allowed to hold any land. The institution of Civil Courts, with the subordinate officials and judiciary and the bar almost entirely drawn from the educated Hindu classes led to the rapid transfer of the land from the improvident and ignorant majority to the thriftier and more acute minority. The extent of the evil may be judged from the boast sometimes made by the Sind Hindus that they now own 40 per cent. of the land, and pay 70 per cent. of the land revenue of Sind.

A similar evil had arisen in the Punjab where the land seemed to be passing from the virile but simple agriculturist races to those better versed in the wiles of a modern financial and legal system. The danger was removed in the Punjab by the passing, so far back as 1901, of an Act which forbade the transfer of land from agricultural tribes to any person not belonging to these tribes. The Act has been generally regarded as entirely successful and salutary. A similar provision of law has been asked for by the Sind Muhammadans and has been recommended by the official head of the Province. The developments which are bound to follow the opening of the canals fed from the Sukkar Barrage render it advisable to take action before the land has irretrievably passed from its original holders. The Government of Bombay accordingly placed an officer on special duty to inquire into the working of the legislation already in force in the Punjab and the North-West Frontier Province, and this officer has unreservedly recommended the enactment of similar provisions for Sind. Only two arguments can fairly be brought against such legislation. The first is that the credit of the agriculturist is thereby unduly restricted. This fear has proved illusory in the Punjab and in any case the success of the Co-operative system in Sind will provide the agriculturist with quite as much credit as is good for him. Moreover, it is precisely the agriculturist whose credit will be restricted that asks for the legislation. The second argument is that such legislation unfairly discriminates in favour of one section of the population, and, in the case of Sind, of the followers of one religion. The argument has little value in Sind, where the Hindu minority already possesses land far in excess of its proportion of the population, and where, moreover, it has unlimited opportunity for buying land freshly brought under cultivation with water from the new canals. It will, however, be interesting to see whether so entirely necessary and justifiable legislation will be passed by the Bombay Legislative Council with its large Hindu majority. If it is not, a strong argument will be supplied for the separation of Sind from Bombay.

THE STATUTORY COMMISSION.

As foreshadowed in a recent issue of THE NEAR EAST AND INDIA, the Indian Statutory Commission has decided to appoint an Auxiliary Committee which shall inquire and report to it on the subject of the growth of education in British India. The Committee will be known as the "Auxiliary Committee on the Growth of Education," and it will be asked to complete its Report and transmit it to the Commission by December 15 next.

The following are the members of the Committee:—

Sir Philip Hartog (Member of the Public Services Commission), Chairman; Sir Amherst Selby-Bigge, Bt. (late Permanent Secretary to the Board of Education), Sir Saiyid Sultan Ahmad (Vice-Chancellor of Patna University), Sir George Anderson (Director of Public Instruction, Punjab), Raja Narendra Nath (Member of the Punjab Legislative Council), and Mrs. Muthulakshmi Reddi (Deputy President of the Madras Legislative Council).

Sir Philip Hartog, according to *The Times'* Simla Correspondent, proceeds to England on July 7 for short leave arranged before his appointment to the Committee. He will return to India early in September and will relinquish his membership of the Public Services Commisson while serving on the Committee.

It is expected that Sir Amherst Selby-Bigge, a member of the Committee, will sail for India some time during September. The Committee has not yet arranged a programme. All the provincial Governments are already busy preparing reports for the Committee's consideration. It is not settled whether the Committee will issue a *questionnaire*, but it is expected that it will make a brief tour of the Provinces during October.

SIR HARCOURT BUTLER'S REMINISCENCES.

An interesting reference to his previous association with the problems presented by the Indian States was made by Sir Harcourt Butler at a luncheon given in his honour by the Overseas League recently. Sir Ernest Birch, who presided, said that their guest has filled with distinction and conspicuous success many important administrative posts, including the Governorship of two great Provinces, and specially comended his well-directed and effective efforts to free certain unadministered tracts of tribal country in Burma from slavery and also to eliminate human sacrifice.

The two predominant features of Indian life, Sir Harcourt Butler remarked in the course of his reply, were the power of religion and the far-reaching influence of the joint family system. One heard the criticism of the Brahmanical system that, compared with Western standards, there was indifference to suffering; but family ties were so strong that no Poor Law system was necessary and within the family the Indian was full of pity and kindness and within that limited sphere led an active and valuable life.

Referring to his present work as Chairman of the Indian States Inquiry Committee, Sir Harcour said that he was greatly assisted in his task by the fact that, as Foreign Secretary under Lord Minto, he knew the States 20 years ago. At that time, and still more when he first went out to India 38 years ago, the ideas of the Princes as to their responsibilities were very different from what they were now. The system of administration in the States mght not be so fully developed as in British India, but at any rate a good beginning had been made, and there was undoubtedly on the part of the Princes a new sense of responsibility to their subjects such as had never existed before.

THE COUNTRY LEAGUE.

Manifesto.

The years which lie immediately ahead are of the utmost moment in the constitutional history of India. A Statutory Commission has made its preliminary survey in India, so that it may the more correctly discharge the duties laid upon it by the Government of India Act of 1919; ultimately to report to the Imperial Government whether those measures of responsible government then given should be extended, modified or restricted. To-day it must be obvious to all, though it was not so in 1919, that the old order has passed away, and that a new, and for India a strange, system of government is in process of evolution. For the past eight years India, with varying degrees of success, has been experimenting with responsible government in a restricted form. There is nothing to be gained by referring to old controversies; but it is certain that large sections of India's responsible citizens, accustomed to the traditional methods of making their wishes and requirements known to Government, failed to recognise the significance of the drastic changes that accompanied the introduction of the Montagu-Chelmsford Reforms. The result has been that a small section of India, which may be described broadly as representing local urban interests (at least in the Legislative Assembly and most of the Provincial Councils) has by intensive methods of political organisation secured for itself a predominant portion of the power handed over under the Reforms, to the definite detriment of more solid, and perhaps more sober, elements. To some extent this was due to the failure of most of these latter elements to recognise the importance of the changes that would come about: to some extent to the fact that many members of the classes who should have taken a prominent share in the new Government had not the requisite sense of public duty; but mainly to the fact that the framers of the Reforms failed to secure to them their rightful place in the new scheme. The bitter attacks which have been made by Indian politicians on these classes, and on all those who have dared to differ from them or to suggest cautious lines of advance; and the fact that under the new régime the Government no longer felt, nor manifested, the same responsibility as before for protecting the interests of those who had in the past supported them, are two main causes which have hitherto delayed and impeded all efforts at organisation.

To-day, however, recognising that these sober elements must stand or fall by their own efforts, and that their interests are definitely threatened, we, the undersigned, have formed a "Country League" with a view to offering a rallying-point to all those, irrespective of race or creed, who seek the advancement of India on sane lines. We have chosen the term "Country" because in English it is used definitely in two senses, national and rural, and it is in these directions particularly that we seek progress. The temporary headquarters of this organisation will be at Cawnpore, later to be moved to Delhi. Those interested in the League should apply in writing to the Secretaries of the Country League, Cawnpore.

It is our immediate intention to press to the fullest possible extent before the Statutory Commission the needs and legitimate interests of our Members, and to seek for them a share in the government of the country, proportionate to their position. We desire to see the progressive realisation of responsible government and to press for full responsibility in the Provinces, consistent with stability and orderly development, and the adequate protection of minorities. It is our purpose to make definite representations regarding the nature and form of constitution best suited to the peculiar requirements of India, in answer to the Secretary of State's repeated invitation. A draft scheme is already under consideration and will be submitted later to the Members of the League. We appeal, in all confidence, to sober and for the most part non-vocal elements, both landed and agricultural, large and small, as well as to commercial interests, to join the League, and with us to shoulder their responsibilities in the good government of the country and the safeguarding of their legitimate interests.

The Country League stands for:—

1. The progressive realisation of responsible government in India.
2. The establishment of Second Chambers in the Provinces.
3. The establishment of some simple form of government in the Provinces.
4. Communal representation, where possible or politic through mixed electorates.
5. Increased representation for Commercial, Landed, Agricultural, ex-Military and Labour interests, and the Depressed Classes.
6. The support of suitable candidates for election to the various Legislatures.
7. The supporting in power of an Administration sympathetic to Commercial development and Agricultural prosperity.
8. Adequate safeguards for Minorities.
9. The formation of an All-India organisation, to take effective political action on behalf of the stable elements of the Country.
10. The stimulation and co-ordination of existing organisations, which may lend themselves to the objects in view.
11. The expression of opinion by the League on the more important public questions that arise from time to time.
12. And, in particular, the formulation of the views of the Members of the League for submission to the Statutory Commission.

PRELIMINARY LIST OF SIGNATORIES.

THE HON. MAHARAJADHIRAJ OF DARBHANGA.
THE NAWAB BAHADUR SIR MOZAMMINULLAH KHAN.
THE HON. MAHARAJDHIRAJ BAHADUR OF BURDWAN.
THE HON. MAHARAJA OF KASIMBAZAR.
THE MAHARAJA TAGORE.
THE MAHARAJA BAHADUR OF GIDHOUR.
THE MAHARAJA BAHADUR OF HATHWA.
NAWAB MUHAMMAD ALI KHAN, KHAN BAHADUR OF KUNGPURA.
COLONEL MAHARAJA JAICHAND OF LAMBAGRAON.
COLONEL THE HON. NAWAB SIR UMAR HAYAT KHAN.
MAJOR NAWAB KHURDA BAKSH KHAN.
KHAN BAHADUR MAULVI SIR RAHIM BAKSH, M.L.C.
SIRDAR BAHADUR GAJJAN SINGH.
KHAN BAHADUR MUHAMMAD AMIN KHAN, M.L.C.
CAPTAIN MUMTAZ MUHAMMAD KHAN TIWANA.
SIRDAR MUHAMMAD NAWAJ KHAN, M.L.A.
MAJOR D. VAN RENEN (of Nenala).
NAWABZADA MOHAMED ZULFIQAR ALI KHAN SAHIB.
SIRDAR BAHADUR AGIA RAM.
SAYAD NAWAB ZISH HUSSAIN OF SHERGARH.
E. J. FINCH, M.L.C.
RAI LAKSHMI NARAYAN SINHA BAHADUR OF PANCHGACHNI.
NAWAB S. CHOTEY.
COLONEL E. H. COLE (of Okara).
RAI BAHADUR BADRI DAS GOENKA.
N. N. SIRKAR.
PROFULLA NATH TAGORE.
MAHARAJ KUMAR MAJORE MAHAJIT SINGH.
THE HON. RAJA BAHADUR KUSHALPALSINGH OF KOTLA.
LT. NAWAB JAMSHED ALI KHAN.
RAJA OF MALLAPUR.
RAJA OF JEHANGIRABAD.
KHAN BAHADUR LT. NAWAB ADDUS SAMI.
KHAN CHAUDHARI MUJTABA HUSAIN.
RAJA BAHADUR OF AMAWAN.
RAJA RAGHUNANDAN PRASAD SINGH.
THE RAJA BAHADUR OF KANIKA.
C. T. ALLEN.
J. LANGFORD JAMES.
A. H. GHUZNAVI.
E. S. TARLTON.
ALTAF ALI.
R. S. SARMA.
SIRDAR NIHAL SINGH.
J. P. SRIVASTAVA.
S. MAHOMED MAHDI (son-in-law of Sultan Ahmad Khan).
RAI BAHADUR DULEEP NARAYAN SINGH, M.L.C.
SIR VICTOR SASSOON, BART., M.L.A.
HON. SIR DINSHAW WACHA.
F. NEEDHAM.
H. M. MEHTA.
J. ADDYMAN, M.L.C.
SIR MANECKJEE DADABHOY.
RAJA RANGA RAO BAHADUR OF BOBBILI.
KHAN BAHADUR HAFIZ MUHAMMED HALIM.
RAJAH BAHADUR RAJA DUTT SINGH OF MURSAN.

The majority of the founders are in favour of the twelve principles enumerated in the Manifesto, but some have doubts as to the need for communal representation and the establishment of Second Chambers in the Provinces; in particular in the Punjab has the present form of government given satisfaction, and it is likely that the proposal for a Second Provincial Chamber would be opposed there.

The measure and form of communal representation

Digitized by Google

from the broadcast view which the Country League must take, namely, the protection of the common interests of all stakeholders, have not yet been laid down. Founders and members will discuss this question, as well as that of Second Chambers.

Small stakeholders, whose interests the Country League is out to protect, will have an opportunity of becoming members of the Country League through the affiliation of associations already in existence or to be set up, and for this purpose the founders are making provision in the Constitution of the Country League.

Until the Country League offices are opened in Delhi, Calcutta, Bombay, Madras, Lahore, Patna, Lucknow, etc., all communications intended for the attention of the Executive staff should be addressed to the Secretaries, The Country League, Cawnpore, U.P. India.

THE BOMBAY DINNER.

The annual reunion dinner of past and present European residents in the Bombay Presidency took place at the Hotel Cecil on June 1. Sir William Sheppard, sometime Member of the India Council, presided and proposed the toast of "The Presidency of Bombay," coupled with "Our Guests."

The Chairman said that strikes and riots in Bombay were sporadic, senseless, and inexplicable, and did most harm to their participants. They could seldom be traced either to any definite cause or to any definite person, though symptoms of uneasiness might lead to the knowledge that they were shortly coming. Those who had lived in Bombay could leave the prolonged strike in the cotton mills to the forces of law and order, and pray that business losses might not be unduly heavy.

In the absence, owing to the serious illness of Lady Jacob, of Field-Marshal Sir Claud Jacob, Commander-in-Chief in India, General the Rt. Hon. Sir Neville Lyttelton responded on behalf of the guests, who included two former Governors of Bombay—Lord Harris and Lord Lamington —Sir Malcolm Seton and Sir Campbell Rhodes.

General Sir Neville Lyttelton, in his reply, said that the Chairman had recalled the fact that he was Military Secretary to Lord Reay when Governor of Bombay from 1885 to 1890. He was extremely pleased at the opportunity of meeting old friends from India, and from Bombay in particular, though the number in the room who knew the Bombay of Lord Reay's day was, he feared, comparatively small. He had, however, spent five very happy years there and he would always be glad to renew the associations at such a gathering.

The toast of "The Chairman" was proposed by Sir Amberson Marten, Chief Justice of the High Court of Bombay. The formal proceedings terminated with a cordial vote of thanks to the honorary secretary, to whom, the Chairman said, the major part of the credit for the organisation of the gathering was as usual due. Mr. W. A. Haig Brown briefly replied.

The company numbered over 200, among those present being :—Major-General Sir Percy Cox, Sir Charles Armstrong, Lt.-Gen. Sir E. C. Bethune, Sir Frank Beaman, Sir James Begbie, Sir Thomas Birkett, Sir John Bowen, Sir George Carmichael, Major-General H. A. V. Cummins, Sir James Du Boulay, Sir Robert Dunlop, Sir Arthur Froom, Sir Frederick Graham, Bart., Sir John Heaton, Sir Malcolm Hogg, Sir Leslie Hudson, Sir Henry Lawrence, Sir Darcy Lindsay, Sir Norman Macleod, Sir Robert McLean, Sir Charles Mules, Sir Stanley Reed, Sir Reginald Spence, Sir Frederick Sprott, Sir Thomas Strangman, Sir Walter Willson, Colonel W. M. P. Wood, Colonel R. Markham Carter, Captain E. W. Huddleston, Colonel J. P. Orr, Major R. L. Benson, Messrs. C. E. Benson, P. R. Cadell, S. Calvocoressi, S. J. Gillum, N. S. Glazebrook, H. T. Gorrie, A. K. Graham, W. A. Haig Brown (hon. secretary), W. J. K. Hegarty, H. P. Hebblethwaite, M. R. Jardine, G. Miller, W. H. Neilson, L. Robertson, A. C. Rumboll, H. F. Weir and D. W. Wilson.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 17.

Bamangachi Judgment.

The Magistrate's judgment in the Bamangachi Shooting case, with its repercussions in British parliamentary and journalistic circles, has been our one topic this week, and at the end of the week, just in time for inclusion in this letter, appears a Government *communiqué* on the subject. "The findings of the District Magistrate," the *communiqué* says, after an unimportant introductory sentence, "in the departmental inquiry held by him into the firing reached Government on May 15, and are now under examination together with the record of that inquiry and of the judicial inquiry held . . . by the District Magistrate and the Sadar Sub-Divisional Officer, Howrah . . . It will not be proper for Government to arrive at any decision regarding the conduct of the Government officials concerned until these have been afforded an opportunity of examining the evidence recorded during the inquiries and submitting their explanation on the matter in which their conduct has been called in question. Every endeavour will be made to collect as early as possible the material required for a proper decision in these cases, but it must be appreciated that some time must necessarily elapse before the Governor in Council can make public his final decisions." That is a somewhat clumsy way of saying that time must be given the Governor in Council to form decisions, the making them public not being a thing itself that should occupy time. The Hon. Mr. Moberly, Home Member of the Government of Bengal, is expected in Calcutta to-day; but it may be doubted whether his presence here, however strong his will to arrive at the truth, will facilitate matters more than the absence of Mr. Sturgis will hinder them. Mr. Sturgis proceeded on leave on May 10; that is, after the publication of the District Magistrate's report. To let him go was to invite "the enemy to blaspheme," and naturally the enemy is heard blaspheming. One has not only had the speaking of the enemy to listen to, but the speaking also of "the candid friend." Let, however, the Governor in Council speak his mind first. He may leave one nothing to say, and that however freely one drew on what one had heard as one went up and down the town.

The Strikes.

Not so much publicity is given to strike news in India as is given in more highly organised countries, and it is sometimes difficult for one to follow the fortunes of a particular strike. Of the too many strikes now in progress throughout India the greater wholly overshadow the lesser. There was a small paragraph in the newspapers one morning on the subject of the strike at Jamshedpur; that and, I believe, nothing since. The East India Railway strike deadlock continues. The men, it is reported, are bent on organising strikes in other districts, and emissaries are to be sent to other big centres to make trouble, or, to use the wording of the *Statesman's* report, "to spread disaffection and create other disputes." "This," to quote further from the same report, "was the effective method to make the company yield which Messrs. Goswami and Philip Spratt suggested to the men yesterday." Mr. Spratt is, of course, the same gentleman of that name of whom a good deal was heard at the time when the alleged political activities of the Y.M.C.A. were before us.

Calcutta Drainage.

It would be a parlous thing, if a great city were to be doomed to suffocation in its own sewage. That would be a case of cloacæ being of international interest. If Calcutta "went west" in self-generated filth, there would be few cities in the world in which there were not at least a few who would feel that it concerned even their own

Digitized by Google

pockets. The danger, those think who have devoted most study to the matter, draws steadily near. Mr. Wilkinson, Executive Engineer, Drainage, Calcutta, in an interview published yesterday, expresses agreement with the opinion of the Chief Engineer to the Corporation, that "the raw Hooghly water in the river alongside Calcutta is nothing less than dilute sewage." "During the past few years," the Executive Engineer said, "I have discussed . . . questions relative to the decay of essential waterways draining Calcutta and its neighbourhood, and I am of opinion that the river Hooghly is deteriorating. As a matter of fact, there is definite evidence that the navigable channel is becoming narrow throughout the major portion of its course, and at several points this fact is strikingly illustrated." Something will, of course, be done about it; but it will probably be only just in time.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, May 19.

The All-Parties Conference.

The All-Parties Conference meets to-day at Congress House, Bombay. Although no agenda has been published, it is understood that the Bombay session is held in continuation of the Delhi one and the business transacted will be mainly the consideration of the Muslim proposals. The Conference, however, has not much chance of suceeding where the Delhi meeting failed, as the situation on the eve of the conference is far from reassuring. The Muslim proposals are that reforms should be introduced in the North-West Frontier Province, and that Sind should be constituted as a separate province; so far they accept the solution of the communal question suggested by the Madras Congress. The Congress further proposed that joint electorates should be substituted for separate electorates, a proposal to which the Muslims strongly object. The Hindu Mahasabha leaders, on the other hand, are determined not to concede any of these demands. In a statement issued by Mr. Kelkar and Dr. Moonje, two leaders of the Mahasabha, the attitude of that body is clearly shown. They say that they insist on joint electorates but are ready to concede any legitimate protection to minorities by the reservation of seats, that there should be a uniform basis of franchise and that provinces should be redistributed, not to increase the number of provinces in which a particular community has a majority, but in the light of principles capable of general application.

The Liberals and the Conference.

Whilst that is the position among those who are attending the conference many important leaders have made up their minds not to attend. A controversy had arisen in the Press regarding the attitude of the Liberals towards the meeting. Mr. D. G. Dalvi, Secretary of the Liberal Federation, told a Press representative that the Liberal Party would abstain from the conference, as no useful purpose could be served by their presence there. Mr. Dalvi said that the goal of complete independence without the British Empire, enunciated by the Congress at Madras and re-affirmed by the various provincial conferences held recently, had estranged the Liberals who were pledged to work for "dominion status" by all constitutional methods. Mr. Dalvi concluded that there is now a split in the Congress itself and that it cannot "expect the co-operation of other parties unless it sets its own house in order." Mr. Dalvi's statement was not allowed to remain unchallenged. Sir Chimanlal Setalvad, replying to him, said "The creed and principles of the Liberal Party are in no doubt and have been clearly enunciated. The party stands for dominion status and is pledged to work for it. . . . But it is quite willing to discuss matters and co-operate with other parties in evolving a constitution that may be acceptable to all and in exploring the measures to be taken for bringing about communal unity in the country. The participation of the party or its members in such work does not and cannot imply any approval of the principles and methods of the other groups with which it may be working. I think it is the duty of every patriotic citizen to take pains and join in threshing out the various national problems and for that purpose to meet people of other parties, however divergent their principles and methods may be from those of his own party." Sir Chimanlal warned his interviewer that he was not speaking officially. The official statement issued by Mr. C. Y. Chintamani, the General Secretary of the National Liberal Federation of India, supports Sir Chimanlal. Mr. Chintamani says that Mr. Dalvi spoke not for the party but for himself and that the Executive of the party has recorded no resolution that the Liberals should take part in the Conference. He proceeds: "Mr. Dalvi has very correctly stated that the Liberal party stands for dominion status and not for independence, but this need not deter the Liberals from co-operation with any party in the preparation of a scheme of constitution for India." In view of the fact that many of the prominent Liberals are not attending the conference this statement is an important one, as it definitey states that, although for personal reasons many members of the party find it inconvenient to attend, the party itself is not opposed to the conference. Clearly the Liberal Party will not be sacrificing any of its principles by participating in the Conference, as its very name implies that it is the instrument of no particular party and provides a common platform for persons of all shades of political opinion.

The Responsivists and the Viceroy's Commission.

Mr. M. R. Jayakar, leader of the Responsivists, has made a statement to the Press in which he says that their attitude towards the Simon Commission has not changed. He points out that while other party leaders have discussed the merits of the *Pioneer's* proposal of a parallel commission the Responsivists have abstained from doing so as they believe that "the difficulty is not the evolution of a formula but the absence of any will on the part of the authorities to accept the principle of equality of powers, status and functions." He concludes by saying that the Responsivists have no intention of re-opening the question of the boycott of the Simon Commission at the All-Parties Conference and that they have accepted the boycott as a settled fact.

The Bombay Strikes.

The situation in the Bombay mills has not changed. The efforts of the General Member, Sir Cowasji Jehangir to end the strike have failed. Three points were discussed with Sir Cowasji. The first was that the mill owners should recognise the Joint Strike Committee and open negotiations with it. Secondly, that the mill owners should appoint a Committee to find out the mills which had effected reductions in wages. And lastly that a Joint Committee of three representatives each of the mill owners and the workers and one representative of the Government should be appointed to end the dispute. The General Member had told the deputation of strikers' representatives which waited on him he would discuss the matter with the Committee of the millowners and he would let them know if he wished to have a consultation with the Joint Strike Committee. As there has been no communication and as the General Member has returned to Mahableshwar it would appear that Sir Cowasji has not met with success. The millowners have put up notices outside their mills that the strikers may regard themselves as discharged and inviting outsiders to apply for employment in the mills. The strikers have decided to post pickets for twelve hours a day instead of two hours as at present.

Lieutenant-General Sir Harold Walker, who has been G.O.C., Southern Command, India, since 1924, retired on retired pay on May 26.

THE BIRTHDAY HONOURS.

The following selection from the list of honours conferred on the occasion of the King-Emperor's 63rd birthday is likely to be of particular interest to readers of THE NEAR EAST AND INDIA:—

KNIGHTS.

Khan Bahadur Muhammad Usman Sahib Bahadur, Member of the Executive Council of the Governor of Madras.

Babu Ganesh Datta Singh, Minister in charge of the Ministry of Local Self-Government, Bihar and Orissa.

Maulavi Saiyid Muhammad Saadulla, Minister, Assam.

Broadway, Mr. Justice Alan Brice, Senior Puisne Judge, High Court of Judicature at Lahore.

Lindsay, Mr. Justice Benjamin, Puisne Judge, High Court of Judicature at Allahabad.

Pratt, Mr. Justice Henry Sheldon, Judge, High Court of Judicature at Rangoon.

Jamshedji Behramji Kanga, Esq., J.P., Advocate-General, Bombay.

Headlam, Captain Edward James, C.S.I., C.M.G., D.S.O., Director of the Royal Indian Marine.

Willis, Lieutenant-Colonel George Henry, C.I.E., M.V.O., Royal Engineers, Master of the Security Printing Press at Nasik.

Muhammad Akbar Nazar Ali Hydari, Nawab Hydar Nawaz Jang Bahadur Sadr-ul-Maham, Finance Department, His Exalted Highness the Nizam's Government.

Ghuznavi, Hadji Abdul Karim Abu Ahmed Khan, Esq., Member of the Bengal Legislative Council.

Low, Austin, Esq., C.I.E., Chairman, Messrs. Grindlay and Co.

ORDER OF MERIT.

Grierson, Sir George Abraham, K.C.I.E., Ph.D., D.Litt., LL.D. In recognition of his eminent position as an Oriental Scholar and of the value to the Empire of his work on Indian Languages and Dialects.

KNIGHT OF THE THISTLE.

Linlithgow, Victor Alexander John, Marquess of, O.B.E., T.D., D.L.

ORDER OF THE BATH.

G.C.B. (Military Division).

Barrow, General Sir George de Symons, K.C.B., K.C.M.G., Indian Army, Colonel 14/20th Hussars, Colonel The Scinde Horse (14th Prince of Wales's Own Cavalry), Indian Army, late General Officer Commanding-in-Chief, Eastern Command, India.

C.B. (Military Division).

Barstow, Colonel (temporary Brigadier) Henry, C.B.E., Indian Army, Commander, Delhi Independent Brigade Area, India.

Fetherstonhaugh, Colonel (temporary Brigadier) William Albany, C.B.E., D.S.O., Indian Army, Commandant Lahore Base Sub-area, and Brigade Commander, Lahore Brigade Area, India.

Fordham, Colonel (temporary Brigadier) William Marshall, C.B.E., Indian Army, Deputy Adjutant and Quartermaster-General, Eastern Command, India.

Boulton, Colonel Harold, C.B.E., M.D., Indian Medical Service, V.H.S., Assistant Director of Medical Services, Deccan District, India.

THE STAR OF INDIA.

G.C.S.I.

Butler, Sir Spencer Harcourt, G.C.I.E., K.C.S.I., ex-Governor of Burma.

K.C.S.I.

Keith, Sir William John, C.I.E., Indian Civil Service, late Finance Member of the Executive Council of the Governor of Burma.

C.S.I.

Reynolds, Leonard William, Esq., C.I.E., M.C., Indian Civil Service, Agent to the Governor-General, Rajputana, and Chief Commissioner, Ajmer-Merwara.

Stokes, Hopetoun Gabriel, Esq., C.I.E. Indian Civil Service, Member, Board of Revenue, Madras.

Rana Bhagat Chand, Raja of Jubbal, Simla Hill States.

Ker, James Campbell, Esq., C.I.E., Indian Civil Service, Private Secretary to His Excellency the Governor of Bombay.

Simpson, Maurice George, Esq., Director-in-Chief, Indo-European Telegraph Department.

ORDER OF THE INDIAN EMPIRE.

G.C.I.E.

Hailey, Sir William Malcolm, K.C.S.I., C.I.E., Governor of the Punjab.

K.C.I.E.

Nawab Muhammad Ahmad Sa'u-Khan, Lieutenant, C.I.E., M.B.E., of Chhatari, Home Member of the Executive Council of the Governor of the United Provinces.

Glancy, Reginald Isidore Robert, Esq., C.S.I., C.I.E., Indian Civil Service, Agent to the Governor-General in Central India.

His Majesty would also have been graciously pleased to appoint the late Maharaja Bahadur Kshaunish Chandra Ray, of Nadia, Vice-President of the Executive Council of the Governor of Bengal, to be a Knight Commander of the Most Eminent Order of the Indian Empire, had he survived.

C.I.E.

Durbar Shri Vala Mulu Surag, Jurisdictional Talukdar of Jetpur-Pithadiah, States of Western India.

Dey, George Goodair, Esq., Chief Engineer and Secretary to the Government of Bengal in the Public Works Department.

Beazley, John Godfrey, Esq., Indian Civil Service, Secretary to the Government of the Punjab in the Transferred Departments.

Gilliat, Algernon Earle, Esq., Indian Civil Service, Secretary to the Government of Burma in the Finance Department.

Beckett, Richard Henry, Esq., Director of Public Instruction and Secretary to the Government of the Central Provinces in the Education Department.

Copeland, Theodore Benfey, Esq., Indian Civil Service.

Arnould, Francis Graham, Esq., Chief Engineer, Bombay, Baroda and Central India Railway.

Harrison, Charlton Scott Cholmeley, Esq., Chief Engineer, Lloyd Barrage and Canals Construction, Karachi, Bombay.

Mackenzie, Arthur Henderson, Esq., Director of Public Instruction, United Provinces.

Cocks, George Arthur, Esq., C.B.E., Inspector-General of Police, Punjab.

Gunter, Colonel Clarence Preston, O.B.E., Director, Frontier Circle, Survey of India.

Coupland, Professor Reginald, lately Member of the Royal Commission on the Superior Civil Services in India.

Hopkyns, William Stenning, Esq., O.B.E., Indian Civil Service.

Bradfield, Lieutenant-Colonel Ernest William Charles, O.B.E., Indian Medical Service, Professor of Surgery, Medical College, and Superintendent, General Hospital, Madras.

Cook, Lieutenant-Colonel Lewis, Indian Medical Service, Civil Surgeon, Bhagalpur, Bihar and Orissa.

Franklin, Lieutenant-Colonel George Denne, O.B.E., Indian Medical Service, late Chief Medical Officer, Delhi.

Will, Lieutentnt-Colonel (Honorary Colonel) Robert Ross, D.S.O., V.D., Commandant, the Bengal Artillery Force.

Cunningham, Lieutenant-Colonel John, Indian Medical Service, Director, Pasteur Institute, Kasauli.

Metcalfe, Herbert Aubrey Francis, Esq., M.V.O., Secretary to the Chief Commissioner, North-West Frontier Province.

Valangiman Krishnaswami Ayangar Aravamulha Ayangar, Esq., Indian Audit and Account Service, officiating Under-Secretary to the Government of India, Commerce Department.

Smith, Sydney David, Esq., Deputy Commissioner of Excise, Bombay.

Wakefield, George Edward Campbell, Esq., O.B.E., Police and Public Works Minister, Jammu and Kashmir State.

Rai Bahadur Badri Das Goenka, Member of the Bengal Legislative Council.

Roberts, Hugh Gordon, Esq., M.D., Welsh Mission at Shillong, Assam.

Voelcker, John Augustus, Esq., Ph.D., of the Royal Agricultural Society of England.

THE CROWN OF INDIA.

Her Highness the Senior Maharani Shrimati Chinkooraja Scindia, of Gwalior.

ORDER OF THE BRITISH EMPIRE.

K.B.E. (Military Division).

Ogilvie, Major-General Walter Holland, C.B., C.M.G., M.B., K.H.P., Indian Medical Service, Director of Medical Services, Army Headquarters, India.

Van Straubenzee, Major-General Casimir Cartwright, C.B., C.M.G., General Officer Commanding Straits Settlement, Malaya.

C.B.E. (Military Division).

Marriott, Colonel Alfred Sinclair, Indian Army, Director of Farms, Master-General of Supply Branch, Army Headquarters, India.

Smith, Colonel John Lindsay, Indian Army, Deputy Director of Supplies and Transport, Northern Command, India.

K.B.E. (Civil Division).

Haworth, Lieutenant-Colonel Lionel Berkeley Holt, Political Resident in the Persian Gulf.

C.B.E. (Civil Division).

Ogilvie, Charles MacIvor Grant, Esq., Indian Civil Service, late Deputy Commissioner, Lahore.

Barnard, Joseph Terence Owen, Esq., C.I.E., Deputy Commissioner, Burma.

Raja Saiyid Ahmad Ali Khan Alvi, M.B.E., of Salempur, United Provinces.

Pestonji Sorabji Kotwal, Esq., Second Additional Judicial Commissioner, Central Provinces.

Cory, Percy Albert, Esq., O.B.E., Honorary Treasurer of the Lady Minto's Indian Nursing Association, Home Branch.

HON. MAJOR-GENERAL.

Honorary Colonel His Highness Sir Muhammad Hamid Ali Khan, Bahadur, Nawab of Rampur, G.C.S.I., G.C.I.E., G.C.V.O., Honorary Aide-de-Camp to The King, in recognition of valuable services rendered to His Majesty's Government.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Honours List.

In the Birthday Honours List there are fewer names than usual of special interest to readers of THE NEAR EAST AND INDIA. Among the new Knights are to be noted Victor Harari Pasha, Director of the National Bank of Egypt and of the Agricultural Bank of Egypt, Mr. J. B. Lloyd, Jun., Financial Director of the Anglo-Persian Oil Company, and Mr. Austin Low, Chairman of Grindlay's Bank, and there are a number of other awards, details of which will be found elsewhere in these columns. In the note accompanying the announcement of the conferment of a Knighthood on Harari Pasha it is stated that it is "for services over a long period in promoting trade and commerce between England and Egypt." One would like to think that this is evidence of a new attitude on the part of the authorities towards commercial activities overseas and particularly in the Near East, for in recent Honours Lists the lack of official recognition of British enterprise abroad has been very noticeable.

The Ottoman Debt.

There are grounds for the belief that the firm attitude adopted by the representatives of the Turkish bondholders in regard to the latest delay over the settlement of the Ottoman Debt question may be productive of good results. It will be recalled that the Turks advanced the plea that the closing of the session of the Grand National Assembly made the ratification of the agreement impossible until the next session, and that the delay of the bondholders in the settlement justified some modification in the dates of payment. The bondholders replied in a Note which may fairly be said to have completely disposed of the points at issue, one of the most important points advanced being that the payment of the first two coupons will not affect the Turkish exchange in any way, as the necessary funds are in the hands of the Ottoman Debt administration. While no official information is as yet forthcoming, it seems probably that Angora will depart from the attitude previously adopted and that the first two coupons will be paid on November 1.

Turkish Coal for Greece.

Considerable surprise seems to have been aroused by the report that an order for 10,000 tons of coal for the Athens Gas Works has been placed in Turkey, as this constitutes the first occasion that Turkish coal has successfully competed with Durham fuel. It is not, however, a very surprising development, for, since the War, the question of price has been more and more a factor in the Near East markets, and it is only natural that, if Turkish coal will serve the purpose, its price should give it a considerable advantage, at any rate in the neighbouring markets. It could not be contended for a moment, of course, that Turkish coal is equal to the British product, but the coal of Eregli, which is the best produced in Turkey, is said to be adequate for most purposes, if it is properly screened and washed. The Turkish steamship companies and railways use it, though that is, of course, not a guarantee of its efficiency. The chief interest in the present development lies in the fact that the British coal industry must now apparently face a new competition in the Near East markets, the importance of which will naturally depend on the success attending the utilisation of this fuel.

Turkey's Coal Mines.

Anatolia is the centre of the Turkish coal industry, and coal is found there in many parts, though the principal area lies along the coast in the vicinity of Eregli. About seventy years ago the production from the mines in this region amounted to about 1,000,000 tons, but just before the War the output was no more than 903,750 tons. During the War considerable damage was done to the plant at the various mines on the coast, and the production in the years immediately following the War was much smaller than the above total. As in other directions in Turkey, however, attention has been paid of late to the development of the mines, and with the utilisation of improved appliances the production has again been increased, probably very considerably if Turkey is now trying to find markets for her surplus production throughout the Eastern Mediterranean.

Motor Traffic in India.

I referred recently to the competition encountered by the railways in India in the big towns from motor traffic. Motor transport is not only affecting the railways in that country, but also the tramways. Thus the Calcutta Tramways Company has been affected in recent years by the competition of independently-owned motor omnibuses, and with a view to meeting this competition has reduced the fares on the tramways and at the same time has increased its own interest in omnibuses. I refer to this because it throws further light on the influence that motor competi-

tion is likely to exert in the future. It is already very evident that the coming of the motor means as regards undeveloped countries that the construction of railways will be a matter of very considerable difficulty, since those who provide the capital for their construction will naturally look for some return, and it is only too clear from what has been happening in Roumania, to say nothing of regions nearer home, that the chance of new railways paying must be very uncertain.

Motors and the Near East.

It would seem indeed that the opening up of undeveloped countries must henceforth rest with the motor, at any rate to a very great extent. As the Near East contains within its boundaries extensive regions which come under this category, such as Persia and the Sudan, it follows that this question is one of the first importance for this territory. There is no practical reason why adequately organised motor transport should not serve the needs of a country almost as well as a network of railways. It all comes down to the construction of a series of arterial roads along which one can visualise the passing of an unending series of motor lorries. There would be junctions at suitable places where goods would be changed from one lorry to another, and radiating off from the arterial roads would be smaller roads to be used for transporting produce to and from the main line services. Obviously it will be a long time before anything of the kind is in operation, but can it be said that the picture I have drawn is too ambitious in view of the great development of motor transport in the past few years? In the Sudan, to give only one instance, every effort is being made to press forward the work of road construction, for it is clearly realised that the development of the Southern Sudan is bound up with the question of motor transport. In other regions, too, road construction is receiving attention, and it is certain that in a few years there will be an enormous expansion in the use of the motor in the Near East.

A Suez Canal Event.

An event in the history of the Suez Canal will be the passage through it in August of the floating dock destined for Singapore. The length of the Suez Canal is about 100 miles, and the average time taken by vessels in its transit is about 15 hours, but it is anticipated that it will be take roughly four days before the dock is clear of the Canal. The dock, which will be taken through in two groups of sections, which will be assembled at Port Said, weighs 50,000 tons. The first group of sections will be 465 ft. long, 172 ft. wide, and will have a draught of from 6 to 7 feet. The second group of sections will be 390 ft. long, 172 ft. wide, and will have a draught of 7 to 8 ft. As the structure is 75 feet high, the question of wind will become important It should be added that this is the first time an important enterprise of this kind has been undertaken, and the arrangements made are such as to reduce to the smallest possible degree any interference with the normal traffic of the Canal.

Suez Canal Traffic.

While on the subject of the Suez Canal reference is called for to the traffic figures for the first quarter of this year, which are now available, and show a further satisfactory expansion in the traffic through the Canal. The net tonnage of the shipping using the Canal in that period was 7,853,000 tons which is a record for that quarter and represents an increase of 568,000 tons on the figures for the corresponding period of 1927. While there was a substantial increase in the traffic in both directions the increase in the homeward trade was much more pronounced. The outward traffic amounted to 3,744,000 tons, an increase on the 1927 figures of 233,000 tons, while the homeward traffic totalled 4,109,000 tons, an increase of 335,000 tons. During the period in question the merchandise carried totalled 7,977,000 tons, which is 483,000 tons greater than the highest total hitherto recorded for any quarter, and over 800,000 more than the figures for the corresponding quarter of 1927. Of this total the outward traffic was responsible for 2,976,000 tons, an increase of 196,000 tons, while the homeward traffic totalled 5,001,000 tons, an increase of 813,000 tons. In the outward traffic the largest increase was in chemical fertilisers which rose from 168,000 tons to 204,000 tons. As regards the countries represented in the shipping the British flag was first with 4,405,000 tons, an increase of 281,000 tons, Holland was second with 825,000 tons, an increase of 60,000 tons, while Germany was third with 796,000 tons, an increase of 142,000 tons. The improvement in Germany's position is perhaps one of the most significant features of the shipping returns.

The Rubber Position.

It is a number of weeks now since I referred to developments in the rubber market. The outstanding feature at the moment is the rapid decline in the London stocks which now total 43,716 tons. This decline has proceeded much more speedily than was anticipated, and it is evident that if the 60 per cent. production basis is continued until the end of the restriction period the stocks here will be very low indeed. It was inevitable, even in view of the uncertain future, that the reduction in the stocks should not be without some effect on the price of the commodity, but the influence of this factor has so far been very small. The price of spot rubber is likely which now total 43,716 tons. This decline has proceeded a little further, and it is not at all unlikely that the spot price may be quite high in the course of the next two or three months while distant positions continue to stand at levels at which rubber production is unremunerative for the great majority of the plantation companies. The truth is, of course, that the market is entirely overshadowed by the uncertainty as to what will happen when restriction ends. It is at least possible that the market will be deluged with supplies for a time in which case it will be a long time before the market recovers. It is by no means certain, however, that 100 per cent. production in the late autumn is quite the formidable factor it is made out to be, owing to the labour situation, but it is evident for the moment that the market is taking the gloomiest view of the outlook.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Braid, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of braid (tape) woollen for chevrons, braid cotton, bunting, etc., to the Department of Ordnance Services, Egyptian Army Citadel, Cairo, June 25; ropes, millboard for tarboushes, flour Russian, crena vegetable, soap native, cotton waste, springs for chairs, upholstery, needles tailors', rubber tyres for carriage wheels, asbestos sheets, drums steel, tin solder in sticks, fasteners belting, glass panes for carriage lamps, burners complete for Primus stoves, manometres, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo, June 30; 1½ tons of candles to the Ministry of War, July 23; and two pumping sets and two water tanks to the Ministry of War. July 25.

Stoneware Pipes, Etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for stoneware pipes, junctions, and bends. June 25.

Nails.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 24,200 kilos French nails with head and 530 kilos with taper heads.

School Materials.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of large quantities of school materials required for schools during the year 1928-29, such as Persian reed pens, white and coloured chalk, exercise books, especial ruling for Arabic calligraphy, brown paper books for chalk drawing, and technical materials such as boxes of drawing instruments, slide-rules, drawing paper of different sizes, set squares, tracing paper, photo-papers, etc. June 28.

Concrete Bridges.—The Director of Projects and Resident Engineer, Naga Hamadi Barrage, Naga Hamadi, invites tenders for the construction of reinforced concrete bridges over the Foadia canal and excavation of a portion of the canal up and down stream every bridge. June 20.

Loco and Tender Tyres, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 205 loco. and tender tyres, July 5; 7,000 kilos raw linseed oil and 50,000 kilos boiled linseed oil to specification; 2,200 cast steel axle-boxes with front and back covers, to drawing; 9,000 kilos zinc sheets; and machine tools, approximate cost £E18,000. Firms interested should communicate direct with the Chief Inspecting Engineer, London, from whom all information can be obtained.

Telephone Exchange Equipment, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply and erection of a manual full common battery telephone exchange equipment at Mansura, and associated subscribers' apparatus. August 15.

Cloth.—The Stores, Egyptian State Railways, Telegraphs and Telephones, Saptieh, Cairo, invites tenders for the supply of 4,300 metres of cloth for making aprons for female operators. July 3.

Bridge over the Nile at Samanoud.—The Ministry of Communications, Egyptian Government, invites tenders for the construction of a metal bridge over the Nile. August 23. (D.O.T.)

Dredgers.—Tenders are invited by the Ministry of Public Works of the Egyptian Government for the construction of (a) two dipper dredgers each capable of an output of spoil in free-getting material of 80 metres cubic per hour measured in the solid, and (b) two suction pump dredgers each capable of an output of spoil in free-getting material of 200 metres cubic per hour measured in the solid; including re-erection in the Sudan and for the delivery thereof in working order safely afloat on the River Nile. Builders may tender either for the two dipper dredgers, or for the two suction pump dredger, or for both groups. The contract documents and the rules for, and full information as to, tendering may be inspected at the offices of Messrs. Goode, Fitzmaurice, Wilson and Mitchell, Consulting Engineers to the Egyptian Government, 9, Victoria Street, Westminster, London, S.W.1, or the Legation of the Egyptian Government, Bute House, 75, South Audley Street. October 1.

Automatic Telephone Exchange.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply and erection of a full automatic telephone exchange equipment in Cairo and associated subscribers' apparatus. Specification and drawings obtainable (price £E5) from Chief Inspecting Engineer, London. September 1.

Steel Sleepers.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 150,000 steel sleepers with clips and clipbolts. July 11.

Metal Cabinets and Safes.—The Survey of Egypt Department of the Ministry of Finance invites tenders for the supply of 120 filing cabinets and 12 safes. July 4. (D.O.T.)

Rails.—Tenders are invited by the Ministry of Finance, Survey of Egypt, for the supply of any quantity of rails up to 14,050 tons (8,300 tons light, 5,750 tons heavy). Offers for any portion will be taken into consideration. Offers may be for either new or second-hand rails. July 25. (D.O.T.)

Fire Bricks, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 18,000 high refractory fire bricks, and for 50 tons structural steel for footbridges, viz., channels, beams, angles, flats, squares, rounds, rivets, and bolts.

ROUMANIA.

Machine Tools.—A new company has recently been registered in Bucharest with the object of the purchase and sale of motor cars and accessories, the construction and "exploitation" of garages, and repair workshops, and any other operations in connexion with the industry and commerce for motor cars and agricultural machinery. The British Commercial Secretary at Bucharest suggests that machine tool firms may care to forward copies of catalogues and price lists of machines and equipment suitable for motor car repair work and garage use. (D.O.T.)

INDIA.

Metal Work, Etc.—The Agent, G.I.P. Railway, Victoria Terminus, Bombay, invites tenders for the supply of ornamental metal work and collapsible gates required for the new main line station building, Victoria Terminus, Bombay. June 18. (D.O.T.)

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 5.

The volume of business in the Stock Exchange since the Whitsun holiday has not been quite on its recent large scale, but markets as a whole have been steady. Gilt-edged stocks, in particular, have been good on the improvement in the monetary outlook. The shipments of gold from New York to London and the addition to the Bank of England's stock have prompted some optimists to talk of an early reduction in Bank Rate to 4 per cent., but in well informed circles such a change is thought unlikely, the gold movements being regarded as special operations carried out with the express intention of preparing the way for the amalgamation of the Currency and Bank of England Note issues. Offers of new capital still continue to flow, and are on the whole well received, the issue of £4 millions in 5 per cent. debenture stock by the Underground Electric Railways Company of London being rapidly over-subscribed.

A Moral for the Motor Industry.

Particulars have been issued of a great American motor merger which is not only interesting in itself but also points an important moral for the British motor industry. Chrysler Motor Corporation proposes to acquire the business of Dodge Brothers through an exchange of stock. A new organisation, it is stated, will be created with a total capital of £100,000,000. Moreover, the new corporation will apparently continue to pursue an expansionist policy. This move suggests an important line of advance to the British motor industry. The merger foreshadows keener competition between American and British motor manufacturers, thus indicating the need for greater efficiency in the British industry. But—and this is the more important point—the British industry, even before the American merger was announced, was in urgent need of unification. It consists of far too many units, a big proportion of which, both technically and financially, is ill-equipped for the struggle for existence. This is reflected clearly enough in the financial results of a large section of the industry. One of the most successful of the motor manufacturing firms is a substantial company, operating on real mass production lines, while the whole tendency of modern industry is in the direction of concentration. In recent weeks there have been a number of interesting rumours regarding amalgamations and it is to be hoped that they do not end their careers as rumours.

Trustee Securities.

The report of the Trustee Securities Committee has been widely discussed in financial circles this week. Important recommendations are made regarding trustee securities. The Committee have reached the conclusion that it is undesirable to add to the present list. On the other hand, though they recognise numerous anomalies in the existing list, it is not proposed to remove them because awkward disturbances might be caused. One modification, however, is suggested—namely, that the granting of trustee status to further issues of housing bonds should be discontinued. It is also proposed that in future trustee status shall be conferred only by public general statute and not by local and private acts. In certain quarters the report has been subjected to severe criticism on the ground that its conclusions are mostly negative. It must be recognised that the Committee were confronted with an exceptionally difficult task, but this criticism does not, perhaps, entirely lack point. A specific declaration that the trustee list should be drawn up with a sole eye on the investor and consequently that provision should be made for revision of the list in the light of developments would, it has been contended, have made a welcome addition to the report.

Chilean Nitrate Developments.

During the past few days there have been developments of great interest to investors who hold the shares of Chilean nitrate companies. The Chilean Government has taken action with a view to honouring its pledge to assist the industry. In brief, producers are guaranteed against any loss should they be compelled to reduce their prices in the event of the German selling organisation of producers of synthetic nitrogen adopting a lower scale of quotations in respect of the new season. The Chilean Government will hand over to Chilean producers a sum equivalent to the reduction in the chief products of the German syndicate; this sum will be passed on to the consumer until the German prices become effective, when the bonus will be retained by the nitrate companies. Apparently a further reduction in German prices is contemplated and the Chilean Government's scheme is an anticipatory countermove. In the past week or two there has been a recurrence in Germany of rumours of an impending agreement between German and Chilean interests. It remains to be seen what substance is in them, but the fact that the question can be seriously discussed in the German Press suggests that the position of Chilean producers is not so hopeless as is sometimes imagined. Meanwhile, the prices of nitrate share have been fairly steady, thus reflecting a wise interpretation of the situation.

The Associated Tea Estates of Ceylon announces a dividend of 3 per cent. on the preference shares for the half-year ending June 30.

The Scottish Assam Tea Company proposes a dividend of 20 per cent., less tax, for 1927.

The Jhanzie Tea Association has declared a final dividend of 35 per cent., less tax, making 45 per cent., payable June 30.

BANKING IN YUGOSLAVIA.

The *Belgrade Economic Review* contains an interesting survey of Yugoslav banking by M. Stanarevich, from which we take the following extracts :—

The centre of our banking is Zagreb, where there are larger and stronger banks than at Belgrade. Belgrade is remarkable for the large number of its banks, because there are a large number of small ones which have maintained themselves since before the War, but those of Zagreb are stronger in the amount of their capital. Thus, while at Belgrade 65 banks had a capital of 521 millions in 1927, Zagreb had 60 banks at the end of 1926 with a capital of 700 million dinars. Taking into account that from the survey for 1926 there was one large bank with a capital of 200 million dinars (the Slovenska Banka), Belgrade and Zagreb may be regarded as equal. Nevertheless, the Zagreb banks have better foreign connexions and consequently better financing than those of Belgrade.

The strongest, oldest, and foremost bank is the First Croatian Saving Bank, which in 1927 completed its 81st year of business. Its capital is 75 million dinars, but its power lies in its savings deposits. It is really a deposit bank which works with money entrusted to it, amounting to one and a half milliard dinars, which represents one-fifth of all the savings in private banks throughout Yugoslavia.

Last year its deposits increased by 135 million dinars. To illustrate the liquid nature of its funds it must be mentioned that on December 31, 1927, it had cash in its treasuries and in other banks amounting to 163.2 million dinars, or over 10 per cent. of the deposits. In addition it holds securities of its own to a total of 227.3 million dinars. In contrast to every other bank, it classifies its securities in kinds and by districts.

Its debtors on current accounts are grouped according to whether their loans are on pledge of papers, immovable property, bills, or other obligations. It has immovable property of its own valued in the balance-sheet at 100 million dinars. It has 48 branches throughout the country.

Its net profit was 1,714 million dinars, 16 per cent. or 12 millions being paid to the shareholders on a capital of 75 millions.

The second bank in importance is the Yugoslav Bank, which also has a good system of branches and takes a part in all branches of economic life, and industry in particular. Its share capital is 100 million dinars and its deposits are a quarter of a milliard.

The foremost of the Belgrade banks is the Jadransko Podunavska Bank. There are some banks, like the Agraro-Komercijalna and Bosanka banks, whose sphere of work lies away from Belgrade in Bosnia, and hence they cannot be counted among the real Belgrade banking houses. The lead among the Belgrade credit institutions is taken by the Izvozna Banka with a capital of 30 millions and the Beogradsko Zadruga with a capital of 20 million dinars. These two are the chief creditors of the small banks in Serbia and of export trade.

As regards the profit from banking business in Belgrade, practically all the banks are paying the same dividend as in former years. It varies between 10 and 20 per cent. of the nominal value of the shares.

The next important banking centre after Belgrade and Zagreb is undoubtedly Liubliana. In addition to the branches of large banks, it has its own leading banks in the Liublianska Kreditna Banka and the Zadruzna Gospodarska Banka. Not only in the amount of its capital, but also in respect of the confidence which they enjoy in Slovenia, these banks deserve special mention. Their chief service, like that of the Savings Banks, has been the accumulation of deposits for saving. In this respect, and compared with the number of its inhabitants and economic conditions, Slovenia has outmarched the other provinces.

The fourth economic centre is Sarajevo, which finances the economic life of Bosnia and Herzegovina. In addition to the branches of the large Zagreb and Liubliana banks, Sarajevo has 15 independent banks. The oldest and foremost is the Zemaljska Banka for Bosnia and Herzegovina, with a capital of 20 millions and deposits of nearly 200 million dinars. It is closely connected with the Wiener Bank Verein.

A purely national bank formed by the amalgamation of Serbian banks is the Srpska Centralna Privredna Banka, whose capital and reserve amount to about 35 millions, and savings deposits to the same amount. It has a considerable amount of credit and plays a large part in financing some of the large enterprises, and in particular the forest industries of Bosnia and Herzegovina.

The Bosanka Industrijska Trgovachka Banka, with a capital of 20 million, is also well known as an important credit institution for those provinces. Finally, the Amerikanska Sryska Banka, founded by Yugoslav emigrants in America with a capital of 10 million dinars, has made satisfactory progress.

Novi Sad is the chief banking centre for Voivodina. There, apart from the local banks (among which the most important is the Sryska Trgovachka Banka), the branches of the Zagreb banks are pre-eminent. These are also represented to some extent at Subotica, the second centre of Vojvodina.

The production of Hamilton's Concessions (Roumania) for May was 3,890 tons.

The exemption of ploughs from import duty in Yugoslavia has been prolonged to October 31.

The Romano-Belgian Oil Company, Bucharest, is to increase its capital from 250 to 500 million lei.

It is proposed to form a Greek limited company to acquire a 30-year concession to manufacture cigarettes for home consumption.

Negotiations for a commercial treaty between Yugoslavia and Austria are to be commenced this week in Vienna.

The traffic receipts of the South Indian Railway Company for the week ended May 5 amounted to Rs.13,17,076, making the total from April 1 Rs.62,40,941.

The net profits for 1927 of the Swiss-Roumanian Bank, Bucharest, amounted to 16,642,000 lei, as compared with 14,625,000 lei for 1926. The dividend is again 12 per cent.

The board of the Service Petroleum Company, Ltd., announce that Mr. Lincoln George Valentine has resigned his position as a director and joint managing director of that company with effect from May 31.

It is understood that the Commission which has been undertaking the revision of the Roumanian Customs tariff will propose considerable reductions in the duties on footwear, woollen fabrics, and garments.

The Eighth International Trade Fair at Liubliana is now in progress. The exhibits include iron and steel products, agricultural machinery and implements, motor cars, cycles, and accessories, and electrical apparatus.

After considering the accounts for the year 1927 the Committee of the Ottoman Bank has decided to propose to the general meeting, which will be convened for June 27 next, the distribution of a dividend of 5s. per share, the same as last year. In Paris this dividend will be paid without deduction of taxes.

Yugoslavia's imports in January and February amounted in value to 1,213.6 million dinars. The value of the exports was 869.3 millions, there being thus an unfavourable balance of 344.3 millions. For the corresponding months of 1927 the value of the imports was 1,067.5 million dinars and that of the exports 939.2 millions.

Engineering Topics.

By G. B. B.

The word "war" has been applied rather freely in the lay Press with regard to the light car situation. The expression is, of course, a wild exaggeration; there is and can be no light car "war." What has happened is that a firm which has made light cars for years following on a long term of motor cycle building, and which already has a light car on the market, has been conducting a number of experiments with a view to cutting down production costs, and has designed a new, cheaper and lighter engine. They are consequently putting another light car model on the market at as low a price as possible, and they are acting in a very sensible manner in so doing. There is plenty of room for the new Clyno and good luck to it and its designers!

Water Power or Coal.

The proposal that the French railways should be electrified, and water power used instead of coal is far from heartening reading for those who are interested in the future of British coal. The cynic—and he has with him not a few British engineers—will say that there is no future for British coal, and without going so far as that, it is surely obvious that the palmy days of the industry are over, and that oil is fast taking the place of what we used to call black diamonds. The pessimist, however, should bear in mind the fact that water power is not likely to be of any real use in this country. That elaborate scheme, the Severn barrage, would have been in hand by this time had not its sponsors realised the one fatal flaw in all such schemes. It is an easy matter to get power from tides or from barraging a river; a child could do it. With any thoroughly well-planned barrage or tidal power scheme electricity can be generated for about nothing per unit. And to transform it and get it on to the overhead lines and prevent it getting off again before it ought and transforming it down and accounting for lost power, costs about one and ninepence three farthings or thereabouts per unit. That is why the Severn barrage has not eventuated and why other schemes of a similar nature, proposed and explained from time to time, are not likely to get beyond the "we'll show you on the blackboard."

The Libyan Desert Scheme.

To go back to the situation abroad, where the problems of distribution are not so acute. There is a suggestion that electricity in bulk may be generated from water power in the Libyan desert! This is rather startling, and sounds rather like a proposal for dredging dry sand from the Atlantic. But the scheme is not by any means of the unrealisable type. The Libyan desert is about 400 ft. below sea-level in parts, and the idea is to cut a canal about 40 miles long to bring water into the desert from the Mediterranean. Alternatively and, I should say, more feasibly, the water would be carried by tunnel and, as far as I can see, the whole thing turns on the question of cost. Of course, there is no idea of creating or attempting to create an inland sea; the water after passing through the turbines would be released into the sandy wastes and could be promptly evaporated, and the estimate is that this evaporation would be so complete and so rapid that water capable of generating 160,000 h.p. could be passed through the power plant.

Piecework.

The piecework question is not likely to cause any real discussion in engineering circles. It has long been known by employers that the great mass of the men in the industry were quite as anxious for its well-being as they themselves. The men also recognised that the employers were far from being what they were represented to be by extremists. The Union, together with those in the iron, steel and shipbuilding trades, has been feeling for some time that payment by results has come to stay, and by a large majority the Amalgamated Engineers' Union has openly admitted the fact and recognised piecework. This should lead to increased production and a big increase of trade in British engineering circles.

BULGARIA'S TRADE IN 1927.

The significant feature of Bulgaria's trade in the past year was the considerable favourable trade balance. The imports amounted to 306,756 tons of the value of 6,133,042 thousand leva, while the exports totalled 466,829 tons of the value of 6,628,195 thousand leva. There was thus a balance of exports over imports of 495 million leva. For the previous year the imports totalled 302,509 tons of the value of 6,628,195 thousand leva, while the figures for the exports were 398,861 tons of the value of 5,617,601 thousand leva, so that there has been a substantial improvement in the country's trade position.

In 1927 there was an expansion in both imports and exports, but this was much more marked in the case of the exports. The sale of tobacco of the best qualities at satisfactory prices was the principal factor in the development of the export trade, which also benefited from the expansion of the trade in barley and maize and certain other commodities. The importance of tobacco to Bulgarian commerce will be realised from the fact that this item was responsible in 1927 for 32 per cent. of the exports The second place is taken by eggs with 13 per cent., then come maize with 8 per cent., barley with 6 per cent., and wheat with 4 per cent. As regards imports the chief trade was done in raw materials for the textile industry and in textiles.

It is not without significance as showing the recovery of Germany since the War that that country occupies the first place in Bulgaria's trade, supplying 21 per cent. of the imports, and taking 23 per cent. of the exports. Chemical products and metals are among the imports from Germany, while Bulgaria exports to Germany, tobacco, eggs, skins, cattle, and cereals. Austria occupies the second place with 8 per cent. of Bulgaria's imports and 16 per cent. of her exports, while Italy is third with 14 per cent. of the imports and 7 per cent. of the exports. As regards trade with Great Britain in 1927, Bulgaria's imports amounted to 11,217 tons of the value of 736,439 thousand leva, while her exports to this country amounted to 9,695 tons of the value of 65,571 thousand leva. Great Britain's position in the list of countries trading with Bulgaria is tenth—a position which obviously might be greatly improved with more enterprise on the part of British traders.

A Bill has been introduced to control the exportation of Cyprus wines to Great Britain, Ireland, and the British Colonies, so as to ensure a quality of wine equal to the standard required for sale and competition in British markets. Under the terms of the Bill, the exportation of wines manufactured in Cyprus to Great Britain, Ireland, and the British Colonies is to be permitted only under licence.

The Roumanian textile industry is developing steadily, both in quantity and quality of its products, and is now able to cover about 40 per cent. of the domestic demand for such articles of major consumption as bleached cloth, print goods, and knitted articles (says an American Consular report). The number of workmen employed in the cotton branch of the industry is approximately 8,000 and in the wool branch about 3,000.

Near East Markets

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date May 20:—

Market April 29 to May 19. Arrivals in Kordofan stations and Tendelti were 1,026 tons as against 1,395 tons for the same period last year, or a decrease of 26.5 per cent. The bulk of the arrivals is coming in at El Obeid and Nahud whilst the stations of Tendelti, Um Ruaba and Rahad, where the areas of gum production are smaller and the tendency of arrivals more quickly shown, are rapidly giving out; 83 tons only or an average of four tons a day came to these latter markets during the above period. The arrivals of inferior Hashab are insignificant, and can be now considered to be at an end. Prices have been firm and without change.

Demand as indicated by April shipments was exceedingly good, 3,133 tons having gone out of the country during that month, or an increase of 40 per cent. over the same month last year. For the period January to April the general increase was 18 per cent., France and Norway and Sweden having doubled their imports, the U.S.A. having imported 1½ times as much, Japan 2½ times as much, the United Kingdom being the one really important market which has imported less, but the difference is only trifling, 184 tons. Demand during May as indicated by our sales although comparatively quiet was better than that for the same month last year.

Reports of rains are coming in from all gum areas, including Kordofan, and the general idea prevailing at present is that there is every indication of early rains which will decrease to some extent the earlier estimates of the crop.

The tendency of the past two years has been for the native to bring in his gum as collected, and it is not believed there is any considerable gum in the hands of the natives. Native and other dealers or local merchants do not appear to have bought largely nor to hold stocks this year. There are naturally some stocks in the hands of exporters but these are by no means excessive and are believed to be largely against forward deliveries.

THE EGYPTIAN SHOE INDUSTRY.

Egyptian shoe production—with the exception of that of one factory having modern machinery, owned by the Government and manufacturing military boots—is the output of small shops turning out hand-made shoes and boots (says an American report). It is estimated that there are approximately 10,000 shoemakers' shops, which produce 2,000,000 pairs of European shoes and about 3,000,000 pairs of native slippers per annum. Thus Egypt, like other Near Eastern countries, has an extensive shoe industry but no real shoe factories.

Owing to the comparatively low duty, the number of shoes imported into Egypt is increasing every year. During 1927, 467,123 pairs of boots and shoes wholly or mainly made of leather, valued at £208,376, and 209,890 pairs of boots and shoes wholly or mainly made of textile materials with leather soles, valued at £42,479, were imported. The United States has gradually disappeared as a supplier of this market, furnishing in 1927 only 748 pairs, valued at £633, as compared with 2,442 pairs, valued at £979 in 1926, and 20,515 pairs, valued at £6,731 in 1921.

Two types of footwear are produced in Egypt—that worn by the European element and wealthy Egyptians and that worn by the natives of the poor classes. The former consists of shoes similar in all respects to those used in Europe and America, while the latter is a loose slipper with a thick leather sole. Large quantities of the European shoes are made to order here. The production of sandals is also considerable. These are worn by the children practically all through the year. Women's shoes are made with a thin sole and the heels are usually of wood. The native slippers are made in various qualities, but generally the cheaper grades of sole and upper leather are employed in their manufacture.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date May 31:—

Currants.—During the early part of the month buyers were still as reluctant as ever to purchase freely; and business transacted, notwithstanding the improvement of the Greek market, can only be described as disappointing to holders, but as time passed an improvement set in albeit slowly, and though prices for the lower qualities were slightly easier, better grades registered a small rise in values and Vostizza appreciated to the extent of 2s. to 3s. from the lowest. This improved feeling became more pronounced as the month advanced, and it closed with a more cheerful tone dominating the position and buyers generally displaying greater interest. The statistical position is strong; stocks in first hands are only about 1,200 tons against 3,000 tons at the same period last year. Quotation:—Provincial 50s., Pyrgos and Amalia 50s. 3d. to 50s. 9d., Patras 51s., Zante 51s. 6d. to 52s. 6d., Gulf 52s. 6d. to 54s., Vostizza 55s. to 58s.

Sultanas, Smyrna.—Holders were beginning to display dissatisfaction at the long period of inactivity, as there appeared no immediate sign of any expansion of business. With Whitsuntide close at hand, endeavours on the part of sellers became very insistent and considerable reductions in price were accepted to make progress. Sales were:—Rain damaged 36s., Ordinary to Fair 40s. to 43s., Medium 45s. to 46s., Good 50s., Fine up to 60s. Greek 51s. to 56s. A few Fine 63s.

Figs.—Bags, Good Average 24s., Genuine 27s. to 29s., Layers 35s., Locoums 40s.

It is announced that, at the request of the Government of Malta, the P. and O. Company have arranged for the direct Bombay mail steamers to call there in future, both outwards and homewards. The call, which commences with the departure from London of the Morea on June 8 and from Marseilles on June 15, will provide a fortnightly direct service to and from Malta. The outward steamers are due to arrive at Malta on Sunday evening, and the homeward steamers on Thursday morning. The first steamer to call at Malta homeward bound will be the Macedonia on June 14.

TRADE OF ZANTE IN 1927.

The British Vice Consul at Zante states that trade was, comparatively speaking, very fair during 1927. The high prices realised by the two principal crops, currants and olives, gave the local and rural population the means of purchasing many commodities required by them, thereby giving trade a greater impetus than in the preceding years. Although the larger part of foreign goods are purchased by the trade at Patras and the Piræus, a slight tendency can be noticed towards a direct import trade, especially with Trieste. Coffee, sugar, rice and similar commodities were mostly imported from Trieste. Great Britain supplied cotton goods and woollens, but the greater part of these textiles came from Italy. Timber, as usual, came mainly from the Adriatic port.

The currant crop was not a heavy one, but was of very good quality, and the perfect weather during the drying season allowed the fruit to be well cared for, and more attention was given to the cleaning process at the merchants' stores. Great Britain and Holland absorbed nearly all the currants exported during the year

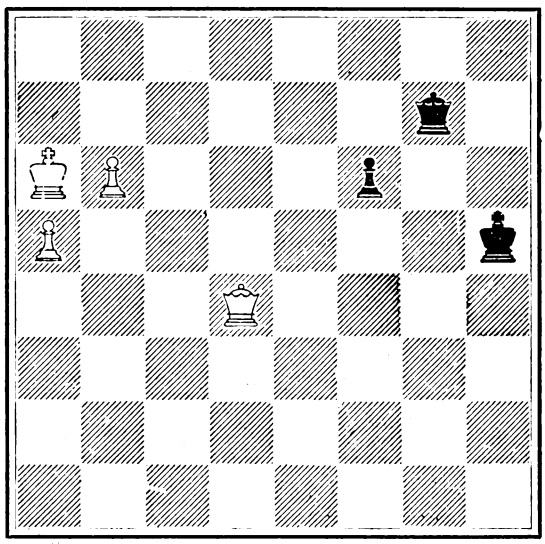
The olive crop was a medium one, and was estimated at about 35,000 barrels of oil; most of which will be utilised in soapmaking. The smaller industries, including soap, tiles and bricks, were very active throughout the year.

During the year 69 vessels with a net tonnage of 75,863 entered and cleared at the port. Of this total, 26 vessels of 42,390 tons were British, 16 of 5,270 tons were Yugoslav, and 14 of 14,212 tons were Dutch.

CHESS.

By "CARO-KANN."

I give this week an ending which occurred in a recent tournament. As the play ran Black lost, for he made a slip and allowed White to check and win the pawn. As the position stands the game can be won, though it is far from easy to find the way.



Black to play and win.

The termination of the Scarborough Chess Congress brings us nearer to the close season, which lasts from the Federation Congress to the beginning of October. The chief tournament at Scarborough provided a most interesting contest, and as most of the competitors will be engaged in the British Championship at Tenby in July, it has undoubtedly stimulated interest in that event.

NEWS FROM ALL SOURCES.

This year's Smyrna Fair will be held early in September.

The directors of the Land Bank of Egypt have declared an interim dividend of 5s. per share, less tax, payable June 15.

The gross production of crude oil of the Phœnix Oil and Transport group of companies for May was 37,808 tons.

Steaua Romana (British), Ltd., are advised that the production of Steaua Romana Company, Bucharest, for May was 51,740 tons.

The launch took place recently at the La Ciotat yard at Marseilles of a 15,000 ton passenger liner built for the Messageries Maritimes Company.

A contract has been given by the Roumanian Railways Administration to Adams and Co., of Manchester, for the supply of cotton wicks.

The Assam Company recommends a final dividend of 10 per cent. plus a bonus of 2½ per cent., or 2s. 6d. per share, less tax, payable July 14.

The Bank of England announce the numbers of 640 Four per Cent. Egyptian Government Irrigation Trust Certificates drawn for redemption on July 1.

The estimates of the areas under sugar beet this year show increases in the case of Yugoslavia with 62,000 hectares and Bulgaria with 18,000, but a decrease in the case of Roumania with 55,700.

The traffic receipts of the Suez Canal from May 26 to June 1 amounted to 4,070,000 francs, as compared with 3,210,000 francs for the corresponding period of last year.

It is reported that the International Danube Commission has concluded a loan for the purpose of works to maintain the navigability of the Danube. The loan will be redeemed out of the proceeds of the toll levied on shipping.

Split occupied the first place among Yugoslavia's ports in 1927, the vessels calling there numbering 7,408 of 2,304,223 net tons: Dubrovnik was second with 3,848 vessels of 1,377,483 net tons; Shibenik was third with 3,628 vessels of 755,036 net tons; while Shushak was fourth with 3,273 vessels of 717,891 net tons.

In 1927 the traffic through the Iron Gate section of the Danube totalled 1,328,248 tons, as against 1,251,135 tons in 1926. As regards countries represented in the shipping, Austria was first with 318,640 tons as against 297,773 tons in 1926, or 24 per cent.; Hungary was second with 210,580 tons as against 165,132 tons, or 15.9 per cent.; Germany was third with 187,157 tons as against 152,625 tons; Roumania was fourth with 180,246 tons as against 171,319 tons; and Yugoslavia was fifth with 162,713 tons as against 288,874 tons.

The profits of the British Assam Tea Company for 1927 were £21,829, against £9,056 for 1926. Including £1,646 brought in and £342 adjustment season 1926, the disposable balance is £20,121. The directors propose transferring to reserve £3,000, to income-tax reserve £500, writing off block account £557, a final dividend of 40 per cent. (making 50 per cent. for the year) on the ordinary shares, carrying forward £1,065. The outturn shows an increase of 33,080 lb. compared with the previous season.

The Balijan Tea Company reports that against an estimate of 680,000 lb. of tea for 1927 the outturn was 585,383 lb., comparing with 626,335 lb. in 1926. The profit was £15,198, against £10,775. Adding additional profit on tea of 1926 crop £891, and deducting allocation to income-tax reserve £1,000, debenture interest £660, trustees' fees £20, expenses *re* debenture issue £278, and interim dividend £2,625, leaves, with £23,285 brought in, £34,791. The directors recommend a final dividend of 15 per cent., less tax, again making 20 per cent., leaving to be carried forward £26,916.

The profit of the Halem Tea Company for 1927 is £24,544, against £14,090. Including £694 brought in and after adjustment and garden managers', etc., commission, the balance for disposal is £22,918. The directors recommend transfer to reserve £2,000 and to income-tax reserve £1,250, final dividend at 15 per cent., making 25 per cent. for the year (against 17½ per cent.), carrying forward £918. The outturn was 1,190,403 lb., an increase of 88,883 lb. compared with previous season. The average price obtained was slightly more than for 1926, and resulted in a profit increase of £9,554.

The traffic in sixty-four Yugoslavian ports in 1927 amounted to 142,005 vessels, the net tonnage being 23,661,344. These figures compare with 139,582 vessels and 20,440,548 net tons for 1926. There was thus in 1927 an increase of 1.7 per cent. in the number of vessels and of 15.8 per cent. in the net tonnage. It is interesting to note that while there was a decrease in the number of vessels calling at Split, Dubrovnik, Shibenik, and Metkovich, there was an increase in the net tonnage for those ports, the reason being that larger vessels are now using those ports. The traffic was mainly under the Yugoslav flag.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 24, state :—

The futures market during the past week has been featureless and fluctuations have been within narrow limits. The week's summary of price movements is as follows :—Sakellaridis : July, 42.39 dollars, 0.29 dollars up ; November, 43.48 dollars, 0.60 dollars up ; January, 43.20 dollars, 0.55 dollars up. Ashmouni : June, 27.92 dollars, 0.22 dollars down ; August, 28.08 dollars, 0.26 dollars down ; October, 28.27 dollars, 0.15 dollars down.

Sakel.—The week has seen a series of very uninteresting markets, and prices show little change from those of last Thursday. No new factors have come into play and local operators have not been doing much.

The demand from abroad has been only moderate, but the local stock is very firmly held and to this may chiefly be attributed the maintenance of prices. Spinners are employing substitute cottons whenever possible, but, for the time being, this is having no influence on the market, it being argued that, even so, the prospective supplies of Sakel next season will not be in excess of requirements. Present supplies of Sakel are lower than at this time last year, and the bullish argument is that, with the growing crop unlikely to produce more than was produced last year, the total supply available for next season will be easily taken into consumption.

The statistical position shows a further improvement on the week, exports being about 110,000 kantars over arrivals. The arrivals during the next few weeks will fall to negligible figures, as very little cotton remains up-country.

At the third May tender 15,250 kantars dockets were issued, making a total for the month of 30,750 kantars.

The market looks rather tired, but we do not think that any important decline in prices will be seen in the immediate future ; the spot market is very firm and, with no large speculative bull positions open, we do not see where any selling serious enough to depress prices can come from.

Uppers.—This market has been very quiet during the past seven days and prices are practically unchanged.

The demand from spinners this week has been only fair, with the bulk of such business as has been concluded coming from Lancashire ; the Continent has bought but sparingly, whilst America is altogether out of the market.

The week's receipts amount to 21,066 kantars, against exports 130,391 kantars ; the stock in Alexandria stands at 2,576,778 kantars.

The official figures of arrivals and exports for the period September 1, 1927, to May 16, 1928, are as follows :—Arrivals : Sakellaridis, 2,398,044 kantars ; Ashmouni and Zagora, 2,926,342 kantars ; Pilion, 270,779 kantars ; Various, 217,610 kantars ; Scarto, 130,334 kantars ; total, 5,943,109 kantars. Exports : Sakel, 2,191,339 kantars ; Ashmouni, 2,423,472 kantars ; Pilion, 241,704 kantars ; Various, 181,425 kantars ; total, 5,037,940 kantars.

Spot : There is no change to report in the general situation. Total sales amount to about 10,800 bales, of which we estimate 5,300 bales Sakellaridis, 5,100 bales Ashmouni and Zagora, 300 bales Pilion, and 100 bales other varieties.

Sakellaridis : There has been a distinct diminution in the demand for this variety ; this is especially noticeable in the medium grades which have been so much sought after for the past few weeks. All grades have been dealt in and spot differences are slightly easier all round, but it is still extremely difficult to find cotton suitable for export.

Ashmouni and Zagora : There has been a fair demand for all grades in these varieties but more especially for the medium grades. Spot differences remain unchanged.

Pilion : There is still a good market for this variety, which grows daily scarcer.

Other Varieties : Very little business has been done. The spot differences for White cotton have eased somewhat owing to the lack of demand.

Crop, 1928 : There is nothing fresh to report this week. Temperature has been very favourable. The plants are growing normally and there is now very little delay to be noticed anywhere. Leaf worm has been reported in isolated cases, but the recent warm weather has done much to keep this pest down. Water is everywhere sufficient and complaints are no longer heard. The Sudan gauges continue to maintain their good showing and the water in the Assouan Reservoir is being freely used. On the 21st inst. the river gauges marked :—Malakal, 10.62 metres, against 9.93 metres last year ; Roseires, 13.19 metres, against 10.92 ; Wadi Halfa, 1.11 metres, against 1.00. On the same date the discharge from the Assouan Reservoir was 1,019 cubic metres per second, against 868 cubic metres last year and 858 cubic metres in 1926, and the level of the Reservoir 106.40 metres, against 110.41 metres last year and 110.21 metres in 1926.

A recent Circular extends the provision of the Roumanian Customs Tariff, under which jute sacks imported by the Agricultural Syndicates Union and by the Head Office of Peasant Co-operatives may be imported at one-tenth of the normal tariff rate, subject to the authorisation of the Finance Ministry, to jute sacks imported by merchant firms who were registered by January 1, 1928. The reduced duty will be accorded on the intervention of the respective Chambers of Commerce, on the basis of a certificate from the Union of Agricultural Syndicates.

The Anglo-Persian Provident Fund Trust, Ltd., has been registered as a private company, with a nominal capital of £100 in £1 shares. The objects are to act as trustees, attorneys, agents, nominees, executors or administrators, to establish funds, make reserves, maintain or contribute to provident or benefit schemes, to subscribe towards insurance, etc. The directors shall be appointed and removed from time to time by the Anglo-Persian Oil Company, Ltd. One-third of the directors shall be called " staff " directors, and shall be selected from persons who are both members of the Anglo-Persian Oil Company, Ltd., Provident and Pension and Insurance Fund, and also officials of the Anglo-Persian Oil Company, Ltd., or of one of its allied, associated, or subsidiary companies.

COMPANY NOTES AND REPORTS.

ASSAM OIL.

The report of the Assam Oil Company to December 31 last states that all fields expenditure has been charged direct to revenue and the loss for the year, after charging income-tax, directors' fees, and interest on loans and writing off £46,000 for depreciation, amounts to £129,226, to which has to be added the debit balance brought forward from 1926 of £53,723, making the loss to be carried forward £182,949. The production from the Digboi field was again in excess of the refining capacity, and all available crude oil tankage was filled. During the latter half of the year, drilling, etc., activities were intensified in preparation for the increased crude requirements of the enlarged refinery. Drilling operations at three outside areas failed to reveal production in commercial quantities. Tests on two of these areas have been abandoned and work at the third has been suspended. Products went steadily into consumption, but, while the quantities sold were materially in excess of those for the previous year, the revenue showed practically no expansion owing to further reductions in the values of petrol and wax and to the disastrous break in kerosene selling rates during the last quarter of the year caused by the dispute in the Indian market between the Standard Oil Company of New York and the Royal Dutch Shell Group over the former's marketing of Soviet kerosene there. While this condition continues it is impossible even to hazard any estimate of results of trading for the current year. The very existence of the smaller indigenous producers such as this company is seriously menaced, and representations on the subject have been made by the local producing industry to the Government of India, on whose instructions the Tariff Board is now considering the whole position.

NEW COMPANY.

STANDARD CARPET FOREIGN (1928).

Standard Carpet Foreign (1928) has been registered as a public company, with a nominal capital of £40,000, in £1 shares, to acquire the businesses carried on by the Standard Carpet Company (Foreign), Ltd., and by A. Dedeyan, and to carry on the business of manufacturers, merchants and factors of carpets, rugs, mats and fabrics, etc. The directors are: A. Van Peteghem, des Etablissements D'hainant de Lille, 66, Rue Colbert, Lille; Armand Dedeyan, 8, Rue St. Georges, Paris, carpet merchant; G. K. Gregoriades, 49, Rue Le Petelier, Paris, carpet manufacturer; J. Hill, Director of Broad Street Investments; D. N. Copsidas, director of Standard Carpet Company (1928). The registered office is at 31-2, King Street, E.C.2.

Coupons due June 1 on the Kingdom of Bulgaria Four-and-a-Half per Cent. Loan of 1909 may now be presented to Messrs. J. Henry Schroder and Co., 145, Leadenhall Street, E.C.3.

The tonnage of vessels entered into British India and cleared outwards with cargoes from and to foreign countries and British Possessions during March amounted respectively to 657,000 and 784,000, as against 696,000 and 677,000 in February and 682,000 and 790,000 in March, 1927. During the year ending March, 1928, the tonnage of vessels entered and cleared with cargoes amounted respectively to 7,650,000 and 7,825,000, as compared with 6,982,000 and 7,890,000 in the preceding year.

Notes of the Week.

Roumania and the Optants.

The seemingly interminable question of the Optants—the Hungarian landlords of Transylvania who have opted for Hungarian nationality and claim compensation for the properties left behind which have been expropriated under the Roumanian Agrarian Law—occupied once again the attention of the Council of the League of Nations in its fiftieth session last week. Again the two parties had to report that no settlement had been reached and that no progress towards one had been made. Again the Council could not bring itself to adopt any more practical course than to urge Roumania and Hungary to arrive at a settlement between themselves. The Hungarian representative appealed to the Council to appoint, under the terms of the Treaty of Trianon, a judge to the Mixed Arbitral Tribunal in the place of the one withdrawn by Roumania; but this course the Council has consistently refused to adopt. M. Titulescu, the Roumanian delegate, then made a fresh proposal to Hungary. He suggested that Sir Austen Chamberlain, as the Council's *rapporteur* in this matter, should, with the help of two others of his own choice, examine the question afresh and decide whether any additional compensation was due to the Hungarian Optants; and that, if he decided to that effect, that the Hungarian Government should pay the money involved, deducting the amount from the Reparations due from Hungary to Roumania. As the proposal that any additional compensation due to the Optants should come out of the Reparations money has been made before and rejected by Hungary, for one reason amongst others that compensation would entail immediate payments whereas Reparations are met by instalments spread over a long period, with the first payment deferred for a number of years, it is unlikely that this fresh suggestion will meet with Hungarian acceptance. Sir Austen Chamberlain, however, allowed it to be inferred that he was still optimistic in regard to a settlement by agreement, and it is possible that the Roumanian admission that additional compensation for the Optants may be due marks some advance in the protracted dispute.

The Machine Gun Incident.

Another matter brought before the Council at Geneva last week dealt with the discovery on January 1 of the smuggling of machine-gun parts into Hungary. A committee had been appointed by the Council to investigate the affair. Its report, when submitted on June 7, gave rise to considerable dissatisfaction among the members, in particular to the representatives of France and of the Little Entente. As the Committee had been appointed on March 7 and had sent technical experts to the scene of the incident with a view to instituting a thorough investigation, its failure to reach convincing conclusions would not seem to reflect much credit on its personnel. The Council disposes of more effective machinery for dealing with matters concerned with the limitation of armaments, and an effort may be made to bring this into use before the last is heard of the subject. The effect of the Committee's findings was held to minimize Hungary's shortcomings, but it is clear that insistence upon her offence could have been stressed only at the cost of emphasizing the major responsibility of Italy in allowing the machine-guns to be supplied by Italians and consigned over Italian railways to Hungary. The Council contented itself with a resolution placing the blame on Hungary, who was held to have neglected her obligations under the Treaty of Trianon.

Possibilities in Turkey.

On second thoughts the Turkish Government has decided that any further attempt at shuffling in connexion with the settlement of Turkey's indebtedness would not be expedient. Three weeks ago, after agreeing to fresh terms of settlement with the foreign Bondholders, the Turkish Government declared that owing to the closure of the session of the Grand National Assembly the agreement could not be ratified until the end of the year, and consequently the first payment would not be made until next June. The inevitable protests against this course of action have not been without their effect on Angora, and it is now announced that the agreement with the Bond-

Digitized by Google

holders will be signed this week, will be ratified before December 1, and that payment of the first coupon will be made before the end of the year, and of the second coupon on May 25, 1929. This change of front follows the conclusion of the Turco-Italian Treaty, and we should like to think that Turkey's tentative admission on terms of equality into the friendship of the West is to mark a final break with those exasperating characteristics which have hitherto had the effect of keeping her outside the pale of European civilisation. If Turkey's rulers will grasp once and for all the fact that reciprocity and fair dealing form the essential basis of normal intercourse between civilised nations, they will not have to complain of any lack of sympathy with the Republic. Mustapha Kemal Pasha has again left Angora to enjoy the creature comforts of life on the shores of the Bosphorus. At the same time one of his close associates is touring in Europe, and from Berlin is telling his countrymen through the Turkish Press that, if Turkey is to take her proper place among the nations, she must seek help for her economic development by means of foreign experts. It is advice that has often been urged upon the Turks from friendly quarters outside the country, but owing to the false pride of their rulers the system has not been adopted in respect of any comprehensive scheme of reconstruction.

The Constitution of Syria.

Last week we commented upon the fact that, although the elections in Syria were completed some time ago, no Assembly had been convoked to frame a Constitution for the country. Curiously enough, it is now announced that the High Commissioner decided to assemble the delegates last Saturday, June 9. This will be the most notable "popular" assembly since 1920, when the Constitutent Assembly proclaimed the Amir Faisal to be King of Syria. At the moment of writing there is little indication whether the Assembly will favour a monarchical or a republican form of government for Syria. Without doubt there is a large proportion of the people in Syria, as there is in every Oriental country, which would prefer a monarchy to a republic; the impersonal head, the figure-head is not a popular conception in the East. But in Syria there are, of course, many Syrians who are, so to speak, "Gallicised," and who may, therefore, favour a republican scheme, which the Mandatory Power itself is said in some quarters to favour. But the essential thing is by whatever means—and the form of government is not the capital factor in this— to hammer the various States of Syria into a unity. Without this end steadfastly in view, neither a monarchy nor a republic will much avail the land of Syria.

The Palestine Survey Commission.

The Palestine Survey Commission, which met for the first time under the presidency of Sir Alfred Mond on June 9, is about to perform a work of immense consequence to the whole future of the Jewish movement in Palestine. The reports which this non-partisan Commission are now considering have been drawn up by experts, and their collation should produce as exhaustive an investigation and as complete a decision on the potentialities of the "Jewish National Home" as it is now possible to make. The Zionist movement itself has at the moment some cause for anxiety, largely owing to the campaign launched recently in America against the supporters of Dr. Weizmann. That the President of the Zionist Organisation will weather this particular storm within the Zionist camp as he has in the past weathered other storms is, however, scarcely to be doubted. Nor is there any reason to think that the final recommendations of this Survey Commission, which are expected to be published so that a great Jewish Conference in America may act upon them in the autumn, will be other than encouraging. The Chairman of the Commission has views upon the future of Palestine, upon the future of the whole Middle East, indeed, which cannot be squared with any despondent spirit among those who have put their shoulder to the Zionist wheel in Palestine.

M. Venizelos.

In a letter published on another page a correspondent takes exception to certain references to M. Venizelos that appeared in a previous issue. No one who has met M. Venizelos will hesitate to admit the charm of his personality or the forcefulness of his eloquence. He has rendered signal service to Greece, but it is probable that when the mists of hero-worship and of personal hostility have cleared away the verdict of history will have to divide his career into two sharply contrasted periods. His services to Crete and those that he rendered to Greece between 1910 and 1914 are above challenge. "The chaos Greece has been in since"—to which our correspondent refers—is only another way of characterising the tedious process of liquidating the effects of the Venizelos-Constantine quarrel and of the Asia Minor venture, for which M. Venizelos, who forced his views on the Allies without reference to Greek military opinion, or even to the dictates of geography and common sense, must be held responsible. By committing Greece to the Asia Minor adventure, by subordinating, as he did through prolonged absence abroad during the critical period after the War, the domestic needs of Greece to the glamour of his own international reputation, by his ignorance of Greek feeling which prevented him from foreseeing the verdict of the 1920 elections, and by his words and actions during the last few weeks, M. Venizelos has shown that there is an unbridgeable gulf between him and the vast majority of the Greek people. Recent events are far from endorsing the view that M. Venizelos's return and acceptance of leadership constituted "the only salvation of the country." There is some reason to suppose that, if he had returned to trouble Greek political waters before the conclusion of the loan, this financial assistance might not have been forthcoming for Greece. His presence in the country is viewed with no favour by Italy or by Turkey, or even by still greater Powers; moreover, it has split afresh his own Liberal Party. Those who can view Greek affairs freed from all partisanship have to accept with profound regret the terrible rift in the nation associated with M. Venizelos's name, and they know that it is idle to ignore it, even when M. Zaimis has thrown a patchwork quilt over it. They believe that time alone can bridge this rift, and that in returning to political life M. Venizelos has retarded the process by which Greece must reach her goal of unity before she can hope to do herself full justice.

THURSDAY, JUNE 14, 1928.

ITALY AND THE NEAR EAST.

Signor Mussolini in a pacific rôle is a far more popular figure in Europe than when he is rattling the sabre. His speech to the Italian Senate last week was so far an improvement on the tenour of previous reviews of foreign affairs that the changed note has evoked a wide and spontaneous welcome. Here we are less concerned with his remarks on European problems in general than with those on Italy's relations with her Balkan neighbours. In view of the circumstances of the speech which followed hard on the outbreak of anti-Italian demonstrations in Yugoslavia it was hardly to be expected that Signor Mussolini's remarks would be altogether to the liking of the Yugoslav people; but the fact that, while avoiding anything in the nature of a threat, they included a complimentary reference to the Yugoslav Foreign Minister, coupled with the announcement that the recent incident could now be regarded as closed, will be held to confirm the growing optimism in regard to the possibility of an improvement in Italo-Yugoslav relations. It is true that Signor Mussolini approached his subject solely from the Italian side and made no attempt to allow for a Yugoslav point of view. The Treaty of 1924 was declared to be a proof of the pacific policy which Italy had followed loyally; the Nettuno Conventions were intended to systematise the relations between the two countries to their mutual satisfaction, and, although Italy had no desire to interfere in Yugoslavia's intricate parliamentary vicissitudes, she could not subordinate her foreign policy to such vicissitudes by waiting indefinitely for the ratification of the Conventions. The Treaty of 1924 had failed to create a true spirit of friendship, and Signor Mussolini proceeded to denounce the atmosphere of ignorance of the true Italy which, combined with self-intoxication and megalomania, was responsible for the recent outbursts in various Yugoslav towns. Finally, he urged Yugoslavia to realise the true facts, and to believe that Italy did not hate her and did not try to interfere with her pacific advancement, and he bade her to remember that Fascist Italy was a nation whose friendship was worth cultivating.

Whether in regard to Italo-Yugoslav relations the Yugoslavs can be expected to accept unreservedly the Italian interpretation of the "truth" would seem to have been a point that Signor Mussolini did not stop to consider. It would have been fairer to have inserted in this context a reference to Italian relations with Albania, above all to the manner of the conclusion and publication of the first Treaty of Tirana, in view of the fact that the whole essence of the Rome Treaty was to provide for cordial co-operation between the two countries in international affairs affecting both of them. It is true that Yugoslavia had at the time of the Treaty of Tirana failed to ratify the Nettuno Conventions, and Italy for this reason may have considered herself absolved from studying Yugoslav feelings. Even so, the sinning is not all on one side, and Signor Mussolini's strictures did not represent the whole truth as it appears to the outside observer, still less to the Yugoslavs. Almost while the Italian Prime Minister was speaking in Rome the head of the committee representing the Albanian refugees scattered in various European countries was submitting to the Secretary-General of the League of Nations an appeal imploring the protection of this body against the present "tyrannical régime exercised in Albania, at the instigation of and with the assistance of Italy." The appeal, no doubt, contains many exaggerations, but it serves as a reminder that there are two sides to the Albanian question. Much may be said for the contention that Albania, as she was left by the Great Powers who called the new State into existence, could not stand alone; that she was practically forced to chose between Italy and Yugoslavia; and that it was as much Yugoslavia's fault as it may yet prove to be Albania's undoing, that she chose Italy. The future of the country, and, indeed, of Italo-Yugoslav relations, depends largely on Italy's handling of the peculiar position that she has gained in Albania. Signor Mussolini will have to show a greater breadth of vision and a wider tolerance than he displayed even in his recent speech to the Italian Senate, if in his handling of the Albanian question he is to retain Albanian confidence and win the good will of Yugoslavia. There can be little effective improvement in the relations between Italy and Yugoslavia so long as the head of the former merely discharges counsels of perfection at the latter, without taking practical steps to bring the policies of the two countries in regard to Albania into harmony. Both States protest their good intentions; now, therefore, that Italy, partly through the mistakes of Yugoslav policy, has established herself in a firm position in Albania, she has only to convince her neighbour of her intention to "play the game" to allay the soreness that the Yugoslavs not unnaturally feel. The best way to do this is by establishing diplomatic relations on a friendly basis, and not, as the Italian Government did for many months, by rendering the existence of the Yugoslav representative in Rome almost intolerable by studied neglect and discourtesy.

The nearest approach to a bombshell, for which in previous utterances Signor Mussolini has shown a predilection, that he introduced into his speech to the Senate was a reference to the peace treaties. In regard to these he expressed his conviction that they were not necssarily inviolable nor immutable. On the contrary, he is reported to have said that he thought that there were various clauses in the peace treaties which could be discussed, revised and improved with the object of prolonging the duration of the treaties themselves and at the same time ensuring a longer period of peace. This is a commonsense point of view that will be endorsed in many quarters; but it needs to be linked with the stipulation that the changes must be the outcome of friendly agreement and ought not to be contemplated for a moment as concessions to be wrung by force. Hungary, it is to be feared, has altogether lost sight of this essential provision in the short-sighted ecstasy that a misguided Press campaign on her behalf has evoked among her people. At the present moment and for some time to come friendly agreement is out of the question. The most practical course to pursue, therefore, is to cultivate wholeheartedly the friendly relations that will be required as an antecedent to revision. Unfortunately, neither from Italy nor from her enthusiastic supporters in the Press has Hungary received the least encouragement to embark on and persevere in the one line of policy that promises success. Signor Mussolini's remarks will revive in the countries of the Little Entente the bogy of Magyar irredentism which had been stirred again into passing animation by certain Press organs, but was subsiding as the falseness of the hopes raised in Hungary was coming to be appreciated.

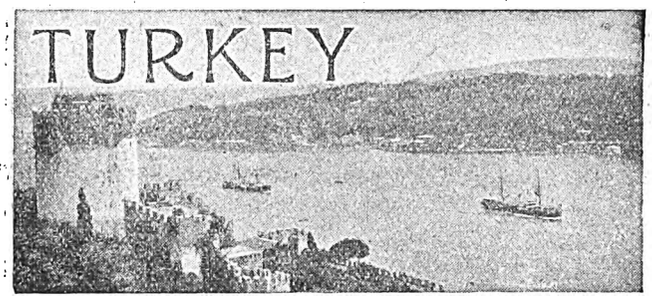
The Near and Middle East*

From Our Own Correspondents.



Constantinople, June 6.

Russian Squadron at Constantinople.

After spending about a week on the shores of the Bosphorus and visiting the sights of the city, the King and Queen of Afghanistan left at the end of last week for Persia and Kabul *via* Batum and Enzeli. They were escorted across the Black Sea by a small Russian squadron which had arrived from Sebastopol and lay for some days prior to the Sovereigns' departure at anchor off Dolma-Baghtche Palace, where the Royal couple were housed.

The presence in Turkish waters of these Russian units, consisting of a cruiser and two destroyers under the command of Admiral Orloff, was made the occasion for the display of much fraternisation in the streets of Pera betwen Turkish and Russian sailors, who were to be seen in all the main thoroughfares promenading in small parties linked arm in arm or with hands interlocked in the usual Turkish fashion. It was very obvious to the passer-by that, whatever the linguistic attainments of the officers, the lower-deck hands, at all events, were restricted to communicating with each other by signs, nods, smiles or grimaces as the occasion demanded. The Russian Admiral had time enough to pay a flying visit to Angora, where he was received in audience by the Ghazi.

It is interesting to know that, in order to maintain their own peculiar system of government afloat, the Soviet authorities have found it expedient to resort to the creation of a novel substantive naval rank, which almost certainly exists in no other navy in the world. The particular executive officer is known as the "Commissar," and he is assisted in his duties by a small council of lower-deck ratings, the number of his committee-men varying in proportion to the numerical strength of the ship's company. The "Commissar" and his assistants, it is stated, act as a buffer between upper and lower deck in all matters affecting discipline and punishment. All orders and decisions of the Commanding Officer must first be passed by the "Commissar" and his Council before they can receive execution. How all this works out in practice on board a sea-going ship, Heaven and the Commissars alone know, but there is little doubt that the libretto of "H.M.S. Pinafore" might have been cast on very different lines had W. S. Gilbert been able to foresee what the third decade of the twentieth century would one day bring forth in the matter of innovations in the Muscovite counterpart of our own "King's Regulations and Admiralty Instructions."

The Ghazi's Holiday on the Bosphorus.

Hardly have the echoes of gun-fire and syren-hooting to speed the parting Afghan guests ceased to reverberate up and down the Bosphorus, when the saluting batteries and ships' syrens have once more come into play to welcome to this ancient city the President of the Turkish Republic, who arrived from Angora yesterday evening, in order to spend three months at the seaside away from the cares of State and the heat and dust of Angora.

Constantinople is at the moment bedecked with a bountiful display of bunting, in which the conventional white crescent with star on a red field naturally predominates. Numerous triumphal arches adorned with rugs, flags, and evergreens have suddenly sprung up on several of the main arteries on both sides of the Golden Horn and over the Galata Bridge. All the main public edifices, Government offices, banks, many private dwellings, and some of the mosques are outlined at nightfall by innumerable electric bulbs.

The Turkish Pacts of Amity.

With the recent signature in Rome of the Turco-Italian Pact of Amity and Arbitration and the progress, even if slow and somewhat laborious, of the Greco-Turkish negotiations in respect of a projected Agreement between these two countries, there would appear to be good reasons for hoping that a distinct clearing of the political atmosphere in the Levant may eventually, with luck, lead to a period of peace and prosperity in these oft-troubled and sometimes potentially dangerous regions.

The recurrence in the Greek Capital, at this juncture, of one of those minor periodical convulsions which have now come to be looked upon as symptomatic of the very essence of Greek domestic politics, will no doubt tend, momentarily, to place the negotiations with Turkey in the background. The chief stumbling-block to a rapid "entente" between the two countries would, however, appear to have arisen over the inherent difficulties, long-standing although not insuperable, of bringing the labours of the Commission for the Exchange of Populations and the apportionment of indemnities to Greek and Turkish nationals affected by the Exchange to a definite conclusion.

The signature of the Turco-Afghan Pact has undoubtedly been a feather in the cap of Dr. Tewfik Rushdi Bey, the young Turkish Minister for Foreign Affairs. It is confidently hoped in Turkish official circles that this diplomatic instrument, coupled with King Amanullah's good offices while a guest at Teheran of the Shah and his Government, may lead to the eventual clearing up of the difficulties which have subsisted for some months past

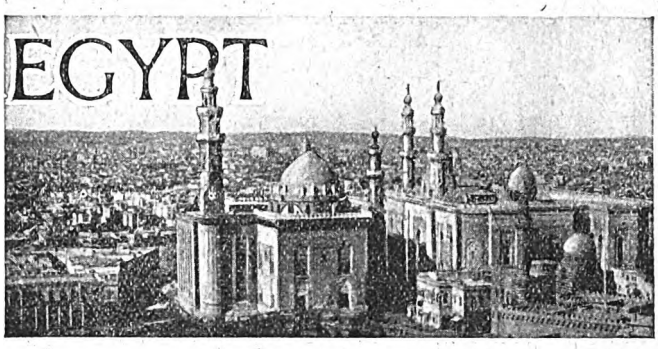
between Angora and Teheran over that perennial source of misunderstanding and disagreement between Turkey and Persia, the border-line which separates the two countries in the region of Sujboulak.

The successful and effective administration of the somewhat turbulent elements which inhabit those distant regions—for the most parts nomad Kurds, who are no great respecters of political border-lines when they are in search of fresh pastures for their flocks—must be a difficult matter for the two neighbouring Governments at the best of times. How difficult the negotiations to accommodate each other by some kind of working agreement have actually been in this matter may be inferred from the presence in Angora for the past five months or so of Firoughi Khan, Persian Minister of War, and the constant journeyings between Teheran and Angora of successive Persian diplomatic couriers.

Garden-party at the British Embassy.

On June 4 Sir George and Lady Clerk held a garden-party at the British Embassy in honour of the King's birthday, which was attended by members of the Diplomatic Corps, the Governor of Constantinople, the senior Turkish naval, military, and political officers and by many members of the British colony. The stately lawns, brilliant flowerbeds and shady trees of the extensive Embassy gardens served as an admirable background for the interplay and flash of colours produced by the ladies' spring gowns, the uniforms of the Turkish naval and military officers, British and foreign Attachés, and by the brilliant scarlet garb of the Embassy "cavasses." The Turkish Marine band, which it has become a tradition for the Turkish Admiralty to place at the disposal of the Ambassador on these occasions, gave a good selection of music, including "A Life on the Ocean Wave," "Annie Laurie," and other popular airs, and the party came to an end with the playing of the Turkish and British National Anthems.



Cairo, June 2.

Holidays.

Whitsuntide and the Muslim feast of Qurban Bairam have followed one another this year so closely that there has for all practical purposes been a cessation of work for over a week. All Government offices have been closed since Tuesday, and Parliament will not sit until next Monday. There is, therefore, very little activity to report in the political sphere. It is somewhat unfortunate that Parliament should have had to shut down its labours for a week, for the Chamber is still in the middle of the Budget debate, and precious time is being lost by this suspension of labour. It is true that so far the debate is well in advance of last year's, but unless the Chamber takes it into its head to devote more than three sittings, each of three hours' duration, per week to the business, it is difficult to see how the Budget can be finished by both Houses before the beginning of July. This will mean that Parliament will have taken over two months to deal with this subject. The reason for the prolonged handling of what is Parliament's most important task is due partly to the short time devoted to it every week, but mainly to the fact that in spite of an exhaustive report by the Parliamentary Finance Committees the Chamber still insists

on itself dealing with and discussing many of the minor details which should be left entirely to the committees, and should only be taken by the Chamber in so far as those committees' reports refer to them.

The Justice Committee has lost no time in reporting on the proposal to amend the internal regulations of the Chamber, which recently produced such a disgraceful scene in the House, and considerable curiosity is felt whether the Government will proceed with this measure this session. Last week I pointed out that the Nationalists intended to resist this measure to the utmost, and there are now distinct signs that the Liberals will join them in their opposition to it. There are, therefore, likely to be lively scenes if the Government persist in their intention of proceeding this session with this measure.

Pensions.

The note on the Budget for the new financal year presented by the Government Finance Committee mentions that a revision of the pension law is being undertaken with a view to endeavouring so to improve the conditions that it will make it possible for certain officials to retire before the present limit without financial loss, and thus facilitate either promotions from below or the suppression of some of the more costly posts. The news that a revision of the pension law is being undertaken is welcome, for in some respects it is very unfair to the officials. The pension due to widows and orphans may be considered as an example. If the widow is left without any children she receives one third of the pension or indemnity which her husband was drawing, or would have drawn if he had been on pension, at the time of his death. If she is left with boys over 18 or married daughters she receives the same pension or indemnity. But if the official dies leaving a boy under eighteen or unmarried girls, the widow receives only one quarter and another quarter is divided amongst the children. The day the boy reaches the age of eighteen or the girl marries, their share is cancelled, and the widow is left with her quarter pension. In other words, the widow who has no children or has children out in the world or earning a living is considered to be more in need of assistance from the Government than the widow who finds that the day after her husband has died her boy has reached eighteen, or whose daughter marries within, say, a year of her husband's death. The differential treatment is so patently unjust that those entrusted with the revision of the pension law cannot fail to be struck by it, and they will, it is to be hoped, readjust the situation so that no matter what happens the widow can get at least one third of her husband's pension.

Legal Reforms.

The legal authorities are at the present moment studying a proposal for the creation of a Cassation Court for the Native Tribunals. This new Court will not be a Court of Supreme Appeal as we know it, but will be very similar to the Courts of Cassation in France and Belgium. It will deal with points of law or procedure, and its function will be rather to try legal decisions than persons. Moreover, its verdict will not be executory, but where it differs from the decision of the lower Court it will quash the judgment and hand down the case again for retrial.

While the institution of such a Court is no doubt necessary, it seems a pity that the procedure which it is proposed to adopt will add to the already great legal delays which exist. It is indeed difficult to understand why, if the Court of Cassation decides that on a point of law or procedure, the decision of the lower Court is wrong, it cannot itself deliver judgment in the required sense, leaving to the lower Court the question of the assessment of damages or the infliction of penalty where either of these is involved. The project provides also for the creation of a special Bar which alone will be able to plead before the new jurisdiction.

Belgrade, June 7.

The Anti-Italian Demonstrations.

Dr. Marinkovitch's bold stroke in trying to secure ratification of the Nettuno Conventions, in order to make possible the renewal of the Pact of Friendship with Italy and, by proving to the world that Yugoslavia really desired peace and good relations with her neighbours, to facilitate negotiations at present still proceeding for a Yugoslav loan in London, led to most unforeseen results. Owing to the grossly inaccurate and highly exaggerated reports which appeared in a certain section of the foreign Press it is necessary briefly to recount exactly what happened.

Just at the moment when Italians might have been expected to show friendliness towards Yugoslavia a group of Fascists landed in Zara and demonstrated against Yugoslavia. This tends to give some colour to the belief expressed in certain diplomatic circles in Belgrade that Italy is so bitterly opposed to the granting of a large loan to Yugoslavia that she is prepared to sacrifice even the Nettuno Conventions to prevent it. Sensational and perhaps exaggerated reports of these anti-Yugoslav demonstrations reached Yugoslavia and led to violent counter-demonstrations on Dalmatian coastal towns. The police and miiltary had to be called in to protect the Italian Consulates in Split and Dubrovnik (Ragusa) and some damage, not very extensive, was done to Italian shops and other property. Meetings of protest were held in Zagreb, Liubliana, Skoplye and Belgrade. But strict orders were given to the police to prevent any anti-Italian demonstrations and they carried out their instructions to the letter, ruthlessly breaking up what would otherwise probably have been quite peaceful meetings, arresting the organisers and dispersing the crowds with fixed bayonets

and drawn sabres. Anyone who knows the Central European student will realise that this was the best way to fan his enthusiasm for such demonstrations.

A protest meeting held on the steps of the Students' Hostel recently presented by King Alexander to Belgrade University was broken up by mounted police, who charged with drawn sabres, wounding over thirty of the unarmed youths standing massed in the narrow entrance. The students retaliated by throwing furniture from the upper windows and the police replied with volleys of stones which broke many of the windows. The next night shouts of "Down with Mussolini," "Down with Fascism," were heard on the Korzo, the main street of Belgrade where the young people walk up and down in the evening to meet their friends and show their new clothes. Immediately police with fixed bayonets poured from every gateway and courtyard and arrested the offenders. The crowd fled in panic. Two youths were wounded and carried away in the municipal ambulance. A group of students took refuge among the tables of the Ruski Tzar café and again shouts of "Down with Fascism," "Long live the King were heard. The police entered the café, guests and demonstrators rushed panic stricken to and fro, a young boy was knocked down and lay as still as death, a young girl fainted. A student shouted: "We will not be killed like rats in a cage," and seizing a chair began to defend himself. Barricades of tables and chairs were soon raised across the entrance to Obilitchev Venatz which flanks the café and two attacks by mounted police were driven off with great valour by students wielding chairs and sticks, singing national songs and shouting "Long live the King." In the forefront of the battle was a tall, slim, Dalmatian girl who incited her comrades to greater effort, while she laid about her vigorously with a chair back.

Police officers made several attempts to persuade the students to leave their "fortress," but in fear and anger they refused. The surrounding streets were rapidly cleared, and the Ruski Tzar was isolated. Had the police surrounded it and waited, the public accidentally shut in with the demonstrators would have come out one or two at a time and the students would either have surrendered *en masse* or dispersed gradually. But orders were given that they must clear up the place at once. Heavy lorries broke down the frail barricades and the police who had several casualties in the fight and were in angry mood, charged into the café packed full of students and public. Many casualties occurred, fifty or sixty people being wounded, but the most seriously injured were all onlookers who had taken no part in the demonstration. But the reports which appeared in certain English papers were grossly inaccurate and by midnight the whole town was quiet, the wounded had been taken to hospital and some seventy prisoners had been taken to gaol.

The next day in the Skupshtina the Opposition began a policy of violent obstruction, stating that they would not allow Parliament to work until an inquiry had been instituted into Wednesday's events and the people responsible for the shedding of blood punished. They banged the lids of their desks, shouted "Down with the murderers," "Criminals," "Traitors," and made so much noise that no speakers could be heard and finally the Government was forced to adjourn the House until after the Whitsuntide holiday, which began on the 3rd inst. The Opposition adopted the same tactics in the Finance Committee too. To make the position of the Government worse, the Italians sent a strongly worded Note demanding not only the punishment of the offenders and reparation of damage done to Italian subjects in Dalmatia, but also the punishment of local authorities who failed to prevent disturbances.

Fortunately Dr. Marinkovitch kept his head and replied in a friendly manner, regretting the incidents which followed the publication of sensational reports of the anti-Yugoslav demonstrations in Zara and promising to make full amends. It is widely believed that the Government will use its huge automatic majority to secure the ratification of the Nettuno Conventions, for what such formal ratification against the will of the people is worth, and that relations with Italy will not suffer greatly as a result of the events of the past few days. It is feared, however, that the flotation of the Yugoslav loan in London will have to be postponed until the autumn.

Reasoned opposition to the Nettuno Conventions is general in all parts of Yugoslavia. It is generally admitted that the Conventions greatly favour Italy, and it is claimed that they will ruin the Yugoslav fisheries in the Adriatic, give the exploitation of the great waterfalls of Dalmatia (Krk and others) completely into Italian hands, favour the development of Fiume at the expense of the Yugoslav ports and in general open the doors for Italian penetration of Dalmatia and the whole of western Yugoslavia. But the Government believes that these sacrifices are worth while, if they assure the establishment of friendly relations with Italy and, as a result, the conclusion of loans abroad necessary for the economic development of this country. On the other hand it is pointed out that Italy has never ratified the Nettuno Conventions nor even the Belgrade Conventions concluded in 1924, a year earlier, and already ratified by Yugoslavia. Further, there is no guarantee that, even if the Conventions are ratified, Italy will cease her policy of "colonising" Albania, encircling Yugoslavia with enemies, and attempting to dominate the Balkans economically and politically.

The Egyptian Post Office, according to *The Times*, is planning yet another special stamp issue in connexion with the centenary of the School of Medicine at Cairo and the Medical Congress that is to meet in Cairo next December. The subjects of the designs of the three commemorative stamps are to be a portrait of Mehmet Ali (founder of the medical schools in Egypt), the effigy of Amenhotep (the earliest recorded patron of doctors), and a view of the hospital at Kasr el Aini.

The Turkish Ministry of Finance has dispatched instructions to the Turkish delegation now in Paris, authorising them to sign the settlement arrived at with the bondholders in connexion with the coupon question. The documents were to be signed on June 12.

HUNGARY AND ROUMANIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—A prolonged absence from my office is the cause of my belated answer to Sir Graham Bower and Mr. Dudley Heathcote.

Sir Graham Bower in THE NEAR EAST AND INDIA of March 22, repeats his assertion that we Slavs have always been Easterners and infers that we are Communists or Socialists. The truth is that Czechs, Poles, Slovaks, Croats and Slovenes have been Westerners for over a thousand years. Russians, Ukrainians, Bulgarians and Serbs have remained until the present day under the influence of Eastern culture. But even if the larger half of Slavs are "Easterners," why saddle them with Socialism and Communism if those articles are of the purest Western origin? Marx and Engels never took Slavs into consideration as the field in which to sow their teachings. Communistic agitators among Slavs consider themselves Westerners and find most support in the West.

I am not condemning nor defending Socialism, although I am a strong opponent of its Communistic form. I am a follower of the Co-operative idea. We Slavs are an agricultural people and, according to my opinion, Co-operation as it practically manifests itself, e.g. in Denmark, suits us best.

It is true that an electoral law is not a test of the civilisation of a people but, I hope that Sir Graham Bower will allow that even Great Britain has not leaped to her present stage in ten years of time. An allowance should be made for the beginners, especially for those who under Magyar and Teuton dominion were systematically prevented from acquiring full benefits of modern civilisation.

Sir Graham says that since 1848 in Hungary there has been only one citizenship—Hungarian citizenship, and that a man, whether Magyar, Slovak or Roumanian, was and is a Hungarian. Sir Graham obviously is unversed in Magyar language (as I am myself) but I am sure that he would be surprised should he ask a Magyar friend to translate for him the English words "Hungarian citizen" into Magyar. Magyar language, and conception, do not recognize "Hungarian" but only Magyar citizens.

According to Sir Graham, President Masaryk and Dr. Benesh are Socialists because they have "confiscated" landowners' land "for the purpose of distributing it amongst peasants." Land in Czechoslovakia was not confiscated but expropriated. Landowners have been paid for the land taken from them. Now it would be interesting to learn from Sir Graham, how much the predecessors of the presently expropriated landowners had paid for the land, when they took it from the Czech nobles and peasants in 1620. They did not pay even a sou. I hope that Sir Graham will not contend that the landowners had the right in 1620 to take other people's land for nothing, and that President Masaryk and Dr. Benesh had no right to take a part of that land and distribute it among the original owners, paying meanwhile the unrightful possessors a fair price. Should Sir Graham still insist that President Masaryk and Dr. Benesh were wrong in their "Socialistic" procedure, then I shall readily admit that his conception of Western ideals are not Slav ideals.

"But if the Germans, Ruthenians, Slovaks and Magyars were consulted, they would probably say, that the rights of minorities were safer under the rule of the Austro-Hungarian Empire than they are under Slavonic rule of the Succession States," contends further Sir Graham Bower. This is only his supposition, and it has no legs to stand on.

First, let us separate Hungary from the Austro-Hungarian Empire. Then let us see the facts and figures. In pre-War Hungary two millions of Slovaks enjoyed freedom to such extent that they could not elect even two deputies to the Magyar Parliament. Half a million of Ruthenians could not elect even half a deputy. To-day, both Slovaks and Ruthenians are fully represented, on the basis of universal suffrage and proportional system, in the Parliament of Prague. Under the Magyar domination 100,000 Magyar children in Slovakia had 3223 elementary State schools, whereas 250,000 Slovak children had no State school in their mother tongue, and only 344 confessional schools in which Magyar language also was taught. Germans of Slovakia and under-Carpathian Ruthenians had not one single school in their language. To-day, under the "Eastern" rule of Czechoslovakia, there are in Slovakia 2648 Slovak, 749 Magyar and 112 German schools, and further East 472 Ruthenian schools. On the other hand, 200,000 Slovaks who remained under the "Western" Magyar rule in Hungary, and over 50,000 Serbs and Croats, have not one single school in their language. These figures speak convincingly that the rights of minorities are infinitely safer under Slavonic rule than they were under the so-called Western Magyar rule.

"A dictatorship, whether of Peter the Great, or of the proletariat of Marshal Pilsudski, or of a Russian general is abhorrent to Western ideas." Quite so. But why leave out Mussolini, Primo de Rivera and Horthy who belong to "Western civilisation?"

Mr. Heathcote in THE NEAR EAST AND INDIA of March 29, in endeavouring to disprove my assertion that Hungary is the only country in Europe in which mediæval feudalism still reigns supreme, quoted figures, from 1895 statistics, which show that out of a total of 51,193,000 yokes of land 2,365,000 individuals held 19,293,000 yokes, whereas 20,000 individuals held 11,900,000 (from 100 to 1,000) yokes, and 4,000 individuals held 20,000,000 (from 1,000 upwards) yokes. In other words, 24,000 individuals held 31,000,000 and 2,365,000 peasants only 19,000,000. These figures only prove what they are intended to disprove.

Mr. Heathcote quoted also the figures of expropriated land in Hungary in post-War period. Magyar statistics are not reliable; but even allowing his figures to be correct they should be interpreted thus: So far as there has been distribution of land to peasants in Hungary it has been done under the pressing example of agrarian reforms in surrounding Succession States. Had Hungary come out of the War victorious there would be no giving of land to peasants, for Magyar feudal aristocracy well knows, that it owed its power and hegemony to its big land holdings and serfdom of the peasants. And all its present

agitation for restoration of pre-War frontiers is only an endeavour to recapture its former privileges. Count Karolyi has been proclaimed a traitor of the country and dispossessed of all his property because he dared to set the "evil" example of distributing his land to peasants.

Here I cannot abstain from drawing a comparison between Sir Graham Bower and Mr. Heathcote in their rôles of Magyar defenders. While the former is accusing Slavs of Communism for their land distribution to peasants, the latter is giving Magyars credit for the very same deed, even if unwillingly done.

Mr. Heathcote denies my charge that Hungary, through her oppression of subject peoples, contributed to the coming of the War, and claims that Tisza opposed the War "as long as possible"; that his country engaged in it only because it could not do otherwise, and proceeds to ask; how can I account for the "undoubted" yearning of Slovaks and Ruthenians for a return of Magyar régime? The "undoubted yearning" of Slovaks and Ruthenians for a return of Magyar régime, is only a pious Magyar wish. If Ruthenians yearn for anything they yearn to be united with their Ukrainian brethren. As to Slovaks, they clearly stated their feelings when they were provoked by Lord Rothermere's agitation in favour of Magyar claims. A passage quoted from *Cesko Slovo* by Mr. Heathcote practically means nothing. We Slavs, trying to make the best use of our independence, often indulge in very strong auto-criticism, which must not be taken by foreigners as if meaning that we yearn to exchange our hard won independence for the old Magyar yoke. To what funny conclusions about Great Britain would a foreigner come should he take literally sharp opinions found in the British Press about British affairs! It took a long time for English, Scotch and Welsh so to adapt themselves under one régime until the differences, similar to those under which at present Czechs and Slovaks, Serbs, Croats and Slovenes are labouring, disappeared. Time will do for us what it did for you, and your fine example is a guarantee of it.

As to Tisza's opposition to the War, we now know that it was not sincere. He only feared lest through the annexation of Serbia the number of Slavs in Austria-Hungary would so increase as to threaten Magyar hegemony. When he was assured that Serbia would not be annexed but reduced and divided between Bulgaria and Albania, and that Germany, would stand by Austria, he consented. Tisza no less than Berchtold wanted to crush Serbia; they only differed in tactics of doing it. Only recently Count Albert Sternberg wrote in the *Neues Wiener Journal*: "War could have been avoided had Austria led another policy in the Balkans. Serbs were not our enemies but we were theirs. She was besieged by us. We prevented her from gaining an outlet to the sea, we throttled her exports, we oppressed her brethren in Hungary. . . We left to Serbs no other hope for their liberation but war. We were those who made war with Serbia unavoidable." Thus writes an honest Austrian. Magyars on their side did everything in their power to leave Serbia no other hope but war, and to nationalities under their dominion no other hope than rebellion. That is the reason why Hungary is guilty of the War no less than Austria or Germany.

Mr. Heathcote says that Hungary was not hostile to Western Powers. The reason is to be found in the difference of Western Powers and Western nations towards the lot of nationalities under Magyar hegemony. But she was hostile to us Slavs, and the indifference of the West made the things only worse. Had the West paid any attention to the oppression of the Slavs and used its good offices with Austria and Hungary to alleviate their lot, perhaps there would have been no war. In 1913 Mr. Wickham Steed, in his masterly book, "The Habsburg Monarchy," warned Austria that she should act quickly in reforming herself unless she wanted to go under. He even expressed prophetic doubt that already it might be too late. Events proved that it was too late indeed. If Teutons and Magyars had only wanted to be the first in a federation of free nations, Austria-Hungary would be existing to-day. But they wanted hegemony, and were ruined.

Now all the free nations which sprang from the ruins of Austria-Hungary are adapting themselves to the new order of things except the Magyar aristocracy. Austrians, Czechoslovaks, Yugoslavs, Poles and Roumanians are daily becoming better friends, forgetting old enmities and looking towards the future. The Magyar aristocracy alone is looking backward and trying to regain its old and unjust privileges. But how? By provoking a new conflagration. Is the West willing to gratify the Magyar aristocracy with a new war? If so it may, alas, but too easily have it.

Friends of peace should work in the opposite direction. History has made such a mixture of peoples in Central Europe as to render impossible a drawing of frontiers on purely ethnographic lines. The right solution is that the minorities in each Succession State should loyally accept the new order of things and, in turn, be justly treated by every State to which they belong, and that no State should try to undermine the other. This would pave the way for ever better understandings and friendlier feelings among the States themselves. Such an atmosphere would easily lead to the demolishing of custom barriers which the Succession States have erected against each other, and the re-organisation of that grand economic unit of Danubian countries. That economic unit could be even better than was Austria-Hungary in its dual form. Then again industrial regions could have cheap agricultural products and raw materials, and agricultural regions cheap manufactured goods. Providence itself has so diversely endowed Danubian countries as to enable them to live with each other. Removal of custom barriers, free trading with each other would but naturally lead to ever closer political collaboration of Danubian States which, united, would make of Central Europe both a guarantor and the region of lasting peace.—I am, etc.,

Split, Yugoslavia. I. F. VUKITCH.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

THE RETURN OF M. VENIZELOS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In your "Notes of the Week" in the issue of THE NEAR EAST AND INDIA of May 24, under the heading of "A Political Crisis in Greece," you make certain statements against M. Venizelos, which I regret to say have no foundation whatsoever.

You refer to his earlier life in Crete as a *franc tireur*. I believe there is no necessity for me to tell you that when M. Venizelos took up arms, he did so against the Turks, under whose oppression the island had been for over four hundred years. The chaos Greece has been in since 1921, and which will continue until a strong man comes forward to put its house in order, was not due to the veteran leader, but to the people themselves, who were led by a clique who have been the anathema of Greece since 1863.

M. Venizelos took Greece over in 1910 in a condition in which few men would have attempted to, and he succeeded, after two years of premiership, in elevating Greece to a status of a country well-governed and prosperous, which he found in a state of chaos as regards finance, justice, army, corruption, etc.

I do not think it is necessary for me to state what has taken place in Greece since 1915 up to to-day. The whole world knows the real truth of Greece's troubles. The only thing I can say if that it is certainly not the *franc tireur's* fault, and of anyone who attempts to blame him for the doings of a camarilla of drones and intriguers, I can only say, either he is not aware of the real facts, or his object is to do harm to the cause of the Greeks.

Last winter I had the opportunity of staying in Greece for about three to four months, and in conversation with Greeks of influential position (although not Venizelists), they admitted that the only salvation of the country was that he would consent to come back and accept leadership.

—I am, etc., C. T. CHRISTODOULO.

91/3, Bishopsgate, London, E.C.2. May 25.

[This letter is referred to in our "Notes of the Week." —ED.]

Signor Galli, Italian Minister in Lisban has been transferred to Belgrade in succession to General Bodrero, who has been recalled.

Good rains are reported to have fallen recently in the Yaman and in the Aden Protectorate, particularly at Lahej.

Earl Beauchamp opened on June 11 an exhibition and sale of Greek and Cretan Refugee and Peasant Handicrafts at the Greek Legation (by permission of the Greek Minister).

Further hostilities were last week reported between the Zaraniq tribe and the forces of the Zaidi Imam Yahya of Sanaa. The Zaraniq attacked a Zaidi detachment at Mansuria, near Hudaida, and have been plundering caravans trading with Sanaa.

At a Council of Ministers last week M. Bratiano, Roumanian Prime Minister, announced that Parliament would be convened between July 1 and 10 in order to vote certain measures regulating the question of stabilisation.

Mr. Robert H. Greg, British Minister to Roumania, and Mrs. Greg, held a reception for the British colony in the grounds of the Legation on June 14, in celebration of the King's Birthday.

The Egyptian Government is reported to have agreed that Iraq should appoint a representative in Cairo, with the rank of Consul-General, to deal solely with commercial matters, while the diplomatic and other intercourse between Iraq and Egypt will continue to be conducted through the Residency.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

THE HEBREW UNIVERSITY AT JERUSALEM.

The meetings of the Board of Governors and the Academic Council of the Hebrew University were held on June 3, 4, and 5 in London. There were present:—

Dr. Chaim Weizmann (London), President of the Hebrew University; Dr. J. L. Magnes (Jerusalem), Chancellor of the Hebrew University; Prof. S. Alexander (Manchester); Prof. S. Brodetsky (Leeds); Dr. M. D. Eder (London); The Very Rev. The Chief Rabbi Dr. J. H. Hertz (London); Prof. J. Horovitz (Frankfurt a.M.); Prof. E. Landau (Goettingen); Prof. L. S. Ornstein (Utrecht); Mr. James de Rothschild (London); Mr. N. Sokolow (London); Mr. Felix Warburg (New York); Prof. Otto Warburg (Jerusalem); Dr. A. Buechler (London); Dr. M. Schloessinger (The Hague); Mr. S. Ginzberg (Jerusalem), Registrar; Dr. L. Kohn (London), Secretary.

The meetings devoted very serious attention to the question of the introduction of degree teaching into the University. After careful discussion of an elaborate report drawn up last year by a special committee appointed by the Board of Governors at its last meeting in August, 1926, and presided over by Professor Brodestsky, it was decided to approve the introduction of degree teaching in accordance with the general sense of the report, with proper safeguards in order to ensure that only students who are fully qualified, and prepared to undertake intensive study, are admitted, and that University courses shall be introduced only in subjects for which there are at the University professors and lecturers of high University rank, and in which adequate equipment also exists for the prosecution of post-graduate teaching and research. In this sense it was decided that a beginning be made in a Faculty of Arts or Humanities, by constituting the Institute of Jewish Studies and the School of Oriental Studies departments of the Faculty, and by instituting courses in Philosophy, History and Letters in the Faculty. This teaching will be introduced in the very near future, and as soon as certain major subjects in the Faculty are fully provided with staff and equipment. With regard to Science, it was agreed not to undertake degree teaching for the present, because certain basic sciences are not yet adequately represented in the University. It was decided, however, to announce that degree teaching in Mathematics, Physics, Chemistry and Biology within the Faculty of Science will begin not later than 1932. Non-degree teaching in Mathematics, and later on, when it is possible, in other branches of Science, was sanctioned on the condition that these courses are not regarded as University courses leading to degrees. Post-graduate medical courses were authorised, to be delivered by the professors of Hygiene and Parasitology, with assistance from outside the University if necessary.

A number of appointments were made. It was decided to invite Professor Fraenkel, Ordinarius in Mathematics at the University of Kiel, to proceed to Jerusalem as Professor of Mathematics, and Dr. Fekete, of the University of Budapest, as Lecturer in Mathematics. A small committee was appointed to nominate a Professor of Inorganic and Physical Chemistry. A distinguished professor of chemistry is to be approached, and the committee was given full power to effect an appointment. Dr. S. Adler, who is at present head of the Department of Parasitology in the Institute of Microbiology of the University of Jerusalem, was appointed Associate Professor. It was decided to appoint a distinguished worker in Industrial Hygiene and Climatology as Research-Fellow in the Department of Hygiene. Dr. F. Bodenheimer, Assistant in the Institute of Palestine Natural History of the University, was appointed Research-Fellow in Zoology with the status of Lecturer.

Steps were authorised for the appointing of a Lecturer in Assyriology in the School of Oriental Studies. Dr. Leon Roth, at present Lecturer in Philosophy at the University of Manchester, is to be appointed as Associate Professor of Philosophy at the University of Jerusalem. This chair is to be called the Achad Ha'am Chair in Philosophy. Dr. Bergmann, head of the National and University Library in Jerusalem, was appointed Lecturer in Modern Philosophy. Dr. Schwabe, of Jerusalem, was appointed Lecturer in Classical Philology. Dr. Tscherikover, of Jerusalem, was appointed Instructor in Greek and Roman History. Dr. Pfiaum, of Jerusalem, was appointed Instructor in Mediaeval History.

Dr. A. Buechler, Principal of Jews' College, London, Mr. M. H. Ussischkin, of Jerusalem, and Mr. Charles Rosenbloom, of Pittsburg, U.S.A., were appointed members of the Board of Governors.

The estimates for the expenditure of the University in the year 1928-29 were approved. These estimates provide for a regular expenditure of £54,000, and a special effort was called for on the part of the Board to secure this sum. Additional expenditure of a capital nature was authorised in connexion with the completion of the Library building.

A committee was appointed to consider the Academic Administration of the University and to make recommendations to the next meeting of the Board. The University Council in Jerusalem was requested to investigate and report on the question of the relationship between the University and certain other educational institutions in Palestine.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
Further particulars may be obtained of
E. H. Keeling.

THE WEEK AT HOME

London, Tuesday Morning.

Churchill v. Lloyd George.

The past week has been enlivened by a parliamentary duel between Mr. Winston Churchill and Mr. Lloyd George over the proposal to relieve the burden of the rates. It has been the criticism of the Liberal Party, or of a section of it, that the Conservative proposals will benefit those who need it least, and will merely swell the profits of the already prosperous industries in this country.

But in the House this criticism did not hold water. Very carefully and convincingly the Chancellor of the Exchequer showed that the greater part of the projected assistance will go to the basic industries, where there is the greatest unemployment and where there is no shelter from foreign competition. This Liberal jibe that flourishing industries would be helped and depressed industries neglected falls, therefore, to the ground with that soft and somewhat stupid thud which characterises so many "Liberal" dogmas to-day.

And as for the objections of Labour to the proposals for rating reform, they seem to be more dutiful than pertinent.

The Prayer Book.

Certainly the Press has done its best to stir the jaded appetite of the public either to partake or to refuse the fruits that are offered in the new Revised Prayer-Book, the fate of which is to be decided in the House of Commons next Thursday. But there has been little fresh contribution to the stock of ideas on the subject; what appears to weigh more with the newspapers than anything else is the consequence of rejection. To the confirmed pragmatist (and almost every Editor seems to believe in pragmatic sanctions) the confusion and dismay which might result from a rejection are things which make a deeper impression than the abstract contemplation of Right and Truth. About our publicists, anyhow, there is little enough of the mood of doing right in scorn of consequence.

But among private consciences this mood is abundant. It is indulged in by sincere Anglicans, and also, perhaps unfortunately, by non-Anglicans whose votes in the Commons may be the deciding factor. One of the absurdities of the British national life was manifest on the last occasion of the presentation of the Revised Prayer-Book, when a number of Celts, Gaels, and I know not what, decided upon the future of a purely English institution.

There are, then, two distinct aspects to this affair. There is the purely religious aspect, the aspect which considers the possibility of the departure of many present Anglicans from the Church of England, either to Rome, or to the Free Churches; and there is the political aspect, which considers the future relations of Church and State, and, particularly, which considers the right of non-Anglicans to pronounce upon the Church of England. In other words, there are the makings, or the possibilities, of an historic struggle.

The Sea and Oil.

Many efforts have been made to check the death of seabirds through the oil that is discharged from ships. The Board of Trade has tried to do something; private individuals have indulged in plentiful propaganda; and there have been public protests. But still the evil continues. Only a day or two ago, for instance, it was reported that along a stretch of six miles of the Norfolk coast eighty dead guillemots and razorbills were found. Their breasts were black and yellow.

Nor is that all. Fisheries suffer; all sorts of pollution occur. And it appears really to be all so unnecessary. For the Admiralty use a separator which must discharge overboard a mixture containing not more than one pint of oil to 200,000 parts of water. It should be compulsory for all oil-driven steamers to fit this device. It would cost the ships nothing, because they would save in oil, in two years, the cost of installation.

One need be no sentimentalist to support this scheme of saving the sea from pollution, but indignation must also be present, in making the appeal, to anyone who has seen birds slowly drowned in this way, and washed up so that they are later almost unrecognisable.

Oxford Doctorates.

One of the minor sensations which provide the more trivial topics of the conversation of educated men was provided last week by Dr. Farnell, Rector of Exeter, who objected to the award, by the University of Oxford, to three officials of the University Press of the honorary D.Litt. degree. Dr. Farnell contended, first, that the recipients were resident Oxford men who might have taken their degree in a normal way, and secondly, that assistance in the compilation of the Oxford Dictionary was not work of such scholarship as should fitly be rewarded with doctorates.

Now it is always invidious for one from a rival University to comment upon the conduct of affairs in "the other place." The point manifestly concerns principle rather than accomplishment—for all recipients have several accomplishments other than a share in the Oxford Dictionary, to their credit. It need scarcely be added that Dr. Farnell's protest but increased the long list of lost causes at Oxford.

The O.E.D.

The Oxford English Dictionary, by the way, has just been completed: an achievement which is perhaps the finest single work ever accomplished by a University. There are so few Englishmen who really idolise their language, as it ought, possessing the finest literature in the world, to be idolised; but their number should slowly increase through the publication of the O.E.D.

There is much to be said for the point of view which the Prime Minister, whose taste in Literature, although not infallible, is sound and not derivative, expressed the other day: that for a desert island *the* book would be the O.E.D. To such a man as Mr. Baldwin, whose memory of books is deep and whose reading is wide, the O.E.D. must make a special appeal, but there are men of less catholic tastes than he and with less retentive memories who also cherish the O.E.D. as a national possession. Such "monumental" works as the Cambridge Modern and Ancient Histories will be remembered when the O.E.D. is forgotten; but not before.

PERSONAL AND GENERAL

TO-DAY

June 14, 1928 (New Style).
June 1, 1928 (Old Style).
Dhulheggia 25, 1346 A.H., of the Muslim Calendar.
Sivan 26, 5689, of the Jewish Calendar.

Ex-King George of Greece arrived in London on June 10, where he expects to stay for a month.

The Prince of Wales received Sir Spencer Harcourt and Mr. Aubrey Metcalfe (Indian Civil Service) at St. James's Palace on June 5.

H.E. Mohamed Tewfik Nessim Pasha, Chief of the Egyptian Royal Cabinet, will leave Egypt for Europe on two months' leave on June 16.

The Marquess of Reading returned to 32, Curzon Street, Mayfair, from Berlin on June 5. The Marchioness of Reading is remaining in Berlin for the present.

Sir William Marris had the honour of being received by the King at Buckingham Palace on June 5, upon his appointment as a Member of the Council of India.

The Maharaja of Kapurthala arrived in London on June 10 from Paris. It is expected that while in London he will attend the conference of the Chamber of Princes.

Lady Irwin and the Hon. Anne Wood returned on June 11 to 88, Eaton Square, from visiting the Earl and Countess of Lytton at Knebworth House, Stevenage.

Sir Ronald and Lady Storrs, with Mr. Clowes and Miss Mary Clowes, were due to arrive yesterday at 36, Lennox Gardens, where they will be in residence for six weeks.

Viscount Inchcape returned to London on June 5 from Scotland for business engagements, and left again the following night for Glenapp to be with Viscountess Inchcape, who is still far from well.

Under the auspices of the India Society, a lecture in English will be given on "Indian Art in Indo-China," by M. L. Aurousseau, at the Institut Français du Royaume-Uni, 3, Cromwell Gardens, S.W.7., on June 28, at 9 p.m. The Earl of Ronaldshay will preside.

Mr. F. W. Carey (Late Consul-General, Macao), will lecture to the Central Asian Society on June 20, at 5 p.m., on "China: A Survey of the Past Year and Present Position." The lecture will be given at the Royal United Service Institution, Whitehall.

Sir Ahmed Hassanein Bey has been awarded a medal by the Geographical Society of France in recognition of his explorations in the Sahara desert. The medal was last month handed by the President of the Society to Murad Kamel Effendi, Secretary of the Egyptian Legation in Paris, for transmission to Sir Ahmed.

The Maharaja of Patiala, Chancellor of the Indian Chamber of Princes, arrived in London from Paris on June 10, in connexion with the inquiry of the Indian States Committee, presided over by Sir Harcourt Butler. The Maharaja will consult informally with Sir Leslie Scott, K.C., M.P., on the case to be submitted on behalf of the Standing Committee of the Chamber.

FOR SALE, OR WOULD LET.

FREEHOLD family residence; in first-class order. New Drainage. New Gas and Water Mains. Very attractive modern domestic offices. 5 double, 4 single bedrooms; two bathrooms; constant hot water at low cost; three principal sitting rooms, good servant's room. Exceptionally fitted with gas and electric light and heat. Large garage; good outbuildings; attractive garden. Very good cricket, tennis and golf clubs. Electric trains to Victoria. Charing X, St. Paul's and Cannon St. £3,000.—Apply Owner, 16 Copers Cope Road, Beckenham.

AN ARMENIAN ARTIST.

It would be insincere not to express disappointment at the fact that Sarkis Katchadourian, the Armenian artist who is now holding an exhibition at the Galleries of the Fine Art Society in New Bond Street, has not considerably enlarged his scope since his last show in London. One rather misses the brilliant oils and water-colours which so enlivened his former exhibitions, and which, incidentally, made comparison inevitable and not invidious between him and Mr. Frank Brangwyn. Some of the subjects in this present show are a little unworthy of so fine an artist, being good enough "journalism," no doubt, but not fit to stand by his landscapes and psychological studies of Oriental women.

But there is no question of Katchadourian's skill in *gouache*, which he employs reticently but with the utmost conviction. In this medium he has little to learn from Western masters.

Of the landscapes in the present exhibition, preference will probably be expressed for "Mount Ararat" (which is envisaged from flat, cultivated fields), "The Lake of Sevan," and "Cross-roads in Armenia." But other works, such as "The Cow-Shed" (into which branches of blossom are beautifully inserted), "Washing-Day," and "Express d'Orient" (the old, cattle-drawn cart) will doubtless please many. On the whole, however, greatest interest will be concentrated upon Katchadourian's studies of Oriental women, which are very exotic, lovely, and real. "Doniazade" (Arabian Nights) is a perfect representation of artificial luxury, carelessness, beauty; "Reading Hafiz" is another; "The White Divan" yet another. In short, it is a stimulating show of forty works, from which, however, one regrets to find largely lacking that vivid joy in brilliant, exultant colour which has characterised much of this Armenian artist's work.

Where to stay in the East

CYPRUS.

Miss Young's Camp, Troodos.

There are summer quarters, for a limited number of paying guests, on Troodos (Miss Young's) in the midst of forests, 6,406 ft. above the sea—the summer resort of the Troops and Government Officials. 20 hours from Port-Said.

Pitched in the pine forest in a lofty and secluded situation, on the upper slopes of Mount Olympus—25 minutes from the summit. Perfect climate, dry, cool and bracing air, enchanting panoramas; no mosquitoes; completely equipped with every comfort and convenience.

Troodos is 35 miles from Limassol and 45 miles from Nicosia. From both towns there are good carriage and motor roads. The summer climate is dry and healthy. The nights are often rather cold after the end of August. As regards dress, Ladies should be provided with washing skirts, as there is a good deal of red dust on the hills; white is much worn, but dust-coloured costumes are advisable. A warm woollen coat and skirt are essential. Riding and motor excursions, Tennis and croquet are the chief occupations of the Visitors. An English Club provides Newspapers, Telegrams (Reuter's) and Books. The water supply is good, and there is plenty of fresh milk. Inclusive terms £3 10s. a week. *Open June 15.*

Apply to Miss Young, 38 Victoria Street, Nicosia, Cyprus.

CYPRUS.

SAVOY HOTEL: Port of Famagusta.
PALACE HOTEL: Inland City of Nicosia.

OLYMPUS HOTEL: Port of Limassol.
(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)
(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

Book Review

MINORITIES.

"THE PROTECTION OF MINORITIES." By L P. Mair. With an Introduction by Prof. Gilbert Murray. (London: Christophers. Price 8s. 6d net.)

Miss Mair's book is a timely and most valuable contribution to the vexed subject of Minorities. This is no propaganda effort, but a careful compilation of facts bearing on the different problems connected with the treatment of Minorities, collated for the most part from the information that has been submitted to the League of Nations. So careful is the author to restrict herself to official documents "as the only approximately reliable source," that she does not deal with the question of Macedonians in Yugoslavia, inasmuch as no petitions from South Serbia have been brought before the Council. The book, however, is not a dry official publication. Miss Mair allows herself to indicate where her sympathies lie, but, as Professor Murray points out, she has taken pains to verify every statement and to give full weight to the side of the case with which she did not sympathise.

There is every prospect of the Minorities questions being with us for many a year to come. Until the various races and creeds can live together in peace and unity, there will be far too many occasions for varying degrees of oppression, even if the cruder forms of outrage and murder are eliminated. It is fair to state that the oppressed are not always angels in human guise, and even if they have recently cultivated an entirely angelic disposition, it is safe to suppose that they have not been ever thus, and that their complaints will be directed against those who have reason to remember when they were otherwise. There is much to be said for Prof. Murray's contention that the best way to prevent excesses, and the conspiracies which provoke or follow them, would be to have resident agents of the League in the dangerous regions. This system would obviate the worse troubles, but it will not cope with the minor forms of persecution, and for the cure of these we must trust to the gradual spread of enlightenment not only among Governments, but among subordinate officials, who often are the prime offenders.

Miss Mair's book should certainly be in the hands of all those who aim at keeping in touch with European affairs of the day. To take but two subjects engaging the attention of the fiftieth session of the Council of the League of Nations—the question of the Hungarian Optants and the matter of Albanians in Greece—the detailed story is set out in each case. We are reminded that the former question was first raised by the Hungarian Government in December 1920, and the latter by the Albanian Government at the meeting of the Council in December 1923. Perhaps in time the Congress of Minorities, which has met annually since 1925, will come into its own. Miss Mair claims for it as its chief advantage the opportunity given for unimpassioned consideration. In petitions and in controversy, she rightly points out, the best of cases are apt to be overstated, and Governments tend to suspect that minority leaders are more anxious to make trouble than to secure their rights. "The fact that the Congress wasted no time on invective, but concentrated on a reasoned statement of its claims made a very favourable impression on the Governments concerned."

NEWS IN BRIEF.

Mme. Zaghloul, widow of the late Nationalist leader, has left Alexandria for France. Enthusiastic crowds lined the streets as she drove along.

M. Ch. Alamanis was sworn in in Athens on June 4 as Greek Minister of Agriculture, in succession to M. Exindaris, and M. Talliaduras as Greek Under-Secretary for Communications.

The two new Turkish submarines, Birindji Ineunu and Ikindji Ineunu (Ineunu I. and II.), which were recently constructed in Holland, arrived at Constantinople on June 9. After they had been officially handed over to the authorities, the Turkish flag was ceremonially hoisted.

Admiral Sir Frederick Field, who succeeds Admiral Sir Roger Keyes as Commander-in-Chief, Mediterranean, hoisted his flag in H.M.S. Queen Elizabeth in Marseilles Roads on June 8.

The Air Ministry announces that, as the result of an accident near Mosul to a Bristol fighting machine of No. 6 Army Co-operation Squadron, Mosul, on June 8, 335654 Sergeant Alfred Joseph Garner, the pilot of the aircraft, and 158714 Sergeant William Frank Futcher were killed.

A Greek Brequet XIX. aeroplane with two military pilots, MM. Papadakos and Adamides, left Tatoï on June 8 for a flight round the Mediterranean, calling at Aleppo (Syria), Alexandria (Egypt), Tripoli (Libya), Algiers, Casablanca (Morocco), Paris, and Rome.

A three-engined Junkers G.24 monoplane, which was presented to King Amanullah by the German Government, is to be flown to Afghanistan shortly, accompanied by two single-engined F.13 Junkers machines which have been purchased by the Afghan authorities.

Mr. H. D. K. Grimston, British member of the Anglo-Turkish Arbitral Tribunal, fell from a second-floor window of his residence at Prinkipo on June 7. He received injuries to his head and is believed to have fractured the base of his pelvis.

The Reporter of the Foreign Affairs Committee of the Greek Chamber has submitted a proposal to the Chamber to annul the commercial treaty between Greece and Russia as being unfavourable to Greece.

Dr. Claude G. Montefiore, of Portman Square, W., was presented with a blotter, inscribed with the names of the 639 friends who had subscribed to the gift on June 6—his 70th birthday. He also received a cheque for £2,683, to be devoted to such charitable or educational purposes as he might select.

The Greek Chamber on June 8 agreed, after a two days' debate, by 97 votes to 77, to postpone for five days its decision on the Parliamentary Commission's recommendation that General Pangalos should be released on bail. During this period the Commission was to submit its finding to the Chamber. It is expected that a Court of 30 Deputies will be constituted this week to try the dictator and his co-defendants.

The Nawab of Kampur, who has been spending a few days in Cairo sightseeing, was last week presented to King Fuad by Lord Lloyd, the High Commissioner. The Nawab on June 7 visited the Museum and asked to see the Royal mummies, but as these are no longer accessible to the public, he was obliged to call at the office of the Minister of Public Works to obtain the necessary authorisation before being able to enter the private room in which the mummies are kept.

The King and Queen of Afghanistan arrived in Teheran on June 9 and were welcomed at the west gate of the gaily-decorated town by the Shah and his son, the Valiahd, in the presence of large crowds.

It is stated by Reuter's Basrah Correspondent that the discussions between Imperial Airways, for whom Colonel Wood Humphreys has been acting, and the Persian Government have concluded.

M. Cafandaris has tabled a Bill in the Greek Chamber for the suppression of 10,000 public official posts. He proposes that a thousand posts a year in different public services shall be allowed to lapse.

The 2nd Batt. East Surrey Regiment is under orders to proceed from Gibraltar to England for the forthcoming trooping season. The 1st Batt. Lancashire Fusiliers is going to Gibraltar from Egypt to take the place of the East Surreys.

A message from Constantinople states that negotiations for an Anglo-Turkish pact are to be instituted, and that th enegotiations for the conclusion of the pact will be conducted by the Turkish Ambassador in London.

RURAL INDIA.

A useful contribution to the study of the problems of rural India is contained in a timely reprint by the Oxford University Press, on behalf of Patna University, of the Russell Lecture, 1926, delivered by Sir Alfred Chatterton. Many minds are, as the lecturer says, studying these problems, an investigation of which has been of course just completed by the Royal Commission on Indian Agriculture. The findings of the Commission have not yet been published, but there are obviously several points of view from which the question of improving Indian agriculture may be approached. Stress may be laid on the urgency of the need for the provision of necessities, such as adequate finance for the cultivators; and for the satisfactory marketing of their produce. Or, again, the improvement of cultivation so as to increase the yield of the land per acre may be deemed to be of primary consequence. Then the need for promoting the general welfare of the rural population may be considered by some to be of supreme importance. But from whatever standpoint the problems of rural India may be examined there can be no two opinions as to their being intimately associated with the welfare and prosperity of the country as a whole. Less than ten per cent. of the people of India live in the towns. The population, according to the last census (1921), is close upon 319 millions; and of this huge total ninety odd per cent. live in the villages of which there are estimated to be not far short of three-quarters of a million. Some of the villages are merely collections of a few huts; others are almost as large as small towns. Some are so remote that no educated man or woman has ever lived in them. There is no contact with the outer world or with modern ideas, and there is no such thing as educated leadership. Agricultural operations are carried on with the minimum of machinery. There is nothing in the way of power except what men and animals provide. And the agricultural implements that are in use are primitive, and they are restricted to those which are absolutely indispensable.

Sir Alfred Chatterton believes that it is not an impossible task to revitalise village life, and to restore to it that healthy communal sense which formerly existed. He considers that, broadly speaking, there are many points of resemblance between the conditions prevailing in rural India to-day and those which obtained in England in the Middle Ages. The agricultural problems which now confront India are not, therefore, essentially different from, nor are they necessarily more difficult than, those which were struggled with and solved in Great Britain. Village life requires to be re-organised. What every village needs is an educated leader to point the way to a better state of things, and to initiate and to control new movements. The people must be taught to work together on a definite programme. And the best results will probably be obtained by starting in a group of villages, as a single village may be too small a unit for the purpose. An educated village leader would be able to bring the work of the Agricultural Department into closer touch with the ryot. As things are, the latter sees the demonstration farm which the Department has established. He is impressed with the buildings, the plant, the cattle and the orderly arrangements. But he cannot understand how he can bring his own land or his own village up to such a standard. In other words there is a gap between the Department and the peasant, and this gap the educated leader would be able to bridge. He would be able, for instance, to bring directly home to the cultivator the lessons to be learned from agricultural demonstrations of new methods and new crops. And there are numberless other useful movements which the leader could promote with the object of improving the position and raising the status of the villagers. There are useful agricultural matters such as the establishment of village plantations for fuel and timber; the planting of shade trees; the sinking of wells for domestic purposes and for irrigation; mutual adjustments to consolidate holdings and so to reduce the loss caused by fragmentation; the improvement of village roads and communications generally; the development of co-operation not only in the matter of credit but in other ways also; the opening of agencies for the sale of improved implements, and of depots for the distribution of selected seed and suitable fertilisers; and the establishment of village industries, and so on. Ideas on these lines might be worked out with the assistance of village councils recognised by the legislature, and vested with suitable local authority; and eventually a central district or provincial organisation would also probably be required.

It is not easy to express an opinion on the question whether success would be likely to attend efforts of this character. But it is all to the good that such ideas should be freely ventilated; and when the report of the Royal Commission is published these, and other remedies for the existing stagnation in the villages, will be doubtless much to the fore. Sir Alfred Chatterton does not claim that his proposals are original. Nor is he blind to the difficulties that would be certain to attend upon them. But he is impressed, as all competent observers are, with the urgency of the need for stimulating rural life. And he believes that the way to stimulate it is to bring some of the educated people back to their villages to take the matter in hand. It is for the Indians themselves to move. Education is now a transferred subject, and, being such, it is under the control of the representatives of the people. The existing educational system is faulty in that it is worked along lines that are too narrow; and that it tends to the concentration of the intellectual activity of the country on legal, literary and philosophic pursuits. It neglects important practical problems such as those that are now under discussion. The result is that, although unemployment is rife among the educated classes, it would be difficult to find men equipped by training and experience for the work which Sir Alfred Chatterton has in mind. He realises this difficulty and he consequently urges the Indians to introduce such educational reforms

"Rural Economics in India." By Sir Alfred Chatterton, Kt., C.I.E., being the Russell Lecture, 1926. (Published for Patna University by the Oxford University Press. Price 1s. 6d.)

as will adapt their system to present-day needs, and will thus enable them to bring to the service of their greatest industry the resources which modern science has placed at their disposal.

CURRENT TOPICS.

The Country League.

If it were necessary to produce evidence of the urgent necessity for the formation of an organisation on the lines of the Country League, such might be found in the proceedings of the All-Parties Conference which was held at Bombay on May 18 and 19. The associations, parties, leagues, groups, etc., represented at the Conference, make a most imposing list. But we gather that in point of fact a number of the principal Liberal leaders were absent as were also most of the chief members of the Muslim League. It will be recalled that at the previous Conference which was held at Delhi it was resolved that a draft constitution for India should be framed. But now we learn that nothing practical in this direction has been achieved. There has been endless discussion, particularly of course on the Hindu-Muslim question. But nothing has been done, and Dr. Ansari—who presided at Bombay—told the conference that no advance had been made, and that much valuable time had been lost. While they were wrangling among themselves, he said, their opponents were going ahead. And he warned the Conference that unless they came to a settlement and decided to frame their constitution on the basis of such settlement they might as well do nothing at all. This appeal does not seem to have had much effect, for there was apparently a sharp division of opinion on most of the more important issues. And in the result all that this second Conference succeeded in doing was to decide to appoint a Committee to frame a constitution by July 1!

The fact that the extreme parties in Indian politics are in this hopeless state of division make it more than ever imperative that the moderate and sane elements should be solidly united. The establishment of the Country League presents to these elements an admirable opportunity of coming together, and of submitting to the Statutory Commission and to the country at large, a considered programme for the advancement of India steadily but surely on the road to self-government. Nothing can be hoped for from the extremists except opposition to any proposals that may be put forward. But if moderate men of all races and all parties unite to support the programme for which the Country League stands, there would appear to be good reason to anticipate that effective work may be done. The names appended to the manifesto show that the League is being widely supported. But, as we pointed out last week, an early and effective demonstration of the practical co-operation and support of the European mercantile community is needed. The principles upon which the League will work are in conformity with those defined at the meeting of the East India Section of the London Chamber of Commerce in July last. It is an organisation which will be in a position to voice effectively the opinions of British and Indian commerce, of the landowning and agricultural classes, and of industry, finance, shipping, etc. It must therefore appeal directly to the interests which were represented at the Chamber of Commerce meeting; and we hope that both here and in India the representatives of all those interests will give it their wholehearted sympathy and support.

The Birthday Honours.

Few indeed of the more than usually numerous band of Indian and European officials and non-officials whose long and devoted service to the land of their birth or adoption received well-earned recognition in the recent Birthday Honours will, we imagine, be disposed to cavil if we single out one name for particular mention. There is only one appointment to the Order of Merit, but the selection is one which will command general approval. Sir George Grierson's pre-eminence as a distinguished Oriental scholar has been fittingly recognised, and we are glad to note the official tribute "to the value to the Empire of his work on Indian languages and dialects," a classical linguistic study of India which was only completed last month with the publication of the eleventh and last volume. If the very different but even more important task, the end of which is marked by Lord Linlithgow's appointment to the Order of the Thistle, can be carried to an equally successful conclusion, the distinction in the case of the Chairman of the Royal Commission on Agriculture in India will be no less deserved. Sir Harcourt Butler's services to the Empire, in many of the most important posts in the gift of the Crown in India, including the exceptional experience of having been Governor of Burma twice and also Governor of the United Provinces, are too well known to readers of THE NEAR EAST AND INDIA to call for detailed comment. But we heartily endorse the happy remark that Sir Alexander Murray made at the Calcutta Dinner, namely, that no selection could have been more appropriate than that of Sir Harcourt Butler as Chairman of the Indian States Committee. An equally popular feature of the list is the honour bestowed upon Sir Malcolm Hailey, the able Governor of the Punjab and a former Finance Minister. Of the new Knights possibly the best known to our readers, apart from the popular Chairman of Messrs. Grindlay and Co., Ltd., are the two distinguished members of the senior and junior services—Captain Headlam and Captain Willis.

The Jain Dispute.

The announcement that the dispute between the Thakur Saheb of Palitana and the Jain community has been settled through the tactful mediation of the Viceroy will be received with the greatest satisfaction by the friends of both the parties concerned. In the long-drawn dispute, two elements have been involved: firstly, the dominion and jurisdiction over the sacred hill on which the Jain shrines are built, and, secondly, the amount of the payment to be levied by the State for the protection and facilities afforded to the pilgrims. As regards the first question, the Hill is undoubtedly a portion of the Thakur's territory, and the Jains were glad enough of the protection of his strong hand in the old troublous pre-British days. With the advent of law and order, however, the Jains have been inclined to regard the hill as a sacrosanct enclave in the middle of the State, and to deny the State officials right of jurisdiction or access, except under degrading conditions such as the removal of their footwear. On this point the Thakur's rights seem to have been admitted, though he has voluntarily agreed to the Jains having the right of appeal from any of his orders to the Agent to the Governor General. On the question of the money payment, the levy of a tax on pilgrims is common throughout India. The sum of Rs.15,000 hitherto paid as a composition for individual payments was fixed so long ago as 1885, and even then was regarded, at least by the State authorities, as a concession rate. Since then the number of pilgrims has greatly increased, and the wealth of the Jain community has also risen at least proportionately. Their leaders, however, objected to any increased payment, and this led to the Agent to the Governor General fixing, after a very careful inquiry, a sum of two lakhs as the annual payment which the Thakur might properly demand. The Thakur Saheb has wisely consented to accept the largely reduced figure of Rs.60,000 as the payment for the next 35 years. Although the personal sacrifice involved is considerable, the Thakur doubtless remembers that the indirect advantage to the revenue and people of the State from the annual influx of the pilgrims is very considerable. His agreement to the settlement is consistent with his reputation as one of the best of the younger Indian State rulers. On the other side the successful conclusion of the negotiations doubtless owed much to the tact and persuasiveness of the well-known Bombay business man, Mr. Kikabhai Premchand.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, May 23.

Politics Again.

If Sir John Simon and his colleagues on the Statutory Commission may sometimes doubt whether their ability and industry will prove equal to the task that Parliament has laid on their shoulders, their doubts must now be small compared with those of Dr. Ansari and his coadjutors about themselves. I wrote on February 23, that is three months ago: "The leaders of the three non-official parties in the Assembly . . . appeal to organisations throughout the country to settle communal or sectional differences, to prepare a draft Constitution with the maximum amount of agreement, and to work for its establishment. It is as if one were to say to another, 'Prepare a draft Constitution, won't you?' when the other replies, 'No, no; you do it.' 'No, no,' says the first, 'I leave it to you.' 'But I should not know how to set about it,' says the other; 'you must draft it.'" How little of exaggeration there was in any of that the proceedings of the All-Parties Conference of this week show. The sessions were held in Bombay, Dr. Ansari presiding. All the Provincial Congress Committees were represented, and there were representatives besides of the Hindu Mahasabha, the Muslim Leagues, and an imposing list of other political bodies. Dr. Ansari, after a statement of the work accomplished by the Delhi Conference, said that on the whole they were exactly where they were at Delhi. They had not advanced any further, and much valuable time had been lost, not through anybody's fault. While they were wrangling among themselves, their opponents were going ahead, daily creating a situation in the country prejudicial and adverse to their cause. Unless they decided to come to some settlement to frame [*sic*] their constitution on the basis of that settlement, and go to the country and create an opinion in their favour, they might as well shut up shop and do nothing at all, and they might rest assured that the Simon Commission would have an easy walk-over.

Mrs. Annie Besant moved a resolution that a committee, with Pandit Motilal Nehru as chairman, Sir T. B. Sapru, Sir Ali Imam, Mr. Subhas Chandra Bose and two or three others as members, should be appointed to draft a Constitution before July 1, 1928. There was at least a show of wisdom in laying down a date; but one does not forget the adage about leading a horse to water. The Constitution, so drafted, is to be circulated among the various associations in the country. The committee is to give the fullest consideration to the resolutions of the Madras Congress on communal unity, in conjunction with the suggestion made by other political parties at the All-Parties Conference at Delhi, the implication of that being that, in Mrs. Besant's opinion at least, some constructive work has been done. The committee is also "to give due weight" to the recommendations made by the various sub-committees of the Delhi Conference. The resolution ends with these words: "This All-Parties Conference will meet again in August, 1928, to draft the Constitution." The irony of the words is no doubt unintentional, but there it is—they meet always to draft a Constitution, never to accept one that has at last been drafted.

The Strikes.

The week saw the strike situation seriously aggravated by the addition of yet another to the total. On May 15, without previous intimation, about 10,000 workers in the Chitpore and Cossipore jute presses struck for higher pay and a six-day-week working. That strike, however, is already ended. Following a meeting on Monday night, it is reported, the majority of the men returned to work yesterday, and practically normal conditions prevailed in all the presses. It is reported, too, that the East India Railway workshops at Lillooah, which have lain idle for eleven weeks, will re-open in a few days. Mr. Mould, Deputy Chief Mechanical Engineer, Lillooah Workships, had a conference yesterday with the foremen and other employees. It is understood that the workshops will be opened on Friday, and if not on Friday, then on Monday. Inquiry at the Agent's Office in Fairlie Place last night elicited no confirmation of the report, but it was not denied. I believe that the lesser strikes in Howrah are nearing an end, or have already ended.

Famine in Bengal.

The Birbhum and Bankura districts of Bengal are famine-stricken. His Excellency the Governor is to arrive in Calcutta this morning from Darjeeling on his way to inspect those districts. He will spend two days here, leaving on Thursday night and arriving in Bankura on Friday Morning. The Ram Krishna Mission has been carrying on relief work in the Bankura District for some time and has now issued an appeal for funds. Subscriptions may be sent to the President, Ram Krishna Mission, Belur Math P.O., Howrah District, Bengal. Those who control the Mission are well known in Calcutta as men of undoubted integrity, but the Mission's record will naturally not be as well known in England. I may say, then, that I can vouch for it.

The Maharaja of Nadia.

Bengal has lost a public man of ability and prominence, and the Government of Bengal has lost a trusted member of the Executive Council, in the death yesterday of the Maharaja of Nadia. He died at the early age of 38, the son of another short-lived man, for his father was but 42 when he died. His only son (there are two daughters also) is an infant. The late Maharaja's selection for office as an Executive Member on the death of Mr. Bhupendranath Basu was unexpected, and Lord Lytton, the Governor of Bengal at the time, was freely accused of having let Delhi force his hand, but the Maharaja showed such fitness for responsibility that soon criticism was disarmed. He rose in a few years to be the senior member of the Council, when Sir Abdur Rahim and Sir James Donald retired, and when Sir Hugh Stevenson went to Bihar and Orissa. As Senior Member of the Executive Council, he was its Vice-President and the leader of the Bengal Council. His was a steadying force in Bengal politics, which will be missed. Bengal politics are never far from chaos.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, May 26.

The All-Parties Conference.

It was generally expected that the Bombay session of the All-Parties Conference which met on Saturday, May 19, at Congress House would not take us any further than the Delhi session had done, but it came as a surprise to the public when the Conference broke up on the same day after passing only one resolution. The various committees appointed by the Delhi Conference had not completed their reports, and much amusement was felt at the meeting when it was found that not one of the committees was able to submit its report to the Conference. A solution to this was quickly found and the Conference just saved itself by referring all questions to another committee of which Pandit Motilal Nehru is appointed the Chairman. The Conference was by no means a representative one, for the Liberals had sent only one delegate, the Muslim League about three, whilst even among the Congressmen there were many who arrived after the Conference had adjourned as they had expected the meeting to last for some days. Messages of sympathy, however, were in abundance. As Dr. Ansari said in his opening speech—and he might as truly have said it at the close: "We are exactly where we were at Delhi; we have not advanced any further." There was much controversy between the Hindu Mahasabha and the Muslim League members of the Conference, and when the solitary resolution came up for discussion both parties took the oppor-

Digitized by Google

tunity to express their views on the situation Mr. Chalga, one of the local Muslim leaders, opposed the appointment of the committee on the ground that it would be re-opening the whole question. The Muslim League's demands, as put forward at Calcutta, were practically the same as the Congress proposals, and if the Congress or the Hindu Mahasabha disapproved of these proposals he wanted them to say so openly. The Mahasabha leader, Dr. Moonje, said that on all national questions the Mahasabha was with the Congress, and that it was only in "domestic" matters that they were communal. Another of the speakers asked the Muslim Leaguers to accept the resolution of the Madras Congress if it amounted to the same thing as the resolution of the Muslim League at Calcutta. Among the Congressmen themselves there was no unanimity; the extremists wanted to know how Dr. Ansari could ask Congressmen to serve on a committee which had to draft a constitution with Dominion status as the goal when the Madras Congress had accepted Independence as its ideal. Dr. Ansari replied that there was nothing inconsistent in this, as the Congressmen by serving on the committee did not go back on the Congress decision, but merely modified their demand as there were other parties who had pledged themselves to Dominion status. The resolution appointing the committee for considering the general principles of the constitution was passed. The committee has to submit its report by July 1 and its conclusions will be considered at the conference which meets at Delhi in August.

Bardoli Letters.

The correspondence between the Governor of Bombay and the eight Gujerat members of the Legislative Council on the enhancement of land revenue at Bardoli and Charari has now been published. The Gujerat members in one of the letters referred to "the impudence of Government" and grudgingly apologised later. The Government attitude was that the revised assessment was 20 per cent. more than the one fixed thirty years ago, during which period the value of land and the level of prices has increased by much more than that percentage. The eight members deny that, and desire an inquiry by an officer who has not had a hand in the matter. The Governor refused to have any inquiry into the equity of the revised settlement Referring to the threat of resignation by the members, the Governor has no doubt that any body of taxpayers in any country would be equally unanimous in their desire to shift the burden of taxation to other shoulders. But this argument loses its force when it is realised that the tax on land is not levied in the same way as the other taxes. A new law is necessary to sanction the levy of a new tax or the enhancement of an existing one; but the land tax can be enhanced or diminished by the Executive which is the sole judge of what is just and proper.

THE SIND DINNER.

The annual Sind Dinner was held at the Café Monico on June 5, under the chairmanship of Sir Montagu Webb. About sixty attended, including all the more recent Commissioners in Sind, while Mr. Charlton Harrison, the Chief Engineer of the Sukkar Barrage and Canals, represented present-day activities. The Chairman in his speech comprehensively reviewed the progress of Sind, particularly in irrigation and in the establishment of Karachi as the Air Port of India. His characteristic modesty prevented him from recalling the fact, afterwards revealed by Sir Charles Mules, that Sir Montagu himself was the first pioneer of flying in Sind, perhaps in India. He took off from a high hill with a machine of his own contrivance and was only saved from death in the subsequent crash by the fact that he landed on the stoutest portion of his anatomy, his head. The dinner maintained its character of being one of the pleasantest and least formal of the Provincial dinners.

THE ASSAM DINNER.

Over four hundred East India merchants and Assam tea planters attended the annual Assam Dinner at the Connaught Rooms on June 4. The chair was occupied by Major Norman McLeod, a former Vice-Chairman of the Indian Tea Association, London.

The Chairman said that last year he was sent to America by the Indian Tea Association of London to inquire into the progress of the advertising campaign there. His conclusions had been received favourably both here and by the Tea Cess Committee.

It had been decided that in future their advertising campaign was to be carried on by their own resident representatives in the States. The general result should be a largely increased consumption of tea in America. What would this mean?

"There is there," said the Chairman, "a population of over 100,000,000. At present they consume rather less than one pound of tea per head per annum. If that were doubled or trebled?"

The Chairman mentioned that they had established their own office in New York, called the "India Tea Bureau," and that would prevent intending consumers not knowing where to get Indian tea.

Why, it might be asked, did they single out America as the sphere of their greatest campaign? Because of the enormous and increasing population, closely allied to ourselves in speech and sentiment, to whom it was desirable that the beneficial effects of tea drinking should be made known, and Americans thus be weaned from the chilly influences of iced water and other beverages that had no dietary value. The prohibition laws of the country provided reason for giving it special attention.

Supporting the Chairman were Sir W. J. Reid (ex-Acting Governor of Assam), Sir Benjamin Robertson, Mr. L. T. Carmichael (Chairman, Indian Tea Association, London), Sir Charles S. Bayley, Mr. W. M. Fraser (Vice-Chairman, Indian Tea Association, London, Sir Alexander Murray, Mr. T. C. Crawford (ex-Chairman, Indian Tea Association, Calcutta), Sir L. J. Kershaw, Sir Walter Wilson.

Mr. Eyre Gordon (acting Indian Trade Commissioner), Sir D'Arcy Lindsay, Mr. W. D. Campbell (President, Ceylon Association in London), Mr. V. W. Dean (President Tea Brokers' Association of London), Mr. J. H. Estill (Commercial Manager, Port of London Authority), Mr. F. Cross (President, Tea Buyers' Association), Mr. A. C. Tunstall, Mr. W. J. Lucking (Chairman, South Indian Association in London) and Mr. C. J. Harrison.

Among those who accepted invitations were: Messrs. H. Anderson, A. W. Ardagh, James Bird, F. H. Brown, J. H. Bundock, W. M. Burton, W. T. Cathcart, A. W. C. Chaplin, A. Christison, F. G. Clarke, Col. F. R. Cosens, Major R. D. K. Curling, Major W. H. Davies.

Sir G. A. Dolby, Mr. W. A. Duncan, Capt. Owen C. Furness, Messrs. A. P. Gibbs, Patrick Gow, R. Graham, W. E. H. Grayburn, Col. L. A. Grimston, Mr. F. G. Guthrie, Major C. G. Hannay, Messrs. J. C. Higgins, W. Hutchinson, S. O. Jackson, Gerald Kingsley, G. N. Kingsley, A. Levick, J. A. MacBean.

Col. A. J. M. MacLaughlin, Mr. A. S. MacWhirter, Sir Charles C. McLeod, Mr. T. McMorran, Mr. R. K. Magor, Lt.-Col. H. D. Marshall, Major-Gen. F. E. Metcalf, Messrs. E. A. Mitchell, A. S. Moore, A. Keith Murray, W. Newnham Davies, R. L. Nimmo, W. M. O'Kelly, J. R. Orme-Webb.

H. C. Paterson, H. H. Payne, W. H. Pease (hon. secretary), Sir Alfred Pickford, Messrs W. H. Quarrell, H. S. Reece, F. A. Roberts, A. Rose, J. E. Roy, L. M. Scott, H. Shuldham-Shaw, S. Bostock Smith, Dr. H. J. H. Streadbury, Lt.-Col. A. J. Strange, Messrs. W. H. Stone, J. N. Stuart, W. E. Stuart-Menteith, Dr. C. Strickland.

Sir George H. Sutherland, Col. A. H. C. Sutherland, Messrs. C. W. Bath Taylor, H. L. Tottenham, C. W. Tosh, W. L. Travers, Col. C. E. Vickery, Capt. A. C.

THE INDIAN STATES COMMITTEE.

An India Office communiqué announces that the Indian States Committee, in view of certain misleading statements which have appeared, consider it necessary to issue the following statement. The Committee at the beginning of March last issued a questionnaire to 235 States in India. Of this number 108 are members of the Chamber of Princes in their own right, while the Rulers of the remaining 127 are entitled to representation only in the Chamber by 12 of their number.

Of the 108 States, the Rulers of which are members of the Chamber in their own right, 32 have up to the present intimated that they do not wish to send individual replies to the questionnaire but that their case will be represented to the Indian States Committee through the Standing Committee of the Chamber of Princes and the Right Hon. Sir Leslie Scott, P.C., M.P., who has been engaged by the Standing Committee to place their case before the Committee. Among these 32 States the more important are Kashmir, Bhopal, Patiala, Tonk, Bundi and Bharatpur.

Twenty States, on the other hand, have sent in individual replies to the Committee. Among these twenty the more important are Hyderabad, Mysore, Travancore, Jodhpur and Kolhapur. Of the 127 States, the Rulers of which are entitled only to representation in the Chamber, 21 have intimated that they will be represented by the Standing Committee and Counsel, while 12 have up to the present sent in individual representations.

The total number of replies received up to the present is therefore 85, and the total number of replies outstanding is 150.

THE GOVERNOR-DESIGNATE OF BOMBAY.

The India Office announces that the King has approved the appointment of Major-General Sir Frederick Hugh Sykes, G.B.E., K.C.B., C.M.G., M.P., to be Governor of the Presidency of Bombay in succession to Sir Leslie Orme Wilson, G.C.I.E., C.M.G., D.S.O., whose term of office will expire next December.

Sir Frederick Sykes, who was born in 1877, has been M.P. for the Hallam Division of Sheffield since 1922. He entered the Army in 1900 in the Imperial Yeomanry and the following year became second lieutenant in the 15th (The King's Own) Hussars, with which unit he served in West Africa and India.

In 1908-09 he passed the Staff College, was G.S.O. in the War Office, 1911-12, joined the Royal Flying Corps in 1912, and after service with that Corps in France commanded the R.N.A.S. in the Eastern Mediterranean, 1915-16. In 1917 he became B.G.G.S., Supreme War Council, Versailles. He was Chief of the Air Staff in 1918, and Controller-General of Civil Aviation in 1919-22. In recent years he has been a director of a number of industrial and commercial undertakings, including the Underground Electric Raiways of London and the London General Omnibus Company. Lady Sykes is a daughter of the late Mr. Bonar Law.

INDIA OFFICE COMMUNIQUE.

An India Office communiqué states that the following will represent India this year at the Assembly of the League of Nations: Delegates, The Right Hon. the Earl of Lytton, G.C.S.I., G.C.I.E., Captain His Highness Nawab Sir Tale Muhammad Khan Sher Muhammad Khan, K.C.I.E., K.C.V.O., Nawab of Palanpur, Sir Basanta Kumar Mullick, I.C.S. Substitute Delegates: Sir Edward Maynard Des Champs Chamier, K.C.I.E., Sir Kurma Venkata Reddi Nayudu, Abdullah Yusuf Ali, Esq., C.I.E., I.C.S. (Retd.).

THE CALCUTTA DINNER.

Sir Alexander Murray presided, and Sir Harcourt Butler, lately Governor of Burma and at present Chairman of the Indian States Committee, was the guest of the evening at the twenty-first Calcutta Dinner held at the Hotel Cecil on June 5. Although the attendance did not quite reach the record figure of a year ago, covers were laid for over 320 subscribers and guests, the gathering, as usual, being a very representative one.

The Chairman, proposing "The City of Calcutta and our Guests." said: "It is not long since Anglo-Indians felt they had a grievance owing to the scant attention paid to Indian affairs by the British public. In this, as in other respects, times have changed. Not a day passes but some newspaper has something to say concerning India, her princes or peoples, their politics or problems. Personally, I welcome this change and consider we are indebted to those editors and special correspondents who are keeping public opinion in this country in touch wth the changing conditions out East."

Sir Alexander added that he was one of those who made no apology for the British being in India, who believed it was the hand of Destiny that led them there, and that the time was not yet when Britain could do more than loosen slowly the guiding reins Providence had placed in her hands. Whatever arguments might be advanced against Britain's right to be in Delhi or elsewhere in the interior, he had never heard an argument that carried any weight against our right to be in Calcutta. There was no Calcutta till the English settled there—no Calcutta worth having until the Scottish joined them on the banks of the Hughli.

Commenting on the growth of Calcutta, the Chairman asked: How many of you realise, for instance, that 10,000,000 tons weight of exports and imports are now handled annually at the jetties, in the docks, or in the stream?

"Since the end of last century the value of the trade of the port has trebled. The new jetties and landing places, the new docks not yet completed, all reflect credit on the port authorities, and we owe a great deal to the present Chairman, Mr. Stuart Williams, whom we are glad to see here to-night.

"What changes, too, are taking place in the nature of the trade. Where formerly cotton goods represented half the value of the imports into Calcutta, now about one-third only is represented by these manufactures. Motor-vehicles come in at the rate of about 6,000 per annum, until now there are 25,000 on the streets of Calcutta alone. Is it any wonder the old hackney carriage and bullock cart are disappearing, driven off the streets and highways by buses and lorries that have wakened up the East more than anything else in recent times?

"Of the exports, Bengal's staple industries, jute and tea, still lead the way, their value alone representing about three-fourths of the export trade of the port. At home nowadays we hear much about the necessity of encouraging the producer and the manufacturer. In Calcutta we realised this long ago. Whereas exports of raw jute remain much about the same as thirty years ago, the jute mills on the banks of the Hughli are now manufacturing into cloth and bags three times as much jute.

"In the jute trade we are proud of what the ryots have done as producers and of what the mill owners have done as manufacturers, but we give credit to the tea industry. While the acreage under tea since the closing years of last century has increased about 50 per cent., the production has increased anything from 100 to 150 per cent. Was it not Jonathan Swift who gave it as his opinion that whoever could make two blades of grass to grow where only one grew before would deserve better of mankind and do more essential service to his country than the whole race of politicians put together."

In conclusion, the Chairman said he coupled the toast of "Our Guests" with the name of Sir Harcourt Butler. Sir Harcourt, with his intimate knowledge of India, its

Digitized by Google

princes and its peoples, was pre-eminently the man to undertake the task assigned to him of making a preliminary investigation into the relation between British India and the Indian States.

Sir Harcourt Butler, who was the recipient of many congratulations on his well-earned promotion in the Birthday Honours to G.C.S.I., responding, said he had been asked to say something about the reforms with which he had been associated in two provinces. A strong Commission of able men had been appointed to examine their working. He was a critic of the Montagu-Chelmsford reforms before they received the approval of Parliament; thereafter he worked them as a loyal servant of the Crown and a lover of India and her peoples. They were based on the natural assumption that Indians would help Europeans in the political education and uplift of the country. Yet some of the most acute minds of India set themselves deliberately to wreck the Constitution and to try to induce the English to leave India.

The reforms came in the wash of the greatest war of history, when a wave of self-consciousness spread over Asia. The ideas of representative institutions expressed in them fell on people saturated with centuries of autocratic rule, divided by violent religious differences, and further subdivided by the strongest caste system the world had ever known. These were formidable difficulties, but in spite of them India had come through a period of great upheaval with comparatively little serious disturbance. There had been disappointments, but the seven years in which the reforms had been working were barely a moment in the life of India.

His experience had led him to four cardinal principles of faith, which he regarded as fixed for any time that we could foresee. (1) Reform was necessary in principle. (2) Western institutions could only be worked with the help of those who were used to them; Indians could not work them unaided. (3) The British could not leave India, even if they wanted to do so. (4) The British system was more firmly established now in India than at any time during the last 40 years.

He believed in his own people, in the accumulated wisdom of the British Parliament, and in the good sense in the long run of moderate Indian opinion. In India as elsewhere economic questions were growing in importance. India already enjoyed a large measure of economic independence. The economic growth of India would bring many difficult problems with it; labour difficulties were already to the fore. The conflict of capital and labour might strike across and profoundly influence the whole political and social organization of India. It might separate those who were now united and unite those who were now separated.

While he could not predict the future, he noted reassuring signs. The points of contact between British and Indians were being multiplied. A degree of progress had been achieved which would have been considered quite impossible 40 years ago. Indians were beginning to invest more capital in business. The spirit of partnership seemed to be gaining ground. Events must not be judged by what occurred in the Legislative Assembly. It was the merchants who made the old India we knew. Would it be the merchants that would make the new India that we felt but could not yet fully see? He would never believe that the spirit that founded Calcutta on a feverish swamp on the banks of a difficult river was dead in our race. In facing the difficulties of the future let us remember the great difficulties overcome in the past. Let us be strong and of good courage in working out, in partnership with Indians, the destiny of India.

Proposing the toast of "The Chairman," the Maharajadhiraj of Burdwan said that Calcutta and Calcutta merchants had made the British India of to-day, and their influence permeated the whole country. The Calcutta boxwallah had every right to be proud of his achievement, and none more so than the Chairman. Referring particularly to the social and political activities of one whose range was not by any means limited to commerce and industry, the speaker said that Calcutta to-day needs more men of Sir Alexander Murray's type.

The formal proceedings terminated with a cordial vote of thanks to the organisers of the gathering for their as usual admirable arrangements. Messrs. Walter Davies (hon. treasurer) and E. W. Bowrey (hon. secretary) briefly responded.

The company, in addition to the foregoing, included Sir Archy Birkmyre, Bt., Mr. Henry Birkmyre, Mr. Victor Butler, Brig.-Gen. H. Bateman-Champain, Sir Charles Barrie, Sir Stapylton Barnes, Mr. C. H. Bompas, Sir William Currie, Sir John Cumming, Mr. J. Bain Crichton, Sir T. S. Catto, Bart., Mr. L. T. Carmichael, Mr. J. B. Crichton, Mr. C. B. Chartres, Mr. A. C. Coubrough, Mr. F. C. Danger, Sir James Donald, Hon. Sir Maneckji B. Dadabhoy, Mr. A. W. Dods, Mr. H. C. Edmondson, Sir Edward O. Every, Bart., Sir Arthur Froom, Mr. M. M. S. Gubbay, Mr. N. Gupta, Mr. W. O. Grazebrook, Sir Ewart Greaves, Mr. W. J. K. Hegarty, Sir Leslie Hudson, Mr. H. M. Haywood, Col. W. R. Izat, Mr. R. Langford James, Mr. H. D. C. Jones, Mr. Cecil Kennedy, Mr. James Keenan, Sir James Leigh-Wood, Mr. R. O. Law, Sir Chas. Low, Mr. A. R. Leisham, Mr. T. McMorran, Mr. W. Ross Munro, Sir Chas. McLeod, Bart., Major Norman McLeod, Sir Henry McMahon, Sir Duncan Macpherson, Mr. A. Preston, Sir Alfred Pickford, Mr. George Pilcher, M.P., Mr. W. E. Preston, Sir Benjamin Robertson, Sir Campbell Rhodes, Sir Ganen Roy, Sir George Sutherland, Mr. G. G. Sim, Col. Sir Buchanan Scott, Lt.-Col. A. H. C. Sutherland, M.C., Sir Newton Stabb, Mr. S. C. Stuart-Williams, Mr. W. L. Travers, Major H. G. Vaux, Sir Henry Wheeler, Mr. A. d'A. Willis, Sir Walter Willson, Mr. R. B. Wilson, and Col. Sir John-Young.

THE INDIAN CENTRAL COTTON COMMITTEE.

The appointment of Mr. B. C. Burt as Director of Agriculture, Bihar and Orissa, deprives the Indian Central Cotton Committee, which celebrates its eighth anniversary in July, not only of a Secretary who has been with the Committee since its inception, but also of one of its most valuable assets. Mr. J. H. Ritchey, who has officiated twice as Deputy Secretary during Mr. Burt's absence on leave or deputations, has been appointed to succeed Mr. Burt. He will hold the office for a period of five years.

Mr. Richey, who has shown himself to be a very capable deputy, has considerable experience of the cotton industry, having for a long time been a Deputy Director of Agriculture in the Central Provinces. For several months prior to his appointment Mr. Ritchey held the responsible post of Director of the well-known Industrial Institute in Indore.

FREEMASONRY IN INDIA.

Lord Cornwallis, Deputy Grand Master, has now submitted to the Duke of Connaught, as Grand Master of the United Grand Lodge of Freemasons, the report of the Mission to India, Burma and Ceylon, undertaken between November, 1927, and March of the present year, in conjunction with Lieutenant-Colonel G. V. A. Monckton-Arundell, Sir John Ferguson, Sir Kynaston Studd, and Lieutenant-Colonel S. Pleydell-Bouverie. The appointment of the Mission was announced in THE NEAR EAST AND INDIA on September 1.

The deputation visited the District Grand Lodges of Bombay, the Punjab, Bengal, Madras, Burma, and Ceylon, attended 46 Lodge meetings, in which 102 Lodges took part; eight Royal Arch Chapters, in which 14 Chapters took part; and 18 other Lodges were met informally. The Grand Superintendent of Bombay and the District Grand Master of Ceylon were installed; a temple at Coimbatore was dedicated; the foundation stone of the Bicentenary Memorial Building at Freemasons' Hall, Calcutta, was laid; the Lodge of the Sawbwas and the Lodge of the Federated Shan States in Burma, the Archibald Campbell Lodge in Madras, and the Schwechaunge Chapter at Yenangyoung, Burma, were consecrated, and Masonic services were held in Bombay, Lahore, Calcutta, Lovedale, Dibrugarh, and Madras. The approximate mileage traversed was 25,754.

Lord Cornwallis pays a high tribute to the hospitality received at the hands of Governors, Residents, Commissioners, Maharajas, Bishops, and others, many of whom were not members of the Masonic Order. He also pays tribute to the excellent condition of the Lodges and Chapters visited, which are composed in membership of Europeans, Parsees, Chinese, Burmese, Hindus, Americans, Cingalese, Punjabis, Muhammadans, Sikhs, Armenians, Greeks, Bengalis, Jews, Aracanese, Madrassis, etc., forming a real Brotherhood of Man.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Roumania's Stabilisation Loan.

"Conversations" on the subject of a loan for the stabilisation of Roumania's currency have been taking place recently in London. The Roumanian delegates have been made acquainted with the attitude of British financial houses. There is no hostility to the loan in principle; but in Roumania's own interests it is essential that she should clear up all questions relating to monetary claims that have been made upon her. With full knowledge of the total amount of the indebtedness that she will have to meet, she can carry through stabilisation with much greater chance of success and of avoidance of subsequent stress. It is natural that the Roumanian Government should wish for a loan without delay, but, as far as I can gather, there is little likelihood of the loan being actually made before the autumn. Its flotation then must necessarily be contingent on certain circumstances.

Ottoman Debt Decision.

The course taken by the negotiations over the Turkish Debt question has been such that any new report of a settlement is likely to be viewed with considerable doubt until a commencement is actually made with the payment of the coupons. As I have already pointed out, the representatives of the bondholders took a firm stand in regard to the latest Turkish proposals, and it would seem that their representations have had an effect at Angora for it is now announced that an agreement has been reached between the Turkish Government and the representatives of the bondholders. The proposals covered by the latest settlement are that the Debt agreement should be signed before June 15, that it should be ratified before December 1, and that the payment of the first coupon should take place in December and that of the second on May 25, 1929. The signature of the agreement, its ratification, and the payment of the first coupon in December will bring to an end an episode which has done much harm to Turkey's credit abroad, but it is a long time to December, and pending the *fait accompli*, most people will be inclined to reserve judgment as to the settlement being final. As I have explained, a settlement was an essential preliminary to the flotation of any new loan for Turkey abroad, and it was in the best interest of Turkey that the settlement should have been concluded with the least possible delay. The difficulties of Turkey's position must not be overlooked. The country is handicapped by a very serious shortage of credit, and the Angora authorities have undoubtedly been hoping to obtain a loan with which to meet their various liabilities including the Debt payments; hence their delay over the settlement.

Burmah Oil Company.

At the meeting of the Burmah Oil Company, Sir John Cargill dealt in detail with the difficult conditions which have obtained in the Indian market during the past year. He explained that prices for kerosene in India were heavily reduced immediately the first Russian cargo arrived on account of the Standard Oil Company of New York, and thereafter steadily declined. He added that but for this untoward and entirely unexpected development the heavy fields expenditure on the opening up of the Singu Field would have been largely met by revenue from the greater tonnage marketed. The question of Russian oil competition has been referred by the Government of India to its Tariff Board to determine the extent and nature of the protection, if any, which in the circumstances should be provided for the local industry.

A New Spirit in Turkey.

The existing poverty in Turkey, to which I have referred above, which is due to the fact that the country has made little or no real economic progress since the War, has been giving those in authority there cause to consider whether hitherto they have been working on the right lines in their enthusiasm to fashion a new country, and there are not wanting signs of a development of a new attitude which, if it develops, may go far to advance the economic progress of the country. This change of front is very noticeable in the Turkish Press. The editor of one of the most influential papers has been touring Europe and the series of articles in which he is conveying his impressions is significant for the frankness with which he admits how much Turkey has to learn from Europe in regard to agriculture and commerce. The writer deals in special detail with agriculture, and emphasises the need for the improvement of crops and for the development of marketing arrangements abroad. His admiration for the organisation of commerce in Europe is unbounded, and an interesting point he makes is the need of Turkey for foreign experts. The suggestion that these should be obtained from Germany is not surprising in view of the close relations which have existed between the two countries, and it really matters little whence they are obtained, for the important thing for civilisation is that Turkey should take her place in world commerce as speedily as possible. It is the end that matters and not the means.

Suez Canal Company.

As usual, a comprehensive survey of the year's working was given at the meeting of the Suez Canal Company, a

Digitized by Google

report of which will be found elsewhere in these colunms. The year was an exceptional one in the history of the Canal. The traffic of the Canal totalled 5,545 passages, representing a net tonnage of 28,962,048, and both these totals surpassed all previous records. This increased activity was reflected in the transit receipts which amounted to 208,000,000 gold francs, a total which was 11 per cent. higher than the figures for 1925 which were previously the best on record. Special interest naturally attaches to the forecast with regard to the current year. For the first four months of this year the traffic receipts have again been excellent, and compared with the same period of 1927 there is an increase of about 850,000 tons, but the warning is given that an examination of the economic situation does not at present warrant the conclusion that this progress in the traffic through the Canal will be continued until the end of the year. It is sincerely to be hoped that subsequent developments will enable this forecast to be modified, for the steady progress of the trade revival is essential if the world is to make pronounced headway in its recovery after the War.

COMMENTATOR.

NEAR EAST MARKET REPORTS.

The current issue of the monthly review of Barclays Bank Ltd, contains the following reports:—

The Sudan.

The general position of the market is quiet and prices are steady for some articles while for others there is a tendency for quotations to fall. The demand from Egypt for sesame is declining. A fair movement is reported in hides and skins, principally to supply requirements from Turkey, while in cabots, tea, gunnies and other imports, the position is just steady. The new model of the Ford car has made its appearance in the country, and large bookings are stated to have taken place. Reports concerning the Gezira cotton crop are most conflicting, but it is generally agreed that the quality, compared with previous years, is not so good and ginning yields are not high. A great deal of the cotton is being lost, owing to a scarcity of labour for picking, but as the prices obtained in Liverpool are higher, it is not anticipated that there will be much loss from the shortage in quantity.

Palestine.

During April the wholesale trade was dull, but activity was shown in the retail market owing to seasonal buying. Exports of cereals have come to a standstill and, in view of the prospects of very poor crops, owing to a complete failure of rains and the early advent of the hot weather, prices have an upward tendency. Flying locusts made their appearance in certain parts of the country, but efforts are being made to destroy them, and so far no damage of any consequence has occurred. The swarms appear to have crossed over from Transjordania and were moving westwards through the Esdrælon plains to Haifa. Wheat and barley are reported to be satisfactory in Central Palestine and fair in the Southern area, but in the North reports indicate the possibility of complete failure in many localities. The transplanting of tobacco is in progress, but the areas under cultivation are considerably smaller than in previous years. The oranges left in the country are realising exceedingly high prices for local consumption. The blossoming of the new crop has been satisfactory generally, despite earlier damage from unfavourable weather.

COMPANY NOTES AND REPORTS.

SOSPIRO OILFIELDS.

The report of Sospiro Oilfields for the year ended March 31, 1928, states that substantial production is being obtained by the Societate Sospiro from its oilfields in Varful Draganeasa, Filipesti and Moreni. The drilling programme in the Moreni field has been extended and further wells will be completed shortly. Exploratory drilling has been continued on the Cervenia and Pitigaia sections, and, while progress in these two fields has necessarily been slow, the indications obtained, particularly in regard to the Cervenia field, are very favourable, and in the event of well No. 3 Cervenia, which is at present being drilled into the oil and has encountered very strong shows of gas, proving a successful producer, an important oilfield will be opened up, the greater part of which is situated in the territory of the Societate Sospiro. The accounts show debit to revenue at March 31, 1928, of £43,528, compared with £34,379.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, June 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahsud for Calcutta (Birkenhead, June 26).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 27).

British India Line.—S.s. Manela for Colombo, Madras, and Calcutta (London, June 16); s.s. Trelissick for Bombay and Karachi (London, June 30).

Cunard Line.—S.s. Bantria for Gibraltar, Ceuta, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool June 23, Swansea June 24); s.s. Bactria for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, July 21).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, June 16); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 5).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, June 22); s.s. Macedonia for Bombay (London, July 6).

Prince Line.—S.s. Korean Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, June 20); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, June 20).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar, Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 26, Swansea June 26); s.s. Serbino for Malta, Alexandria, Jaffa, and Haifa (Swansea June 25, Liverpool June 26); s.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool July 7, Swansea July 12); s.s. Flaminian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 11); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 12); s.s. Andalusian for Oran*, Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 14). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ROAD CONSTRUCTION IN GREECE.

As is well known the need in Greece as in other Balkan countries for proper roads is very pronounced. Special interest attaches therefore to the recent award of an important road contract to Messrs P. G. Macris Trading and Industrial Co., Ltd., of Athens, Agents for the Shell Co. (Hellas) Ltd., in Greece, since it constitutes the first determined attempt on the part of the Greek authorities to deal with the question of communications and thus to further the development of the country's resources.

The story of roads in Greece can be dismissed in a very few words. A century ago the country did not possess a single carriage road, and the progress that has been made since that time has been so poor that as recently as 1925 the length of the existing roads was no more than 8,617 miles, an additional 570 miles being at that time under construction. The condition of most of these roads is poor; indeed, except for the main thoroughfares, few of them are fit for motor traffic. Two reasons are mainly responsible for Greece's failure, hitherto, to solve the road problem. The question of finance has been constantly operating to preclude new enterprises which could possibly be postponed, while the importance of the sea traffic of Greece has rather tended to obscure the need for the improvement of the land communications.

From the difficulty with which a decision was reached in respect of the present contract it would be possible to draw the conclusion that even now Greece's need for roads is only imperfectly understood. That would, however, be only a partial explanation of the long-drawn out consideration of the question. In countries like Greece the award of important contracts not infrequently becomes a political question; and during the current year the road contract has played an important part in Greek politics, occasioning at least one ministerial crisis.

Some details of the contract may be of interest. The contract provides for the construction of a complete system of up-to-date roads, which will be known as "national" roads and will link up the chief cities and towns of the country with the productive centres. The length of these roads will be not less than 5,000 kilom. (3,100 miles), the estimated cost being £6,000,000 of which about one million pounds is to be advanced now to the Greek Government for the commencement of the work and is to be repaid out of the proceeds of a loan of not less than £2,000,000 which is to be issued under the auspices of a group of London banking and issuing houses. The Greek Government will raise further loans up to the £6,000,000, during the progress of the works, on such terms as are obtainable at the time, subject to the above group having the preference.

The service of the loan will be met from the proceeds of the import duty on benzine and from tolls which will go to form a standing Road Fund. While the proceeds of the duty on benzine alone are amply sufficient for the service of the total loan of £6,000,000 covered by the Macris contract, the Greek Government has agreed to offer as a collateral guarantee the surpluses of the special revenues assigned to the service of the loans under the control of the International Financial Commission. It is estimated that the resources of the Road Fund will also be sufficient to provide the funds for the construction of the other roads required, known as "provincial" and "communal" roads, the cost of which will not be less than £12,000,000. These provincial and communal roads will be constructed with the national roads as the yearly resources of the Road Fund will permit. The cost of carrying out the complete road programme of the Government is estimated at £18-20,000,000.

With the completion of this programme it is anticipated that the national resources of the country will be greatly developed, that new centres of production now out of the way will be opened up, and that easy access to the famous archæological sites (coupled, of course, with improved hotel accommodation) will immensely favour the development of the tourist industry which constitutes such an important item of the income of other Mediterranean countries.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

The Foreign Loan.

Bucharest, June 7.

The negotiations for the stabilisation loan still drag on and, although it is confidently hoped that they will ultimately be brought to a satisfactory issue, it hardly seems likely that the loan will be floated before the autumn. In the expectation that the negotiations would be terminated by that date it has been decided to call an extraordinary session of Parliament some time during this month (June) to deal with the relative legislation. It remains to be seen what progress will be made in the meantime.

The Economic Situation.

Trade and industry have for the past year been suffering from a depression which amounted to a crisis, caused on the one hand by the lack of money (and consequently the high interest demanded for credits by the banks), and on the other hand by the exceptionally poor harvest of 1927. It is hoped that the promise of an excellent harvest this year will be abundantly fulfilled, and that the foreign loan, if and when granted, will restore the money market to more normal conditions.

Harvest Prospects.

The harvest prognostications on the whole are favourable, though in some districts the autumn crops have suffered from heavy hailstorms and in others there has been too little rain, as in certain districts in Moldavia. A former British chronicler of Roumanian customs somewhere states that the Roumanian is an enemy of trees. This is well illustrated in those parts of Moldavia which habitually suffer from drought, for there large tracts of forest have been cut down by the peasants, who rarely replant them, unless they are obliged to. Thus they have impoverished their own land, and are now yearly suffering from the consequences of their thoughtlessness. Fortunately the Roumanian Government has now taken steps to stop reckless deforestation.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 12.

Considerable liquidation in Wall Street and a certain amount of selling from Paris have conspired to produce a somewhat heavy tone in the Stock Markets here, and apart from the continued steadiness in gilt-edged stocks the general tone of markets has been irregular. The strength of high class investment securities is due to the favourable conditions which at present exist in the money market, thanks to the recent large acquisitions of gold by the Bank of England. This has prompted talk of an early reduction in Bank Rate, but so long as the monetary position in America remains uncertain and while the actual stabilisation plans of the French Government are still in doubt it is unlikely that a reduction in the official minimum will be made, seeing that at best the lower level could probably only remain in force for a relatively short period. In the meantime the flow of new capital issues shows no abatement and heavy over-subscription has been the response to several prospectuses in the past week.

The Declining Return on Investment Stocks.

We recently called attention to the advantages of the old-established trusts as compared with their newer rivals. This point was forcibly emphasised by Mr. Robert Fleming at the Investment Trust Corporation meeting this week; and the point he made intimately concerns every investor. "With rare exceptions," he said, "we find it impossible now to obtain such rates of return as were procurable five or six years ago, and many of the bonds issued then, or at any earlier date, are being paid off and replaced by securities of less attractive character from the point of view of return. In our own case we have had to take repayment during the year in this way of as large a sum as £71,000." This clearly means that it will tend to be increasingly difficult to maintain revenue in the future, both for the investment trust and the ordinary investor. But the old-established trusts—and many ordinary investors, too—have and will retain for some time a considerable proportion of high-yielding securities. They have not, therefore, cause for immediate concern, but the newer trusts are less favourably circumstanced in this respect. In short, investors must be prepared to accept in the future less attractive returns on fixed-interest bearing stocks.

Amalgamated Dental Dividend.

The profit statement of the Amalgamated Dental Company for 1927 will give satisfaction to the deferred ordinary shareholders, for it announces the first distribution to be made since the shares were created in 1924. This company, registered in 1905, has in recent years pursued a policy of expansion, and is now of considerable proportions, its issued share capital exceeding £2,500,000. The deferred shares were issued in connection with the fusion of the business of Claudius Ash, Sons and Co., and De Trey and Co. During the past year the net profits have advanced from £194,680 to £217,209 and it is proposed to pay a dividend of 6¼ per cent. on the deferred ordinary shares. It would, however, have been possible to make a distribution before, but the directors have wisely decided to build up a reserve. This is not ignored on the present occasion, for £20,000 is allocated to reserve, thus raising the total to over £190,000. In view of the large amount of capital employed it would clearly be desirable to continue this policy and no doubt the directors will do so. Meanwhile, the meeting will be awaited with more than ordinary interest. The 8 per cent. cumulative preferred ordinary shares, yielding £7 10s. have regularly received their dividends, while the 5½ per cent. cumulative preference shares return £6 1s. per cent.

The Turkish Debt Settlement.

The Turkish debt problem has been prolonged. At last, however, it seems reasonable to assume that a settlement is in sight. A statement has been issued this week to the effect that the Turkish authorities have consented to sign an agreement relating to the debt settlement before the 15th of the present month, to secure its ratification before December 1 next and to pay the first coupon on, or shortly after, December 15 and the second on May 25, 1929. These terms represent a compromise, the Turkish Government securing a postponement of roughly six months of its resumption of payments. In Turkey it has been semi-officially stated that it is quite out of the question to have the agreement ratified during the present session of Parliament. It is added, however, that the Turkish Government would be prepared to come to some working arrangement with the bondholders after Parliament had reassembled in the autumn. This is the present position and it is to be hoped that the Turkish Government will faithfully honour its agreement. Turkey's credit will hardly stand the strain which further procrastination would involve.

The Luther Brewery Company of Bucharest is to increase its capital from 28 to 200 million lei.

Further reductions have been made in Roumania's export duties, including those on wheat flour, maize, meal derivatives, and sugar.

Roumania's exports of cereals during the first three months of the year (in tons) were as follows:—Wheat, 3,358; rye, 2,620; maize, 130,856; barley, 26,886; oats, 749; millet, 62; wheat flour, 2,496; bran, 3,920.

The results of the Bengal Coal Company for the half-year ended April 30, 1928, show a profit of Rs.878,000, including carry-forward; depreciation, Rs.123,000; dividend, Rs.600,000; commissions, Rs.65,000; carry-forward, Rs.90,000. Dividend for half-year, 15 per cent.

It is reported that 3,017 tons of locust beans were exported from Cyprus during April, 1928, reducing the present stock to 4,028 tons.

Violent earthquake shocks were reported last week from the neighbourhood of Brusa (Anatolia).

Motors and Motoring.

By G. B. B.

The "tar nuisance," as so many motorists call it, is with us. As a matter of fact, tar is about the cheapest and, in many respects, about the best surface dressing that can be used for road work, and it is a really quick drier, provided, as is generally the case, that a good quality, well-boiled tar is used. When applied and coated with a good layer of chips or coarse gravel it makes an excellent and lasting surface for the road. The motorist wants roads with good surfaces, but he does not want to give the surveyor sufficient time to prepare them; his idea seems to be that there ought to be something that could be applied well after midnight and would be dry and fit for use before the milk carts were out, but unfortunately we have nothing of the kind available at present. Another thing is that, tar is comparatively inexpensive, although it is much dearer than most motorists think, and were any other dressing of a much more expensive character used, the cost of road maintenance would increase. That would mean that motorists would have to pay more than the utterly inadequate proportion towards road upkeep than they pay now or that the rural and country rates would have to be increased.

A 5 h.p. Model.

The light car "war," as it has been called by so many writers has, in their view, I suppose, been intensified by the entrance of another "baby" into the field, a 5 h.p. model which will probably be very well advertised and there is no light car war at all. All that has happened has been that a reduced price is being announced for a car which has an engine or 9 h.p., which was introduced at last year's Motor Show and which has been in production for some weeks. This new baby car, then, is not new nor is it a baby! From a strictly business point of view, I think the manufacturers of that car are too shrewd to enter into any car "war," the field is already fairly crowded, with the Austin Seven, the Morris Minor and the Triumph Seven, and whilst there is plenty of room for keen business competition, there is no one in the trade who would view a price war with anything but apprehension.

A Battery Testing Instrument.

From the Edison Swan Electric Co., Ltd., Queen Victoria Street, are to hand particulars of their S.O.S. hydrometer for battery testing. The instrument contains three chaslyn balls, which sink or rise according to the condition of the electrolyte and so enable even a novice to see at a glance whether his battery requires charging. Obtainable at a reasonable price, this appliance is just the thing for the non-technical car owner.

American Cars in India.

Talking the other day with a friend just home from India I was told that American cars outnumbered the British in that country by about six to one, a figure which I regard as an exaggeration. At the same time, it must be admitted that the Americans have got a strong hold on the Eastern market, a fact largely due, as I have said which will no doubt make good. But, as a matter of fact, before, to a failure on the part of British manufacturers to let the prospective buyer know what they have to sell. This reminds me that at the Geneva Motor Show this year there were only three British firms represented, although there were between 30 and 40 American exhibitors. It is a fact that cannot be explained away satisfactorily that on the Continent few people are aware that Britain is a great motor manufacturing country, their ignorance being due to the entire lack of British advertising in Continental and Near Eastern papers, and the small number of British cars that are seen on the roads between Paris and Stamboul. Yet American motor advertisements are in every journal one picks up and American cars are more familiar than even Italian on European roads.

General News.

I hear that the Ascot Motor and Manufacturing Co., Ltd., have acquired the Letchworth works of the Phœnix Motor Co., and that in future the Ascot car will be made in the garden city. Spare parts and service for Phœnix Cars will be obtainable at Letchworth as formerly.

I have not yet had space to congratulate the B.S.A. Co., Ltd., on its excellent showing for the year's trading. A sum available for distribution of about £500,000 on a £5,000,000 capital speaks for itself. The company this year have adopted the wise policy of conserving their resources and after paying preference dividends, etc., have carried forward about £340,000.

Information is just to hand that a British firm of aircraft manufacturers have just been successful in obtaining a large contract for supplying the Argentine Navy with sea and other planes. With this, naturally, goes a good deal of business in the shape of accessories, spares, etc. The statement is made that price was not a deciding factor in the case, the decision being made solely on the excellent manufacture and the quality of the materials used. As a matter of fact the British price was considerably in excess of that of the nearest foreign competitor for planes of a similar power and size.

Company Meetings.

BURMAH OIL COMPANY.

Satisfactory Results under Unfavourable Conditions.

Kerosene Rate War in India.

The Position and Outlook.

Sir John Cargill's Speech.

The twenty-fifth annual general meeting of the Burmah Oil Company, Limited, was held on June 11 in the Merchants' Hall, 30, George Square, Glasgow.

Sir John T. Cargill, Bart. (chairman of the company), presided, and there was a large attendance of shareholders.

The Chairman said:—Ladies and gentlemen,—Following our usual practice I propose, with your permission, to take as read the notice calling this meeting, together with the report and accounts, and to call upon the secretary to read the auditor's report.

The auditor's report having been read by Mr. F. G. Holdsworth (the secretary),

The Chairman, continuing, said:—Ladies and gentlemen,—With the industry still under the cloud of world over-production, and values for some of our products already below the levels ruling in 1926, I refrained, when I addressed you last year, from prophecy as to the results for 1927, which you now have before you. But, in view of your unwavering and whole-hearted support of the settled policy of your board to deal conservatively and soundly with profits, I had no hesitation in venturing the claim that your company was as well placed as the best—and much better placed than most—to regard with reasonable equanimity the vacillations in values so characteristic of the petroleum market. And with the actual figures now before us I find no reason for revising that claim.

The unfavourable conditions which we were then facing continued throughout the year. Their consequences have been reflected, not only in our own but also in the published accounts for the period of practically every company in the industry, other than those of a purely holding nature, whose figures are consequently not of a comparable nature. If, however, reconsideration of my claim seems unnecessary, subsequent events call for some qualification, since it had in mind the normal economic reaction of fluctuations in world supply and demand, and took no cognizance whatever of peculiar and special conditions directed at and operating in the Indian market alone.

The Indian Market.

As the report reminds you, the whole volume of your products, with the exception of paraffin wax, is marketed in India. Kerosene represents some 60 per cent. of that volume, and more than 40 per cent. of the kerosene has, ever since 1905, been put on the Indian market under our maximum price policy at a price always materially and on occasions enormously below world parity, and the balance, on average, also well below prices based on world parity at which foreign kerosene could be laid down at the time in India. From this it necessarily follows that, since the average price at which we have sold our kerosene in India has been very considerably below that at which kerosene could at any time have been imported and sold there consistent with world market costs of the product and of freights, and since our kerosene represents some 60 per cent. of our marketed production, we have had in this policy an important insurance against the normal vicissitudes of petroleum values. In other words, since 60 per cent. of our products was regularly being marketed well below world market values current at any time, vacillations of prices downwards meant much more for others in the industry than for ourselves. This, then, was not the least of the factors which I had in mind when I made the claim last year to which I have referred.

But when, through the action of others, India becomes the cockpit of their disputes my statement requires qualification. While foreign importers to India can, normally, make good elsewhere the losses which may be involved in the uneconomic and unusual prices at which, for their own purposes, they may be prepared to sell in India, we cannot, since our production has to be marketed there and the indigenous industry of India must have in its home market at least fair competitive conditions if it is to live. But what has been the position?

Importations of Soviet Kerosene.

A few months only after we last met here the Standard Oil Company of New York commenced importations to India of kerosene which it had purchased on contract over a period of years from the Soviet Government of Russia. As is well known, these supplies are the production of oilfields and refineries in Russia acquired and developed by foreign capital before the Russian Revolution, which were expropriated by the Soviet Government without compensation. Of these expropriated properties those of the Royal Dutch-Shell group were probably the most substantial and important. That group has stated that for years—at one time in one way, at another in another way—it had been endeavouring, not alone for itself, but for all others interested, to secure restitution or compensation—or at least the recognition of the principle of compensation. It had on occasion purchased—in that direction only and with participation open to all—and on occasion it had boycotted Russian supplies, but all through in close consultation and agreement with the other interested parties, including important members of the Standard Oil group; and, indeed, the Standard Oil Company of New Jersey and not the Royal Dutch-Shell group itself had apparently been the most recent negotiator, all the parties being finally agreed to a minimum time period to test the chances of the policy of boycott.

While, it is alleged, these parties were thus bound, the Standard Oil Company of New York, afterwards publicly condemned for doing so by the Standard of New Jersey, was persuaded by the Soviet to enter into this contract, significantly, if true—in the light of Soviet political activities—not only specially for the Indian market, but also at an f.o.b. price lower than the then current market, and, even so, subject to still further reductions in accordance with the values which might be realised in India.

Royal Dutch-Shell Group's Action.

If not content with, at least passive in the past to, the entirely disproportionate share of the imported kerosene trade of India being done by the Standard Oil Company of New York in the fact of the much greater geographical claims of its own Eastern production, the Royal Dutch-Shell group at once accepted the challenge—whether the Standard's intention was to increase the trade disparity between them or merely to perpetuate it at the lower cost made possible by these exceptionally priced Russian supplies in place of supplies from America, as hitherto. Under our own arrangements with the Royal Dutch-Shell group we could have held kerosene prices in India until December 31, but we had no hesitation in deciding that we would gain nothing by this three months' delay, but would merely jeopardise for the future the extremely friendly and beneficial association which we have had with that group for 23 years, to which I made special reference in my speech two years ago, if we thus stood on the letter of our rights and did not live up to the spirit of that association on the first occasion on which it had been put to any serious test.

As a result, prices for kerosene in India were heavily reduced immediately the first Russian cargo arrived for the Standard, and thereafter steadily fell to a level even below that governing the volume of our maximum price policy—in other words, so far as the inferior quality is concerned, much below any level which has ruled anywhere for kerosene, at any rate since before the War.

Effect on Year's Results.

But for this untoward and entirely unexpected development, heavy fields' expenditure in the past year on extensive opening up of the Singu field, preparatory to putting that field into a condition more and more to meet the natural decline in production of the older Yenangyoung field, would have been largely met by revenue from the greater tonnage marketed in 1927 than in 1926, and the reduced profits for the year are mainly due, therefore, to a combination of these two factors, for our total fields' expenditure is, as you are aware, charged direct to revenue.

I have referred to this situation here to indicate at once the principal cause of the poorer showing for the year. In my address to the shareholders of the Assam Oil Company, Limited, at the company's annual meeting on the 31st of last month in London I dealt at some length with the consequences of this situation on the smaller indigenous producing companies of India as exemplified by the Assam Company's results, and for the better information of those of our own shareholders who may not have seen the Press reports of the proceedings at that meeting we are arranging to circulate a copy with the usual report of the proceedings at this meeting.

I shall be reverting later here to-day to this position, but will now proceed with you to my usual examination of the figures of profit and loss and of the balance-sheet.

Reduced Profits.

Depreciation of £396,533 5s. 2d. is lower than last year by £94,720 15s., the reason for which I shall explain later. Here it is sufficient to assure you that in the opinion of your board it is as usual on an ample scale. The balance of profit remaining after this charge is £1,903,312 7s. 9d., which is increased by transfer fees and interest and dividend account, amounting together to £804,360 6s. 9d., to £2,707,672 14s. 6d., as compared with £3,167,661 17s. 10d. in 1926, or a reduction of £459,989 3s. 4d. despite the increase in dividend and interest account of £114,419 18s. 8d. Debits to the profit and loss account are greater by some £128,056, mainly represented by the difference between increased income-tax and the special gift of £100,000 to Rangoon University. On the other hand, there is the saving of the £10,213 14s. 6d. of capital charges incurred in 1926, and the lower contribution to employees' provident fund following on the reduced final dividend now being recommended.

The net result is that the profit carried down is reduced by £588,046 1s. to £1,914,772 13s. 2d., and, after adding the carry-forward from 1926 of £453,469 7s., and making the same allocations as last year of £20,000 to insurance reserve, £200,000 to general reserve, and £150,000 to fields expenditure equalisation reserve, the balance to the balance-sheet is £1,998,242 0s. 2d., or £530,479 17s. 4d. less than that of 1926. From this Preference and interim Ordinary dividends for the year, absorbing £881,975 7s. 7d.,

Digitized by Google

have already been paid, and we are now recommending a final dividend on the Ordinary shares of 2s. per share, less tax at 2s. 1½d. per £, or 10 per cent., making 20 per cent. for the year, in place of 30 per cent. for 1926. This will absorb a further £613,850 7s. 7d., and we are proposing that the balance of £502,416 5s., or £48,946 18s. more than last year, should be carried forward.

The Balance-sheet.

Turning now to the balance-sheet, on the assets side you will see that the refinery block is up by some £306,923, representing the further cost, less depreciation, of the reconstruction and modernisation scheme which it is hoped will be completed during the current year. The fields block stands at the old figure of £350,000, all expenditure there other than for electrification having, as usual, been charged direct to revenue. The increase in fields electrification block is mainly due to the extension by transmission of this form of power to Singu, where current is now available, although its application over the large area involved will unfortunately not be completed to enable us to dispense entirely with the more expensive liquid fuel much, if at all, before the end of the current year. There is a small net decrease in pipe-lines block account. The increase is the tanker and tank installation block is mainly attributable to the cost of the new tanker s.s. Masimpur, which, commissioned towards the end of the year, has since been giving complete satisfaction. Stocks of plant are up and stocks of products down by some £742,896 and £119,404 respectively.

Investments are, on balance, down by some £1,995, after transferring to the trustees of the employees' provident fund securities to the value of the company's contributions for the year. As to these investments, the market value of the quoted ones alone is very considerably in excess of the value at which all of them stand in your books. Sundry debtors and debit balances are higher by some £602,000, while the reduction in loans, deposits, and cash by about £1,635,000 reflects a heavy but necessary transference throughout the year to permanent investment in and for the operations of our own business, which, it is anticipated, will normally result in more profitable employment of these resources, although it is necessary to point out that the immediate result must be a drop in our interest income.

On the liabilities side of the balance-sheet you will see that after making the usual appropriations from profits the general reserve now stands at £800,000, the insurance reserve at £500,000, and the fields expenditure equalisation reserve at £600,000. Then at £934434 18s. 5. the fire and marine insurance account is up by some £87,826, representing premia credited less losses during the year, and sundry creditors and credit balances are up by some £108,507, comparing with the increase of some £602,000 in sundry debtors and debit balances.

Increased Fields Expenditure.

While no set-back can ever be other than unpalatable, I feel that you will agree with your directors that in the circumstances I have already described the results of the past year can in themselves scarcely be regarded as unsatisfactory. Had we not, with our other indigenous producing neighbours, been the victims of the specially localised and intensive rate war in the kerosene market, which none of us could avoid, our greater marketed tonnage in 1927 would, as I have already indicated, have enabled us, despite our heavily increased fields expenditure, to meet, with only a comparatively small decline in profits, the effects of world over-production.

As to fields expenditure, I have frequently warned you that we can unfortunately look for no material lightening of this burden so long as we remain dependent for our raw material on the comparatively deep and unfortunately small calibre wells which have for years now been characteristic of the proved fields of Burma and India. There, even in our palmiest days, we have never enjoyed the large spouting wells with which Nature has favoured Persia, Iraq, Venezuela, Mexico, and the United States, but then we had shallower and therefore cheaper wells, whereas to-day, as in recent years, we have to go to steadily increasing depths to get at best no better than the past yields, if as good. All this means more expensive production and the constant burden of heavy expenditure on new wells to offset the decline in the older ones.

Production Prospects.

While, therefore, your directors, relying on the best geological advice at their disposal, have no serious anxiety as to your concessions continuing to yield our raw material for many years up to the volume of our existing refining capacity, the cost of winning this oil cannot be importantly reduced until the day arrives when the fields are completely drilled up and become simply a producing proposition with a gradual but inevitable decline to final exhaustion. Under normal economic conditions, however, this necessity for steady and heavy new drilling need not disturb us any more in the future than in the past. The oil industry, probably more than any other, swings from over to under-production and back again with extraordinary rapidity, and world prices must ordinarily reflect not the costs of temporary cheap flush production of wells which fall off more or less rapidly, and whose very calibre places a serious drain on the oil reservoirs they have proved, but the naturally much greater costs of that production from old and new wells of much more modest calibre, which represents such a considerable proportion of

the world's oil resources and which is normally essential to meet the increasing growth in demand for the commodity. And we are fortunate in the enjoyment of a crude petroleum unusually rich in the most valuable products—wax and benzine—unembarrassed by those foreign and objectionable features which in many cases render refining not only very difficult but complicated and expensive, and of a home market capable of absorbing practically all we can produce. In normal circumstances, then, we can look with reasonable confidence to being able to hold our own in the interplay of the law of supply and demand and to show results which will stand comparison with those of our contemporaries.

Government of India and the Situation.

It is not then that sort of situation which requires me to remind you to-day of my previous frequent statements that the nature of the fields on which we meantime depend is such that production costs must be heavy and continuous. No, it is the present unusual situation in which we and our neighbours in the Indian oilfields are placed; the specially localised war of prices, the effects of which we cannot escape, and the uncertainty as to its continuance, that demand that I should warn you, as we and our neighbours have thought it our simple duty to warn the Government of India, that its indigenous oil industry is no better placed, but in some respects worse placed, than any other country's petroleum or other industry indefinitely to face, and successfully to come through, price conditions for its products which are dictated and governed by no economic considerations whatever, but, on the contrary, are alleged, in the case of one of the combatants, to be based on conditions of purchase which in the very nature of the origin and source of the supplies discount entirely the normal charges of labour and of capital. The Government of India has referred this situation to its Tariff Board to examine into and report on the extent and nature of the protection, if any, which in these unusual circumstances should be provided for the local industry. The continued existence of some of our neighbours is undoubtedly already seriously menaced.

As we ourselves are more fortunately placed, our respective approaches to the Government of India and to the Tariff Board have necessarily reflected our differing position; but while I am confident that we can and will be able to see this trouble through, it is, and must continue to be, a serious drain on our resources and cannot but have—as indeed it already has had—unfortunate reactions on the policy we have steadily followed of spending a considerable amount of our revenue every year in attempts to discover and open up further petroleum resources in the Indian Empire, for, with the ready consent of the Provincial Governments concerned, our neighbours and we decided immediately on the outbreak of this trouble that every resource should be husbanded and that purely exploratory work everywhere must be suspended.

Uncertain Issue.

What the issue of this third party dispute will be, and when, none of us can say; and while it continues it is quite impossible to hazard any estimate of trading results. Wider issues have been opened up than were involved in its original cause. By their very action the Standard Oil Company of New York advanced the case for the principle of supplying a market from the source of production nearest to it, and it seems certain that not only the Royal Dutch-Shell Group, but also the Anglo-Persian Oil Company, Limited, with the best geographical excuse of all, although hitherto not pressed by that company because of its recognition of the somewhat delicate basis of Indian marketing arrangements, will insist on their fair share in future of the imported petroleum trade of India. What we do definitely know is that the opposite ideas of the combatants on the morality of trading in goods from a tainted source are no longer necessarily an obstacle to peace.

Both sides have made their respective ethical conceptions perfectly clear and each is now apparently prepared to agree to differ on that issue. But we also know that offers made by the Royal Dutch-Shell Group to secure peace—fair and reasonable offers in the circumstances I have described—have been refused, and that quite unreasonable counter offers have been made, including a condition affecting us that the indigenous industry must agree not only to export benzine while India may be able to absorb all its production, but also not to increase its benzine production by resort to "cracking" of kerosene or other fractions of petroleum! I need scarcely tell you that there will be no peace if this depends on the indigenous industry producing one gallon less than is economically potential to it, or on other than unfettered and complete freedom to deal with its production at all times as it sees fit.

Combined Marketing Unit.

You may rest assured that we can, and will, see this trouble through, though, as I have already said, it is proving a serious drain on our resources and in many directions is having most unfortunate reactions on the position and development of the indigenous industry. While normally well equipped to face this struggle, we are fully alive to the fact that there never was a position not capable of improvement, and in every direction economies can be, and are being, practised and resources husbanded by us and our technical position being strengthened in every way. We are on the eve of realising the full benefits of concentrated and modernised refining plant which will enable us increasingly to make the best and most profitable use of our raw material, and on the marketing side, as you are already aware, we have arranged to combine and consolidate the organisations of ourselves and of the Royal Dutch-Shell in India, excluding Burma and Assam, which the Royal Dutch-Shell, as in the past, leave entirely to us.

This combined marketing unit, registered under the name of Burmah-Shell Oil Storage and Distributing Company of India, Limited, and in which we have a 50 per cent. interest, commenced business on January 1, and has at its disposal all the experience and resources of the two parties. It at least doubles our marketing strength and should considerably reduce our marketing costs, while the arrangement incidentally perpetuates the recognition accorded by the Royal Dutch-Shell for many years of the right of our indigenous production to the first call on their and our combined trade. Unhappily it involved a break, after some 36 years of loyal, devoted, and most valuable service, with our selling agents in India, Messrs. Shaw, Wallace and Co.—never a pleasant thing, but particularly distasteful where, as here, personal relationships have been peculiarly close and friendly—and I gladly seize the opportunity to express here publicly the deep appreciation by your company, not alone, of work well done by these good friends of ours in your service for more than a generation, but also of their ready recognition of the requirements of the position and their co-operation in making the necessary transfer, which, fortunately, was no more than this, for employees of theirs who were engaged in our agency. At the same time, and in view of this radical change in the company's selling arrangements in India proper, we decided to take over from Messrs. Bulloch Bros. and Co., Limited, the Chittagong and Akyab selling agencies, which for an equally long period these friends have satisfactorily conducted on our behalf. To these friends also I am sure you would wish me to give public expression of our deep appreciation of their lengthy and valuable service.

Change in Management System.

Long before these developments—in fact, just prior to the visit to India which Mr. Watson and I paid together in 1924-25—he and I decided so to reconstitute the affairs of the company there as to render it safe and practicable for my own firm of Messrs. Finlay, Fleming and Co. voluntarily to surrender the managing agency of the company at the end of this year. Those of you who are familiar with the more intimate history of the company will need no reminder from me of the fact that, through my late father, Finlay, Fleming and Co. have been closely associated with your company from the day when it was entirely his own private property, and that from these very early days they have acted as its managing agents. In 1906 that position was confirmed to them by a special clause in the articles of association under which they could be removed from their position only by an extraordinary resolution after requisite notice, but my colleagues in the firm and I were in such complete agreement that conditions had so fundamentally changed—especially through the building up of an efficient, whole-time company organisation—that this system of management, which had been the best for these earlier days and conditions, was no longer justified. It was accordingly agreed with Mr. Watson more than a year ago that such further preparations as might be necessary to enable the company to look after its own affairs in India should be put in hand and completed so that the managing agency might be terminated at the end of this year, and this has been done.

These changes involve the breaking up of very old associations. In the case of the managing agency, my brother and I, and in the case of Messrs. Shaw, Wallace and Co., Mr. Ashton, are still left with an active connexion through this board, but it is, I can assure you, something like a tearing up of roots to see the termination of an unusually close and harmonious relationship between principals as represented by your company and agents as represented by our respective firms.

Earlier to-day I said I would later explain the somewhat lower depreciations for the year. This is that the reduction is mainly on the assets which have since passed to Burmah-Shell, by whom they will be remuneratively employed and adequately depreciated.

For the rest, it seems unnecessary to add to the epitome in the report of the past year's operations. Where we can control events and their consequences, I have no anxiety as to the adequacy of your equipment to secure satisfactory results. Your business is in competent hands. Whether in crude oil production and all that goes to find and win it, or in refining, or in marketing, or in the over-riding and reconciling and controlling spheres of management, I can assure you that you are well and ably served by an exceptionally loyal and capable body of men, and I know I carry you heartily with me when I once again tender to all of them, East and West, your and the board's deep appreciation of another year's unstinted service under not too comfortable or happy conditions. These men and their endeavours certainly deserve success, but in the shape of the dividends you have been accustomed to they unfortunately cannot command it so long as all their efforts are checkmated by unfair conditions which we can neither control nor escape.

Your assistant managing director, Mr. Gilbert C. Whigham, toured all your Indian interests in the winter of 1927-28, and made useful contact with the *personnel* on the other side.

Principal Outside Investments.

As regards your major outside investments, the Anglo-Persian Oil Company, Limited, deeply engaged as it is in the benzine and kerosene markets of this country and the Continent, has inevitably shared with other distributors the effects of world over-production. These, however, are merely the normal "ups and down" of the business, and fundamentally and intrinsically I am satisfied that that great undertaking was never sounder or more vital and promising than it is to-day. Some of you have, no doubt, seen the report of the proceedings at the annual meeting on the 31st ultimo of the Assam Oil Company, Limited, which we control. As I have already mentioned, we are arranging to send a copy to you all, from which you will see that, like ourselves, it has suffered in the past year not only from these same general depressing conditions in the industry, but also from their localised and peculiar aggravation to which I have already so fully referred. But here again—although, of course, not on a comparable scale—there is reason for hope that under normal market conditions the greatly improved and still improving production and refining position of that company should make it possible to liquidate its considerable debit balance and establish itself on a profit-earning and dividend-paying basis. The Tinplate Company of India, Limited, is now converting sheet bar into tinplate of excellent quality at the rate of 60,000 tons per annum. Its costs are being steadily reduced, and besides earning and paying interest on its Debentures, all of which we hold, it is now accumulating surplus revenues for their redemption.

I now beg to propose:—"That the report of the directors and audited statement of account, including the balance-sheet and profit and loss account to December 31, 1927, presented to this meeting, be received, approved, and adopted," and I shall call on Mr. R. I. Watson, your managing director, to second this motion. After the motion has been seconded an opportunity will be given to shareholders to ask questions or make comments.

Mr. R. I. Watson.—I beg to second the motion.

The Chairman.—If there are any questions to be put, I shall be pleased to answer them to the best of my ability. There being no questions, I now beg formally to put to the meeting the resolution which I have just proposed and which Mr. Watson has seconded. Carried unanimously.

The Dividend.

Continuing, the Chairman said:—I have now pleasure in moving:—"That the dividend on the Ordinary shares recommended by the directors at the rate of 10 per cent. per annum, 2s. per share, less tax, making with the interim dividend paid in November last 20 per cent., less tax, for the year, be adopted, and that the same be hereby authorised to be paid on June 15, and that the balance of £502,416 5s. be carried forward.

Mr. David Young.—I beg to second the resolution.

The resolution was carried unanimously.

The Chairman.—I have now very much pleasure in moving:—"That Mr. D. W. T. Cargill be re-elected a director of the company."

Mr. T. D. Kerr.—I beg to second.

The motion was unanimously carried.

The Chairman.—I beg to move:—"That Mr. Leonard Gow be re-elected a director of the company.

Mr. Alan D. Kerr.—I beg to second.

This was also carried unanimously.

Mr. J. Moncrieff Wright.—I beg to propose the reappointment of Mr. James Wilson, C.A., as auditor for the current year.

Mr. David Thomson.—I beg to second that.

The motion was unanimously agreed to.

The Chairman.—That is all the business, ladies and gentlemen. I thank you for your attendance.

Vote of Thanks.

Mr. T. F. Donald.—Ladies and gentlemen,—It is customary at this meeting for us to award a vote of thanks to the chairman for presiding, and also to express our thanks to him and his co-directors for their services during the past year. I think that it is more incumbent than ever upon us to do so on this occasion. From the very informing address we have listened to to-day, it is evident that Sir John Cargill and his colleagues have had a very difficult and trying time. They have had to face sundry very difficult problems—over-production, unfair competition in the markets of India. These must have caused them a great deal of time, trouble, and anxiety. We have heard from the chairman the measures they have taken to cope with these disadvantages, and I am sure we feel confident they have done the best that they possibly could in the circumstances, and we may, in his own words, look forward to the future with every equanimity. In a business of this sort there must be, of course, ups and downs, and for the first time after many prosperous years we have to submit to a reduction in dividend. I do not think we need be downhearted over that. I think I am expressing the feelings of us all when I say that so long as the affairs of this great company are in the capable hands of our chairman and his colleagues we are sure of getting a good, fair run for our money, and we look forward with every confidence to the future. (Cheers.)

Chairman's Reply.

The Chairman.—Mr. Donald, Ladies, and Gentlemen,—I have already detained you a very considerable time, and I feel I must not trespass on your time any longer, although there are quite a number of things I feel I would like to have said to you to-day which perhaps I did not say in my speech. I would just like here to at once ask you to recognise that that speech of mine is not in any way a personal speech; it represents not my own views, but the carefully-considered views of my colleagues and of all those who are responsible for the management and policy of this great company.

I should like to thank Mr. Donald for the very kind and encouraging words which he has just used in proposing this vote of thanks, and to thank you all for the hearty way in which you have signified your approval of what he has said. I can assure you it is a great encouragement to me personally, as I know it must be to my colleagues, to feel that, in spite of the fact that we are having reduced profits and consequently reduced dividends, we still have your confidence and that we also have—and that, I assure you, goes a long way—your sympathy in the troublesome and trying times we are passing through, and which, I have told you, I am convinced we will safely survive. I always welcome this opportunity of paying my own personal tribute to those who are associated with me, or I think I would put it better by saying those with whom I am associated, in the management of this great company. The loyalty and enthusiasm with which every one works are known to me personally in a way in which they probably are not known to any other body, and I appreciate it very deeply.

Tribute to Managing Director.

I feel that it is almost invidious to mention any name specially, and yet I feel that I must pay a tribute, and in doing so I know that I will take with me my colleagues and every one connected with the company, to your managing director, Mr. R. I. Watson—(cheers)—who, I assure you, works night and day, and devotes his entire time and talents to the interests of the company and of you shareholders. I do not wish in any way to embarrass Mr. Watson by saying too much, and I think it will be quite sufficient if I again say to you that you are singularly fortunate in having as your managing director a man of the outstanding ability, energy, and business capacity of Mr. Watson, and one who commands the respect and confidence of every one with whom he comes in contact. I would just again thank Mr. Donald and you, ladies and gentlemen, for your extremely kind reception of us to-day. (Cheers.)

Mr. R. I. Watson.—In a word, ladies and gentlement, I would like to thank Sir John Cargill and all of you for your much too kind recognition of the little work I have been able to do for the company. It has, as Sir John has made clear to you, been a particularly trying and difficult period, but I have not the slightest hesitation in reassuring you all about the future. We are perfectly sure, and perfectly confident, we are going to "win through" the present trouble, and possibly, almost certainly, get into a much more secure position than we ever have been in the past. (Cheers.)

This concluded the proceedings.

SUEZ CANAL COMPANY.

Record Traffic in 1927.

The Outlook.

The seventy-fourth annual general meeting of the Suez Canal Company was held in Paris on June 4.

The Marquis de Vogüé (the president), in submitting the report of the directors, said that the traffic of the Suez Canal had shown unprecedented activity in 1927. The transit receipts, amounting to 208,000,000 gold francs, were eleven per cent. greater than those of 1925, which were previously the highest. The conversion into French francs of the sums thus collected was effected on the basis of the rate of exchange of 124 francs, at which the pound sterling had remained since the beginning of 1927. They would be permitted on this occasion to say how pleased they were at the stability of the French currency, which they had so long desired, and owing to which the nominal amount of their profits, ceasing to be influenced by the fluctuations in the franc, would reflect henceforward the actual position of their undertaking. The year 1927, however, had further undergone, relatively to the previous year, the influence of the exchange. The rate of 124 francs at which the conversions of sterling were effected was, in fact, much below the mean rate of 1926. Nevertheless, owing to the large increase in the transit receipts, the profit of the year was sufficient to allow not merely the maintenance of, but actually an appreciable increase in, the dividend. Thus it was proposed to fix at 577·52 francs the gross dividend per capital share, an increase of 33·50 francs as compared with 1926. The growth of traffic which permitted this increase in the dividend showed that after the upheaval brought about by the War the economic development of the world was continuing. Apart from inevitable fluctuations, the results of local and ephemeral disturbances, international trade was ever tending to increase, and their undertaking continued, as in the past, to participate fully in this increase.

In view of such brilliant results they had considered it to be their duty to follow the traditional policy of reducing the transit dues, a

Digitized by Google

policy of which they had always approved, and which, taking account of the legitimate interests of the users of the Canal, would enable them to carry out to the satisfaction of all the exploitation of the monopoly which the company enjoyed. The board had put in force on April 1 last a reduction of 25 centimes, thus bringing down to 7 francs the transit dues, which, since April 1, 1925, had been 7.25 francs. This step should not compromise the future maintenance of the dividend at the figure which was proposed this year; the increase in the transit receipts since the commencement of the current year was, moreover, such that it would go far towards making good the diminution involved by the reduction for the nine months of its operation in 1928.

The total receipts for the year amounted to 784,595,099.54 francs. They represented, as compared with 1926 an increase of 38,047,293.74 francs, which arose for the greatest part from the increase in the traffic receipts. Expenditure amounted to 65,637,589.49 francs, a decrease of 4,089,587.31 francs, effected mainly in regard to maintenance works. It was proposed to transfer 25,000,000 francs to the amortization fund for improvement works and 25,000,000 francs to the fund for amortization and renewal of material. Allowing for these allocations, the excess of receipts over expenses stands definitely at 658,876,760.05 francs. Adding the carry forward for the year 1926, 917,640.77 francs, the disposable total is 659,794,400.82 francs. It was proposed to fix the profit for division at 636,642,253.52 francs, leaving a balance of 23,152,147.30 francs, to place a sum of 20,000,000 francs to the extraordinary reserve, and to carry forward 3,152,147.30 francs. The division of the distributable profit of 636,642,253.52 francs among those entitled to it would result in making the dividend 565.02 francs on each share. That dividend, increased by 12.50 francs interest, would represent a gross revenue of 577.52 francs and a net revenue of 455 francs.

The maritime movement of the Canal in 1927 consisted of 5,545 transits, representing a net tonnage of 28,962,048. These two totals surpassed all previous results. The net tonnage was 2,901,671 tons above the total for 1926 and 2,200,113 tons above that of 1925, which was previously the highest total. The traffic in ballast stood at 2,409,621 tons, and represented 8.3 per cent. of the total movement, against 7.8 per cent. in the previous year. In this traffic tankers figured for 75.4 per cent. The average tonnage of the ships making the passage has changed little: it attained a gross tonnage of 7,237 as against 7,256 in 1926. The proportion of the transits made by ships of a gross tonnage of over 10,000 rose from 10.5 per cent. to 10.6 per cent. The average duration of the stay of ships in the Canal fell to 15 hours 6 minutes; that was the shortest time recorded so far, a result particularly satisfactory in view of the increase in the traffic. The number of passengers has notably increased, rising from 286,432 to 340,318. The division of the tonnage by nationalities placed, as always, the British flag in the first place with 57.1 per cent. of the traffic against 57.4 per cent. for the previous year. Then came, in the usual order, the Dutch, German (the latter showing a marked increase of 609,910 tons), French, and Italian flags.

The movement of merchandise passing through the Canal amounted to 29,500,000 tons; it was almost three million tons greater than the previous record, reached in 1925, and more than four million tons above the 1926 total. This increase took place alike in the outward and homeward movement; the former, continuing the notable advance realised in 1926, increased for a second time by a million tons. The improvement in shipments of coal, which were greatly decreased by the strike in England in 1926, contributed nearly 375,000 tons; consignments of railway material, cement, and salt took on an importance which they had not had previously; finally, the increase in the total of various merchandise, comprising all kinds of manufactures, has been also very pronounced, thus confirming the forecasts which were made last year. Though important, the expansion of the trade in merchandise from Europe remains much below the development of the movement from South to North. For several products—wheat, jute, soya beans, and manganese ore—the increase recorded was more than 100,000 tons; that of wheat actually exceeded 900,000 tons, and the total trade in that cereal was not much below the exceptional total reached in 1925.

Since the commencement of the current year the traffic of the Canal had given excellent results. The net tonnage for the first four months was about 850,000 tons greater than that for the corresponding months of last year. However, the very favourable impression given by this remarkable progress was not entirely confirmed by anticipations regarding the remainder of the year. Without doubt Europe would again need great imports of wheat; unfortunately the Australian harvest, below that of the previous year, would not permit of export on a large scale, nor did it seem probable that India would be able to supplement it to a very great extent. As regards rice, while French Indo-China announced an abundant harvest, the production of Burma and Siam would be much below that of the past year. In conclusion, the examination of the economic situation suggested that it would be unwise to conclude that the progress in traffic recorded since the beginning of the year would be maintained until the end.

The report was unanimously adopted.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

INDIA.

Equipment for Pumping and Power Supply Scheme.—The Indian Stores Department at Simla invites tenders for generating sets, transformers, generating and transformer station auxiliary plant and accessories, E.H.T. transmission line equipment, and telephone equipment in connexion with the Sumera Hydro Electric Pumping and Power Supply Scheme of the Public Works Department, United Provinces. July 2. (D.O.T.)

EGYPT.

Braid, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of braid (tape) woollen for chevrons, braid cotton, bunting, etc., to the Department of Ordnance Services, Egyptian Army Citadel, Cairo, June 25; ropes, millboard for tarboushes, flour Russian, crena vegetable, soap native, cotton waste, springs for chairs, upholstery, needles tailors', rubber tyres for carriage wheels, asbestos sheets, drums steel, tin solder in sticks, fasteners belting, glass panes for carriage lamps, burners complete for Primus stoves, manometres, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo, June 30; 1½ tons of candles to the Ministry of War, July 23; and two pumping sets and two water tanks to the Ministry of War. July 25.

Stoneware Pipes, Etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for stoneware pipes, junctions, and bends. June 25.

Nails.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 24,200 kilos French nails with head and 530 kilos with taper heads.

School Materials.—The Director of Stores, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of large quantities of school materials required for schools during the year 1928-29, such as Persian reed pens, white and coloured chalk, exercise books, especial ruling for Arabic calligraphy, brown paper books for chalk drawing, and technical materials such as boxes of drawing instruments, slide-rules, drawing paper of different sizes, set squares, tracing paper, photo-papers, etc. June 28.

Loco and Tender Tyres, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 205 loco. and tender tyres, July 5; 7,000 kilos raw linseed oil and 50,000 kilos boiled linseed oil to specification; 2,200 cast steel axle-boxes with front and back covers, to drawing; 9,000 kilos zinc sheets; and machine tools, approximate cost £E18,000. Firms interested should communicate direct with the Chief Inspecting Engineer, London, from whom all information can be obtained.

Telephone Exchange Equipment, Etc.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply and erection of a manual full common battery telephone exchange equipment at Mansura, and associated subscribers' apparatus. August 15.

Steel Sleepers.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 150,000 steel sleepers with clips and clipbolts. July 11.

ROUMANIA.

Machine Tools.—A new company has recently been registered in Bucharest with the object of the purchase and sale of motor cars and accessories, the construction and "exploitation" of garages, and repair workshops, and any other operations in connexion with the industry and commerce for motor cars and agricultural machinery. The British Commercial Secretary at Bucharest suggests that machine tool firms may care to forward copies of catalogues and price lists of machines and equipment suitable for motor car repair work and garage use. (D.O.T.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 6:—

Egyptian Futures.—Sakel Contract.—As we anticipated in our last report, quiet markets with relatively unimportant fluctuations have been experienced during the period under review. Throughout the earlier trading, further straddle buying against sales of Uppers, mainly for Alexandria account, caused values gradually to appreciate, but, latterly, with the withdrawal of support from this source the market has developed an easier undertone, with the result that most of the earlier gains have been wiped out, to-night's level showing only nominal alterations to that ruling on the 23rd ult., i.e., an advance of 2 to 17 points for near and 4 to 6 points for new crop months, with the current month exceptionally 7 points decline. For some little time the market has been in the hands of the speculative element with trade support a negligible factor; whilst it is true that the statistical position is strong, economic factors are bound to assert their influence sooner or later; at present spinners are quite unable to dispose of fine counts on the ruling basis of their raw material. It appears probable that unless a speedy revival in the offtake takes place, and at the moment there are no signs of this happening, holders of stocks will begin to get anxious, especially so should new crop reports continue to show their present satisfactory outlook. The heavy premium of Sakel over other cottons has already locally caused a good deal of substitution, and whilst this has not been greatly felt as yet, the result will be more apparent as the season advances. The relative weakness of near positions, both here and in Alexandria, rather endorses the above comments regarding the demand, but it must be borne in mind that other outlets are showing more activity than Lancashire and America; from accounts to hand, Continental spinners are regular buyers, and the filling of orders from this source may rather obscure the depressing conditions in other countries for the time being. For the immediate future we do not look for any material change in the level, whilst the trade outlook would rather lead to the adoption of a "bearish" view; this appears to be counterbalanced for the time being by the strong statistical position and the present optimism prevailing amongst those holding cotton.

Upper Contract.—A rather easier undertone has been in evidence in this option since we last wrote, the market coming under pressure owing to further straddle selling against Sakel purchases. Near positions have weakened somewhat in comparison to new crop months, mainly owing to tenders of some high-grade cotton which at the moment is not meeting with much request from spinners. A fairly consistent trade demand has been experienced throughout the period under review and local offerings continue to be more attractive than the basis demanded by shippers on the other side.

Egyptian Spot.—Just prior to the Whitsun holiday a tendency to cover in actual was noticeable amongst certain buyers, but the movement assumed no very great proportions and was short lived. During the remainder of the period under review, trading has been distinctly on the quiet side, sales of Egyptian cotton averaging 200 bales and Sudans about 400 per diem. Fluctuations in price have been of comparatively little importance and it is somewhat surprising that this steadiness has not attracted more interest from the trade, in spite of the holiday feeling which has been so much in evidence. According to most reports business up country leaves much to be desired, but at the same time the average forwardings to spinners have reached a presentable figure. The local inquiry has shown little change in character. The bulk of the Sakel inquiry has again been for the "off" cotton, chiefly within a range of 14d. to 18d.; inquiries for cottons over F.G.F. have been quite exceptional, and only a very small trade has taken place in this better cotton. The market for the "inferior" grades at from 6d. to 13½d. appears to have been thoroughly combed out. Nahda, Maraad, and White cotton have all been inquired for from time to time with limited results.

Sudan Sakel has moved off steadily and the basis for the various grades has remained very firm. Pilion has been in improved request at from 15½d. to 16½d. Uppers have met with an irregular inquiry, but most grades have been covered at one time or another; cotton at from pass to 25 on is still the most popular range. Alexandria has recently shown a tendency to "meet" purchasers of Uppers, but Liverpool still remains the cheaper market for actual.

C.i.f. business has been for the most part very quiet. Forwardings to spinners for the week ending the 25th ult. were returned as 9,967 bales Egyptian and 3,146 bales Sudan, and for the week ending the 31st ult. (a broken period) 2,552 bales Egyptian and 1,789 bales Sudan. Estimated sales (8 days), 2,400 bales Egyption and 3,150 bales Sudan. Quotations of Sakel show an advance since the 23rd ult. of 15 points and those of Upper and Pilion a decline of 25 points. F.G.F. Sakel to-day, 21.70d. F.G.F. Upper to-day, 14.95d. F.G.F. Pilion to-day, 15.55d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended May 21, state:—

The past week has been badly broken up by holidays, the actual working days being reduced to four. A holiday feeling has prevailed and the market has been quiet, closing barely steady. The week's summary of price movements is as follows:—Sakellaridis: July, 42.83 dollars, 0.44 dollars up; November, 43.92 dollars, 0.44 dollars up; January, 43.70 dollars, 0.50 dollars up. Ashmouni: June, 27.74 dollars, 0.18 dollars down; August, 28.00 dollars, 0.08 dollars down; October, 28.32 dollars, 0.05 dollars up.

Sakel.—This market has been more or less in the hands of the professional element and, this week again, the bulk of the business has consisted of their jobbing operations. In the early week there was some straddling of Sakel new crop against sales of October Ashmouni and at one time the difference was pushed out to nearly 16 dollars; to-day, however, has seen some of these straddles being reversed and the difference at the close was only 15.60 dollars. The demand from abroad has been very poor, poorer even than recent weeks, but there again the Whitsun holidays are probably, to some extent, responsible. The inquiry, although small, has been fairly general, even America taking a slight interest. There is nothing fresh concerning the Government cotton and the interest which the public seemed to be taking in the matter of a few weeks ago has entirely evaporated. The local statistical position shows further improvement on the week and the local stock is down to about 2,500,000 kantars. There is no change in the situation and we can only confirm our opinion of last week that prices will probably remain steady at about present levels.

Uppers.—This market has had to stand the strain of straddle and end-of-the-month hedge selling, and prices show a slight decline on the week. Spinners' demand has been on the poor side, with Lancashire again the principal customer.

The week's receipts amount to 8,019 kantars, against exports 65,271 kantars; the stock in Alexandria stands at 2,519,526 kantars.

Spot: The market was closed on Whit Monday and also on Wednesday and Thursday for the native festival of Courban Bairam, thus leaving only three working days. Total sales amount to about 3,900 bales, of which we estimate 2,300 bales Sakellaridis, 1,500 bales Ashmouni and Zagora, and 100 bales Pilion.

Sakellaridis: The demand has fallen off considerably. The top grades are almost entirely neglected and the bulk of the business transacted has been in the medium grades, though there has been a small turnover in the low grades. Spot differences are more or less unchanged.

Ashmouni and Zagora: In these varieties also the demand is much less active. All grades from Fully Fair to Good have been dealt in at about last week's differences.

Pilion: A small business has been done at about last week's premiums.

Notes of the Week.

Italy and Yugoslavia.

Although the recent outburst of popular feeling in Yugoslavia against the proposed ratification of the Nettuno Conventions with Italy may have drawn some inspiration from personal hostility to the Voukitchevitch Cabinet, it is evident that the relations between the two countries are largely conditioned by widespread anxiety in Yugoslavia regarding the ultimate aims of Italian foreign policy. One of the disadvantages under which a Fascist State labours is that any public manifestation is credited, on the strength of the iron discipline which the dictatorship enforces, with official instigation or approval. The recent anti-Italian excesses in Yugoslavia were encouraged, if not directly caused, by reports of what had been taking place in Zara—the Italian enclave on the Dalmatian coast. These reports were inevitably exaggerated, but that the provocative acts which intensify feeling between the two countries are not confined to Yugoslavia is proved by the details of the proceedings at Zara that preceded the recent crisis. In the course of celebrations to commemorate Italy's entry into the War a religious ceremony was held at the Zara Cathedral at which an oath was solemnly taken by a large gathering of Italian War Volunteers. According to the published version of the oath the members present swore to serve "the cause of Italian Dalmatia," and "to continue to struggle by word, by writing and, if necessary, by arms, in order that one day the martyrdom of Francesco Rismondo and Tomaso Galli may be completely avenged, and that the noble land of Dalmatia, usurped by the barbarian, may be wholly restored to the laws and the eternal civilisation of Rome." If this oath represents Fascism's contribution to European peace, the world at large will decide that Rome's eternal civilisation came to an abrupt end in 1915, and that there is not a pin to choose between the "barbarians" on either side of the Adriatic.

Conflict in the Skupshtina.

The Yugoslav Government is experiencing heavy weather in Parliament. Everything pointed to a stormy session, but the actual course of events has surpassed the gloomiest expectations. The worst trouble began with the anti-Italian demonstrations. These gave rise to a bitter attack on the part of the Opposition in the Skupshtina against the Government over the conduct of the police in suppressing the student demonstrations in Belgrade. Eight members were suspended, and when four of these returned to their places the next day and refused to leave, the police were called in to remove them by force. A free fight took place, in which most of the deputies seemed to have a hand, before the offenders were ejected. From this point the Opposition have launched a campaign of organised obstruction. Interpellations, if numerous and lengthy enough, can effectually block the ordinary business of the Chamber. The Government has tried to defeat these tactics by adjourning the sitting at the end of the day instead of closing it, in order to rule out questions at the next sitting, but the reply of the Opposition is to produce a list of fifty speakers on the motion before the Chamber. This week sees the return of M. Raditch, who has served his sentence of suspension for ten sittings. The Agrarian-Democrat group, presided over by him and M. Pribitchevitch, have declared war to the knife in Parliament until, in their words, liberty is restored to the country by the holding of fresh elections, free from intimidation and electoral abuses. It is possible that feeling is embittered by the reflexion that, if the loan negotiations now in progress are successful, the Government will have succeeded in strengthening its position. In the case of Yugoslavia, however, the unsatisfactory condition of home politics does not appear to have alarmed foreign financiers as much as it has in the case of Roumania.

The Little Entente.

A meeting of the Ministers for Foreign Affairs of the three Powers of the Little Entente is always an event for the countries concerned, as considerable store is set on the maintenance of the pact between them. This year the meeting, which was due to take place at Bucharest on Wednesday, follows upon a period of some agitation for the three States owing to the publicity given to an English newspaper proprietor's desire to see the Treaty of Trianon revised. An attempt, it was held, was being made to disturb the very foundation of the Little Entente, and the wisdom of its formation was loudly preached to the already converted. This minor crisis has passed, and probably the main preoccupation of the Bucharest meeting will be Italo-Yugoslav relations. If the Little Entente is in any way responsible for such improvement as there may have been in the relations between the Italian and the Yugoslav Governments, it has deserved well of its generation; but it can hardly regard its task in this respect at an end until permanent good will has been established between the two peoples. The fact that some degree of understanding has been reached by Italy and Roumania ought to assist Yugoslavia and Italy to come together. The coincidence of hostility between the two latter countries and of a certain parading of Italo-Roumanian friendship is a measure of the limitations of the Little Entente, however loudly its efficacy is proclaimed by the members themselves.

A Greek Strike.

The Greek Government is confronted with a strike of serious dimensions. Originating with the tobacco workers of Kavalla, it spread rapidly to other tobacco centres, and to Salonika, with sympathetic movements in Athens and the Piræus. Collisions between strikers and the police in the north have led to bloodshed, and consequently passions have been still more inflamed. There is no reason to doubt the accuracy of the official diagnosis that the strike is battening on encouragement received from Moscow. The Soviet Government has contrived to keep in close touch with Greek Communism, helped, no doubt, by the Soviet Commercial Delegation which was installed in Athens as a result of the Convention concluded under the régime of General Pangalos. That Convention has remained unratified by Greece, as the Government desired to introduce certain modifications into it. Its proposals were rejected by the Moscow authorities, and the Greek Government has now been compelled to abrogate the Convention. The Soviet Commercial Delegation will consequently have to leave the country. Unless political differences paralyse the Government, it may be expected that steps will now be taken, in the light of the grave menace that the strikes have furnished, to deal more effectively with Communist activities in Greece.

King Amanullah's Tour.

It is to be hoped that the people of Afghanistan will be able to appreciate at its full worth the wonderful odyssey that their King and Queen are now bringing to a close. For variety, if not for actual distance, the tour must constitute a "record" in royal achievements. India, Egypt, Italy, France, Belgium, Germany, Russia, Turkey and Persia have been visited in turn, and in most cases the official visit to the capital has been followed by a stay of varying lengths to enable King Amanullah to obtain first-hand knowledge of the country, its people, institutions and industries. Such a tour must have proved an education in itself, and both the King and Queen Surayya will return to their own land primed, as no other occupants of the Afghan throne have ever been, with knowledge and breadth of outlook that may well have epoch-making results for Afghanistan. Even more striking, perhaps, than the tour itself is the manner of their home-coming. From Teheran they have travelled by motor-car to Meshed, and from the latter or from Herat the journey to Kabul is to be made by air. The normal journey from Herat to Kabul by road takes the traveller longer than he would take to proceed from London to Tokio by the Siberian route, and it would have been a prosaic ending to a spectacular tour. King Amanullah, however, has made his plans well. He returns to his capital in his own aeroplane, and for the peace of mind of his more fanatical subjects he can show that, while he has kept his eyes and ears open in the countries of unbelievers, he has restricted his written commitments to Muslim countries—Egypt, Turkey and Persia.

Palestine and the League.

The appearance this year of Palestine's delegate before the Permanent Mandates Commission at Geneva brought no surprises, unless the fact that no petitions were forthcoming from the Arabs can be held to be a surprise. As a matter of fact, however, the Arabs in Palestine, although, as Lieutenant-Colonel Symes admitted to the Commission, their relations with the Jews are "not yet entirely satisfactory," have during the last year or two shown a disposition no longer to kick uselessly against the pricks. Among the politically-minded Arabs themselves there have been dissensions, so that the famous "Arab Executive," which formerly could be relied on to forward a wedge of protests to Geneva, can no more even pretend to be the mouthpiece of Palestinian Arab opinion. And among the non-politically minded Arabs there has gradually been dawning a comprehension of the facts, first, that the Government of Palestine seeks in no way to oppress them, and secondly, that the Zionist bogy is by no means the horrific thing which it was once supposed to be. The average Palestinian Arab sees, in fact, that a proportion which is not negligible of the sums which are subscribed for the help of Jewish Colonists has a very fair chance of eventually benefiting him. It was, therefore, in no spirit of official optimism that Colonel Symes could boast that a civic spirit was developing in Palestine. The realist will have been particularly grateful for Colonel Symes' statement that the Jerusalem Government has in view reforms which will put the agriculture and industry of Palestine on a firmer basis, for economic power, which must everywhere precede political power, is the goal towards which every Middle Eastern State should aim It is, however, so very much duller than the great cry of political independence and other things that are worthless without sound economic foundations.

The Rout of the Locusts.

A picturesque example of the sort of benefit which Great Britain is bringing to the backward countries of the Middle East is to be found in the statement, just made

in Jerusalem by the Department of Agriculture, that both Palestine and Trans-Jordan are now free from migratory locusts. As our readers know, an intense campaign has been conducted during the last few weeks, and millions of young locusts have been destroyed by the combination of flame-guns and trenches. These military measures have saved the Arab farmers and *fellahin* thousands of pounds; it is particularly heartening to learn that the harm done by this ageless foes of agriculture is negligible. And another example of the true scientific spirit is manifested in the report that the Palestinian Locust Service, flushed with success in its own country, is now demonstrating the effectiveness of its weapons in the French Hauran, which was last week stated to be infested with young swarms. Collective action is the only possible sort of action against a nefarious enemy who respects not the boundaries man and Nature have set to the various States. The Department of Agriculture in Palestine is to be very heartily congratulated upon this model campaign.

"King Ibn."

The British Press has now quite succumbed to the lure of Central Arabia as the source of good "copy," and the mightiest personage in those parts, risibly recognisable as "King Ibn," is now quite often the hero of a three-decked paragraph, the masts of which, in the form of heavy and abundant headlines, are generally as misleading as the original telegram. Some of the information which emanates from the Hijaz and Najd is manifestly untrue, some unimportant, and a certain amount correct and significant; but it is all adorned in the same sensational way in the majority of journals in this country. Almost simultaneously we learn, for example, that the Imam of the Yaman is being stirred on by Asiris and by certain Indian Mussulmans to eject the impossible Najdi from the Holy Places, and that an electric lift is being transported to Riyadh for the benefit of King Ibn Saoud's father, Abdur Rahman, who, by the way, has just been reported to have died. Quaintly, but perhaps not so unnaturally, it is the second item which is set out as having the greater importance. As a matter of fact, the sub-editors, in declining to "splash" this story of a row between the Yaman and the Hijaz, may have acted better than they knew, for if one thing could be predicted in Arabia with certainty, it would be that the Zaidi troops would not forsake their highlands for the lowlands of the deserts of the Hijaz. Several people, it seems, have attempted to start this war between the Imam Yahya and King Ibn Saoud; but the magnetos are not firing. Upon the Imam's territory "King Ibn" has no designs, and it would take considerably more than golden support from Indian Mussulmans to persuade the Imam to squander his incomparable mountain troops upon the plains of the Muslim Holy Land.

A rocky area of about 500 square yards between the villages of Perachora and Bissia, in the Corinth district, subsided 300 ft. last week, while great rocks detached from Mount Geranion fell, carrying with them many pine trees.

Dr. F. Dherelle, who has been appointed Professor of Bacteriology in the Yale School of Medicine, New York, has been studying cholera in India within the past year, but he has lately returned to Alexandria, where he is Director of the bateriological laboratory of the Quarantine Station.

A report from Salonika at the end of last week stated that tobacco strikers there attempted to hold a demonstration, but the attempt was not successful. The strikes have appealed to Moscow for support, and have asked the Soviet Government to make a protest against the measures taken by the Greek Government.

Collectors of Egyptian antiquities from all parts of the Continent attended the sale in London on June 12 of General Sir John Maxwell's well-chosen array, but Mr. Howard Carter defeated all the foreign competitors for the chief prize in giving £3,000 for the specimen in electrum of a class represented by only two other known examples —the gilt mask of Thua, the mother of Queen Tyi, and the beaten gold mask of Tutankhamen, both in the Cairo Museum. The sale was followed by the offer of an ancient Greek marble statutette of Aphrodite, which realised £1,500 (Savile Gallery), and a marble torso of Dionysus brought £220.

NEWS IN BRIEF.

Sir John Percival left Cairo on June 17 on furlough, preparatory to vacating the Judicial Advisership.

The Afghan Legation in Teheran and the Persian Legation in Kabul have been raised to Embassies.

The Indian and Japanese workers' delegates at Geneva have agreed to convene a conference of workers of Asiatic countries next year in Calcutta.

The Greek Chamber has rejected by seven votes the request of the ex-Dictator, General Pangalos, to be allowed to appear before Parliament and answer the charges brought against him.

The King and Queen of Afghanistan left Teheran on June 16 for Meshed by motor car. They propose to continue their journey from Meshed by the aeroplane presented to them by the German Government.

It is stated from Basrah that an electric lift is being shipped through Bahrain and Al Hasa for the Palace of King Ibn Saoud at Riyadh. It is being installed to provide easy access to the roof for the King's aged father, Abdur Rahman.

Protocols to the security pacts of 1926 were signed in Teheran on June 15 between Persia and Afghanistan and Persia and Turkey, whereby in the event of war between any one of the signatories and a third Power the other party acts as conciliator.

Rashid Mumtaz Pasha died on June 16 at the Villa Castel, Nice, aged 73. He had been Imperial Vali of the Khodavendikiar, and then Prefect of Constantinople under Sultan Abdul Hamid II., and became Minister of the Interior under Sultan Reshad.

The Iraq Parliament has passed a law exempting building materials, machinery of various kinds required for the development of the resources of the country, printing presses, tombstones, and agricultural machinery from Customs duties.

On the eve of the opening of the Little Entente Conference at Bucharest, M. Marinkovitch, Yugoslav Minister for Foreign Affairs, gave a banquet on June 15 in honour of M. Titulescu, Roumanian Foreign Minister, who has been on an official visit to Belgrade and left later for Turn Severin.

The Permanent Mandates Commission of the League of Nations on June 14 examined the report of the British Government on the administration of Palestine and Trans-Jordan during 1927. The examination was conducted in the presence of Lieutenant-Colonel G. S. Symes, Chief Secretary to the Executive Council in Palestine, assisted by Mr. Lloyd, of the Colonial Office.

Professor Herzfeld, who is in the service of the Persian Government and is now carrying out excavations near Meshdi Morghab, between Shiraz and Persepolis, discovered there a few days ago a palace said to be more extensive than that at Persepolis. He has also unearthed the upper part of a stone statue engraved with Roman characters and believed to be of Cyrus the Great, the founder of the Persian Empire, who lived in the fifth century B.C. The work of excavation is continuing in the hope of finding the missing lower part of the statue, as well as other objects.

GREECE AND ALBANIA.

One of the last acts of the Council of the League of Nations at its fiftieth session was to reject an Albanian appeal for its intervention in the dispute between Albania and Greece on the subject of Albanian Minorities in the latter country. This rebuff to the Albanian Government did not imply any abatement of interest on the part of the Council in the fate of minorities, but was intended to protect the League from abuse of the right of appeal by the submission of relatively unimportant grievances. The problem of minorities remains one of the hardest or at least one of the most delicate that the League has to approach. Intervention may well provoke an international dispute; and the cause of minorities is not likely to be promoted by stimulating their intransigence and so increasing their unpopularity. As Sir Austen Chamberlain had to remind the Council, its duty was to do justice to those to whom it was due, and yet it must be careful not to encourage dissension. The existence of the problem associated with minorities is not wholly due to the bad drafting of the Peace Treaties, but is practically inseparable from the state of ethnographical distribution in Europe. The object of the Council, therefore, as Sir Austen Chamberlain well expressed it, must be not to create in the midst of a nation a community that would remain perpetually foreign to the national life, but to secure to the minorities a sufficient measure of protection and justice to enable them gradually to become merged in the peoples among which they lived. Unfortunately, this latter goal is almost invariably lost sight of both by the minorities themselves, and by the Government under whose jurisdiction they are placed. While the former are on the look-out to emphasize their alien character, the latter give little or no heed to the desirability of making the community an integral and contented part of the nation.

The dispute between Albania and Greece provides a typical example of the incompatibility complex in the Balkans. The trouble is linked with the exchange of populations between Greece and Turkey. In the negotiations that led up to the Convention on Exchange both sides agreed that Muslims of Albanian origin should be exempt from its application. Unfortunately the Convention omitted any actual provision to this effect, and in December 1923 Albania complained to the Council of the League of Nations that all Muslim inhabitants of Epirus had been ordered to leave Greece, while their property was being confiscated and their harvests requisitioned for the benefit of Greeks returning from Asia Minor. The inquiry instituted by a Mixed Commission appears to have been almost as unsuccessful as the recent investigation by a League Committee into the smuggling of machine-gun parts into Hungary. During 1924 the Greek Minorities Treaty came into force, and the Council was able to deal direct with the Greek Government without being dependent on Albanian appeals. For two years or more the game of Pull baker, pull Devil, was played at the expense of the hapless minority population. At one time the Greek Government was forced to appeal to the Council to allow over a thousand "Albanians," whom it had previously insisted were Turks and not Albanians, to proceed to Turkey, because they had "left" their homes and were stranded owing to the suspension of exchange, at the insistence of the Council. At a later date the Albanian Government informed the League that a movement was on foot to expel five thousand Albanians from Chameria; but the figure was challenged, and it was declared that only eight hundred who had been judged liable to exchange by a Sub-Commission were involved. In the end the sentence on these was revoked, and the League's mandatories delivered their judgment that the Muslim population of Chameria was of Albanian origin, and the Greek Government consented to regard the exchange of people from this region at an end.

Thus the remnant of the Albanian Muslims remained in Epirus, but their troubles were not all behind them. Many had been ejected from their homes, into which Greek refugees from Asia Minor had been installed. Even when they contrived to recover the use of their property, they found that they had been deprived of their title deeds. The situation was one which lent itself to the multiplication of injustices, if good will were lacking. No genuine ground of complaint lies with the application of the Greek Agrarian Law to Chameria equally with other parts of Greece. It was inevitable, however, that the district should be selected for refugee settlement, with results that would not add to the contentment of the Albanian population, even if it had not been dispossessed of property to make room for the newcomers. If the Greek Government, profiting by the experiences of the country with regard to long-established Albanian communities in other parts of Greece, had been anxious to hasten the process by which the Chamis would become loyal Greek citizens, it would have paid special attention to sparing them anything in the nature of persecution or vexatious treatment. On the other hand the Chamis have their right of appeal to the League, and the Albanian Government could not produce any convincing argument in support of its claim to interfere between a minority in Greece and the Greek Government on the ground that the peace of Europe was threatened. Its intervention before the Council, therefore, was bound to fail; but the responsibility of the League to see that the terms of its Minorities Treaties are carried out remains. Here would seem to be another case where the proposal to instal a representative of the League in a "dangerous" region might be acted upon with advantage. It is to the interest neither of Greece nor of Albania that there should be constant friction between the two countries; yet even if the Albanian Government has no right of interference, it is inevitable that it must feel concern over the fate of Albanians in Greece, and any sufferings or injustices to which these people may be subjected must necessarily react on Greco-Albanian relations.

The Near and Middle East

From Our Own Correspondents.

Jerusalem, June 9.

Child Marriages.

Child marriages are not uncommon among Sefardi Jews, Muslims and certain of the Christian communities in Palestine. There is much local opinion in favour of drastic reform, but hitherto the Government has not been able to interfere with the unfortunate custom. A fortnight ago the English Press reported the curious case of the aged Jew Aaron Netach of Acre, who was alleged to have "sold" his ten-year-old daughter for thirty pounds to a Muslim neighbour to be married to the latter's thirteen-year-old son. The sequel is still more curious. The sons of the aged Jew made most strenuous efforts to secure control of the helpless victim, their small sister, alleging that the father was no longer of sound mind and seeking to get themselves appointed the child's legal guardians. The local rabbinical authorities were unable to exercise authority, and the matter was brought before the Haifa District Court. Here the "feeble-minded" father proved altogether too much for the sons. When the case came before the Court he sprang a surprise on the applicants by producing proof that he had turned Muslim twenty-six years ago. Although it was proved that since that time he had lived as an observant Jew, his sons could produce no evidence that he had formally abjured Islam. So the sons find themselves in an impossible position: as Jews they can hardly bring up a case touching on the "personal status" of a Muslim, which comes within the competence of the Muslim religious court.

The "Sabbath Case."

The Tel-Aviv "Sabbath Case" is still causing great perturbation in the minds of local Jews. The Jerusalem Court of Appeal has confirmed the finding of the Jaffa Court that the Tel-Aviv by-law (which had been duly confirmed by the High Commissioner), compelling Jewish shopkeepers to close by a fixed time on Friday evening and certain hours on Saturday, is contrary to the condition prescribed in Article 15 of the Mandate, since it "discriminates" on grounds of religion between Jews and non-Jews—since the by-law explicitly excludes non-Jews from any obligation to observe the Sabbath rule (although non-Jews in Tel-Aviv are virtually non-existent). The Court's ruling turned on the technical point of "discrimination": it left the matter open whether or not the Tel-Aviv municipality might have the right of compelling all places of business, Jewish or non-Jewish, to observe the by-law—thereby making no "discrimination." It is reported that an appeal may be taken up to the Privy Council. The real point of interest is to discover whether a semi-autonomous Jewish body within the "Jewish National Home" can legally make the Sabbath binding on all Jews, without contravening the clauses in the Mandate preserving the rights of religion and conscience for all communities in Palestine; for there is a certain section of local Jewish opinion which would not welcome obligatory Jewish religious observance.

Punishment of Communists.

The other main Jewish grievance at the moment is what the local English Jewish paper calls "Flagellation of Jewish political prisoners." There is a small group of Jewish Communists in Palestine who seize every opportunity of advertising their presence; a steady stream of them is continually being sent to prison for a short spell with deportation to follow. A group of these in the Jerusalem jail, awaiting deportation after the expiry of their sentences, refused to conform with prison discipline, insisting on special privileges as "political prisoners." Corporal punishment was duly meted out to them, whereupon they practised a week's "hunger-strike." This they stopped on the local labour organisation's taking up of their protest and submitting a memorandum to the Acting Chief Secretary. This Memorandum points out that to deport a Jew from his "National Home" is a breach of the spirit of the Mandate; while "corporal punishment, which degrades the punisher more than the punished, has been abolished in most 'countries of culture'; in England itself it has continued as a relic of the punitive system of mediæval days . . . it never existed in Palestine before the War . . . and its introduction from England we regard as . . . a reversion to ancient barbarism."

CYPRUS.

Nicosia, May 30.

The Locust Plague.

Considerable swarms of locusts have been hatched out this year, and it is feared that large numbers of eggs will have been deposited. The papers blame the Government for reducing too soon the price paid for those brought in, and are pessimistic on the outlook for next year, especially in view of the swarms invading Palestine and Trans-Jordan, which so far have flown mainly westward. In past years immense flights have sometimes come from Syria and Asia Minor. When they encounter strong winds they succumb, and seas near Cyprus are covered with dense quantities of dead insects.

The Lepers of Cyprus.

The news of an alleged discovery of a cure for leprosy has been received with great satisfaction. The unfortunate island sufferers are housed in a wooded spot outside Nicosia called the Leper Farm, where regular attendance is provided by the Government Medical Department. Lady Storrs, besides the great interest she has taken in the new asylum for the blind, has devoted much attention to the welfare of the lepers, visiting them almost every week, and doing much for their relief, by largely increasing supplies of books, pictures and games, and in other ways.

Agricultural Shows.

A successful Agricultural Show has been held. Annual meetings are held at different centres and are very popular. They include exhibits of horses, cattle, and other animals. There is no question that they do much to promote many branches of agriculture, and improve stock breeding. There is good competition for prizes which are given. Similarly good results are obtained from the now annual exhibition at Nicosia organised by the Forest Department. One was opened this month by the Governor, and was of great interest. Prizes were given for articles made of Cyprus wood, such as furniture, agricultural implements, etc.

Nationality of Cypriots Abroad.

Welcome news has been received that the complicated question of nationality affecting Cypriots in Egypt, which has so long troubled the large colony there, will soon be settled. It is reported that the British Government will pass an amendment dealing with the status not only of Greeks in the Island but with all Cypriots residing in foreign countries.

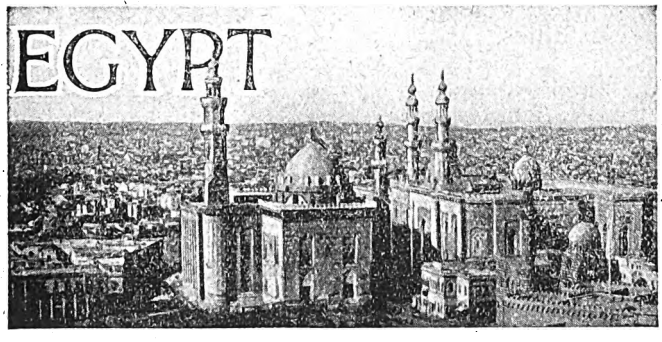
General News.

The new Director of Agriculture, Mr. M. T. Dawe, has taken up his duties and has been visiting various parts of the island.

Bishop MacInnes has visited the Greek Archbishop, with whom he discussed various ecclesiastical matters. His Eminence returned the visit.

News has been received that Greek emigrants to Australia, including Cypriots, have not met with success, but fail to find suitable employment.

The population of Cyprus on December 31, 1927, was 339,488.



Gairo, June 9.

The Transfer to Alexandria.

The High Commissioner returned from his visit to Palestine in time for the garden party at the Residency on the King's Birthday. It proved a most enjoyable affair. There were nearly a thousand guests present, and in the evening the annual Eton dinner took place, followed by a military concert on the lawns. No decision has yet been taken with regard to the departure of the High Commissioner on leave or the transfer of the Residency and the Government to Alexandria. To a very great extent it will all depend on the progress which Parliament makes with the Budget, but it is not improbable that King Fuad with Queen Nazli and the Royal children will go to Montazah at the middle of the month and that the High Commissioner will leave for England in the early days of July.

Parliament's Dilatoriness.

The dilatory manner in which Parliament is dealing with the business still before it—repeatedly discussions have to be suspended owing to there being no quorum—may, as some think, be due to the sultry climatic conditions amid which it has to work, but there is a good deal to be said for the explanation given to me the other day by a shrewd old Egyptian who said: "Why should you expect the members to accelerate the end of the session when the continuation of Parliament means that they can spend their time in Cairo and the Chamber under conditions which at this time of year are far more congenial than what they would have to bear in their own constituencies whither they would have to return if Parliament went into recess!"

The Birthday Honours.

Egypt and the Sudan do not bulk very largely in the Birthday Honours this year. Harari Pasha receives a well merited knighthood. He has had a long and useful career, having come to the front as far back as the days of the late Lord Milner when the latter was Under Secretary of State for Finance and looked upon Victor Bey Harari as one of his most valuable assistants. He left Government service about twenty years ago, and has since then played an important part in Egyptian finance, being on the board of most of the important financial establishments of the country such as the National Bank of Egypt, the Credit Foncier Egyptien, the Agricultural Bank of Egypt, the Mortgage Company of Egypt Limited (of which he is Chairman), etc. Successive British representatives have always come to look to Harari Pasha as one of those on whom they can always rely for sound advice and support, and the honour now conferred on him is a recognition of the valuable services which he has rendered to those responsible for the direction of affairs in Egypt.

Of the other honours perhaps the most noteworthy is the C.B.E. conferred on Mr. Arthur Douglas Deane Butcher, Director of the Hydrological office of the Ministry of Public Works and in charge of the research work in regard to water control at the Delta Barrage. Mr. Butcher has never been much in the limelight when the various schemes for river control have been discussed or formulated, but he has played an all-important part in the research work connected with every one of them.

The Royal Mummies.

Some three months ago a proposal was made to the Chamber of Deputies by Ismail Pasha Sidky that the Royal mummies should no longer be exhibited to the public gaze but should be returned to their tombs—or,

if their burial places could not be found they should be deposited in a specially constructed tomb—and be permanently removed from exhibition. The Pasha pointed out that in no other country did a nation exhibit the mortal remains of its more illustrious ancestors, and he regarded this pandering to the morbid taste of the public as wholly inconsistent with national dignity. The proposal received the approval of the Chamber which referred it to its Public Works Committee for examination and report. This Committee has, it is understood, recommended that the proposal should be put into operation, but even before its report could be presented to the Chamber the Minister of Public Works has taken action to meet at any rate in principle what the proposal aims at.

To return the Royal mummies to their tombs would be impracticable for divers reasons into which there is no need to go. What has been done has been (1) to replace the lids on those of the royal sarcophagi in the Cairo Museum which are intact; (2) to withdraw into a special room the show-cases containing the royal mummies whose sarcophagi are incomplete and (3) to shut the tomb in which Amenophis II lies exposed in the Valley of the Kings. Amongst the royal mummies withdrawn from the main Museum are those of Seti I, Rameses II, Seti II, Rameses III, Menephtah, Rameses V, and Queen Nefertari, the beautiful wife of Rameses II, while among those whose lids have been replaced are the mummies of Iuia and Tuia, the parents of Queen Thi, the famous Queen of Amenophis III. Henceforward the public will not be able to see any of these mummies, and scientific and other interested people will only be able to have access to them by special permission of the Ministry of Public Works. It should be added that while the public will be thus debarred from viewing the mummies themselves they will be able to see what they are like from the numerous photographs and sketches which exist in the Museum.

The Aswan Power Scheme.

A report on the Aswan hydro-electric power scheme by the Italian engineer Signor L. Ponticorvo has just been delivered to the Minister of Public Works. It will be recollected that for many years, even before the War, a proposal has been before the Minister of Public Works for the utilisation of the waters of the Nile passing through the Dam at Aswan for the purpose of the production of power for use in Upper Egypt. Some little time ago the Ministry engaged the services of Signor Ponticorvo to advise it in this connexion. Sgnor Ponticorvo has handed in a very elaborate report, but I understand that in reality it does not place the Government in any better position to take a decision in this matter.

Press Gathering.

The monthly meeting of the local and foreign Press once again took the form of a dinner at Groppi's, this time under the presidency of the leading Egyptian lady-journalist, Mlle. Siza Nabarawi. It was a great success, the novelty of a lady, and particularly an Egyptian lady, in the Chair, attracting an unusually large number of the members of the profession and their wives. Mlle Nabarawi, in responding to the vote of thanks, said a few words with regard to the remarkable advance made by feminism in Egypt to which she very gracefully stated the Press had greatly contributed.

Khartoum, May 28.

Quiet.

It has often been said that blessed is the country that has no history, and while certainly the Sudan has its history of quiet progress only noticed with the inauguration or completion of some outstanding public work of importance, the Sudan is truly blessed in that it has none of those political troubles and problems which face its northern neighbour, Egypt.

A Dust Storm.

Temperatures have been regularly anything about 110 degrees F. maximum, and at night the thermometer rarely goes lower than 80-85 degrees F. Early showers at Khartoum have undoubtedly meant less *haboobs* (sand or dust storms), but we have had one or two "good specimens." Last Wednesday towards evening it seemed as if an immense range of mountains, miles high, were rolling in upon Khartoum from the south, and later, with its nearer approach, as if the very world itself was in dissolution and going up in judgment fires and smoke. A "good" *haboob* must be one of Nature's most awe-inspiring phenomena—as well as one of man's greatest discomforts when in the midst of it.

Useful Films.

H.E. the Governor-General left Port Sudan on May 11 for Egypt and Home and just before going attended a private exhibition of films taken and shown by the very enterprising firm, Messrs. Karakashian Bros (The Tropical Photo Stores, Khartoum). The films included the Governor-General's recent tour to Kassala, Armistice Day Sports at Gordon College, a Race Meeting at Khartoum, Christmas Day Church Parade, Lady Maffey's Children Party at the Palace on Christmas Eve, Regatta and Aquatic Sports of the Blue Nile Club, the Inauguration of the Electric Tramways, and the Opening of the White Nile Bridge at Khartoum—indeed quite an epitome of history during the past few months. The films of native life were also of interest, and altogether the evening's show was most enjoyable—enabling some of us to see ourselves as others see us.

Visitors.

Since my last letter we have had air visits from Lady Bailey, Lady Heath, and Lieutenant and Mrs. Bentley on their trans-African flights, and the arrival of the R.A.F. Squadron and South African Flight from the Cape at the Sudan Club to Air Marshal Webb-Bowen of the R.A.F. end of April was made the occasion of a Dinner at the and Capt. C. J. Ventor, D.F.C., of the South African Flight and Officers. The Financial Secretary, in the absence of the Governor-General, presided. All the speeches were racy, but good; Air Marshal Webb-Bowen certainly made the speech of the evening. Why is it flying in the air, like sailing the seas, seems to produce such good after-dinner speeches? By the way, Sir John Maffey, the Governor-General, is one of the best after-dinner speakers I have ever heard. It is rumoured that the R.A.F. will make the flight from Cairo to the Cape and back part of annual training. The South African Flight on this occasion accompanied them as far as Khartoum from the Cape, and it seems extraordinary that the flight returned from Khartoum to Pretoria in four days.

Digitized by Google

Holidays.

We have a way of celebrating every kind of religious and national holiday in the Sudan with a few special ones thrown in. From May 29 to June 2 inclusive we have the five-day holiday of the Qurban Bairam, while on June 3, being the Birthday of King George, we have another holiday, totalling six days inclusive, during which Government Offices and markets are closed! Commercial firms have no difficulty in getting their Muslim staffs to work most of these holidays, and one doubts whether they are really necessary from any question of native feeling today. Such holidays cause a great deal of inconvenience to firms dealing with Europe and even to natives bringing in their produce to the markets. It is now mooted that Kordofan markets are closed down from August to the beginning of December, and it is suggested by the Authorities that it would do the merchants good to have three or four months' rest!

"Commercial" Departures.

When year after year brings to a close the long and useful services of many officials who have done their "bit" in the development of the country it is difficult to note a few and leave out others. In the case of commercial people, however, they are comparatively so few that the loss of one or two is very acutely felt in their little community. Mr. J. Stanley Smith, Sudan Manager for Messrs. Arnold Cheney and Co., Inc., and Mrs. Smith have now left the Sudan, on Mr. Smith's being transferred to Cairo. He and his charming wife will be very much missed for their genial disposition and good fellowship. Mr. Smith—"Ivory" as he is called amongst his friends—first came to the Sudan some thirteen years ago. Mr. W. H. Lake was at one time Manager for the old Bank of Egypt at Suakim and subsequently at Khartoum, but since 1915 has been Sudan Manager for Messrs. Laing, Son and Co. It is rumoured that he is going to their London office. Mr. G. W. Stevens who has been here only a comparatively short time—some four years—came to establish the Sudan factory and business of Messrs. McCorquodale and Co. Ltd., the English printers, and with his mission accomplished returns to England. Mr. White of the Associated British Manufacturers of Egypt also expects to leave the Sudan shortly for Egypt. This must be the longest roll of "commercials" who have said good-bye to the Sudan for many years.

Now is the best time to leave the Sudan with its heat and sandstorms! I well remember leaving Khartoum after my first visit to the Sudan some fifteen years ago. The train for Egypt left in those days about ten o'clock at night. It was February; and the Grand Hotel was full with the beauty and wealth of pre-War Europe. The moon lit up the river and broke through the magnificent trees along the Embankment. The lights twinkled on the opposite shore and marked out the distant Blue Nile Bridge. The palms tossed their heads towards the stars. The night was perfect. Strolling guests or residents took more definite shape as they approached, and laughter and chatter grew clearer—or again forms and voices faded away towards the shadows. Fate seemed unkind that one should have to hurry from the City of Beautiful Night to a train and back to humdrum life once more. But many a time since throughout the long monotony of summer heat and sand one was only too happy that leave was approaching.

It is not the place, however, but the friends one makes that count in the course of years, and if the season's discomforts induce our departing friends to leave Khartoum with fewer regrets, nevertheless they are there—at least to the number of long established friendships.

ROUMANIA.

Bucharest, June 7.

The Political Situation.

Since the meeting of the National-Peasants' Party at Alba Julia in the beginning of May, the political feeling of the country appears to have changed slightly in disfavour of that party, owing mainly to the alarm caused by the promises made to the peasants by M. Mihalache, the leader of the Peasant section of that party. M. Mihalache's socialistic tendencies have always aroused certain misgivings among the upper and middle classes, and are said to have been one of the principal reasons why the late King did not confide the Government to the Peasant party some years ago. The landed proprietors have already been reduced to a condition approaching penury by the expropriation of their land, which was paid for after a long delay in Treasury Bonds redeemable over a long period of years and having only a paper value, instead of gold. They cannot be expected, therefore, to view with approval the promises of further concessions of land by means of which the Peasants' Party is being held together. It would appear that the same feeling is at least partially accountable for the disunion which has existed between the two sections of the National-Peasants' Party ever since the Alba Julia meeting, for M. Maniu and his adherents are not prepared to go nearly so far as M. Mihalache in this direction. Moreover the behaviour of Prince Carol has excited a good deal of indignation, and some of the onus has fallen on the party which was known to sympathise with him, though since the publication of his recent doings it is not believed that much support would be accorded to him now. Even his friends and intimates are shocked by his behaviour.

Minorities.

The daily press is still full of long articles on the Optants' question, which are fanning the flame of hereditary dislike of the Hungarians. Great satisfaction is generally expressed at the attitude of the majority of the English press towards Lord Rothermere and his campaign, which has not been greatly furthered by the recent extravagance committed at Budapest. In regard to the treatment of the Minorities it may be of interest to cite a few illuminating figures. During the supremacy of Hungary in Transylvania, the Roumanian minority population amounting to over 2 millions only had two Roumanian secondary schools in the whole country. There were large districts populated almost entirely by Roumanians where there was not a single Roumanian School, and only in a few of the Hungarian schools was Roumanian taught at all. A good illustration of this is given by the fact that, among the better educated serving classes from Transylvania, most of the Roumanians speak Hungarian more naturally than Roumanian. It is true that the lower classes were not, as a rule, dissatisfied with their lot, as their wants were few, and they lived in peace and

Digitized by Google

security. But the middle-class Roumanians were at a serious disadvantage under the Hungarian régime, as they were not eligible for any post of public authority, only the free professions being open to them, but no official posts, in the Government or the local administration. On the other hand, the present Hungarian minority population under Roumanian rule has 38 Hungarian schools and many of the old officials have remained at their posts, in the post offices, railway stations and local administrative offices. The Roumanians are, therefore, justified in expressing surprise at the complaints of the Hungarians at their so-called oppression. As has been repeatedly stated in these letters, the only real cause the Hungarians have for complaint is against the maladministration from which they suffer, especially in Transylvania, in common with the other minority races and with the Roumanians themselves, and which is due to the lack of reliable and experienced administrators at the disposal of the Roumanian Government. It is indeed a lamentable fact that a great deal of corruption exists in official spheres, and it can only be hoped that, as the economic condition of the country improves, and the general standard of education is raised, serious steps will be taken to combat this corruption, which, besides demoralising the national character, is a drain on the public treasury.

THE ADEN FIELD FORCE.

The tenth Annual Dinner of the Aden Field Force took place at the Trocadero on June 16. Major-General Sir James Stewart was in the chair. Others present included:—

Rear-Admiral L. R. Oliphant, R.N., Brigadier-General L. N. Beatty; Captains, R.N., R. Fitzmaurice, K. F. Guy, and A. W. Lowis; Colonels W. B. Douglas, A. P. Drayson, E. L. Popham, A. E. Scott, A. R. Winsloe, and R. de Verdon Williams; Commanders, R.N., M. Murray and T. J. Linberry; Lieutenant-Colonels A. S. Arnold, W. B. Chambers, A. E. Hills, E. P. Le Breton, I. M. Macrae, A. Le F. Smith, and G. E. S. Smith; Majors A. G. Armstrong, H. Berridge, A. P. H. Cadell, J. K. Douglas, A. G. C. Fane, C. E. Harding, P. J. Newton, A. W. Nias, G. C. Pullman, G. Read, D. T. Richardson, H. M. Wigstuick, and F. E. Wood; Captains R. F. Barton, K. W. Bridges, C. Blamey, L. G. Conville, R. T. Cowley-Brown, L. R. Douglas-Mann, G. F. Elmslie, H. V. Geary, F. Golding, P. B. Hembrow, P. Lyle, J. A. Prescott, B. P. Ross-Hurst, H. D. Taylor, J. B. Tindall, E. G. Venning, and F. M. Wardle; and Messrs. W. C. Bell, F. S. A. Dobson, D. S. Grainger, W. S. Tinsley, G. H. Landon, and E. C. Mark.

ANGLO-JEWISH COMMUNITY AND LORD BALFOUR.

In order to mark "his eminent services as a statesman, and particularly as the author of the Balfour Declaration," the Anglo-Jewish community in London will give a dinner on July 3 to Lord Balfour at Guildhall, which for the first time in the history of the City of London has been placed by the Corporation at the disposal of the Anglo-Jewish community. Major H. L. Nathan, Chairman of the Balfour Forest Committee, will preside. That committee was formed to give effect to the desire of the Anglo-Jewish community to render suitable tribute to Lord Balfour for his work in Palestine. The tribute, with Lord Balfour's approval, will take the form of a forest in Palestine, the first tree of which was planted recently by Field-Marshal Lord Plumer, British High Commissioner in Palestine.

The lists of the Oriental Languages Tripos were issued at Cambridge University on June 13 as follows:—

ORIENTAL LANGUAGES TRIPOS, PART I.

Class I.—L. I. Edgar (a) (Christ's), J. George (b) (Queens), A. S. Super (a) (Emm.). Class II.—S. M. Hertz (a) (Cath.). Class III.—J. Mascaró (Down). (a) Hebrew, Aramaic. (b) Arabic, Persian.

DIPLOMA IN ORIENTAL LANGUAGES, PART I.

Examined and Approved.—S. C. Mag. Neill (Trin.) (Sanskrit).

The Air Ministry regrets to announce that as the result of an accident at Shaibah, Iraq, to a D.H.9a machine of No. 84 (Bombing) Squadron, Shaibah, on June 12, 1928, No. 359131 Sergeant Francis George Bamford, the pilot of the aircraft, and No. 359418 A.C.1 Arthur Sidney Frost, were killed.

THE RADICAL PARTY IN YUGOSLAVIA.*

(From a Correspondent.)

Zagreb, May.

As usual, rumours of an imminent and inevitable Government crisis are becoming insistent again before the summoning of Parliament. That these rumours are being spread in the main by the Opposition Press, goes without saying. They are founded upon the differences existing within the Radical Party, which are becoming more weighty and more ominous from day to day. We are told that they are too serious to be compounded and that within the next few days the Radical Party is bound to split. If this were really to happen, the days of M. Voukitchevitch's Government would be numbered; because if even a bare forty Radical deputies were to join the Agrarian-Democrat Coalition (KDK for short), the Opposition would be in the majority.

A month or so ago, all the hopes of the Agrarian-Democrat Coalition under M. Pribitchevitch and M. Raditch were built upon the differences within the Davidovitch Democrat Party; now it is the discord in the Radical Party through which these hopes are to be realised. But this confidence in a break-up of the Radical Party will prove as fallacious as the calculations based upon a disintegration of the Democrat Party.

It is certainly true that the concord which formerly reigned in the Radical lines passed away with the veteran leader Nikola Pashitch. There is at present no one authority in the Radical Party strong enough to keep it as firmly united as Pashitch's prestige caused it to be. Differences, however, existed within the party already in his day and were the work of the very same political men who are now the leaders of the various Radical groups. The struggle for the inheritance of Pashitch and the leadership of the Radical Party is not a growth of to-day. Even while he was still Prime Minister, it led to an open breach between him and Liuba Yovanovitch, who was certainly—apart from Pashitch—the strongest personality in the Radical Party. That acrimonious campaign against Yovanovitch was carried on principally by the immediate *entourage* of M. Pashitch, which was indeed the chief object of M. Yovanovitch's attack. The deaths of Nikola Pashitch and Liuba Yovanovitch did not put an end to this struggle. It was successfully continued by Yovanovitch's successor, the present Prime Minister, M. Velya Voukitchevitch, and one consequence of this is

* This article was written before the decision to ratify the Nettuno Conventions was made public.

that at the last elections the leading men of the Pashitch group were left without mandates, the venerable M. Marko Trifkovitch no less than the smart Dr. Velizar Yankovitch.

The greater number of the Radical deputies, however, remained neutral in this struggle, and they formed the so-called Centre Party under the leadership of the deputies M. Nikola Uzunovitch, M. Boza Maksimovitch, M. Ninko Peritch, M. Momchilo Ninchitch and others. This group believed that it might play the part of the odd man out who scores in this quarrel, but this hope was not fulfilled. The Government passed into the hands of M. Voukitchevitch and has remained there, and with it all political power in the land. Now this is of greater importance to the Radical Party than to any other. And the discontented Radical members realise this as thoroughly as those of the Government group. Therefore it is not surprising to any one who understands the workings of Yugoslav politics that whenever it comes to voting in the Skupshtina the Radical deputies should, almost to a man, rally round M. Voukitchevitch. For a fall of the Government might very easily entail the advent of a non-Radical Government.

Not a single Radical deputy wishes this contingency to arise; and that is why the Radical Club declared, unanimously, during the last Government crisis, that it could never be on the side of any Government whose chief was not a Radical. This resolution is quite in keeping with the spirit and tradition of the Radical Party. "Only unity can save the Serbs," was for centuries the watchword of the Serbs; and "Only in unity of party lies the greatness of the party" was the watchword of the Radicals. However great may be their dissensions among themselves, it must ever be borne in mind that in dealing with other parties they must never destroy the unity of the Party as such.

Therefore, in regard to their present bickerings, it is not a case of warring principles; the discontented Radicals merely desire that they, too, should have a share in the advantages conferred by Government, and that members of the discontented groups should be appointed Ministers. Undoubtedly they would incidentally wish to weaken the position of M. Voukitchevitch, but this should not go so far as to let the Opposition get into power.

This brings us to the fundamental mistake in the tactics of the Opposition. The leaders of the Agrarian-Democratic Coalition believe they will be able to make capital for themselves out of the dissensions in the Radical Club. As a matter of fact, it is the dissatisfied Radicals who are exploiting the Opposition in exactly the same way as it was exploited by the Democrats during the last Government crisis. The more fiercely the Opposition waged its campaign against the Voukitchevitch Government, the more valuable would M. Voukitchevitch find an alliance with the Democrats, and the greater would be the concessions he would be compelled to make them. The dissatisfied Radicals are pursuing similar tactics now, and M. Pribitchevitch and M. Raditch will experience the same disappointment with MM. Ninchitch, Maksimovitch and the rest of them as they went through a few months ago, when, at the critical juncture, the Democrats to a man cast their votes for the Government.

Only this time the end will come sooner, because M. Voukitchevitch has greatly strengthened his position during his twelve-months' term of office. The Skupshtina has passed the Budget, and the questions which are now due to come up for settlement are so important that there is little chance for the Opposition. The first we would mention is the big London loan, which is of cardinal importance for the economic development of Yugoslavia. The Housing Law, the Law of Citizenship, the ratification of the Nettuno Conventions, and a whole series of other laws are so urgent that they simply must be dealt with.

To this must be added that the Yugoslav elector is tired of elections, and the number of those who abstain from voting is steadily on the increase. At the last Local Government Elections, not even fifty per cent. of those entitled to vote presented themselves at the urns, and there arose the joke about the one and only victorious party—to wit, that of the electors who did not vote.

This election weariness of the Yugoslav electorate is only too intelligible. It has been so liberally fed with all sorts of promises and programmes that now it is thoroughly fed up with them. Meanwhile, conditions have not improved so greatly and on the whole things are as they were. The economic crisis is not yet weathered, and it is clear to-day that the only cure for it lies in the toil of the peasant, assuming that this toil be also blessed with a good harvest. General elections in the midst of this economic crisis would be too expensive and too risky; because Yugoslav elections cost far too much for any one to take the responsibility for them at the present moment.

But if elections are out of the question, it follows that the Government is in no danger; because the Budget has been passed and the Parliament can be sent on holiday at any moment. In that case much legislation of an extremely urgent nature would stand over, and the public, upon whom the new Budget has laid heavy burdens, would be left without the compensations which the new laws propose to give.

The position of the Government being thus assured, it is equally certain that the differences within the Radical Party will be duly compounded. At this moment the doyen of the Party, M. Aca Stanoyevitch, is engaged in seeking to bring about a new compromise, and the recent big Radical political meeting at Veliki Becherek has shown that the Government is sincerely anxious to have a settlement.

And therefore the present dissensions in the Radical Party should not be taken seriously. Serious differences could arise only over great questions of principle, and this—in spite of some of the Young Radicals—is not likely to happen just yet.

The Radical Party will remain united and at the most a few portfolios will change hands over an exchange of Ministers. This is all the basis there is for an important and even "inevitable" Government crisis.

THE WEEK AT HOME

London, Tuesday Morning.

The Rejected Prayer-Book.

Although the expected happened last week, when the re-Revised Prayer-Book was rejected by the House of Commons, it cannot be said that the nation regarded the event with perfect equanimity. The ordinary view of what may be called the Broad Church, and the ordinary view of the Low Church are each well enough understood; what is not so well comprehended is that vague mass of English opinion which, while holding strictly to no definite religious conviction, would fain have seen the Established Church run its own show, instead of being prevented from doing so by non-Anglicans.

It is impossible now to predict the future course of events within the Church, but inevitably, it would seem, there must be a move in the direction of making the Church above, or free from the control of, the State. One can scarcely see how the courageous Churchmen, at any rate, can resist the prompting now to create an *imperium in imperio,* to profess, that is, a dual loyalty, both to their Church and to their State. That development would, of course, imply both Disestablishment and Disendowment.

Now it may be that the time has really come for the end of such a religious-political institution as the Church of England: it may be that Erastianism will henceforth be regarded as but an historical phenomenon. And the suggestion has been made that the Established Church is, simply, an anachronism, wholly inapplicable to the religious life of to-day.

But a consideration such as this is not the immediate problem. That problem concerns rather the possibility of a wholesale secession from the Church on account of the disputed question of the Eucharist. For it was over this, not over the many changes suggested in the Church Service which were almost universally admitted to be improvements, that the battle was lost.

Politics and the Church.

One need in no way impugn the sincerity of many of those who in the House of Commons opposed the Prayer Book in order to lament the fact that a spiritual matter had to be decided by a body of men so many of whom know nothing, except from hearsay, of the significance and inner meaning of Anglicanism. Nor, in saying this, does one deny the probability that certain of those who voted for the Measure did so, not on religious grounds, but frankly (or unconfessedly) on grounds of expediency.

It is certainly interesting to note that the Conservatives had a balance of 29 in favour of the Measure; the Labour Party had a balance of 47 against it; and of the Liberals, only two voted for the Measure. Probably it is not unfair to say that the opposition consisted mainly of the Evangelical spirit, the Nonconformist spirit, and the anti-clerical spirit, the last of which is occasionally seen to mark the Labour Party, although it should be added that that Party includes men who are devout Christians. For those who set store by such things, there may be comfort in the fact that, of Englishmen concerned in this question of the Church of England, there was a clear majority in favour of the Archbishop of Canterbury's lead.

The problem of Church and State seems hardly likely to become a burning political question, but if it does I do not think that much of the "anti-Popery" that went down well enough in the House of Commons would very deeply impress the country at large. But there are, of course, not a few Churchmen who welcome the prospect of Disestablishment, which in their opinion might imply an immediate diminution in numbers attending Churches, but would leave a residue of intenser, devouter, and more progressive Catholics. It is possible, on the other hand, that that very laudable instinct of the Englishman not to make changes in religious matters could so be worked upon in the country as to stave off Disestablishment and let the Anglo-Catholics go whither they will.

"Dux Femina Facti."

To the great majority of those sweet young things upon which the Conservative Party, in its wisdom, has just imposed the inestimable privilege of the Vote, the name of Mrs. Pankhurst, who died the other day, was indeed but a name. But to those who probably most closely question the sagacity of this extension of the franchise Mrs. Pankhurst represented something quite exciting. For the Feminist movement was before the War a subject which reduced men either to rage or lively sympathy: an emotion which was the result more of Mrs. Pankhurst's activities than of those of any other single woman.

Whether it was the inevitable result of the Suffragette campaign, or whether as a result of the work which women did during the War, that the vote was extended to females in 1918, must remain a point of discussion. But somehow one thinks that the more sparkling young women of to-day would not have been over-attracted by the doctrines of Mrs. Pankhurst, although in all probability they would have succumbed to her personality. For the Feminist movement is to-day largely an unreal issue; in any case, he or she who attempts to raise it as a vital question is now quickly made to look ridiculous. The so-called "Sex War" is an invention of the journalistic and alarmist mind.

Thames Sailing Barges.

The annual Thames Sailing Barge match, which was revived last year, after an interval of twenty years, was held last week, and created much enthusiasm. This revival has done infinite good to the cause of sailing, and the average Londoner, who hardly knows of barques and brigantines and schooners except as hopelessly defunct vessels was on Thursday really excited to see, travelling between Gravesend and the Mouse lightship, these heavy barges with their huge mainsails, their mizzens, their jib-sails and foresails all set to the strong sou'-wester.

This year thirty-one barges were entered, and if anyone had imagined that steam had quite driven romance from the London River, he should have seen the barges, all decked out in new paint and sails, with some of the crews in white ducks and coloured stocking caps. To those who see things aright, there is more human virtue in the performance of the Vigilant, which won the race in six hours, eleven minutes, and forty-five seconds, than in the greatest "speed" performance set up by a steam-going vessel anywhere. But for those who hear of the second, how many hear of the first? Yet is not a sailing-ship one of the loveliest things ever created by man?

A Fixed Easter.

The Bill to stabilise the date of Easter on the Sunday after the second Saturday in April was given a third reading in the House of Commons last Friday, and now has to gain the approval of the Lords. This Bill is no bad example of the desire now prevalent to change ancient and fluid practices into hard and fast usage, the plea being, of course, convenience. No fundamental convictions are stirred by this proposal to fix Easter, except the Tory respect for tradition and the Liberal or Labour desire for improvement.

This distinction, however, was not borne out in the Commons debate, where the reactionary attitude was firmly stated by a Labour member, and where the desire for change was manifested by Tory members. As a matter of fact, the old conception that the Conservatives are out to conserve and the Labour people to change ("progress" it is called) is often very seriously falsified, because the itch to alter ancient institutions is shared about equally by the different parties. Only one man's tradition is another man's treason.

Nowadays, of course, the religious significance of some of the public holidays is generally forgotten, so that one would have thought that the people who, in the Conservative view, should rightly decide this question of the incidence of Easter would be the religious people. But that seems to have come as an afterthought to the supporters of this Bill.

Book Review

ABYSSINIA.

"IN THE COUNTRY OF THE BLUE NILE." By C. F. Rey. With a Foreword by Major-General Lord Edward Gleichen. (London: Duckworth. 25s. net.)

"SAVAGE ABYSSINIA." By James E. Baum. (London: Cassel and Company. Limited. 12s. 6d.)

Although by no means the only country with a sensitiveness in regard to foreign criticism, Abyssinia is understood to have developed this trait more highly than most. Consequently for those who write about the Abyssinians, if they are minded to retain their popularity in the country, it is well to avoid wounding the susceptibilities of a proud and touchy people. Mr. Rey mentions an historic instance of this difficulty that confronts authors of books on Abyssinia. It was on account of a reference to the Emperor's humble origin in a book published by the Rev. H. A. Stern that Theodore imprisoned the latter on his return to Abyssinia and thus provoked war with Great Britain. The diplomatic archives of the two countries could provide a much more recent instance of umbrage caused in Addis Ababa by highly placed criticism of Abyssinian customs or tendencies. In these circumstances it is, perhaps, unfortunate that an American author who sets out to give some very readable impressions of a tour in Abyssinia and light character sketches of the people should group them under a heading which may secure journalistic effect, but is not germane to his subject matter, and is certainly impolite to his late hosts. Mr. C. F. Rey with a profounder knowledge of his subject has trodden more warily, and his book suggests that in many instances he has denied the reader of his knowledge out of deference to the known sensitiveness of the Abyssinian authorities. It is to be hoped that sympathy with Abyssinia and a manifest desire to promote the interests of the people will save his writing from the resentment that so often attends foreign efforts to throw light on a fascinating but peculiar country.

It is significant of the interest attaching to Abyssinia that these two new books on the country should make their appearance in quick succession. Wholly dissimilar in object and treatment, they are yet in a way complementary to one another. Mr. Rey writes from full knowledge and close study, and uses a prolonged tour as a setting for recent Abyssinian history and for a fresh exposition of Abyssinian resources, manners and customs. Mr. Baum is an American journalist, who "conceived the idea of an expedition to Abyssinia for the purpose of collecting museum specimens, mammals and birds"; on one and the same day he secured the support of certain museum authorities and of the *Chicago Daily News*, which made itself responsible for the financial part of the undertaking, and the expedition started. It may be an oversight or it may be typical of "rush" conditions in America that from start to finish, as far as the reviewer can discover, there is no mention of any date to fix the period of the expedition, or its duration. On page 10 mention is made of October as being the end of the rainy season and on the middle page of the book the reader is informed "It was December." In the other book the dating of the preface and reference in the text allow the diligent reader to infer that the tour undertaken by Mr. and Mrs. Rey was made in the winter of 1926-27, and a reference to the American expedition's presence in the country at the same time enables one to date the latter. As a general principle it may be said that the value of a travel book is enhanced by an indication of the date to which the descriptions apply.

A large part of Mr. Rey's book is devoted to a tour to Debra Markos, in the province of Gojam, and back to the capital. The narrative introduces the reader to many phases of Abyssinian life, as well as to the topography of the country. Gojam, it is interesting to note, looks better cultivated, better kept and more prosperous than other parts, a state of affairs that the author attributes to the fact that in this province Abyssinians themselves are the farmers, peasants and cultivators, instead of being merely the overlords of the serfs who till the land. If, therefore, at any time Abyssinia is able to rid herself of the blot of slavery and serfdom, she stands to gain from a practical as well as from a moral point of view; but the system is so inextricably interwoven with the life and economy of the country, that it is not easy to see how the problem is to be solved, given the present mentality of the people. The Abyssinians, however, in spite of their traditional aloofness are not likely to escape much longer the relentless drive of progress. The motor has reached Addis Ababa, and with the impetus given to road construction in that town must come the gradual spread of roadways throughout the country. One of the chief handicaps to trade will then be removed. Both from the commercial and from the agricultural point of view Abyssinia as a whole remains practically undeveloped. Unfortunately its more important enterprises, in the form of concessions, have not been uniformly successful, and in this respect as well as in the general type of foreigners that the Abyssinians have attracted to the country the sinning has not been all on one side. Their experience is almost inevitable when foreign help is enlisted haphazardly and on no specific system. It would pay Abyssinia handsomely if the Government and people would put themselves to school, as did the Japanese half a century ago, and introduce foreign advisers to help them to push on the development of the country, the Abyssinians learning the while to replace them in due course.

After dealing with the economic potentialities of Abyssinia, the conditions and characteristics of its people and the problems before them, Mr. Rey devotes two chapters to the history of the Abyssinian Church. The part played by the Church in the State is indicated by the fact that it owns from one-fourth to one-third of the land of the country and includes in its ranks "as priests, monks and debtera, a very large proportion—estimated by some writers to be as much as a quarter—of the male population." Mr. Rey adds: "These individuals do not work and are profoundly ignorant; they are recruited by the simple method of paying a dollar or two and being breathed on by the Abuna. It is, therefore, hardly astonishing that they are not to be found amongst the ranks of the Prince Regent's supporters." The position of the Church is a strong one and offers a formidable obstacle to the advancement of the country.

Mr. Baum sets out to tell the reader just what he saw and how it struck him, in his treks through western Abyssinia, and his descriptions reveal shrewd judgment, an eye for the picturesque and a kindly sense of humour. Both our authors visited Ras Hailu of Gojam, but it is the American journalist who conjures up the more telling picture of the man and his surroundings. It is only fair to say that, if we turn to Mr. Baum's narrative to be interested and beguiled, we should as surely turn to Mr. Rey's volume for reliable information on any given point. Mr. Baum is on ground of his own on what is the main feature of the book, the descriptions of his pursuits of game, and he came in for many thrilling experiences, the climax being reached in the bagging of thirteen specimens of Walia ibex amid the tremendous and seemingly inaccessible escarpments of Simien. He has told his story well, and the reader parts company with the cheery nar-

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

HUNGARY AND ROUMANIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The letter of M. Voukitch in your issue of June 14 is very interesting, and illustrates the fundamental difference between Eastern and Western mentality. I think I can best define that difference by the statement that Western civilisation which is representative of the mentality of the Western nations is Individualist, and the Slav civilisation tends towards Socialism in one form or another. It varies from the old Russian *mir* and the Serbian family community to the more extreme form now in force in Russia.

On the other hand, if we take the two Anglo-Saxon nations as representatives of Western civilisation, we find that they have from the earliest times attached importance to the protection of life, liberty and property. In the great Charter of English liberties of February 11, 1225, we find it stated in Article 29: "No free man shall be taken or imprisoned or be dispossessed of his freehold or liberties or free customs or be outlawed or exiled or in any other way destroyed." And in the American Constitution it is stated: "Nor shall any person . . . be deprived of life, liberty or property without due process of law, nor shall private property be taken for public use without just compensation."

I am aware, of course, that there are persons and parties in England who repudiate the fundamental rights defined in Magna Carta and the American Constitution; but I submit that these persons are notoriously acting on foreign teaching, either of Marx, Lenin, both Orientals, and that a nation must be judged by its acts not by the speeches of politicians. In the Irish Land Purchase Act a full and adequate compensation was secured to the landowners, who have been only too glad to part with their property on the terms offered. On the other hand, it cannot be claimed that full and adequate compensation is paid in either Czechoslovakia, Roumania or Yugoslavia. It is difficult to give accurate figures, but my information is that in Czechoslovakia the compensation paid has been about one third of the value; in Roumania about one per cent., while the Italian subjects in Yugoslavia have been specially protected by the Nettuno Convention. This Convention is resented by the Slovenes. But the Western position was admirably stated by the American Secretary of State Bayard in a letter to the American Minister in Chile dated March 20, 1886, in which he said: "Title to land and landed improvements is by the law of nations a continuous right not subject to be diverted by any retroactive legislation of new governments taking the place of that by which such title was lawfully granted."

M. Voukitch, as I understand him, justified the action of the Czechoslovak Government as retaliation for the confiscation that took place after the Battle of the White Mountain in 1620. I do not defend these confiscations. My sympathies are with the cause with which the Winter King and his plucky English wife were associated, but it is fair to say that the Bohemians were accused of rebellion and that Cromwell made similar confiscations in Ireland; nevertheless the British Government has recognised that prescription for three centuries constitutes a valid title, and as a consequence paid full compensation.

May I, in all good will, be allowed to add that the foundation of prosperity is to be found in security, and to shake security by invalidating the title to private property is to destroy credit? I am informed that the rate of interest on good paper in Roumania is now 15 per cent. Credit is based on security and security is based on a strict submission to the dictates of law and justice, and this submission is the more imperative in new States or revolutionary governments, for they have to create confidence and establish credit. The bitter reproach of the Abbé Sieyes to the constituent assembly, *Vous voulez être libres et vous ne savez pas être justes,* is permanent warning to all revolutionary governments and succession States. That all men without distinction are entitled to Life, Liberty and the pursuit of happiness is conceded by both Anglo-Saxon nations, and it is in the spirit of sincere good will that I urge on the Succession States that happiness and prosperity can best be attained by a strict observance of the obligations of Law, and Justice, including, of course, Treaty obligations, towards all, whether majorities or minorities, without distinction of class or race nationality. There can be no happiness and no prosperity without peace, a peace of justice and reconciliation as distinct from a policy of expropriation or retaliation based on real or imaginary racial grievances or social covetousness.—I am etc.,

June 17. GRAHAM BOWER.

Studwell Lodge, Droxford, Hants.

THE FORM OF GOVERNMENT IN SYRIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The popular Assembly convoked by the High Commissioner of Syria, will find it very difficult, I fear, to come to a decision upon the country's best form of administration. A Royal head being out of the question for it, and a Republic premature, there can, in my opinion, be nothing better for it than to remain under a capable French Governor who can give it peace and watch over its prosperity.

A united Syria is a paradox and must be ruled out, for, the Maronite Lebanon will not tolerate any rule but its own in which the Druse will claim their legitimate share. Beyrout with its great Christian majority and wealth, will not agree to be ruled by Muslims, and will link with the Lebanon, as it was 80 years ago. Damascus, Homs, Hama, Tripoli and their dependencies will tolerate only a Muslim ruler. The country is, in fact, a small model of India, without its hereditary Chief.

France, on the other hand, cannot undertake the protection of the whole country and its pacification for nothing. Moreover, it will have to be its guarantor in the world's money market for municipal and State loans. For that, it will have to make suitable arrangements. The essential thing for Syria is to be mistress of its resources, education and laws.

With all that, I would allow the High Commissioner a salary of £5,000 per annum with a further £25,000 for "frais de representation" to be paid by Syria, as a fund for the encouragement of new Yazegis, Bustanis, Cheikhos (who did so much for the higher education of their countrymen without any reward).—I am, etc.,

June 16. A. SEFI.

PERSONAL AND GENERAL

TO-DAY

June 21, 1928 (New Style).
June 8, 1928 (Old Style).
Muharram 2, 1347 A.H., of the Muslim Calendar.
Tammuz 3, 5689, of the Jewish Calendar.

Sir Philip Buckland arrived on June 16 at Marseilles from Bombay in the P. and O. s.s. Macedonia.

Sir Clement Hindley left London on June 15 to join the s.s. Morea at Marseilles on June 16 for Bombay.

Ex-King George of Greece visited the King and Queen at Buckingham Palace on June 12, and remained to luncheon.

Princess Aspasia of Greece, with her daughter, has arrived in London from Rome, and is staying at the Green Park Hotel.

The King has approved of the following title being taken by Sir Alfred Mond:— Baron Melchett of Landford in the County of Southampton.

The Maharaja of Kapurthala, who left London on June 14 for Paris, will return to the May Fair Hotel on June 28, and remain until the end of July.

On June 18 the Greek Minister opened a private view of an exhibition of oil paintings by Nicholas Himona at the Arlington Gallery, 22, Old Bond Street.

Admiral Sir Roger Keyes, Bt. had the honour of being received by the King at Buckingham Palace on June 15, upon relinquishing his appointment as Commander-in-Chief, Mediterranean.

Her Majesty the Queen, accompanied by Lady Elizabeth Motion, visited Mr. Katchadourian's exhibition of paintings, which was recently opened by the Persian Minister, at the Fine Art Society, 148, New Bond Street, on June 11, and complimented the artist on his work.

Previously to the Court held by the King and Queen at Buckingham Palace on June 12, the King received Colonel his Highness the Maharaja of Kapurthala and Captain his Highness the Maharaja of Rajpipla. Colonel Sir Arthur Bannerman, Political Aide-de-Camp to the Secretary of State for India was in attendance.

Lady Heath will be the guest of the evening at a Reception which the Near and Middle East Association is holding on June 28, at a quarter to nine o'clock, at 5, Grosvenor Square, W.1., kindly lent for the occasion by Miss Rachael Parsons. Lady Heath will speak on her experiences during her flight from the Cape to Cairo and will show a remarkable series of slides illustrating the journey. Tickets (7s. 6d. each) may be obtained from the Secretary, 7, St. James's Terrace, Regent's Park, N.W.8.

In the course of recent excavations in the old Akserai quarter of Constantinople, traces of a triumphal arch attributed to the period of the Emperor Claudius have been unearthed. Marble coffins and artistically carved pillars have also been discovered.

PALESTINE EXPLORATION FUND.

The 63rd ANNUAL GENERAL MEETING
will be held at the
ROOMS OF THE ROYAL SOCIETY, BURLINGTON HOUSE, W.1, on FRIDAY, the 29th JUNE, at 4 p.m.

FIELD-MARSHAL THE RIGHT HON. VISCOUNT ALLENBY, G.C.B., G.C.M.G., etc., will preside.

Mr. C. LEONARD WOOLLEY will give some account, illustrated by lantern slides, of his recent excavations at UR, and Mr. G. M. FITZGERALD will show some views of the P.E.F. excavations at OPHEL, JERUSALEM.

Members and others interested in the work of the Society are invited to attend.

NEWS IN BRIEF.

Sir Percy Loraine, British Minister to Greece, on June 15 received the freedom of Missolonghi, where Byron died.

Sir Ahmed Hassanein Bey has been elected an honorary member of the Geographical Society of Germany in recognition of his explorations in the Sahara.

H.M. King Fuad has conferred on M. Nicholas Cambas, former President of the Mixed Courts of Appeal in Egypt, the Grand Cordon of the Order of the Nile.

M. Titulescu, Roumanian Minister for Foreign Affairs, arrived in Belgrade on June 14 on a two days' visit to confer with Dr. Marinkovitch, Yugoslav Foreign Minister, on his way home to Bucharest.

The agreement regarding the resumption of the payment of interest due on the bonds of the Ottoman Debt was signed in Paris on June 14 by the representatives of the Bondholders and by Fethy Bey, Turkish Ambassador to France. The representatives of the Bondholders are drawing up a statement which will be communicated to all concerned.

Major-General Sir Henry Peter Ewart, Bt., G.C.V.O., K.C.B. (late 2nd Life Guards), of The White House, Hythe, Southampton, Colonel of the 7th Dragoon Guards, who saw service in Egypt and the Sudan, successively Groom-in-Waiting, Equerry-in-Waiting, and Crown Equerry to Queen Victoria and King Edward, who died on April 16, aged 89, left unsettled property of the gross value of £493,887, with net personalty £488,697.

During the excavations now going on at Kalydon, in Ætolia, marble heads of Artemis and Dionysus were discovered. According to *The Times* Athens correspondent they are stated to be of a type similar to the work of Pheidias at the Parthenon. There were also discovered the trunk of a fighting Amazon of the 4th century B.C., and 50 fragments of inscribed earthenware tablets, one recording a legal decision and another referring to the temporary settlement of the villages adjoining Kalydon by the Greeks of the same period.

CYPRUS.

Miss Young's Camp, Troodos.

There are summer quarters, for a limited number of paying guests, on Troodos (Miss Young's) in the midst of forests, 6,406 ft. above the sea—the summer resort of the Troops and Government Officials. 20 hours from Port-Said.

Pitched in the pine forest in a lofty and secluded situation, on the upper slopes of Mount Olympus—25 minutes from the summit. Perfect climate, dry, cool and bracing air, enchanting panoramas; no mosquitoes; completely equipped with every comfort and convenience.

Troodos is 35 miles from Limassol and 45 miles from Nicosia. From both towns there are good carriage and motor roads. The summer climate is dry and healthy. The nights are often rather cold after the end of August. As regards dress, Ladies should be provided with washing skirts, as there is a good deal of red dust on the hills; white is much worn, but dust-coloured costumes are advisable. A warm woollen coat and skirt are essential. Riding and motor excursions, Tennis and croquet are the chief occupations of the Visitors. An English Club provides Newspapers, Telegrams (Reuter's) and Books. The water supply is good, and there is plenty of fresh milk. Inclusive terms £3 10s. a week. *Open June 15.*

Apply to Miss Young, 38 Victoria Street, Nicosia, Cyprus.

CYPRUS.

SAVOY HOTEL: Port of Famagusta.
PALACE HOTEL: Inland City of Nicosia.

OLYMPUS HOTEL: Port of Limassol.
(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)
(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

THE INDIAN CONSTITUTION.

Nobody expected that the All-Parties Conference would make much headway in its attempt to frame a Constitution for India. And so far, as we mentioned last week, it has done nothing. This is not surprising, as there is no particular reason why it should be more successful than previous Conferences have been in reconciling Hindu and Muhammadan differences. In fact, no solution of this great communal problem appears to be in sight. All the efforts which have been made by the leaders on both sides in congresses, conferences, committees and the like have been entirely ineffective so far. The only chance would appear to be that eventually the Central Legislature may prove to be the means whereby a solution may be worked out. Opinions may differ as to the success or otherwise of the Reforms. But most observers agree that the Central Legislature, which was created by the Reforms, has begun to manifest a national feeling. It has become the centre of the political life of the country; and it displays a willingness to work for India and not for provinces, or communities, or interests, or sections. Indeed, some claim that the Central Legislature has already begun the work of nation-building, and that the national spirit which it is developing may ultimately prove to be strong enough to reconcile or to subdue communal differences.

The Hindu-Muslim difficulty is admittedly the most serious of the obstacles in the way of the rapid extension of representative institutions in India. There are, however, other interesting and important questions of which less is heard but which will require to be attacked. One of these is the question of the relationship in which in the India of the future the various Provinces will stand to one another and to the Central Government. The main object of the Reforms was to train the people in the methods of responsible government; and the provinces were considered to offer the most promising training ground. Responsibility to the Provincial Legislature was introduced in respect of certain functions of the Government, while other functions were reserved. This system of dyarchy was objected to on the ground that it was not sufficiently democratic; and what was termed provincial autonomy was demanded. Provincial autonomy, in the accurate sense of the expression, implies the existence of a Central Government and the existence of Provincial Governments. But it does not define the distribution of power as between the Central and the Provincial Governments. It is, however, precisely at this point—as is suggested by the Majority Report of the Reforms Inquiry Committee—that difficulties have arisen in respect of all federal constitutions. If all the reserved subjects were transferred to Ministers, the control of the Central Government over the Provincial Government would vanish; for the reason that that control exists because the Central Government is still supreme on the reserved side. It follows, therefore, that before the remaining reserved subjects can be transferred some decision must be come to on the question of what the ultimate relationship between the provinces and the Central Government is to be. Is there to be a strong Central Government with power to control the actions of the Provincial Governments in the interests of the country as a whole, or are the provinces to be autonomous States subject only to the minimum of control by the Central Government.

From whatever standpoint this question is regarded it seems to be almost impossible to resist the conclusion that a strong Central Government will be an imperative necessity. The Indian ideal is that British India shall develop into an autonomous State or nation. But what possible prospect is there of the attainment of this ideal unless the discordant elements in the country are held together by a central controlling authority? It is admitted that the prospect of ultimate autonomy which the Reforms scheme has opened out has accentuated the tension between Hindus and Muslims. Each community has striven to make its position stronger and to put up as many safeguards as possible in the provinces where it is in a minority. And in all but two provinces one or other of the two communities is in a permanent minority. In these conditions inter-provincial quarrels would be certain to arise if the provinces were autonomous. And such a state of affairs could not be other than dangerous to the development of the national ideal, for it would tend to foster rather than to allay communal differences. From an economic point of view also provincial autonomy would surely be a blunder. As the majority of the members of the Reforms Inquiry Committee pointed out, the fields of taxation would require to be closely examined before any such system could be introduced. Excise, Customs, and Stamp duties, for example, at once suggest themselves as subjects concerning which there would be difficulties. Similarly, as it seems to us, provincial autonomy might lead to grave difficulties in respect of the defence of India. The representatives, in the Central Legislature, of autonomous provinces might feel it to be their duty to consider first the interests of their own provinces, rather than to take a purely national view, with the possible result that military expenditure might be reduced to a dangerously low level. It must not be imagined that considerations such as these are opposed to the idea that it is in the provinces where the people can best be trained in the principles and methods of responsible government. Nor is the great need for decentralisation overlooked. Decentralisation to the fullest practicable extent is admittedly essential in the interests of efficiency and economy. In short, the provinces should be given all such powers as are necessary for their full development. But if they are to be welded together into an Indian nation, it would appear to be imperative that they should be subject to the control of a strong Central Government empowered to control their actions in the interests of the country as a whole.

CURRENT TOPICS.

Indian Currency Notes.

The popularisation of the currency note issue in India has always been, and indeed still is, an arduous undertaking. The Indian prefers gold or silver coin to paper. Centuries of habit stand behind this preference, which is also supported by certain practical considerations. The Indian climate is eminently destructive, and it is apt to make short work of paper. Then in rural India there is also the ever-present risk of fire to influence the peasant against paper money. Nevertheless very substantial progress has been made during the last twenty odd years in the work of popularising notes. The average "active circulation"—that is the amount of notes issued less those held in Government treasuries and in local head offices of the Imperial Bank of India—increased from Rs 28 crores in 1904-05 to Rs 163 crores in 1925-26 and Rs 156 crores in 1926-27. In the last named year the decrease, as compared with 1925-26, was caused by a fall in the price of India's main export staples. The prospects for continued development in the future are encouraging. The latest available information is that confidence in the paper currency is steadily growing, and that acquaintance with modern monetary methods is increasing at the same time. It is reported by the Currency Department that this is particularly noticeable in Burma where in 1926-27 there was a marked decrease in the seasonal demand for coin with which to finance the rice crop. In Sind also there was a remarkable decrease in the use of silver rupees; and this decrease is believed to be entirely due to the growing popularity of currency notes. In Northern India likewise there was a falling-off in the demand for whole rupees from the Banks and the Currency office in the Cawnpore circle. The fall in prices was partly but not wholly accountable for this. Silver rupees issued in quantities of ten thousand or over from the Lahore Currency office aggregated Rs 1,39,000 against Rs 6,45,000 in the previous year. And similarly there was a great reduction in the issues from the Cawnpore Central Office. An increase of a crore of rupees in the figures of the Cawnpore and Lahore clearing houses also shows that the people are being gradually educated in the use of cheques, and that the banking habit is extending.

It is believed that the practice of hoarding is less persistently followed than formerly. This belief is based on the fact that large sums now find their way into the Post Office Savings Bank, the Co-operative Credit Societies, and the Savings Accounts Departments of the various large Banks doing business in India. Another fact which supports this view is the exceptionally rapid development of the Post Office Cash Certificates. These securities were introduced in 1917-18, and at the close of that year the total amount outstanding was Rs 888 lakhs. By the end of the year 1926-27 this sum had been trebled, the total being Rs 2668 lakhs; and by January 31, 1928—the latest date in respect of which figures are available—there had been a further rise to Rs 3038 lakhs. To what extent the practice of hoarding is really followed in India can be, of course, only a matter for conjecture. But these figures certainly suggest that some, at any rate, of the capital which ordinarily would be hoarded is now being diverted to more profitable uses.

A Legal Question.

Public attention has been lately again drawn to a question which was discussed by the Associated Chambers of Commerce of India and Ceylon at their meeting in December, 1926. It affects endorsements on certain Bills of Exchange. According to the law in force in England, Banks are protected in respect of forged or unauthorised endorsements not only on bills of exchange, or cheques as defined in the Bills of Exchange Act, 1882, but also in respect of demand drafts or orders which fall within the wider definition of the Stamp Act of 1853, and which include demand drafts drawn by another branch of the same Bank. In British India, as the law stands at present, Banks are protected against forged, or unauthorised, endorsements of cheques which would include demand drafts drawn upon them by *other* Banks. But they are not protected against forged or unauthorised endorsements of drafts upon them by their own branches. This is the contention of the Associated Chambers. They are in a position to quote cases where difficulty has arisen, although they do not assert that so far the Banks have been put to serious loss. But they take the view that the present position tends to hamper the financing of trade. They accordingly asked the Government of India to make such an amendment in the Negotiable Instruments Act of 1881 as would bring the law in India into line with the English law.

The Government of India take a different view, which they have quite recently confirmed. They maintain that the contention of the Associated Chambers is based solely on the assumption that the Indian Courts would follow a certain decision of the English Courts. But they are advised that this is an unlikely contingency because the relative section of the Indian Act differs from that of the English Act. Indeed the Government of India consider it to be extremely probable that the Indian law is already exactly what the Associated Chambers want it to be. The result is that the Government do not propose to move until it has been demonstrated by a test case that the protection required is not afforded by the law as it stands.

This decision the Associated Chambers are not, we gather, disposed to accept; and the Bengal Chamber has already recorded a strong opinion against it. What the whole matter really amounts to is that the legal advisers to the Chambers differ from the legal advisers to the Government. And this fact alone seems to us to indicate that the position is uncertain, and that it ought therefore to be cleared up. Moreover, this difference of opinion in legal circles in India might be reflected in conflicting decisions in the Courts. It would be a simple mattter to amend the Indian Act in the way suggested, and to adopt that course would surely be more satisfactory than to wait for litigation which would almost certainly give rise to fresh difficulties.

River Traffic in India.

The steamer traffic on the great rivers of India is controlled and regulated by a statute styled the Inland Steam Vessels Act. Recently there has been introduced into the Legislative Assembly by a private member a Bill amending this Act so as to provide for the fixing of maximum and minimum rates of freight for goods carried by inland steamers. This method of controlling rates has been in force for many years on Indian railways, and the promoter of the Bill considers it to be equally suitable for inland steamer traffic. His argument is that the steamers enjoy "unfettered freedom" in the matter of rates; and that they have killed all competition on the rivers.

This is an entirely mistaken view, as has been shown by the Bengal Chamber of Commerce. Far from being monopolists the steamer companies have to face not only the competition of the railways which is severe, but also that of the country boats which is much more severe, especially in Lower Bengal. The statistics of the quantity of merchandise imported into and exported from Calcutta by the river routes support this statement as regards the country boat traffic. Figures for recent years are unfortunately not available as they are not now recorded. But according to the latest on record—for the year 1921-1922—the total quantity of merchandise brought into Calcutta by country boats that year was close upon 24 million maunds, while the quantity exported was more than eight million maunds. During the same period the inland steamers brought into Calcutta rather more than nine and a half million maunds, and exported about nine million maunds. It should be added that the maund is equivalent to 82.28 lb. avovidupois.

These figures effectually dispose of the argument that the steamer companies are monopolists so favourably

Digitized by Google

situated as to be able to charge extortionate rates. They also make it clear that maximum and minimum rates would have to be applied to the country boat traffic as well as to the steamer traffic. For otherwise the position would be that one type of public carrier would be subject to disabilities from which his principal competitor would be free. Nor does it follow that regulations suitable for railways are necessarily suitable also for steamers. It is open to anybody to run steamers or boats on public rivers, and this fact obviously regulates rates of freight. A railway is in an entirely different position, and it can, if it chooses, raise rates unduly. Furthermore there is in India a difference in the law governing the liability of railways and steamers respectively as carriers. A railway is regarded as a bailee, and being such is required only to prove that as much care has been taken of goods committed to its care as would be taken of his own goods by a prudent owner. An inland steamer company is, on the other hand, a common carrier, and under the Indian Carriers Act its liability is much more onerous.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, June 2

The Satyagraha Campaign at Bardoli.

From the middle of April the Bombay Government decided to change its tactics at Bardoli and Valod and, whereas until then the revenue officers had confined their activities to notices of demand and to attempts at distraint which were frustrated by organised evasion, they determined to resort to forfeiture of land and attachment of cattle and moveable property. To lighten the work of their revenue officers the Government appointed a number of *Pathans* to work in parties of five under five officers. This has created some stir in the city and reports of terrorism in the two districts have gained currency. The Bombay Government has issued a statement which, while it purports to be a warning to the occupants of land in Bardoli Tuluka and Valod Mahal, is really meant to reassure the public that the conduct of the *Pathans* has been exemplary. They say that it is incredible that so small a number of persons could terrorize a population of 90,000. The statement adds: "That as soon as the threats to the Vethyas are withdrawn by the non-co-operation leaders and they are allowed to resume their lawful occupations, the necessity of retaining the *Pathans* will disappear, and they will be sent away." Can this mean that while Government is sure that the *Pathans* are not molesting the villagers it wants to hold out the withdrawal of the *Pathans* as an inducement to the villagers to pay up their taxes? The attention of the cultivators is drawn to the fact that the non-agriculturists have been served with notices of forfeiture with the warning that on the expiry of the period of such notice their land would be entered as Government unoccupied waste and disposed of to persons applying for the occupancy, and that such land once disposed of would not be returned to the previous owners; that a very small area of land has been similarly dealt with, and that notices of forfeiture have been issued to other agriculturists, and that in some cases proclamations of sale have been made. The statement further points out that the number of applicants for the occupancy is by no means small and that one-sixth of the revenue has already been paid up.

Mr. Patel's Outburst.

On the same day that the Bombay Government issued its statement, Mr. Patel, President of the Legislative Assembly, in response to an appeal of Mr. Gandhi's for funds for the people of Bardoli, contributed Rs. 1,000 per month, and in a letter to Mr. Gandhi expressed his sympathy for the cause. He said: "My study of the struggle has convinced me that the Bardoli people have a just case for asking for an independent and impartial inquiry. I am also convinced that they have exhausted all other constitutional methods open to them for the redress of their grievance. I have watched with admiration the courage, the patience and suffering of the men and women of Bardoli, and I have also watched with equal pain and indignation some of the coercive measures adopted by Government to collect the assessment. . . I believe that the measures adopted have crossed the bounds of law, order and decency. . ." These allegations, coming as they do from a man of Mr. Patel's status, have not made the work of Government any easier. Seeing that Mr. Harilal Desai, Bombay Minister for Education, is pressing for an independent inquiry, the Bombay Government will have to appoint a committee to inquire into the question. Mr. Patel's remarks have provoked the *Times of India* to remark in its leading article that if Mr. Patel feels so strongly on the subject he should resign the presidentship of the Assembly before giving expression to his views. The writer, for one, will not be surprised if Mr. Patel takes the journal seriously and does resign—because he knows he is sure of being re-elected. Mr. Patel has done this primarily as a political stunt, and it is no use playing into his hands by asking him to resign, for that will only win him the sympathy of his constituency, which is Bardoli. At the same time, can Mr. Patel be permitted to "non-co-operate from within"? Whilst the Viceroy is deliberately abstaining from interfering in the matter and has left the local Government to settle its own problems, Mr. Patel has seized the first opportunity to express a view which increases the fears of the people and embarrasses the Bombay Government. Mr. Patel would have done well to have had a little faith in the Ministers and the Indian members of the Executive of the Bombay Government.

A Record Blaze.

Bombay has had what is believed to be the biggest fire in its history. On Friday morning at 9.30, the locality of Sewri was shaken by a tremendous explosion, and the top of a kerosene tank in the compound of the Standard Oil Company was thrown several feet into the air, falling back almost into its original place. A dense cloud of smoke issued from the tank followed by tongues of flame shooting high into the sky. All the available fire engines in Bombay rushed to the scene, but by the time they arrived the tank was a blazing cauldron, and the firemen had to concentrate their attention on preventing the fire from spreading to the other tanks in the neighbourhood—by no means an easy task as the oil tanks at Sewri are very near each other. In spite of the fact that the firemen carried their hoses right into the heart of the conflagration there were no casualties. An attempt was made to pump the oil from below into other tanks, but this was found dangerous, and was abandoned subsequently. The cause of the fire is not known. For twenty hours before the outbreak oil was being pumped continuously into the tank from the *Biscayo*, an oil tanker belonging to the Standard Oil Company which had arrived in Bombay a couple of days ago from Russia with Russian oil products. The fire lasted the whole day, and at night the flames lit up the sky. The firemen had expected that the blaze would be extinguished in twelve hours, but even now (on Saturday morning) a cloud of smoke is hanging over Sewri, and it will not be a surprise if the fire subsides only at noon. The capacity of the tank is 1,266,000 gallons, and oil was being pumped into it when the fire burst out. The tank, it is believed, was half filled, and the damage is estimated at several lakhs.

The Auxiliary Committee on Education.

The names of the persons who are to form the Committee to inquire on the growth of education in British India and report to the Simon Commission were out this week. Most of them were already known before. They are: Sir Philip Hartog, Chairman; Sir Lewis Amherst

Digitized by Google

Selby-Bigge, late Permanent Secretary to the Board of Education; Sir Saiyid Sultan Ahmed; Sir George Anderson, Raja Narendranath, Member of Punjab Legislative Council; Dr. (Mrs.) Muthulakshmi Reddi, and Mr. R. M. Statham, I.E.S., acts as Secretary to the Committee. It will be noticed that four out of the seven are Englishmen. The three Indian members all represent communal views Raja Narendranath is a Hindu Mahasabhaite; Dr. Muthulakshmi is the women's representative; and Sir Sultan Ahmed is a staunch Muslim. The task of the Committee is to report on the progress of education, and the report has to be ready by December. The work of the Committee is not so formidable as it may seem since all the necessary information is already in the annual reports of the provincial Governments and the quinquennial reports of the Government of India.

THE PUBLIC SCHOOL MOVEMENT IN INDIA.

For some time past there has been in existence in India a movement for the establishment in that country of a school of the English public school type. Of this movement the leader is the Hon. Mr. S. R. Das, the Law Member of the Viceroy's Executive Council, who is endeavouring to organise a non-communal all-India public school. Mr. Das has already enlisted the support of H.E. the Viceroy, and of some of the ruling Princes, and of many distinguished Indian public men. His object is to collect Rs 30 lakhs to cover the cost of the necessary buildings, and to provide an adequate endowment. So far he has been promised, we understand, Rs 18 lakhs of which the ruling Princes are responsible for Rs 10½ lakhs. The city of Bombay has given Rs 4½ lakhs to which sum the Parsi community has contributed generously.

An independent movement for the establishment of a public school for Parsi boys has also been started recently, Sir Cowasjee Jehangir, Bart., offering the princely donation of Rs 15 lakhs for the purpose. The aims and objects of this movement were explained lately by Sir Pheroze Sethna in an Indian contemporary. Sir Phiroze Sethna anticipated that the general lines of the two schemes will be more or less identical, although as the Parsi school will be on a communal basis it may have certain distinctive features. Is the course of his remarks on the subject, Sir Phiroze Sethna says:—

"As a member of the Indian Sandhurst Committee I had occasion to visit and to study the methods adopted in some of the public schools in England, and it is my firm conviction that they form a priceless heritage of Great Britain, and have contributed largely to the building up of her greatness, strength and prosperity as one of the Great Powers of the world. It is to her public schools, and the splendid education—I am using the word in a very comprehensive sense—which her sons receive in them at a plastic age that she owes the marvellous continuity, richness and strength of her national life. Critics there are, who find fault with some aspects of life in those schools and the training imparted therein, and in these ultra-democratic days average public opinion, which is by no means always high or enlightened public opinion, demands that if you cannot level up, you must level down. One piece of adverse criticism levelled against them is that they are too aristocratic and too costly for poor boys who must therefore remain shut out from them, with the result that they must inevitably accentuate class differences and class feelings. This criticism is not devoid of force, nevertheless the general consensus of opinion rightly is that, on the whole, the influence of public schools in England upon her national life, growth and development has been wholesome and powerful. With so many scholarships so freely given it has now become possible for many a poor but talented young lad to enter a public school.

"If public schools have any disadvantages, dispassionate critics will agree that these are greatly outweighed by their advantages. The public school system is peculiar to England alone. It does not prevail on the Continent or in the United States of America. Even in the self-governing Colonies and Dominions, Canada alone has made an attempt and so far possesses two or three schools which are run on the lines of English public schools. Perhaps the soundest argument in favour of the public school system is the fact that it has survived for so long and is still flourishing and that in other educational spheres its methods are flatteringly emulated. Whatever may be said against it, the public school turns out a class of man whose services to his country cannot honestly be disputed. In a peculiar and undeniable way the English public school system suits the English genius, and its product has been and is the mainstay of the Empire in many a tight corner. Of Englishmen who come out to the different Imperial services in this country a very fair percentage are from public schools. Those in commercial firms however, I mean the majority of them, have not had public school education. The tendency, I understand, is now growing even for business firms to give preference to candidates who have passed out from public schools. If I am not mistaken three large British firms in Bombay get out no others than public school men in their employ.

"Of all Indian communities the Parsis have more readily adapted themselves to Western methods. In the matter of literacy the returns of the last census show that amongst them there is little disparity between the sexes. For years past the community has had before it several projects for a well-established school. If nothing concrete was done in the past it was because of the difficulty of getting the necessary funds. Some years back a highly esteemed member of the community, Mr. Merwanjee M. Cama, set apart the very large sum of twenty-five lakhs of rupees, and which sum has now improved with interest to more than thirty lakhs, for educating sons of Parsi priests for the profession of the clergy, and be it remembered that a Parsi priest like the Brahmin must be born of a priestly family. If that large sum so far back was devoted to the purposes of a Parsi school, by now much headway would have been made. It is however never too late and now that 15 lahks have been endowed by one donor, the community may well hope that the school will be a 'fait accompli' before long."

On the difficult question of the type of religious education to be provided for, Sir Phiroze points out that the three principal tenets of the Zoroastrian religion are "good words, good thoughts, good deeds." And he suggests that the best religion will be to enjoin on the boys the constant practice to the fullest extent of these tenets. He realises that in English public schools the greatest attention is paid to what is called character building. And religious education in the Indian schools must be, he thinks, of such a nature as will help in implanting those qualities of heart and mind which form character, so that a high sense of duty may be instinctive among the boys. He continues:—

"The future of the Parsi community is now, for better or for worse, inextricably interwoven with that of the Indian people as a whole. The Parsi youth must not be ignorant of his ancient Iranian culture and civilisation. It is gratifying that of late there is an awakening in the community in this direction. We would like Parsis to take a greater interest in the present progressive State of Iran and also to cultivate commercial relations if possible. But, at the same time every Indian community great or small, would do well to look more to the future than to the past. It is in this way alone that a harmonious, full and strong national life can be built up. Indian history, Indian culture and Indian civilization must therefore form part of the curriculum of studies in the public school and should be studied synthetically, so as to evolve a future common culture and civilization in which all Indian races and communities can take proper share and real pride.

"There is one very important aspect of the institution of public schools to which special attention must be drawn. I am hoping that before long we shall have many public

Digitized by Google

schools in the country. They must be so organised and conducted that they will be naturally and rightly looked to, for supplying at least a considerable portion of the future statesmen, legislators, administrators, and soldiers of India. This I consider their special function and every care must be taken that they may discharge it fully and properly. The race of statesmen, legislators, administrators and soldiers requires special mental and moral training, and it must be the special task of these public schools to provide such training.

"The Parsi public school will be avowedly communal. Some may object to this, and think that just as communalism is opposed to nationalism so a "communal" public school is opposed to the basic conceptions of true public schools which should be national and not communal. In the peculiar circumstances of India, however, idealism has sometimes to be modified and a communal public school may well be given a fair trial. But the very fact that the Parsi school will be communal makes it all the more necessary that special care should be taken to guard against the evils of communalism. The school may be Parsi, but the spirit and atmosphere that should pervade it must be thoroughly Indian and Catholic. If provision is made for the admission of some non-Parsis, just as non-Europeans, boys and girls, are admitted in some schools mainly intended for European boys and girls, just as non-Mahomedans are admitted at Aligarh and non-Hindus at Benares then there will be leaven enough of the non-communal element to prevent excessive or unreasonable communalism, and to reconcile it with and subordinate it to, the decisive needs and demands of a healthy national spirt.

"The question is raised as to whether the Parsi public school should be a day school or a boarding school. There ought to be no doubt on the point. A public school must be a boarding school. If you want to produce men with a certain type of character you must take them at a young age and subject them to a strict regimen which can be had only in good restricted public schools. We talk of home influences, but are we sure that those influences make for strict discipline and a stern sense of duty? There may be sweetness, affection, gentleness in the life of the home, but it is precisely these sweet and gentle influences of the home that retard the growth of those sterner virtues without which character cannot be strong and complete, and the battles of life cannot be bravely and successfully fought. By the boarding system the Headmaster gets his boys more completely under his control so that he can the better counteract in them the undesirable influence of some kinds of home life and more easily conform them to the desired pattern."

Reuter's Simla correspondent states that the Afghan newspapers describe the elaborate preparations made for the reception of the King and Queen of Afghanistan on their arrival at Herat, between June 23 and July 2. Part of the journey will be made by air. A State banquet will take place at Dilkusha Castle, in Kabul, in celebration of their return.

The Motor Transport Co., of Peshawar and Kabul, who hold the monopoly, by special appointment to the King of Afghanistan, of mechanical transport between Torkham and Kabul, announce a service beyond the Khyber Pass, leaving every second day from Peshawar at 7 a.m. and reaching Kabul next day at 4 p.m., with similar journeys in the opposite direction. This service should be a very great convenience for travellers, tourists and traders, and marks a distinct advance in the transport facilities of the country. Seats, luggage and merchandise may be booked through the Indian branches of Grindlay and Co., Ltd.

The annual report on the Prince of Wales's Royal Military College at Dehra Dun for Indian cadets shows satisfactory progress. The preparation for the Sandhurst examination worked well, and two candidates from the College passed at Simla. The number of cadets in residence was 78, and accommodation has now been completed for 120. Arrangements have been made for cadets who are not specially fit for Sandhurst and the Army to go to a University to complete their education for other careers. It is expected that Indian State Forces will draw on Dehra Dun College largely, and the question may come forward when the reorganisation of these forces is considered. A committee of Indian Princes and Government officials will shortly examine the reconstitution of these troops.

THE DEATH OF SIR ALEXANDER MUDDIMAN.

(From Our Own Correspondent.)

Cawnpore, June 18.

The death of Sir Alexander Muddiman, Governor of the United Provinces, has taken place as the direct result of a heart strain following on excessive exercise at squash racquets and tennis at a high altitude. He will be difficult to replace. It seems essential that the new Governor should be someone with experience of the country, as provincial politics are disturbed by the mischievous action of the party opposing the Government.

Sir Alexander Muddiman, Governor-General of the United Provinces of Agra and Oudh, whose death was announced on Monday, was chiefly known in connexion with his work with the Government of India and the Reforms scheme. As Deputy Secretary in the Legislative Department he had practical knowledge of the working of the Morley-Minto Reforms of 1910. And later, as Secretary of the Department, he had a great deal to do with the shaping of the Montagu-Chelmsford reforms, and with the legislation which they necessitated. When the scheme was put into operation he was selected to be the first President of the Council of State, an office which he filled with distinction. In 1924 he succeeded Sir Malcolm Hailey—who then become Governor of the Punjab—as Home Member and leader of the Legislative Assembly. In the first Assembly the post of leader was not of course easy; but when the second Assembly was elected in 1923 the Swarajist leaders determined to abandon their boycott of the Central Legislature. They accordingly came into the Assembly, and the difficulties which were created by their obstructive tactics were very considerable. Although Sir Alexander Muddiman may not have had the skill and experience of his predecessor in the leadership he was nevertheless very successful in handling a difficult situation. As we pointed out at the time when he succeeded to the Governorship of the United Provinces he was by common consent the best speaker, judged by Parliamentary standards, in either of the two Houses. He had great debating skill, and was clear in statement and straightforward in argument. Moreover, he was in sympathy with the policy underlying the Reforms scheme, and this sympathy undoubtedly contributed materially to his success as leader of the Assembly.

In 1924, Muddiman was appointed to the Chairmanship of a Committee—the Reforms Enquiry Committee—which was constituted by the Government to examine the difficulties arising from or inherent in the Reforms Scheme, and to suggest remedies consistent with the structure, policy, and purpose, of the Government of India Act of 1919. The members of the Committee failed to come to unanimous conclusions, and they issued two reports. The Majority Report, with which the Chairman was associated, dealt with a large number of the difficulties in question in a practical way, and made numerous recommendations. Some of these have been adopted, but the appointment of the Statutory Commission has, of course, delayed most of the points arising out of the minor inquiry.

Muddiman's appointment to the Governorship of the United Provinces was received with general satisfaction. It is true that his career in the Indian Civil Service had been somewhat different from the ordinary. He had spent most of his time in the Secretariat, and was thus without extended experience of district work. He was appointed to the Bengal Commission in 1899 when he became an Assistant Magistrate in Bihar. About three years later he joined the Bengal Government as an Under-Secretary, and thereafter he had but little experience of the districts. The general opinion was, however, that, despite this disadvantage, he would have been a successful Governor. He had an altogether exceptional capacity for work, combined with no inconsiderable ability; and his sudden death after only a few months of office is the occasion of universal regret.

Commercial and Financial Section.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Ottoman Debt.

The first step in the final stage of the settlement of the Ottoman Debt question has been reached with the signature of the agreement in Paris last week by Fethy Bey, the Turkish Ambassador in Paris, and the representatives of the British, French, German, Italian, and Swiss bondholders. It now remains for the agreement to be ratified by the Grand National Assembly, which, it is stipulated, must take place before December 1, and following the ratification the first coupon will be paid. It would be idle to pretend that the settlement now arrived at is to the liking of the bondholders, but it has been accepted as offering the best way out of an unfortunate business, and it can only be hoped that no further hitch occurs to throw the agreement once again into the melting pot. Not that I think there is any real fear of that happening, for while the bondholders have gone as far as they can in meeting the Turkish demands, I have no doubt that the Turks feel that there is nothing to be gained by any further delay, especially since their doubts as to the exchange position have been completely removed. With the Debt question out of the way Turkey will be free to devote herself to the problem of development, in regard to which, as I pointed out last week, the question of the enlistment of foreign experts is beginning to be mooted. The reported invitation of a Dutch banker to Turkey to give advice on financial matters is no doubt to be interpreted as the first step in this direction. Only a few months ago Angora would have scorned the idea of advice from Europe on any matter, and this development shows plainly the change in outlook which is now taking place in Turkey.

Near East Loans.

It is rather curious that there should be so many Near Eastern loans on the tapis at the present time, Roumania, Bulgaria, and Yugoslavia all desiring loans of greater or lesser amount. Of these loans the only one which is likely to be issued in the near future is the Bulgarian Stabilisation Loan, the amount of which is now to be £5,000,000, an increase of £500,000 having been authorised by the League of Nations to meet the expenditure occasioned by the earthquake disaster. As in the case of the Roumanian negotiations which were impeded on account of the attitude of Roumania over the German share of the 1913 loan, there has been a hitch over the Bulgarian loan as regards the revenues allocated to its service, but it is understood that a settlement is about to be made over the claims of the Diskonto-Gesellschaft in this respect. While it is reported that very satisfactory progress has been made with the Roumanian negotiations it is very doubtful as I suggested last week, whether the loan will make its appearance before the autumn. With the third loan—that for Yugoslavia—much less progress has been made than in regard to the issues for the other two countries, and it is now reported that the negotiations have been postponed to the autumn. This loan is the largest of the three, the amount being £50,000,000, and among the purposes for which it is desired are railway construction and the reform of the currency. From the point of view of Great Britain this is probably the most important of the Near Eastern loans, for it will not only mean orders in connexion with the railways, but also possibly for new ships.

Yugoslav Banking Amalgamations.

A feature of the present year in Yugoslavia has been the number of banking amalgamations with the object of establishing large undertakings which can better serve the interests of the country than a number of small institutions. It has been known that further amalgamations were pending, and the announcement is now forthcoming that the Yugoslavian Discount and Mortgage Bank, which was recently formed by the amalgamation of the Croatian Discount Bank and the Croatian-Slavonian Land Mortgage Bank, is to increase its scope and resources by absorbing the Bosnian Bank, Belgrade, and the Agrar and Commercial Bank, Sarayevo and Belgrade. The Yugoslavian Discount and Mortgage Bank, which will now have a capital of about 180,000,000 dinars and published reserves of about 38,000,000 dinars, will, it is understood, shortly change its name to the Yugoslav Union Bank.

British-French Discount Bank.

Details are given in the Bulletin of the Ottoman Bank of the subsidiary institution which has been established by that bank in Athens. Its title is the British-French Discount Bank Ltd., and its capital is £250,000. The purpose of the new bank is the development of business relations between Great Britain, France, and Greece. The board of directors of the new bank is as follows: Mr. E. W. H. Barry, M. Félix Bellet, Sir John P. Hewett, M. le Baron Hottinguer, M. Raoul Mallet, M. le Comte Pillet-

Cyprus Asbestos Results.

A very satisfactory report is forthcoming from the Cyprus Asbestos Company for 1927. As a result of the year's working the debit balance of £2,017 has been converted into a credit balance of £28,986. The trading profit per ton of asbestos fibre in 1927 was £5.116. Mining costs have been reduced by £1.187 per ton as compared with the previous year, while the net proceeds have been increased by £0.527, which is equivalent to an increased margin of profit per ton of £1.724. As regards the current year, it is anticipated that further reductions in working costs should be effected and that there will be a large profit per ton of fibre.

The League of Nations.

While that purpose was not in view when it was established, the League of Nations has found in the furtherance of the economic reconstruction of European countries a most valuable field for its activities in the last few years. In the current issue of the Monthly Review of the Midland Bank an article is devoted to the League of Nations as a force in reconstruction, and a whole-hearted tribute is paid to the financial and economic assistance which it has rendered. The article deals in detail with the various countries which have been helped by the League—Austria, Hungary, Greece, Estonia, Bulgaria, and the Free City of Danzig—only two of which fall within the Near Eastern sphere. Of Greece the article says that "It is too early yet to judge of the measure of success attending the Greek scheme, but clearly here too the League has rendered inestimable services in assisting the process of monetary stabilisation and in aiding economic recovery by improving the material resources and raising the general level of prosperity of the country." In view of the work of the League it is surprising that its good offices should not be more generally sought in connexion with the raising of loans, but both Roumania and Yugoslavia are endeavouring to meet their financial requirements without the assistance of the League. One is left to assume that it is the preliminary examination of the economic position of a country and the conditions attached to loans issued under the ægis of the League that make countries prefer to do their own negotiations. Whether they can get better terms that way is another matter.

Phœnix Oil Report.

The announcement in the report of the Phœnix Oil and Transport Company that it is not proposed to pay a final dividend for the past year will scarcely have come as a surprise to the shareholders in view of the conditions which have obtained in the oil market. As a matter of fact, though the profits are much below the total for 1926, the company was in a position to pay a final dividend equal to the interim distribution, which would have made 5 per cent. for the year, but no one will criticise the decision of the directors to adopt a conservative policy at this period. The actual production of oil amounted to 434,897 tons, this total marking a further stage in the rapid development of output which has been a feature of this company's history since 1922. The figures for production since that period are so striking that it is worth while setting them out in detail. For 1922 the production was 42,105 tons; for 1923, 105,259; for 1924, 187,904; for 1025, 267,380; for 1926, 360,231; while for 1927, as I have mentioned, the production again rose sharply to 434,897. The fact that with such an increase in output the profits amounted to only £223,553 as compared with £428,719 for the previous twelve months throws a vivid light on the situation prevailing in the oil market. The low price for oil is not, however, the main reason for not paying a final dividend. A scheme has been adopted for the installation of pipe stills and fractionating towers at both refineries, and this scheme, which involves an outlay of approximately £100,000, will, it is anticipated, result in an increased profit of considerably more than that per annum even at the present prices. It is expected that the new pipe stills and fractionating towers will be installed and working in October next, so that enhanced profits should commence to accrue before the end of the present year.

Kassala Cotton.

The report of the Kassala Cotton Company, which has just been issued, covers the last season in which the company is concerned with its original concession in the Gash Delta. It will be recalled that a new agreement was arrived at last year with the Sudan Government, under which the company relinquished its Kassala concession and received a new concession adjoining the area under the control of the Sudan Plantations Syndicate. The area of the new concession is about 45,000 feddans, of which it is proposed that one-third shall be under cotton each year. It is hoped that at least 5,000 feddans will be planted with cotton in the autumn of 1929, and that the full quota will be planted by the following year. The results of the last season at Kassala showed a great improvement on those of the previous year. The area effectively irrigated was 26,100 acres, as against 11,500 acres, while the crop amounted to 54,128 kantars, as against 22,547 kantars. An unusually good Gash flood was responsible for the improvement.

COMMENTATOR.

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

WESTMINSTER BANK
LIMITED
Head Office: 41 Lothbury, London, E.C.2

THE POPULATION OF GREECE.

A provisional return of the Census recently held in Greece gives the total population as 6,187,000. Among the chief towns Athens has 452,357 inhabitants; the Piræus, 254,584; Salonika, 251,161; Patras, 65,444; Kavalla, 53,000. No other town can boast of more than 36,000 inhabitants. As the total population on January 1, 1921, was 5,043,816 (excluding the 493,287 inhabitants of the territory since restored to Turkey), the number of refugees who have entered Greece from Turkey has to be reckoned at about one-and-a-quarter million, if the Turks who have been returned to Turkey number a quarter of a million.

BRITISH GOODS ON THE YUGOSLAV MARKET.

Some Hints to Manufacturers.

Something like a year ago I drew attention to the extraordinary lack of interest displayed by British manufacturers towards the Yugoslav market.

Of course British goods can be bought at Yugoslav shops, chiefly textiles, ironmongery and colonial goods; but there is a lack of direct, or well-organised indirect, connexion, especially for machinery, motor cars, steam engines, dynamos and electric material. It is interesting to note that American industry has managed to gain ground in far greater measure, although American goods (motor cars, dynamos, motor cycles, rubber goods, and provisions are those that come chiefly into consideration) are appreciably inferior in quality to British goods costing only a trifle more. On top of this, America carries on business under considerable difficulties and from inconvenient bases. Her chief depôts for the Near East are in Alexandria, Trieste, Genoa, and even in Hamburg. The Italian port of Trieste is a free port; but what with the constant bickerings and misunderstandings between Yugoslavia and her neighbour, the very existence of a port in frontier territory presents difficulties to normal trading. The same drawback applies to Salonika, which lies in Greek territory. The delivery of goods via Bulgaria, with whom Yugoslavia has chronic frontier trouble, is practically impossible.

In spite of all these obstacles, American goods have found their way to the Yugoslav market—because the American manufacturer is not afraid of taking risks. Uncertain financial conditions, the fluctuations in the value of our currency, which has begun to be stabilised only during the past few months, and, finally, the constant crises and alarms in our internal politics—all these cause want of confidence, and only well-represented and enterprising firms can hope, by judicious trading, to win a market in a country where bankruptcies are the order of the day. The winding-up of bankrupt concerns takes years, and it is the supplier who bears the brunt of the loss. He must work with a large and certain margin which the Americans know how to exploit far better than Europeans do. For an American car the European buyer pays far more than for a European car. By way of example let me point out that the Chevrolet Car (product of the General Motors, Limited) costs less in America than the Overland (the American concession to a British firm). On the Yugoslav market, the Overland is the cheaper of the two, which shows the want of confidence on the part of American manufacturers when supplying goods in Yugoslavia.

Important as intermediaries are Italy and Austria, no less as middlemen than as transit territories. Of course, native industry is well developed in both countries, and the result is formidable competition between the two. Italian goods, however, have their own special character, and whenever relations between Yugoslavia and Italy will improve—and after the recent efforts on the part of Dr. Marinkovitch, Yugoslav Minister for Foreign Affairs, it is to be hoped that they will do so ere long—Italy will have a good basis for her commercial footing in Yugoslavia. Besides her own goods, Italy offers excellent railway connexions, free ports, depôts, and workshops. She possesses the two ports most important to Yugoslav and Hungarian trade, viz., Trieste and Fiume.

Austria has long acted as intermediary between Yugoslavia and Germany, and the market of northern Yugoslavia is altogether in the hands of German industry. In the south, French goods predominate, and trade with France enjoys the patronage of the Yugoslav powers that be.

France exports cheap goods to Yugoslavia, and her competition makes itself felt in all directions. At the same time, Yugoslav export to France is very small, and this betrays the fact that mutual commerce between the two countries is to a great extent artificial.

Of British goods, textiles and motor cycles are well-established on the Yugoslav market; also, in lesser degree, typewriters and fountain pens. The last-named are, however, being gradually ousted by cheap French and German products, and the typewriters by American and German competition. British textiles and motor cycles maintain their place in popular favour despite keen competition and yet another grave handicap. All British goods reach Yugoslavia only through middlemen established either in Vienna or even in Bohemia, for whom the import of British goods is not even their chief business. This procedure is intelligible; and when I consider Yugoslav trade and politics, I am compelled to admit that the British manufacturers are only obeying the dictates of prudence when they seek to establish their agencies in Austria or Italy. All the same, this will not suffice. If trade with Yugoslavia is to be encouraged, the Chambers of Commerce must facilitate agreement between Yugoslav retail dealers and British agents, so that the manufacturer may be enabled to supply the goods direct through his agent in Vienna or Trieste, and not through a dozen middlemen, each of whom must have his profit by the way, whereby the price of the goods is driven up to the point where the consumer refuses to pay. Moreover, British manufacturers ought to take an interest in conditions in Yugoslavia—a country from which many things might be exported and which ought to have a great future when once it has settled down. The soil is excellent for wheat and tobacco. Its mineral wealth is great. Industry is not greatly developed as yet, and in view of the vigorous industries of Italy and Austria and their intense and rapid growth, we must expect Yugoslav manufacturers to specialise in rough produce, such as raw copper, timber beams and boards, tobacco in bales, pig iron and lead, raw chemical products, flax, etc.

These remarks might furnish a basis for a summary of the position and possibilities of British trade on the Yugo-

slav market—a position which might easily be greatly improved and, indeed, provide British production and British commerce with fresh fields for conquest.

Although it is impossible to-day, or at least fraught with considerable risk, to supply goods in Yugoslavia on credit or against deferred payment, we may say that the north, i.e., Slovenia and part of Croatia, is commercially sound and that there the supply of goods on normal terms is already possible.

High tariffs constitute another great obstacle to successful trading. The country is full of agencies that are prepared to get your goods through the Customs at a minimum of expense. They seem to have grown up overnight like mushrooms. Yugoslav Customs regulations are so complicated, and are moreover so frequently altered, that it is almost impossible to keep track of them; and whoever is successful in understanding their intricacies or getting round them sets up as an agent. At least, so we say. Of course, we hope that conditions will improve in this department also and a serious obstacle to trade be removed thereby.

The Yugoslav market would come into consideration, incidentally, for goods which would be difficult to place elsewhere. Textiles, hats, and foot-gear that had been long in stock might still be disposed of there, and such goods—of good quality though not new—would have a chance of competing successfully and even ousting the shoddy high-priced output of other countries. In any case the development of trade with Yugoslavia would be possible and profitable; but of course— and I wish to point this out once more—on a basis of immediate payment and good commercial basis, or at least through a thoroughly reliable agent.

JOE MANTUANI.

The production of the Anglo-Egyptian Oilfields for the week ended June 15 was 5,474 tons.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended May 20 amounted to £E5,968, making the total from April 1 £E33,889.

Messrs. R. Raphael and Sons, Austin Friars House, E.C.2, announce the numbers of bonds of Piræus, Athens, and Peloponnesus Railway 3 per Cent. bonds drawn for repayment at par on July 15 next.

An Athens message states that a London banking firm is co-operating with the Greek National Bank in negotiations for the purchase of the railway system in the Peloponnese. It is also reported that a group of French capitalists is negotiating for the purchase of the Greek State Railways, which consist chiefly of the lines between Athens, Salonika, and the Serbian frontier.

The Roumanian Ministry of Agriculture has issued a report to the effect that the winter crops in Roumania proper promise results better than any obtained since the War. The condition of the crops in Bessarabia is also satisfactory, while all the spring sown crops show up extremely well. The areas under barley and maize considerably exceed those of last year.

COMPANY NOTES AND REPORTS.

PHŒNIX OIL AND TRANSPORT.

The report of the Phœnix Oil and Transport Company for the year ended December 31, 1927, states that the operations for that period showed a continuance of the progress made in previous years, but the results were naturally affected by the exceptional fall in world prices for oil products. The net profit amounted to £223,553, to which is added the balance brought forward of £208,213 5s., amounting together to £431,766. The directors have decided to transfer to investment reserve £100,000, increasing that reserve to £200,000, and after providing for the interim dividend on account of 1927 paid on January 31, 1928, which absorbed £107,575, there remains a balance of £224,191. When the interim dividend for 1927 of 6d. per share on the £1 shares and a proportionate amount on the 1s. shares was paid, it was intended to distribute a similar amount as a final dividend, which the year's profits would have permitted, but subsequently, as a result of research carried on both in U.S.A. and Roumania, a scheme was laid before the board for so lowering refinery costs and generally effecting such substantial savings on present methods that the directors considered it their duty immediately to proceed with its adoption. The scheme includes the installation at both refineries of pipe stills and fractionating towers, which are the latest inventions of modern oil science in U.S.A. and are being manufactured there. The scheme involves an outlay of approximately £100,000, but the company's experts are confident it will result in an increased profit of considerably more than that amount per annum even at present ruling prices. In view of this large capital outlay and the unsettled condition of the oil industry, the directors feel compelled to husband resources, and therefore do not recommend a further dividend for 1927. It is proposed to carry forward the balance of £224,191. It is expected that the new pipe stills and fractionating towers will be installed and working in October next.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, June 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahsud for Calcutta (Birkenhead, June 26).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, June 27).

British India Line.—S.s. Merkara for Colombo, Madras, and Calcutta (London, June 30); s.s. Trelissick for Bombay and Karachi (London, June 30).

Cunard Line.—S.s. Bantria for Gibraltar, Ceuta, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool June 23, Swansea June 24); s.s. Bactria for Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, July 21).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 5); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 28).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, June 22); s.s. Macedonia for Bombay (London, July 6); s.s. Padua for Port Said, Colombo, and Madras (London, July 7).

Price Line.—S.s. Italian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, July 4); s.s. Sicilian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, July 11).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar, Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool June 26, Swansea June 26); s.s. Serbino for Malta, Alexandria, Jaffa, and Haifa (Swansea June 25, Liverpool June 26); s.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool July 7, Swansea July 12); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, July 11); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, July 12); s.s. Andalusian for Oran*, Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, July 14). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The Bengal and North Western Railway, after transferring £30,000 to the contingency fund and £25,000 to the reserve, and placing, as usual, £35,000 to the sinking fund, have declared an interim dividend for the half-year ended March 31 of 4 per cent., together with a bonus of 5 per cent., or 9 per cent. in all, on the ordinary stock.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 14.

Revival has not yet followed the pronounced set-back which overtook the Stock Exchange markets a week or two ago, and during the past week further adverse factors have been introduced in the shape of renewed weakness of securities in Wall Street and something of a collapse on the Brussels Bourse. Fairly heavy selling has taken place in London of speculative stocks, especially those in which the interest is of an international nature. On the other hand the cheapness of money helped investment stocks to resist the unfavourable factors at work elsewhere. It is now getting a little late to look for any resumption of boom conditions before the holiday season sets in. But it is in the favour of holders of securities that a period of cheap money seems fairly certain. It may also be that the worst of the set-back in Wall Street is over. The Federal Reserve Board's deliberate policy of checking speculation has produced its effect and need not be carried to more drastic lengths. However, speculators in New York have received a sufficient shaking to make it likely that the American markets for industrial securities will be rather quiet for a time. It seems probable that similarly quiet conditions will prevail over here; and, truth to tell, a pause after months of great activity is by no means to be deplored.

The Tin Outlook.

During the week the reports of four fairly well-known tin producing companies have been published, and three at least are somewhat disappointing. The past year has certainly not been entirely satisfactory for tin producers. Many results for the past year having now been issued, shareholders are turning their attention to the outlook for the current year. The immediate future is hardly more encouraging than the immediate past. But an improvement in the more distant future is not regarded as impossible. The chairman of the Tavoy Dredging Corporation recently declared that it was "a little difficult to explain why the set-back in the price of the metal should continue." Again, the chairman of the Anglo-Oriental Mining Corporation emphasised "the inherent soundness" of the tin industry, which was founded upon two cardinal facts—"the first was the constant growth in the world's demand for the metal and the second was the limitation of supplies." He made a good point in dwelling upon the need for re-organising the industry on modern lines. Consolidation and re-grouping, together with the employment of more efficient plant, are much to be desired. A plea has lately been made for adequate statistics relating to the industry, in order to give shareholders more definite guidance than they have at present. It is to be hoped that every effort will be made to satisfy this perfectly legitimate demand.

Hudson's Bay Prosperity.

The ordinary shares of the historic Hudson's Bay Company have lately been an active market, the price having advanced from the lowest point of the year at £4 9/16 to the current level of £6 1/16. The report published this week, for the year ended May 31 last, confirming the preliminary profit statement, shows that the rise has not been without justification. The profits from trading were nearly trebled, the net profit being £438,295, as compared with £298,554. The dividend from trading profits is increased by 5 per cent., making the total dividend for the year 25 per cent. (on which 10 per cent. being from land sales is free of tax); this compares with last year's total of 20 per cent. A sum of £225,000 is transferred to the dividend equalization fund, against nothing for the two preceding years. The directors' report strikes a hopeful note, which is perhaps not unnatural in view of the commonly accepted view of Canada's future. In particular, comment is made upon the development of mining and manufacturing in British Columbia and the prairie provinces, this having widened the basis of the prosperity upon which the company depends. On the whole, the results of agriculture in Canada are described as satisfactory. The completion of buildings in Winnipeg, Vancouver and London have contributed to the increase in the company's trade. Doubtless profits will fluctuate somewhat from year to year, but there is considerable confidence in the company's future.

Coal Profits.

The report of William Cory and Son. the well-known coal factors, for the year ended March 31 last makes a distinctly unfavourable comparison with that of a year ago. In the circumstances, however, the level of earnings is very creditable. The net profits fell from £1,038,777 to £696,047 and the dividend on the ordinary capital of £2,850,094 is to be 17½ per cent., compared with 18 per cent. and a bonus of 10 per cent. for 1926-27. The exceptional high level of profits for the earlier years, which showed an increase of £504,795, was largely due to the coal stoppage, the heavy imports of coal substantially contributing to the company's revenue. It is noteworthy that the profits for the past year are some 40 per cent. higher than those for 1925-26. As for companies directly and solely engaged in mining coal, the position is much less satisfactory, for the industry is plainly working at a considerable loss. In the recent past, it is true, costs have been steadily reduced, but at the same time prices have been falling more rapidly than costs. The result was that for the last quarter of 1927 there was an average loss equal to fully 1s. per ton. More recently the loss has been somewhat less, and it is expected that during the first quarter of this year the loss has been in the neighbourhood of 9d. per ton. This has been mainly due to the rapidity with which costs have declined. Of course, the loss is still considerable and should prompt an anxious search for the appropriate remedies.

An order has been placed by the Yugoslav Government with a British firm of coal exporters for 6,000 tons of Durham patent coal. This business previously went to Germany. It is anticipated that further orders for large quantities of coke will shortly be placed here.

Engineering Topics.

By G. B. B.

The fact that the gas engine is a highly efficient, convenient, economical, and thoroughly reliable prime-mover would, one would have thought, have been apparent by now to every power user. The fact that British gas engines are in every way the equal of those of Continental manufacturers should have been equally apparent. For years gas engine practice has proceeded on normal and common lines of development in every country, and he would be a bold man who would assert, in this connexion, that the gas engines of any one country were superior to those of any other. It comes rather as a surprise, then, to learn, from an article in a contemporary, that the development of an export trade in gas engines is not one of the easiest of tasks. No task is really easy, of course, but surely there is no more difficulty in selling one article of established worth to people who are open to buy than there is to sell any other article.

However, this correspondent thinks otherwise and says that "for many years this class of motive power"—I do not wish to be hypercritical, but a gas engine is not a motive power. It is a prime mover. Electricity is a "motive power," as are steam, water, and hot air"—"suffered from the drawback that suction gas producers were only suitable for a limited range of fuels and that fact lent special strength to the competition which had to be faced both in steam and oil engines."

Suction Gas Power.

Now, no paper has said more regarding the possibilities of suction gas power development, particularly in the Near, Middle, and Far Easts, than has this newspaper. Both in and out of season we have emphasised the value of the gas engine and the economical manner in which suitable gas can be generated from various substances. The motor vehicle, fitted with an engine running on suction gas, has great prospects in store, provided makers rise to the opportunity and assist by showing prospective users exactly what that class of vehicle can do. It is useless for makers to rely on the statements of travelling salesmen. Demonstration vehicles should be sent through every part of the Near East, especially accompanied by representatives with a thorough knowledge of the languages of the countries visited.

Gas Engines in the Balkans.

There is a good deal in what the correspondent in question has to say regarding the possibilities of developing the sales of gas engines in the Balkans. The machinery trade between this country and that part of Europe has always presented certain drawbacks, the chief of which were the inordinately long credits which have to be given before any large volume of trade can be built up, and the big element of risk which exists, or which by British houses is imagined to exist. It appears that in the development of the gas engine trade Turkey is found to be the most satisfactory country to deal with, taking into account the amount of trade, the credit accorded, and the risk. As far as sales are concerned, that country accounted for a large number, these being effected through a small army of agents or distributors, each of whom lives in one of the coast towns or ports and who sought for and dealt only with business in his own city or vilayet.

In Roumania, so far as the internal combustion engine is concerned, the crude oil using type is by far the most popular, for purely local reasons. Both in Roumania and Bulgaria, however, there has been and is a certain market for internal combustion engines working on light hydrocarbons of a specific gravity of 740-750. It is true that engines of that type hardly come within the ordinary gas engine category, being nearer to the containing ordinary motor car, etc., engines running on petrol, but as every engineer is aware, a mere change in the carburetter will turn any gas engine into one that will run on petrol or benzole. The Bulgarian market, again, is said to be affected by the great length of the credit required by the buyers and the financial risks that have to be taken. In this, I am merely quoting: I have no knowledge as to these risks, etc., and believe that if British makers and exporters go about the business properly they will find no more risk in trading in the Near East than they will in trading in any other part of the world.

The Bank of British West Africa recommends a final dividend of 4 per cent., making 6 per cent. for the year ended March 31, 1928, less tax.

The Rohilkund and Kumaon Railway have declared an interim dividend for the half-year ended March 31, 1928, of 4 per cent., together with a bonus of 3 per cent., or 7 per cent. in all, on the ordinary stock.

The Greek Finance Minister has drawn up a decree ordering the banks operating in Greece to submit to the Finance Ministry a monthly return containing the amount of cash, deposits with the Bank of Greece, deposits with other Greek banks, gold, foreign currencies, credits granted, bills discounted, sight liabilities in drachmæ, in gold, and in foreign currencies.

THE LIUBLIANA SAMPLES FAIR.

(From Our Own Correspondent.)

The eighth annual International Samples Fair has just closed in Liubliana, which was the first Yugoslav town to risk such an undertaking. By now the Fair is an institution. With gloomy pride a typical native made haste to inform me this year that it was "quite the worst show we have had so far," so that I promptly went and was not at all disappointed. During these eight years the Yugoslav sample fairs have settled down to their special character. In Zagreb, local industry is well developed (for Yugoslavia), but the place is above all a cosmopolitan town and a trading centre. The variety of goods is greater and also the number of countries represented. Liubliana is the chief town of an industrial region, and the Liubliana Fair most interesting as an exhibition of the output of the factories of Slovenia and West Croatia. Great progress has been made since that first fair in 1921. This year the whole of one large pavilion was filled with household furniture which would have done credit to any arts and crafts exhibition I have ever seen. All was native work, much of it from the little village of St. Vid, near Liubliana, where so many of the fine Carniolian bells are cast in a bell foundry that is scarcely larger than an ordinary farmhouse, and looks rather like one. Prices were moderate, and I was not astonished when I heard that many orders had been placed abroad. Knitted goods have improved out of recognition, both in quality and design during the last five years or so. It is a pity that the wool available here for such good work is not softer and lighter. There are a good many factories for woollies in and around Liubliana. Then there were bricks, basket-work, shoes and boots (from Terzitch), cotton goods, paper (from near Liubliana), chicory, a big consignment of woollen material from the new factories at Kranye, and the usual peal of bells—all local products; and furs, which were very largely so. The French pavilion was full, while the Czech pavilion was packed with dynamos to the exclusion of everything else. British goods were conspicuous by their absence, except in the motor section, which was larger than ever. In spite of expense, motoring increases in popularity as a means of travel, and for short journeys motor lorries come cheaper than railway transport—so I am told. There were plenty of British makes of motor cycles, and also cars. I hear that if the British loan is successful, trade with Great Britain will at once look up in this country. Meantime you find more and more British goods for sale at shops—gloves, hosiery, jams, and marmalade have been imported recently in increasing quantities, and people have taken to them.

Then there were the usual specialities: Turkish carpets (a firm from Graz, not Sarayevo!), Bosnian purveyors of carpets, sweets, and silver filigree. There was the permanent Health Exhibition, and finally an exhibition of modern Slovene Art. Judging by the last-named, the artists of this country are passing through a phase corresponding to that of the æsthetic era many years ago at home. I noticed a certain avoidance of the clean bright colouring typically dear to the Slav, and a preference for half-tones, and of course (this goes without saying in all modern art) conventional drawing. With my old-fashioned taste and training, I honestly preferred the examples of applied art, the wall-paper patterns, designs for scenery, book-binding, etc., in which the traditions of peasant art and industry exercise a wholesome and restraining influence.

In time for next year's Fair it is proposed to replace the present wooden pavilions by permanent buildings with concrete foundations. This year will also see the construction of a large swimming-bath in Liubliana, thoroughly up-to-date in all its appointments, where the water will be artificially heated—a necessary precaution in an Alpine climate where every spell of rain means a sudden cooling off of the rivers. A new hotel will shortly stand at the entrance of the street opposite the main station. This hotel will be in the style of the "Esplanade" in Zagreb, and will add greatly to the amenities of Liubliana, as far as visitors are concerned. So far, there has always been difficulty about finding accommodation for strangers at times of congresses (and Liubliana is, for obvious reasons, a favourite resort for congressites—or should it be "congressists"?—in summer) during the Fair, and, latterly, even during the ordinary tourist season. Obviously, the writer is no longer alone in the idea that Liubliana is not a bad summer resort in itself, and a comfortable base and headquarters besides for the whole of Upper Carniola, beg pardon! "Yugoslav Switzerland," as the new prospectuses rather wisely express it.

NEWS FROM ALL SOURCES.

The condition of the cotton crop in Lower Egypt is 99 per cent. as compared with last year, and that in Mid-Egypt and Upper Egypt 100 per cent.

A glass manufacturing company has been established at Bucharest under the title of the Transylvanian Glass Company with a capital of 10 million lei.

The Greek Chamber of Deputies was to discuss on June 18 a motion dealing with a proposed contract for dredgers for the Port of Piræus.

The Egyptian State Railways, Telegraphs, and Telephones have given a contract to Messrs. Howell and Co. for the supply of 8,000 steel boiler tubes.

The traffic receipts of the Suez Canal from June 9 to 15 were 3,760,000 francs, as compared with 3,800,000 francs for the corresponding period of last year.

It is reported that British shipping companies have made representations with regard to the high port dues and charges at Constantinople and other Turkish ports.

A contract has been given by the Egyptian State Railways, Telegraphs, and Telephones to Messrs. George Turton Platt and Co. for the supply of helical springs.

The value of Egypt's imports for May was £E4,266,860, as against £E3,898,798 last year, while the value of the exports was £E4,660,034, as against £E3,433,051.

The profit of the Dooloogram Tea Company for 1927 was £9,510, against £6,734. The directors propose a final dividend of 5 per cent., making 12½ per cent., against 10 per cent., carrying forward £471.

The net profits of the Banque de Syrie et du Grand-Liban amounted to 3,694,126 francs, against 2,975,624 francs for 1926. The dividend has been raised from 8 per cent. to 10 per cent.

The net profits of the National Bank of Bulgaria amounted to 44,700,000 leva for 1927 as compared with 148,900,000 leva for 1926. 42,500,000 leva have been added to the reserves, while 2,200,000 leva have been placed to the pension fund.

The London office of the Banca Commerciale Italiana announces that its Roumanian affiliation, the Banca Commerciale Italiana and Romena, Bucharest, etc., has taken over the Banca Agrara Timisana, of Timisoara, and its branches at Cluj, Arad, and Sibiu.

A Bill is being introduced into the Greek Chamber providing for the formation at Athens of a limited company with the exclusive privilege for thirty years to manufacture cigarettes for home consumption.

Large orders for steel for the construction of a bridge over the River Hoogly at Calcutta are understood to have been received by Tees-side firms. Messrs. Braithwaite and Co., who have works at Calcutta and Bombay, have secured the contract for the bridge. Of the 17,000 tons of steel sections and plates needed for the structure, approximately half is to be supplied by rolling mills on the Tees-side. It is expected that Tees-side firms will also manufacture the huge steel bearings for the bridge.

In a letter to British manufacturers enclosing application forms for space in the London section of the British Industries Fair, 1929, the Department of Overseas Trade states that, owing to the success of the last fair, it has been found necessary to provide an extra hall giving 100,000 square feet of stand space in addition to the 250,000 square feet occupied at the last fair—roughly a 40 per cent. increase. It is further stated that provisional applications for space at the White City amount to two-thirds of the total new stand area. In Birmingham the increase of space will bring the exhibition area to about 250,000 square feet, making a total area for both sections of the Fair of over 600,000 square feet.

Near East Markets

CYPRUS TRADE IN APRIL.

The value of goods imported dropped slightly during April, the total, £130,980, being £7,418 less than for April of last year, and £21,654 less than for March of this year, but was considerably more than the quinquennial average and may therefore be considered satisfactory.

The biggest drop was in flour in view of the approaching harvest; and there was a further decrease in machinery. One other item worthy of note is the increase in the number of motor cars (including motor lorries) imported. Exports at £115,667 were £18,294 in excess of those for April of last year and £32,329 above the average. No item showed any abnormal increase, the tendency being to a general all round improvement. The exportation of asbestos began during the month with 410 tons. The prices of products in general were well maintained.

The values of the principal imports were as follows:—Cotton yarns and goods, £17,474; flour, wheaten, £17,523; iron bars, joists, etc., £2,711; iron and steel manufactures, £2,291; leather, sole, £2,259; machinery, £12,291; motor cars, £6,566; petrol and benzine, £3,491; petroleum and paraffin, £3,129; silk manufactures, £2,458; soap, £2,200; sugar, £4,171; woollen manufactures, £4,252.

The values of the principal exports were as follows:—Asbestos, £8,469; carobs, £16,637; cheese, £2,911; cotton, £3,316; lemons and oranges, £15,479; mules, £3,068; potatoes, £6,989; pyrites, £18,335; raisins, £6,253; silk cocoons, £3,472; silk raw or wound silk, £9,769; wine, £4,632.

POTATOES FROM PALESTINE.

The Empire Marketing Board reports that a small consignment of potatoes has been sent to this country from Palestine this year and it is reported that a larger shipment of an experimental nature will be made next year. It is the intention to plant potatoes in the Jericho and Bensai districts in November and to ship the tubers in February or early March as deck cargo on the boats carrying oranges.

ECONOMIC PROGRESS IN YUGOSLAVIA.

An interesting survey of the potentialities of Yugoslavia is given in an article in a recent issue of the United States "Commerce Reports," in which it is pointed out that the country has been passing through a period of readjustment, and that, while much progress has been made, lack of capital has handicapped extensive development. The article continues:—

The country is rich in natural resources, comprising large tracts of fertile soil, varied and abundant mineral deposits, wide forest areas, and the power, largely undeveloped, of the many watercourses. Agriculture is the basic industry of the country and is closely followed in importance by cattle-raising and forestry. The raising of livestock is the second industry of importance in the Kingdom, normally supplying from 25 to 30 per cent. of total exports. The forage crops, meadows, and pastures of the country furnish adequate feed for the domestic herds, so that exports of animals and animal products represent practically a net profit to the country. As the per capita consumption of meat and meat products is small, a large percentage of the total production finds its way to foreign markets. The heavy loss of animals during the World War has not yet been fully replaced. Short corn crops, which make the fattening of swine for slaughter difficult and result in the export of live hogs instead of pork and pork products, are also in part responsible for the diminished number of livestock.

The forestry industry ranks first as regards capital invested, and normally is third in total value of exports. It is estimated that more than 1,000,000,000 dinars, or about one-third of the capital invested in industrial enterprises, is placed in the development of forest products. Forests cover 18,745,340 acres, or about 30.5 per cent. of the entire area of the Kingdom. The State owns 47.7 per cent. of the forest lands, private individuals 33.3 per cent., and the remainder is owned by communities, municipalities, and other public organisations. Following the depression which continued throughout 1925, a steady improvement has been recorded in this industry, but full development of the rich forest resources and proper utilisation of production are impossible because adequate transportation facilities are still lacking.

Industries Undeveloped.

Industrial development, excluding the forestry industry, is still in its infancy. There are, however, several small but active industries, including the textile, chemical, paper, ceramic, leather and tanning, etc., but these, with the exception of the chemical industry, produce chiefly for home consumption.

The minerals of the Kingdom are classified chiefly as follows: Metallic minerals, comprising ores of copper, lead, iron, gold, silver, aluminium, molybdenum, manganese, chromium, and antimony; non-metallic, comprising sulphur and asphalt; fossil fuels, comprising black coal, brown coal, and lignite; useful rocks, such as marble, limestone, granite, cement marl, and gypsum; mineral wells, comprising salt wells and petroleum wells. Coal is the most important mineral resource of the Kingdom, but production of the higher grade is insufficient for home needs, and small quantities are imported regularly. Mining has been carried on in practically all provinces; but development, except in regions adjacent to ports, has been hampered by lack of means of communication.

The policy of financial retrenchment adopted in recent years by the Government has resulted in a practically balanced budget, but at the sacrifice of certain important expenditures for public works. The increasing need of such projects, however, has made a continuation of the present fiscal policy injurious to normal economic development, and foreign capital has therefore been sought to expedite new construction, especially of railroads.

The attainment of dinar stability, in spite of intermittent adverse economic developments, such as the unfavourable trade balance of 1927, is an achievement of the first importance for the trade and credit position of the country. The funding of the debts to Great Britain and the United States also contributed largely to the adjustment of the country's financial status abroad. The

gradual recovery of the Kingdom's production is indicated by the steady increase in volume of exports,

The transport system is the weakest link in the national economy. The roads inherited by the present Kingdom represented a conglomeration of railways that were built with no idea of serving the needs of the country as at present constituted. In addition, a large number of the roads were destroyed during the War. The rebuilding of these roads and the consolidation of existing roads into an effective workable system has been a difficult task. Despite this reconstruction, the network is still inadequate for the general needs of the country, and every effort is being concentrated on the expansion of transport facilities, lack of which has seriously handicapped economic progress.

The gradual extension of transport will open many new regions, where hitherto the lack of facilities to ship products to marketing centres has kept down the purchasing power of the population. This development, in turn, is expected to create an important potential market for a variety of foreign products.

EGYPTIAN MARKET CONDITIONS.

The Monthly Review of Barclays Bank, Ltd., contains the following report on the Egyptian market :—

There is little of outstanding interest to report in regard to trade generally, which is entering upon the usual slack period, common at this period of the year. Demand for cotton goods has improved, although there has not been much activity, and prices show a tendency to appreciate. Exports of sugar to Syria, Palestine, and the Grecian Islands have given good support to this commodity, although, at the moment, quotations for future deliveries are not strong. The demand for flour for spot consumption, as well as for export, has been active at steady prices; weakness of the Chicago market at the time of writing is causing quotations to droop. Preference in the rice market is being given to the Egyptian product and, owing to reduced stocks, prices are appreciating. Importers show little inclination to operate in cabots, and there has consequently been a depression in the market, with poor exports. Little business has occurred in gunnies, preference being given to cotton-sacks, but even the demand for these has been quiet.

TURKISH MARKET FOR NECKTIES.

The major demand for neckties in Turkey is confined to four-in-hand ties, since bow styles are little worn except with evening dress (says an American Consular report). Medium and high grade four-in-hand ties are imported chiefly from France, Italy, and Germany, while the cheaper grades are made locally from imported materials. The trade in ready-made ties, controlled chiefly by French, Italian, and German manufacturers, is estimated at approximately £T25,000 per year. The fabric is largely imported from Germany, France, and Austria, with Germany controlling about 65 per cent. of the trade. It is estimated that the total imports of fabrics of this nature are valued at £T150,000 to £T200,00 per year.

Reparation payments made to Yugoslavia during the period August 31, 1927, to May 31, 1928, amounted to (in gold marks): deliveries in kind, 34,716,819.02; sundry payments, 213,178; cash transfers, 9,830,111.72; total, 44,760,108.74.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Pumping Sets, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of two pumping sets and two water tanks to the Ministry of War. July 25.

Iron Sheets.—The Egyptian State Railways, Telegraphs, and Telephones invite tenders for 144,300 kilos galvanised corrugated iron sheets of various dimensions with accessories.

Galvanised Steel, Etc.—The Egyptian State Railways, Telegraphs, and Telephones invite tenders for 22,000 feet galvanised mild steel and 3,200 feet piping steam mild steel, and for 700,000 twine type lead seals.

Side Bearing Springs, Etc.—The Egyptian State Railways, Telegraphs, and Telephones invite tenders for 2,000 side bearing springs for standard 10 ton wagons to drawing; 4,100 metres cable switchboard, value between £E950 and £E1,150; and 30 loco and tender tyres 4 ft. 2¼ in. to drawing for standard gauge main line. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Flat Mild Steel.—The General Management, Egyptian State Railways, Telegraphs, and Telephones invites tenders for the supply of 472,800 kilos flat mild steel. August 29.

Steel Plates.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of 58 steel plates for renewals of four swing bridges. August 23.

Spare Parts for Machines, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of spare parts for machines, leather, belts, iron goods, paints powder, nails, files, etc., to Tura Mills. July 28.

Rails.—Tenders are invited by the Ministry of Finance, Survey of Egypt, for the supply of any quantity of rails up to 14,050 tons (8,300 tons light, 5,750 tons heavy). Offers for any portion will be taken into consideration. Offers may be for either new or second-hand rails. July 25. (D.O.T.)

Metal Cabinets and Safes.—The Survey of Egypt Department of the Ministry of Finance invites tenders for the supply of 120 filing cabinets and 12 safes. July 4. (D.O.T.)

Automatic Telephone Exchange.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply and erection of a full automatic telephone exchange equipment in Cairo and associated subscribers' apparatus. Specification and drawings obtainable (price £E5) from Chief Inspecting Engineer, London. September 1.

Cloth.—The Stores, Egyptian State Railways, Telegraphs and Telephones, Saptieh, Cairo, invites tenders for the supply of 4,300 metres of cloth for making aprons for female operators. July 3.

Bridge over the Nile at Samanoud.—The Ministry of Communications, Egyptian Government, invites tenders for the construction of a metal bridge over the Nile. August 23. (D.O.T.)

Dredgers.—Tenders are invited by the Ministry of Public Works of the Egyptian Government for the construction of (a) two dipper dredgers each capable of an output of spoil in free-getting material of 80 metres cubic per hour measured in the solid, and (b) two suction pump dredgers each capable of an output of spoil in free-getting material of 200 metres cubic per hour measured in the solid; including re-erection in the Sudan and for the delivery thereof in working order safely afloat on the River Nile. Builders may tender either for the two dipper dredgers, or for the two suction pump dredger, or for both groups. The contract documents and the rules for, and full information as to, tendering may be inspected at the offices of Messrs. Goode, Fitzmaurice, Wilson and Mitchell, Consulting Engineers to the Egyptian Government, 9, Victoria Street, Westminster, London, S.W.1, or the Legation of the Egyptian Government, Bute House, 75, South Audley Street. October 1.

INDIA.

Tool Steel.—The Agent of a railway company in India invites tenders for the supply of tool steels, cast and high speed, for consumption during the period September 1, 1928, to March 31, 1929. July 16. (D.O.T.)

Equipment for Pumping and Power Supply Scheme.—The Indian Stores Department at Simla invites tenders for generating sets, transformers, generating and transformer station auxiliary plant and accessories, E.H.T. transmission line equipment, and telephone equipment in connexion with the Sumera Hydro Electric Pumping and Power Supply Scheme of the Public Works Department, United Provinces. July 2. (D.O.T.)

ROUMANIA.

Machine Tools.—A new company has recently been registered in Bucharest with the object of the purchase and sale of motor cars and accessories, the construction and "exploitation" of garages, and repair workshops, and any other operations in connexion with the industry and commerce for motor cars and agricultural machinery. The British Commercial Secretary at Bucharest suggests that machine tool firms may care to forward copies of catalogues and price lists of machines and equipment suitable for motor car repair work and garage use. (D.O.T.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 13:

Egyptian Futures.—Sakel Contract.—For the first time for a considerable period this market has shown decided weakness. During the earlier days, although a distinctly easier undertone was in evidence, the decline was not important, but latterly general liquidation from all quarters has been in progress, and with no outstanding short interest of moment to be covered this has materially affected values, to-night's close being at practically the lowest of the week a decline of 133 to 159 points for near and 118 to 122 points for more distant positions. For some weeks past consistent purchases by both local and Alexandria speculators have been accumulating, and on top of this, as commented upon in our recent reports, a large straddle interest, purchases of Sakel against sales of Uppers, has been worked up. These operations have been based on the strength of the statistical position and the assumption that trade interests both in this and other countries will sooner or later be forced into the market to replenish their supplies. Support from the latter sources has been delayed much longer than generally anticipated, and as soon as the weaker "longs" started to get out the overbought position of the market became most marked; although the decline has been very rapid, we very much doubt whether the technical position has yet improved to the extent to warrant anticipations of anything except temporary reactions for the immediate future. Local trade reports from the fine spinning section still indicate, as they have done for some time past, a general distrust in the ruling level. Spinners appear to be successfully eking out their dwindling Sakel stocks and substituting or mixing in other and cheaper varieties. Cables from Alexandria very briefly attribute the downward movement that has been witnessed to general liquidation; crop reports continue to be very satisfactory and the water situation appears to have ceased to operate as a market factor, reliable reports stating that ample supplies will be available throughout the summer months.

To conclude, whilst, as stated previously, we still consider that more liquidation has to be effected before the market will be in a really sound position, we think those who lean to the "short" side would be well advised to keep their commitments down and to be content with moderate profits. The partial evening-up of the old long account has already eased the position to a certain extent, and whilst, at the moment, there is nothing in evidence to cause anticipation of a reaction, any improvement, whether in the shape of healthier trade support or firmer American markets, would probably find a ready response here.

Upper Contract.—Values in this contract have been adversely affected by the very sharp decline experienced in the Sakel market and also in a lesser extent to the rather disappointing tone in the American Departments. In addition, trade support has been on a much reduced scale from that experienced during recent weeks, although there are signs of more trade interest developing at the lower levels now obtaining.

Throughout the week consistent selling orders have been coming into the market, mainly for Alexandria account, and the result of this has been to narrow the new crop premium at which we stand over the American market to approximately 340 points. At this difference we rather consider that purchases of November against sales of October in the other market will later on show a moderate profit. Advices from Alexandria are to the effect that the liquidation of the stale "bull" account has now been about completed, and on this account we consider that purchases on any further recessions from to-day's level are to be advised.

Egyptian Spot.—In spite of a series of constantly sagging futures markets some improvement has been noticed during the past week in the offtake for spot Egypts, and it is satisfactory to record that Sakel cotton has contributed its share. For a long time past orders for spot Sakel, at from pass to 50 points on contracts, have been conspicuous chiefly by their absence, but latterly there have been signs that trade interest in this quality was at last showing signs of revival. Needless to say, staple is a first requisite and much of the so-called "Fully Good Fair Sakel" which is being offered here stands a poor chance of participating in this inquiry. The situation with regard to the Fine qualities of Sakel shows no change. Very little business has taken place worth mentioning, the high prices which are still being asked offering little encouragement to would-be purchasers, where any such can be found.

The inquiry for the "off" and inferior cotton has again been on a fair scale, but business has, on the whole, been quieter, a state of affairs due no doubt to the fact that this market has been so well combed out in these qualities that spinners are not finding it so easy to fill their requirements as was the case some little time ago.

Sudan Sakel has experienced only a very moderate offtake, but the basis has remained firm. Uppers at from pass to 30 on have continued in steady request, but no improvement in the demand for the better qualities has been seen. The dropping market has acted rather as a check on business, and much the same sort of thing has been seen in the Pilion market, where only a moderate business has resulted, although the inquiry for cotton at from 15.50d. to 16.50d. has well been maintained. At the moment, without anything up country to encourage purchases on a large scale, the trade appears to have adopted a watching attitude; but it is probable that if the present decline shows signs of a halt, a considerable amount of buying may be induced, for, if half the reports we hear are correct, many spinners are badly in need of fresh supplies.

C.i.f. business has been very irregular, but here and there some bright patches have been noticed. Offerings from Egypt continue to show considerable variation. Forwardings to the trade for the week ending the 8th inst. were returned as 11,729 bales Egyptians and 2,861 bales Sudan. Estimated spot sales, 1,900 bales Egyptians and 400 bales Sudan. Quotations of Sakel have declined 140 points during the week and those of Upper and Pilion 75 points. F.G.F. Sakel to-day, 20.30d. F.G.F. Upper to-day, 14.20d.; F.G.F. Pilion to-day, 14.80d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 7 state:—

The past week has been a series of quiet markets and the tone is somewhat undecided. The week's summary of price movements is as follows:—Sakellaridis: July, 42.55 dollars, 0.28 dollars down; November, 43.39 dollars, 0.53 dollars down; January, 43.21 dollars, 0.49 dollars down. Ashmouni: June, 27.46 dollars, 0.28 dollars down; August, 27.67 dollars, 0.33 dollars down; October, 28.10 dollars, 0.22 dollars down.

Sakel.—There is very little fresh to say on this market during the past week. Business has been of a professional nature and commercial houses have not operated to any extent. The demand from abroad has slightly improved, but it is rather the firmness of the spot market which has prevented any serious sagging of prices. There are again rumours that the Government intends, after all, to release its stock in small daily quantities at market price; if such is the intention, it is doubtful if the scheme will work out exactly as the Government wish; however, that is the rumour and we give it for what it is worth.

The Sakel-Ashmouni straddle difference has narrowed in to 15.29 dollars this week on a continuation of the reversing mentioned in last week's report. The July-November straddle has narrowed to 84 points against 109 points last week.

Uppers.—This market has attracted little attention and prices have more or less followed New York fluctuations.

General.—The local statistical positions shows an improvement of about 90,000 kantars on the week and the Alexandria stock now stands at 2,400,000 kantars, against 2,950,000 kantars at this time last year. The market is somewhat nervous and a decline looks possible, but we do not thing that we are in for any serious drop unless American breaks badly.

Spot.—There has been a general improvement in the demand; this was especially noticeable towards the latter part of the week. The market was closed on Saturday last and will be closed every Saturday until further notice. Total sales amount to about 10,400 bales, of which we estimate 3,700 bales Sakel, 6,500 bales Ashmouni and Zagora, 100 bales Pilion, and 100 bales other varieties.

Sakellaridis: A good business has been done in all grades up to Fully Good Fair, Good; higher grades have only shown a very small turnover. Low grade cotton has been much in demand, but spot differences remain unchanged.

Ashmouni and Zagora: There has been a considerable increase in the demand for these varieties and all grades have been dealt in, with a slight hardening in the spot differences.

Pilion: Is still much sought after, but the lack of cotton restricts the turnover. Premiums paid do not show much change.

Other Varieties: A small business has been done in White round about Fully Good Fair, Good.

Crop, 1928: There is absolutely nothing new to say on the crop this week. It is progressing normally in spite of rather variable temperatures. Leaf worm attack is still in evidence, but no damage has been done, the cultivators having been very energetic in destroying the egg masses. Flowering in Upper Egypt is fairly general and it has also started in the Delta. The discharge from the Assouan Reservoir, on the 5th inst., was 1,018 cubic metres per second, against 838 cubic metres last year and 1,154 cubic metres in 1926, and the level stood at 103.88 metres against 108.74 metres last year and 106.85 metres in 1926.

It is reported that the prospects of the prune crop in Yugoslavia are satisfactory.

During the fourth annuity up to May 31, Greece received reparation payments totalling 1,166,370.55 gold marks.

The board of directors of Barclays Bank (Dominion, Colonial and Overseas) have declared interim dividends for the half-year ended March 31, 1928, at the rate of 8 per cent. per annum on the cumulative preference shares and at the rate of 3½ per cent. per annum on the "A" and "B" shares, subject to deduction of income-tax at the rate of 3s. 1½d. in the £ in respect of the cumulative preference shares and 3s. 5¼d. in the £ in respect of the "A" and "B" shares, payable on July 19.

In the first quarter of the current year Yugoslavia's exports, totalling 1,372.5 million dinars, went mainly to the following countries:—Italy, 368,108,709 dinars, or 26.83 per cent.; Austria, 280,319,017, or 20.43 per cent.; Germany, 196,934,583, or 14.35 per cent.; Czechoslovakia, 114,899,802, or 8.37 per cent.; and Hungary, 112,005,026, or 8.10 per cent. Great Britain occupied the ninth place in the list of countries importing from Yugoslavia with 28,688,295 dinars, or 2.09 per cent.

Notes of the Week.

Murder in the Skupshtina.

The stormy scenes that have characterised the proceedings in the Yugoslav Parliament for the last few weeks came to a head on June 20, when M. Ratchitch, a Radical deputy, stung by the abuse hurled at his party by the Opposition and in particular by one member, M. Pernar, drew a revolver and discharged it at the ranks of the Croat Peasant Party. M. Bassaritchek was killed instantly and five others were hit, including M. Stephen Raditch, the Croat leader, M. Pavle Raditch, who tried to protect his uncle, and M. Pernar, the immediate cause of the outrage. The wounded were conveyed at once to hospital, but M. Pavle Raditch died on the way. The condition of M. Stephen Raditch gave rise at first to some anxiety, but according to the latest reports he is expected to recover from his wound. Even in a country where political murder is endemic its introduction on a wholesale scale into Parliament is calculated to shock the national conscience. A single revolver shot in the Skupshtina might have been regarded as a momentary lapse in a fit of temper; but M. Ratchitch, in turning his weapon on the Croat leaders, after he had already hit his immediate antagonist, proved that he was acting under the prompting of something else than a sudden resolve to avenge his honour. For some days previously the suggestion had been bandied about in Radical circles that Croat opposition would only be overcome by force; and it is difficult to resist the conclusion that M. Ratchitch was prepared, if occasion arose, to give effect to this suggestion. When political differences have been reduced to this level, it is time that the people should reassert their authority and take charge of the politicians who have betrayed their trust.

The Effect in Yugoslavia.

Croat indignation has found temporary vent in the immediate withdrawal of all deputies from Belgrade and in minor riots in Zagreb. The more considered attitude of the Peasant Party will depend in large measure on the actions of the Government. M. Voukitchevitch's Cabinet, in not resigning at once after the incident in the Skupshtina, has lost an opportunity of dissociating itself in the eyes of the country from all possibility of sympathy with the assassin's motives. It would have had to remain in office until its successor had been chosen, and the administration would not have suffered. As things are, there seems little doubt that the Government will have to yield to public opinion, by making way for a Cabinet of Affairs of no definite Party complexion. If, however, peace is to be restored to Yugoslavia, something more than fresh elections will be required. The root of the trouble lies in the policy of over-centralisation associated with the name of M. Pashitch. In the years immediately following the War, there was much to be said for a system that would provide the maximum amount of driving power in Belgrade with a view to setting the new Kingdom on its feet. Its acceptance in the northern provinces, however, did not imply acquiescence in their permanent elimination from all administrative control. Serbia, having once gained the hegemony, showed no disposition to share it, and Serbian methods jarred increasingly on Croat and Slovene susceptibilities. There has been little or no attempt to heal the breach thus created, and it would seem to have taken such a rude awakening as the Skupshtina murders have provided to bring the country to a sense of the dangerous domestic policy that it was pursuing. The need for modification in the Constitution is now being more generally admitted, and, provided that the Radical Party and its leaders show readiness to meet Croat and Slovene opinion on this point, good may yet come for the Kingdom out of the tragedy of June 20.

Political Troubles in Egypt.

The Coalition Government in Egypt has not long survived the resignation of Sarwat Pasha, its Liberal head. With the appointment of a Wafdist Prime Minister the idea that the Wafd should take over the whole responsibility for the administration inevitably came to the fore and found support in the Party itself. Mustapha Pasha Nahas himself was not in favour of the proposal, and did his best to maintain the co-operation of his Liberal colleagues. Differences, however, between the Liberal and Wafd camps asserted themselves, and finally both Mohamed Pasha Mahmud, the Liberal Minister of Finance, and the Liberal Minister for War, resigned. Their resignations marked the end of the Coalition, and the only problem before the Prime Minister was whether he should fill the vacant portfolios by appointing two of his own followers, or whether the Government should resign and appeal to the country. Before a decision could be reached the resignations of two Wafd Ministers were announced, and a further complication was added by the publication of documents purporting to connect Nahas Pasha with an arrangement by which he and two other members of the Wafd, in their capacity as lawyers, were to receive payment for influencing the course of a judicial matter in a certain direction. Until the authenticity of the documents has been proved, and the explanation of the three lawyers has been given, judgment on the matter has to be withheld.

The Change of Government.

To what extent the allegations brought against Nahas Pasha may have influenced King Fuad's action cannot at present be stated, but there can be little doubt that the interests of Egypt require that, until the allegations have been satisfactorily disposed of, anyone labouring under such a charge should vacate the office of Prime Minister. Nahas Pasha's position was complicated by the fact that the Executive Committee of the Wafd formally recorded their continued confidence in him, and so virtually forbade him to resign. In these circumstances King Fuad considered that he had no alternative to dismissing the Cabinet. His Majesty based his action on the fact that the Ministry had been formed on the basis of a Coalition, and, as this basis could no longer be maintained, he had decided to dismiss the Government. After consulting with various ex-Prime Ministers, including Sarwat Pasha, who refused to take office, King Fuad called upon Mohamed Pasha Mahmud, Liberal Minister of Finance in the late Cabinet, to form a Government. At the moment of writing, the composition of the new Ministry is not known, but it may be expected to take the form of a Cabinet of Affairs, one of whose duties will be to conduct a general election. The crisis and its solution, it cannot be too strongly emphasised, are essentially a domestic concern of Egypt, with no bearing on Anglo-Egyptian relations. The main interest attaching to it centres in the manner in which Egypt, comparatively new to political independence, will rise superior to a crisis of this character.

Greece and Turkey.

Although official spokesmen in Turkey still speak of the early conclusion of a Turco-Greek pact as probable, there is little indication that this optimism is shared in Greece. It now becomes evident that Italy consented to the signing of her agreement with Turkey because she had realised the unlikelihood of any immediate understanding between Turkey and Greece. The trouble between the latter two countries remains the impossibility of arriving at agreement over the value of the properties of the "exchangeables" of both and over the rights of "non-exchangeables." Greece has offered to submit the whole question to arbitration, leaving to a commission of three the task of adjudicating on each point submitted to it, with an undertaking on the part of all concerned to accept its decision as final. This proposal has not been accepted by Turkey, nor has she made any counter-proposition. So far the negotiations have been allowed to drag on without seriously affecting the relations between the two Governments. Under Italy's prompting Turkey tried to expedite matters. When, however, she did not meet with immediate success, but had in spite of her failure in this direction obtained her treaty with Italy, she seemed content to allow things to drop back into the old groove, and no real progress has been made. The talk of the forcible seizure of the property of non-exchangeable Greeks in Constantinople, because the Greek Government has not yet surrendered the properties of non-exchangeable Turks in Western Thrace, suggests that the Angora Government is beginning to lose patience over what it regards as the non-fulfilment on the part of the Greeks of their treaty obligations. In view, however, of the friendly atmosphere which has actually been established between the two Governments it is to be hoped that both sides will refrain from pushing things to extremes.

The Little Entente Conference.

The meeting in Bucharest last week of the Foreign Ministers of the three States of the Little Entente once again registered the pacific and static nature of the understanding that links Yugoslavia and Roumania with Czechoslovakia. This year an attempt to introduce a constructive element into an otherwise negative programme was made by the appointment of a joint commission to consider means for intensifying the economic relations of the three countries. For the rest, the Little Entente can only register its resolve not to tolerate any revision of the Treaty of Trianon, its devotion to the League of Nations and its approval of the ratification by Yugoslavia of the Nettuno Conventions as a step in the improvement of Italo-Yugoslav relations. Unfortunately the effect of the latter is weakened by the fact that the meeting has of itself aroused Italian wrath. These periodical discussions between the Foreign Ministers of the three Powers are conceivably helpful to the respective Governments, but to the outside world they offer no concrete contribution to the advancement of Europe. The proposal to study the financial and commercial relations between the three countries is a sound move, and the scheme might be applied to the political sphere. Instead of merely registering, meeting after meeting, its disapproval of any revision of the Treaty of Trianon, the Little Entente might appoint a joint commission to investigate Hungarian grievances with a view to discovering how, as an alternative to revision, the ground can be cut away from under the feet of Hungarian complaints. European opinion has no special predilection for revision—on the contrary, it is instinctively opposed to it—but, confronted as it is with definite evidence of grievances arising out of the Treaty of Trianon, it would appreciate a helpful contribution to the subject which would convince it by intelligent argument either that steps are being taken to remove the alleged grievances or that revision would either merely shift the incidence of injustice or increase the sum total of it. As things are, the iteration of grievances on one side and of a refusal to listen to them on the other tends to reproduce a situation similar to the domestic situation in Yugoslavia and Roumania, with the same risk of appeals to force.

"Flagellation" in Palestine.

We had rather thought that the system of securing law and order and justice in Palestine was something of which the British Administration could well be proud, that whatever might have failed of accomplishment in other departments, that of justice was something in the nature of a model achievement. To judge by the Jewish Press, however, the Palestine Government has recently committed the most atrocious of acts, in the "flagellation" and the deportation of a few Jewish Communists from the Holy Land. Protests have been made both inside and outside Palestine to the effect that, since every Jew entering Palestine is returning to his home, no law under the meaning of the Palestine Mandate can expel him. And concerning the flogging, it is alternatively claimed that this

Digitized by Google

'barbarism" never existed in Palestine before the War and has been introduced from England, or that it is an inheritance from Turkish rule in Palestine. Now we confess to having little sympathy with all this agitation. In the first place, this handful of Communists suffered corporal punishment, not because they were Communists, but because, when in prison, they refused to conform to prison discipline. In the second place, if the Jerusalem Government considers such Communists to be a potential menace to the peace of the country, we fail to see any argument by which they may profitably be retained. Admittedly, the "stunt" in certain ignorant quarters concerning the great menace of Bolshevism in Palestine is one which fails to carry conviction, and that this problem has never been considered by the Jerusalem Government as a very important one. Is that not all the more reason, however, for trusting the unperturbed Administration when it does decide to deport these undesirables? This overriding claim that no Jew can be deported from the Holy Land is, in short, one of the most preposterous yet emanating from, and echoed outside, Palestine. But it should be remembered that this affair has gained all the more prominence because the Zionist colonists are, in general, so law-abiding and decent a folk.

Palestinian Arabs.

The Arabophil will not find very much encouragement in the fact that some sort of compromise has been arranged between the Muslim Arabs of Palestine and the Christian Arabs, for this sort of patchwork unity does not impress. Whatever the Arab Congress may say—and the Seventh Congress was held on June 20—the Arabs of Palestine cannot "get going" as a united body. There is now too large a section of them, although it is largely voiceless, which desires politics to be a practical affair, that is, which desires unostentatious collaboration with the Government. At the same time, it is difficult to resist the theoretical justice of the demand, sent by this Arab Congress on June 20 to the League of Nations and to the British Government, for the establishment of a democratic parliamentary system of government for Palestine. There is no obvious reason in equity why the Arabs of Palestine should be denied what has some years since been granted to the Arabs of Iraq. Nor can it be thought that those Zionists and friends of the Zionists who are publicly announcing their fear that "Crown Colony Government" may soon be ended in Palestine are without responsibility for this reiteration of the demand by the Arabs for the establishment of parliamentary government. To assert boldly that parliamentary government in Palestine should be postponed is, in fact, to revive the Arabs' fears that the Zionists have all to lose by the modification of "Crown Colony Government." It is certainly the worst way in which to ensure that fusion of interests and that collaboration between Arab and Jew which are the hope of every well-wisher of the Holy Land as a unity.

The Constitution of Syria.

Syria is now considering hard the form of her Constitution, which is to be fixed by the Assembly at Damascus. Information is difficult to procure upon the sentiments of the population on whether Syria should have a monarchy, on the basis of Iraq, or a Republic. It is claimed that eighty per cent. of the people wish for a monarchy, their main fear being that the establishment of a republic might mean an encroachment upon the laws of the Quran: the example of Turkey is said to have filled many minds in Syria with fear. The extreme Nationalist Party, on the other hand, are said in part to favour a republic, considering that by this means of government alone can the real freedom of Syria be secured. They point out the setting up of a monarchy would cause internal discord in the country, and that if a particular dynasty did not please the Syrians, it would be difficult to remove it. Nor do such men relish the idea of contributing to the upkeep of a King's Court. They assert, moreover, that a King of Syria could hardly be other than a Mussulman, whereas a President of a Republic, a man who appears at a particular moment to have the greatest merits, might quite well be a Christian. This problem is, of course, the Syrians' own problem, and it would be invidious for outside observers to offer advice. There is, indeed, much that might be claimed for, say, the Turkish precedent or for the Persian tradition.

The Turco-Syrian Frontier.

The refusal of the Turks to accept the arbitration of a neutral, the Danish General Ernst, upon the disputed Franco-Syrian frontier, still persists, apparently; and France, or French Syria, remains the only one of Turkey's neighbours—apart from Persia, whose dispute upon the border Kurds seems in fair way of being settled—with whom an active difference endures. The details of this frontier by Nisibin and Jazirah-ibn-Omar have already been set out in THE NEAR EAST AND INDIA: there is no question at all that France has right on her side, and that Turkey, who agreed to abide by the decision of General Ernst, has not a leg to stand on. That, however, is legally speaking; actually, Turkey shows little sign of budging from her obstinate position. A recent speech by Ismet Pasha, on the vote for the Budget, contained a warning note that it was impossible to push the Turkish spirit of conciliation beyond the limits of the national interest. In the meantime, this difference between Turkey and Syria, with the recurrence of "frictions" on the frontier, threatens, in the words of *Le Temps*, to "envenom the relations" between the two countries. One cannot help lamenting the apparent stupidity and bad faith of the Turkish Government in thus continuing to offend its southern neighbours. Must the friendship of Italy be purchased at the price of French enmity? Why not deal squarely with both the Latin countries?

Torrential rains lasting thirty-eight hours have caused considerable havoc throughout Roumania. In Bessarabia the rain was accompanied by lightning, which destroyed about ten villages and caused the death of ten people.

The only railway in Afghanistan, the narrow-gauge line between Kabul and Dar ul Aman, the new city built two years ago by King Amanullah, had its first serious accident recently, when an engine overturned, killing one man and injuring two. Its driver, a Peshawari Pathan, escaped.

Signor Galli, the new Italian Minister to Belgrade, was received at Belgrade Station on June 20 by M. Milanovitch, representing the Minister for Foreign Affairs, by General Bodrero, the ex-Minister, and by the staff of the Italian Legation. He presented his credentials to King Alexander on June 23.

THURSDAY, JUNE 28, 1928.

THE YUGOSLAV TRAGEDY.

The whole gamut of national characteristics of the Yugoslav people, as well as the history of the country during the last decade, provided the background of the grim tragedy enacted in the Skupshtina on June 20. For weeks the Opposition, driven, as it maintained, to desperation by a state of affairs that the Government refused to remedy, or to allow that it called for remedy, had indulged in a policy of obstruction as thorough, unyielding and exasperating as only the tenacity of the Yugoslav nature can devise. In the fierceness of the immediate quarrel both sides, it is probable, had lost sight of the original questions that divided them. The Government had decided that the Opposition, by its conduct, had forfeited all right to be listened to; the Opposition had made up its mind to prevent all parliamentary business until effect had been given to a whole series of demands that could be conceded only over a considerable period of time. Neither would budge from its position, and the struggle was fought out amid an interchange of personal abuse has gained for the Skupshtina an unenviable notoriety. One of the worst offenders in this latter respect was M. Stephan Raditch, leader of the Croat Peasant Party, a holder of ministerial office, and only four months ago invested with a mandate, which he could not discharge, to form a Ministry. The example set by M. Raditch found zealous imitators among his followers, who vied with one another to outdo their leader in powers of invective. It was during a bout of this general and intensive abuse in the Skupshtina that a Radical deputy, goaded beyond further endurance or outclassed in powers of vituperation, sought to clinch his side's points of view by shooting six of his opponents. One deputy was killed, M. Pavle Raditch, nephew of the Croat leader, was mortally wounded and died shortly afterwards, M. Stephan Raditch was seriously wounded, and two other deputies slightly wounded. The assassin, M. Ratchitch by name, left the Skupshtina unobserved in the general confusion, and, after transacting some personal business, presented himself at the Ministry of Interior, where he was arrested.

Good can come out of this terrible evil only if the Yugoslav people can bring themselves to deal drastically with the underlying causes and are not content with merely pointing the finger of disapproval at the principal actors. It is probable that M. Stephan Raditch is capable of straining to breaking-point the temper of milder people that a hot-headed Montenegrin—a renegade in the opinion of most of his own people, but useful to the Serb Radicals as a cloak for their policy towards Montenegro; yet M. Raditch would be only a harmless eccentric, if he had not been encouraged by the blind allegiance of the great mass of the Croats, who overlook his disservices to the country as a whole in their satisfaction with his irresponsible baiting of the Serbs. The Government of M. Voukitchevitch has failed to identify itself with the national sense of abhorrence that the tragedy in the Skupshtina has evoked, by refusing to resign at once, and in so doing has strengthened the opinion that the Radical Party's sole preoccupation is to maintain itself in power. The deadlock between a Radical Government and the Opposition has lasted, with few interludes, for ten years, and has become intensified since the death of M. Pashitch. Obstinacy on both sides has effectually prevented any compromise, until the stage has been reached when the revolvers alone offers to the Serb mentality a way out of the *impasse*. A Belgrade Radical paper had already suggested the solution which some one was quickly forthcoming to carry into effect. The more civilised Croat, although past-master in the art of obstruction and exasperating behaviour, might have hesitated long before adopting such crude methods; but if the Cabinet should cling to office, even from well-intentioned motives, and make no effort to cope with the present situation in Yugoslavia, it is almost inevitable that the Ratchitch way of attempting to silence the Opposition should in turn be adopted by some ultra-excitable follower of the latter to remind the Government that its duty is concerned with the well-being of the country as a whole, and not only with the interests of a single Party.

It is too early for any clear indication to have been provided of the probable outcome of the crisis. Until it is known whether M. Stephan Raditch will make a complete recovery, the Peasant-Democrat Group led by him and M. Pribitchevitch may be expected to stay its hand, although the riots that have already taken place in Zagreb prove the dangerous state of public feeling in Croatia. M. Voukitchevitch, the Prime Minister, may also persuade himself that his retention of office is essential during the first few critical days after the outrage; but it is difficult to believe that politics in Yugoslavia after such an appalling development can continue along the lines of an established deadlock. Each side is convinced that it alone is acting in the interests of the country, and neither realises that both are helping to prove that Yugoslavia, or at least the present collection of politicians, is unfitted for constitutional government. The suggestion has been made, and must necessarily seem to carry added conviction after recent events, that the only way in which the country can be rid of self-seeking and ineffective politicians is to put itself to school under a dictatorship. There is, however, little likelihood of anyone with the required breadth of vision being found for the post of dictator; he would, moreover, be a native of one of the component parts of the Kingdom, and as such will be unacceptable to the others. At the root of the troubled situation lies the rigid centralization of the Vidovdan Constitution, which is intolerable to the Croat. It was adopted to enforce Serb control, under the conviction that it offered the only means of consolidating the new Kingdom. The event has proved it to be the main obstacle to solidarity and harmony in the Triune State. Hitherto the Serbs have refused to admit this fact, and have persevered in their determination to impose the will of Serbia upon the rest of Yugoslavia. To maintain this policy after the Skupshtina murders will mean that the whips of Serbian domination must be exchanged for scorpions, and that way lies the disrupture of the Kingdom. The country's hope remains in the personality of King Alexander, whose influence for good can hardly fail to be strengthened by the obvious bankruptcy of the Radical Party's policy.

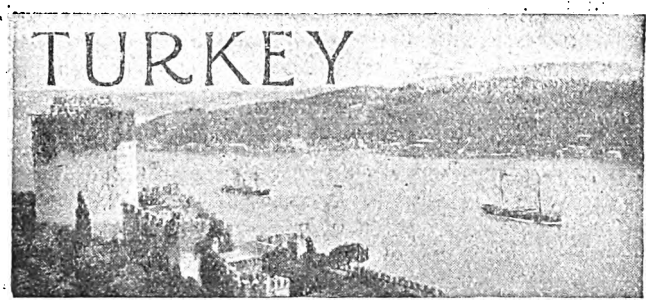
The Near and Middle East

From Our Own Correspondents.



Constantinople, June 20.

Simplification of Ritual in Mosques.

It has been manifest for some few months past that further innovations in respect of Muslim religious observances were being contemplated in governing circles at Angora. The "tocsin" was sounded some two months ago, when the delivery in the mosques in the Arabic language of the *Khoutbah*, or sermon, was prohibited, and a collection of stereotyped sermons in the Turkish dialect was distributed by the Ministry of Education among the Imams as an indication of the broad principles which were to govern their deliveries in the pulpit on all future occasions.

Of still graver moment to the individual worshipper in the matter of strict adherence to century-old practice and tradition has been the novel and delicate question of European headgear while at prayer. The tenets of the faith require that in executing the numerous genuflexions and prostrations which are part and parcel of the *Namaz*, the forehead of the worshipper should come into actual contact with the ground as a sign of abasement and humility in the eyes of the Almighty. Although Holy Writ lays down no hard and fast rule with respect to the wearing of headgear while at prayer, a firmly established tradition requires that on no account should the head be uncovered in places of worship. With the head coifed in fez or turban the worshipper could comply to the very letter with the requirements of the prescribed ritual, but when wearing a bowler hat it is obvious that one of two tenets of the faith is bound to go by the board—either the head cannot come into contact with ground by reason of the hat-brim, or the headpiece must be discarded, whereupon the technical offence is committed of uncovering in a place of worship. Many of the older generation have done their best to get round the difficulty by discarding the hat at prayer-time, making four knots in a handkerchief and slipping the latter over the cranium.

This practice also is now to come to an end. At the instance of the Faculty of Theology—the only body in present-day Turkey empowered to deliver an *ex cathedra* pronouncement on theological, doctrinal and ecclesiastical matters generally—the University of Stamboul is submitting to the Ministry at Angora a comprehensive report suggesting, among various secondary matters, that Western garb shoud be proclaimed by no means incompatible with the rational performance of religious observances in mosques and elsewhere. The wearing of shoes in a mosque is proclaimed to be preferable to the present custom of going about bare-foot, in stockings or in overshoes. It is finally suggested that seats should be installed in all mosques, and that musical and choral services should be introduced when sufficient talent is forthcoming.

With respect to the leaving of foot-gear whilst at prayer, this innovation strikes at the very root of the *Abdest*, or Ablutions, the feet being one of the prescribed parts of the body which must be washed before the *Namaz* may be performed. As for the introduction of music into the services in the mosques, the Commission will no doubt be hard put to it, when examining the matter at the Ministry, to find a precedent, although the *Mevlevi* Dervishes—an unorthodox sect, it is true—used, up to the time of their disbandment throughout Turkish territory, reed-pipes and "tom-toms" whilst executing their peculiar gyratory performance after the more conventional *Namaz*.

A further item upon which the Commission will be called to pronounce is the most suitable means of gradually shaping and moulding the mental attitude of the present-day ecclesiastical hierarchy towards a sympathetic understandinf of the growing needs of an up-to-date and democratic country like modern Turkey.

There the matter stands for the moment, but interesting developments are expected to take place in the near future.

Turkish Police and the English Language.

About twenty Turkish policemen are at present undergoing an intensive course of training in the English language to enable them to answer questions put to them by English and American tourists in the course of their wanderings in and around Stamboul. Their teacher is Mr. Tully, an Englishman by birth who some years ago embraced the Muslim faith and who was formerly Professor of English at the Galata Serai Lyceum. It must be said for the Constantinople police that their social and educational standard has improved greatly within the last year or two, many of the officials, even those in subordinate positions, being ex-officers of the Army and Navy.

The tourist traffic has expanded very considerably of late and this spring alone over 17,000 tourists, mainly American, British and German, visited the city, arriving here mostly in trans-Atlantic and East-Indian liners.

Turkish Submarines.

Two submarines recently built to the order of the Turkish Government in a Dutch shipyard cast anchor in the Bosphorus a few days ago. The official ceremony of hoisting the national colour was performed the day after their arrival within close distance of the Dolma-Baghtche Palace, from a window of which the Ghazi watched the ceremony through binoculars. The two undersea vessels have now joined the Turkish fleet, which, at the moment, is carrying out tactical exercises in the Sea of Marmora, where the submarines are to take their first plunge into Turkish waters. They have received the names of "In-Eunu the First" and "In-Eunu the Second" in commemoration of the two battles which inaugurated the turning movement which eventually drove the Greek Divisions in Anatolia back to the coast in 1922.

Financial Reform.

It is reported on reliable authority that, with the concurrence of the Turkish Ministry of Finance, the Directorate of the "Ish-Bankassi" or "Banque d'Affaires"—the leading Turkish bank in Constantinople—have entered into negotiations with M. Fessering, Chairman of the

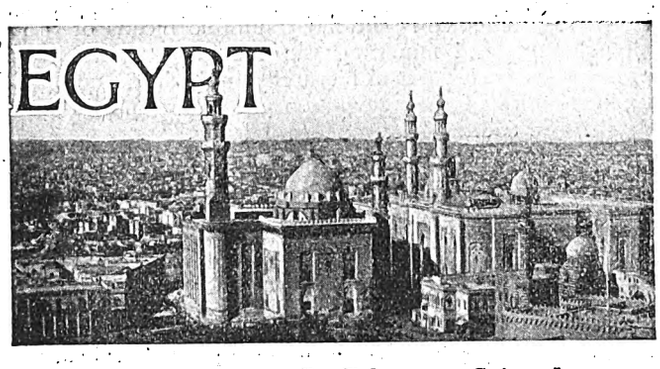
Board of Directors of the "Banque d'Etat Hollandaise" with a view to acting as their Financial Councillor.

One of the thorny problems with which M. Fessering will be confronted, should the negotiations lead to an agreement, will be the careful examination of the question of the projected amalgamation and fusion of all Turkish financial establishments into a Trust to be administered on up-to-date lines with the assistance of the Government, much in the same way as the petroleum, alcohol, sugar and kindred monopolies are being administered at the present time.



By Telegram, Cairo, June 25.

The Seif-ed Din Affair.

One reason why King Fuad's dismissal of Nahas Pasha is so widely approved is the revelation which the Liberal Nationalist organs have made of the part which he is alleged to have played in the Seif-ed Din case. The facts are as follows:—As soon as Prince Seif-ed Din had been safely brought to Constantinople from Ticehurst Asylum in England, where he had been confined for twenty-five years, his mother brought an action against his curator for the cancellation of the judgment of interdiction, which had been pronounced against him, and for a sum of £E200,000, being the expenses incurred in bringing the Prince to Constantinople, together with an alimentary pension of £E22,000 yearly for his keep and a sum of £E60,000 pounds for the purchase of a palace and a launch for his use. The case was brought before a special Court in Cairo called the Court of the Crown, which alone is competent to deal with matters affecting the personal status of members of the Royal Family. The Prince's mother briefed Mustapha Nahas Pasha, then Vice-President of the Chamber and later President of the Council of Ministers, Wissa Wassef Bey, then second Vice-President and now President of the Chamber of Deputies, and Gaafar Fakhry Bey, a Deputy, all three of whom were practising lawyers. The three made an agreement with the Prince's mother, through her duly recognised representative, regarding their fees. The terms, it is alleged, were as follows:—In case of the interdiction's being cancelled, the Prince's mother was to pay them £E117,000; if the Court awarded the alimentary pension claimed, an extra £E10,000 should be paid them; and similarly, if the purchase of a house and launch was authorised, counsel should receive further £E5,000, but both these fees would be liable to increase or decrease in proportion as the amounts allotted were in excess of or less than £E22,000 and £E60,000 respectively. If the Prince's mother dismissed counsel before the case was finally settled, she was to be compelled to pay the aforementioned fees.

Fakhry Bey, moreover, wrote to the Prince's step-father on behalf of himself and his colleagues to the effect that, now that Nahas Pasha and Wissa Wassef Bey occupied the posts of President of the Council and President of the Chamber, a satisfactory solution would be facilitated. He went on to write that there was a proposal before Parliament for the abolition of the Court of the Crown and for the transfer of its jurisdiction to the ordinary Courts, adding that they had full confidence that this proposal would be pased by both Houses and that they through their influence would succeed in the case.

The papers in question have reproduced photographic copies of both these documents. The agreement regarding fees is contrary to the law in Egypt, which prohibits members of the legal profession from making arrangements with their clients by which their fees directly depend on the result of the case. Such an agreement, therefore, would be a serious breach of legal etiquette, and an infringement of the law carries with it disciplinary measures by the native Bar. As for the letter, it speaks for itself. Both documents have created no little sensation. Nahas Pasha has ordered the Parquet to open an inquiry against the two papers which published these documents, and one of the editors has asked the Parquet to open an inquiry against Nahas Pasha.

Cairo, June 16.

The Coalition.

The forecast made in this correspondence a fortnight ago that, if the Government persisted in proceeding with the reform of the internal regulations of the Chamber there would be lively scenes, has been realised, and this week, when the Justice Committee presented its report on this proposal, the Nationalists and Liberals, after protesting energetically, left the Chamber in a body. The fact that neither Mohamed Pasha Mahmoud, the Vice-President of the Liberal Party, nor his colleague, Gaafar Pasha Waly, was present on the Ministerial bench on the two days when this incident took place has aroused no little comment, and again the Press is full of articles speculating on the effect which the Wafdist persistence in amending the internal regulations will have on the Coalition. It is, however, quite impossible to say anything definite in regard to the future of the Cabinet in its present formation. No one can contend that the Coalition, in the sense that it is a working agreement between the two parties forming it, exists to-day. The rank and file of both parties see even less eye to eye with one another than they did at the outset. The leaders themselves are by no means happy in their association, and it is only because neither side has hitherto wanted to assume responsibility for an official split that they have continued what is nothing more than a fiction.

For all practical purposes the present Cabinet is Wafdist and it carries out its own policy. It would certainly seem more dignified, therefore, if both parties faced facts and mutually agreed for the Wafd to assume full responsibility for the administration of the country and the Liberals to bear officially the label of Opposition—which in fact they constitute to-day.

There are all manner of rumours current in the lobbies of difficulties arising out of the promotion and change of Mudirs which must be effected without delay, the Provincial Councils elections, which are due this summer, the renewal of the mandate of half the Senate, which under the Constitution must take place this year, and so forth, and it may be that the near future may see a shuffling in the political situation.

The Egyptian Nationality Law.

The Nationality law has been postponed to the next session. The ostensible reason is the departure for Europe of the President of the Parliamentary Commission which examined the measure. But the real reason is the inability of the Chamber to agree on the categories which have the right to Egyptian nationality. The opposition has manifested itself particularly in regard to the ex-Ottomans who could become Egyptian subjects, and it is no secret that this opposition is based on the fear that, if the Syrian Christian element is allowed to assume Egyptian nationality with all the political rights attaching thereto, this will create serious competition for those who at present are enjoying the fruits of that nationality.

In some quarters the Copts are accused of favouring the new law because thereby the Christian minority amongst the Egyptian population will gain in importance

Digitized by Google

and will thus be able to secure, when it wants, the support of the British Government in virtue of the reservation made in the Declaration of February 28, 1922. Whether by the autumn the Government will manage to overcome this opposition remains to be seen, but it is to be hoped that it will succeed in doing so and so place upon the Statute Book a measure which is badly needed to settle the anomalous position at present existing in regard to ex-Ottoman subjects.

The Budget.

Impressed possibly by the fact that, owing to departures for cures in Europe and other unavoidable reasons there would be a danger that if it prolonged the session there would in the end be no quorum, the Chamber has decided to extend its working hours every week. It now sits six days a week, of which four are being devoted to the Budget. There is, therefore, a great possibility that by the time this letter is in print the Chamber will have completed its financial labours and that it will be possible for Parliament to rise for the summer before the end of the month. It is significant that the Palace credit, which figures first on the Budget, has been left until the end.

The Afghan Treaty.

Egypt has just concluded her first international treaty since the removal of the Protectorate in 1922. This is a Treaty of Friendship with Afghanistan, which is the result of the recent visit of King Amanullah, who during his stay expressed the hope that his country would conclude such an agreement with Egypt, and delegated the Governor of Kabul, Aly Ahmed Khan, to discuss the matter and sign the document on behalf of his country. The Treaty, which is a simple document, stating that peace and sincere and permanent friendship shall reign between the two countries, who thereby establish diplomatic relations with one another and propose to conclude a commercial convention, has now been signed by Wassif Pasha Ghali, Minister for Foreign Affairs, and Aly Ahmed Khan, who in celebration of the event gave a banquet on Tuesday last at the Continental-Savoy Hotel, to which he invited the Egyptian Ministers and the Diplomatic Corps.

The Judicial Adviser.

Saturday night last the Mixed Courts and the Mixed Bar gave a banquet at San Stefano Casino in honour of Sir John Percival, who has resigned the Judicial Adviser-ship and to-morrow leaves the country. The chair was taken by M. Hanssen, President of the Mixed Court of Appeal, and he, M. Firman Van Den Bosch, the Procureur-General, and M. Fatarakis, leader of the Mixed Bar, paid very warm tributes to the work which Sir John had done and to the excellent relations which he had established with the members of the Mixed Court and the Mixed Bar during the time he had acted as, and held the position of, Judicial Adviser.

These tributes to Sir John Percival's personality and ability find their echo in the Native Courts and the entire legal community, both Egyptian and foreign. The retiring Judicial Adviser, before he succeeded Sir Maurice Sheldon Amos three years ago, was Vice-President of the Native Court of Appeal, to which he had worked his way up from the position of Inspector in the Ministry of Justice—in which capacity he was appointed on his joining the service some twenty-five years ago. He enjoyed almost unrivalled respect during the time he was in the Native Courts and his nomination to the Judicial Adviser-ship was hailed with pleasure by his Egyptian colleagues and friends. Their expectation that he would fill that post with the same dignity and ability and gain the same esteem amongst the foreign legal community has been more than realised.

Sir John leaves Egypt with the sincere regrets of all who have ever had contact with him, either officially or socially, and it was pleasing to note, as a recognition of the graceful manner in which she has throughout seconded her husband, that at the San Stefano banquet the name of Lady Percival was associated with the toasts that were drunk to the health of the retiring Judicial Adviser.

Belgrade, June 21.

The Tragedy in the Skupshtina.

Since the War Yugoslavia has been almost alone among the Balkan and Central European States to preserve a decent semblance of parliamentarism and avoid the political murders to which party feeling so often gives rise in southern lands. But during the last few weeks party bitterness has been steadily growing. The Opposition, despite the Government's huge majority, 212 out of 315, has for some time carried on a successful policy of obstruction. By bringing forth scores of "urgent" proposals, points of order, personal explanations, by constant interruptions and causing violent scenes, they most effectively prevented the Skupshtina from doing any serious work at all. At first this was taken in fairly good part by the Government majority, but certain of the less tolerant among them began finally to react to the challenge and scenes became more and more violent, language coarser and coarser and the atmosphere was full of the foreboding of storm. Such a situation could not last long. On June 20 the storm broke, and its results were far more tragic and disastrous than could have been imagined.

From the beginning of the meeting there was keen irritation; heated words were exchanged, and there was a nervous tension which boded ill. Taking his text, perhaps, from the articles advocating the murder of Stephen Raditch recently published in the Belgrade paper *Jedinstvo*, M. Toma Popovitch, a Radical member, threatened the Opposition that if their insults were continued their leaders would pay for it with their heads. Angry scenes followed; the meeting was adjourned, and when it was resumed M. Popovitch was severely reprimanded by the Speaker, and M. Punisha Ratchitch, a Montenegrin member whose whole life has been spent as a Nationalist fighter, was called upon to speak on a matter of personal explanation. He began speaking from his place, but owing to constant shouting and banging of desks could not make himself heard. He protested angrily against the interruptions and constant insults of the Opposition. His speech was repeatedly interrupted, especially by Dr. Pernar, a Croatian member. Wordy warfare between the two began, and feeling ran very high. M. Ratchitch moved over to the right speaker's tribune, nearer to his opponents and in a terrible voice shouted: "I state before you all that Serbian interests have never been in so grave danger except when guns and rifles have been firing, and as a Serb and representative of the people when I see my people and fatherland in danger I openly state that I shall use other weapons which are necessary to protect their interests." Again the whole House was in an uproar, and Dr. Pernar, white with rage, shouted: "You robbed the Begs." M. Ratchitch was for a second speechless with rage at this personal insult, then shouted: "Pernar must apologise," and "I ask the President to punish him or I will punish him myself." A Minister sitting behind M. Ratchitch seized him by the shoulder to restrain him, but M. Ratchitch shook him off shouting: "Whoever tries to come between me and Pernar will die." The Speaker, amid uproarious shouting closed the meeting and went towards the Ministers' room on the left. M. Ratchitch stepped towards Dr. Pernar and ordered: "Take back those words." Dr. Pernar sat silent, petrified. Then M. Ratchitch drew a revolver from his pocket, shook off those who tried to hold him with a y "Loose me or I'll kill you. A Montenegrin cannot pardon such an insult," and again called for an apology from Dr. Pernar. Receiving no answer he fired two shots into him. Dr. Basaritchek, seeing M. Ratchitch was still pointing his revolver towards where M. Stephen Raditch and M. Pribitchevitch were sitting, rushed forward, and, shot through the heart, fell between the stenographers' tables where they were still writing the last words which M. Ratchitch had spoken from the tribune. M. Grandja, who was sitting next to M. Stephen Raditch, tried to protect him with his own body, but was shot through the hand. M. Raditch, who was lying on his seat, was then shot through the stomach. M. Pavle Raditch, seeing his uncle's danger, rushed at M. Ratchitch and was shot through the breast. Panic followed during which M. Ratchitch walked slowly out through the Ministers' Room, climbed through a window and made his way to the room of a friend in a neighbouring street, where he at once began to write letters to his electors and friends. These completed, he went to the Minister of Interior to give himself up, but Dr. Koroshetz refused to receive a criminal, and sent two gendarmes to arrest him and take him to prison.

Dr. Basaritchek, a man well known as a champion of Serbo-Croat friendship and highly respected, died within twenty minutes. M. Pavle Raditch died shortly afterwards in hospital, and M. Stephen Raditch and Dr. Pernar are still in great danger.

The Effects of the Murders.

Although it is generally considered that this act was performed by an individual member of the Skupshtina in a moment of angry madness, these murders may have considerable political effect. This will depend largely on whether M. Stephen Raditch lives or dies. If he lives, it would seem that every possible step will be taken to encourage him to use his immense personal influence to calm the Croatian people, who are not unnaturally upset by the sudden loss of two of their leaders. In any case it seems probable that this last shock will cause the fall of the already shaky Voukitchevitch Cabinet, and leave the ground clear for the formation of a new Government, whose constitution and form will depend on M. Raditch's fate.

One of the most regrettable mistakes made in the handling of the situation created by this tragedy was the shutting off of Belgrade from all communications with the outside world for some hours afterwards. News leaked out before these measures became operative, and was magnified in Vienna and Budapest and relayed to all the capitals of Europe. By the time authentic news from Belgrade came through it was too late and false and highly sensational rumours were widespread. So censorships defeat their own ends.

The Dutch representative in Teheran signed a provisional treaty with the Persian Government on June 21 similar to that signed by other Powers to replace the Capitulatory régime.

M. Moloff, Bulgarian Minister of Finance, left Sofia for London in connexion with the negotiations for a loan. He has been instructed to ask Sir Otto Niemeyer to arrange for arbitration with the Diskontogesellschaft of Berlin on the use of Customs revenue as security.

Sir Malcolm Stevenson, K.C.M.G., of Government House, Victoria Mahe, Seychelles, Governor and Commander-in-Chief of the Seychelles, and formerly High Commissioner of Cyprus, who died on November 27, left property in England of the value of £13,017, with net personalty £12,812.

The Afghan Minister to India has issued a *communiqué* stating that the importation of all intoxicants into Afghanistan is strictly forbidden, subject to the exception that, for the benefit of Europeans employed in Afghanistan "the importation of alcohol is allowed under the very strict supervision of the import and Customs authorities in restricted quantities for the exclusive use of these foreign nationals only, and its sale otherwise is prohibited."

CYPRUS, PAST, PRESENT, AND FUTURE.*

By Sir Ronald Storrs.

I would like first to thank the Royal Colonial Institute for the honour of their hospitality and for the chance of trying to win the interest of this audience in and for Cyprus. Venturing, therefore, to surmise that your knowledge of the colony may be general rather than intensive, I propose to take Cyprus, so to speak, from the month, to offer you a glimpse of its past, a glance into its present and perhaps a guess at its future. The name of the Island has nothing whatever to do with the tree, though I frequently receive communications addressed as if it had, but it has given its name to copper (*cuprum*), which was first mined there. Its size is about that of Norfolk, Suffolk and Rutland together, and it is after Sicily and Sardinia the largest island in the Mediterranean, at the extreme eastern corner of which it lies.

After passing under the sway of Thothmes III of Egypt, it was divided up into a number of petty kingdoms, subsequently possessed by the Ptolemies, presented by Julius Cæsar to Cleopatra and absorbed into the Roman Empire. Up to that date it had produced one famous character—Zeno of Kitium, the founder of the Stoic Philosophy, some of whose tenets still come in useful to the officers of the present Government, and, I believe, to my late colleagues in Palestine. St. Barnabas was a Cypriot and with St. Paul converted the Roman Governor Sergius Paulus, with the result that Cyprus was the first country in the world to have a Christian Governor. Later on the Island became part of the Byzantine Empire and remained such with Arab interludes during that period (in which the history of civilisation appears generally to have marked time) until 1190, when suddenly and without warning, it became for the first time British. King Richard, voyaging to the third Crusade had planned to meet and marry Berengaria of Navarre in Cyprus. The lady arrived first, was driven ashore by bad weather, captured and held to ransom by the unchivalrous local Emperor Commenos. King Richard landed, knocked down a few castles, rescued and married his Queen in a chapel which is still shown, and sent Commenos into Syria fettered (regardless of expense) with solid silver chains. But Cœur de Lion had other business than to rule Cyprus, which he, therefore, sold to the Knight Templars, who passed it on to Guy de Lusignan, the French King of Jerusalem. The Lusignan dynasty reigned in prosperity and even splendour for 300 years, until one of its descendants committed the double imprudence of marrying the noble Venetian Lady Caterina Cornaro and of dying without issue. The Venetian Republic, very prompt and prehensile in such matters, immediately declared Cyprus Venetian territory and ruled it for eighty years until, after a long siege and heroic defence, its fortresses were captured by the Ottoman Turks, and Cyprus became an Ottoman upon which all dozed in varying degrees of apathy and discomfort for the next 300 years. Forests were converted into deserts, Gothic Cathedrals into mosques and famous abbeys into building material. In 1878 after the Treaty of Berlin Cyprus passed once more under British Occupation and, when Turkey attacked us in 1914, was annexed and in 1925 proclaimed a Crown Colony. Lord Wolseley was the first High Commissioner. Lord Kitchener worked in the Island for two years as Surveyor and Registrar-General, and it is by his map that we still direct our steps. This year we have commemorated the fiftieth anniversary of the British occupation of Cyprus by the striking of a Crown piece and by a stamp issue notable, I am happy to say, not for errors of printing or eccentricities of perforation, but as a thing of beauty and a joy (I might remind any philatelists present) obtainable for one year only.

The population of Cyprus is well under 400,000, of whom four-fifths are Christians, chiefly Greek-speaking of the Orthodox Church, and one-fifth Turkish-speaking Muslims. We have, therefore, three official languages, like Switzerland and Palestine to-day, England 800 years ago and Palestine again 2,000 years ago. The climate is almost perfect, being temperate on the plains in winter and throughout the summer deliciously cool in the noble pine forests of Olympus and the Troodos range, 6,000 feet above the sea.

Cyprus is, economically, in a transitional stage. She possesses, I shall hope to show you, all the physical essentials, but has been held back, chiefly for want of financial resources, and only needs encouragement and development to transform her latent energies from the potential into the kinetic. The difficulty throughout the ages has been the apparent lack of water, with which all things are possible, without which almost nothing. And it was with tremendous relief that, after extensive borings, which are already enriching the district of Famagusta, there was discovered this spring what experts pronounce to be a large subterranean source. This discovery coincides auspiciously with the British Government's increase of the Grant-in-aid to an amount equal to the Tribute, which frees sufficient revenue to apply for a loan. "Give me water," said a Cypriot farmer the other day, "and I will turn it into money fast enough." And there can be no doubt that, once the water begins to flow and the admirable soil of the great central plain to be made independent of the caprices of the Near Eastern rainfall, there will be given to agriculture an impulse which can hardy fail to render Cyprus the Garden, as she was in the Middle Ages the Emporium, of the Mediterranean. For almost every variety of temperate or subtropical fruit flourishes in mountain and plain, and the great market of Egypt stands only just over the way, ready to absorb, especially in the five hotter months, almost any quantity of fruit and vegetables, so long as they are properly graded and packed. The barley is not inferior in quality to that of Gaza of the Philistines, which up to the War supplied Glasgow distilleries with whisky for Philistines all over the world. The prejudices of distillers against the excessive proportion of foreign bodies formerly to be found in Cyprus-imported barley are yield-

ing before the rigid application of a recently passed Adulteration Law.

Water is pre-eminently necessary for citrus cultivation, in which Cyprus is rapidly winning herself a place in the economic sun. Twenty-one million oranges were exported last year, the highest grades of which—I am far far enough from Jaffa now to blurt out the truth—were pronounced by the Imperial expert to be the finest in the world.

The hills of Limassol and Paphos, carpeted in the summer with exquisite vines, are beginning to attract the attention of the English wine market, with whose assistance it will be practicable to develop them into an industry of capital importance. Cotton growing has increased in the last five years from 2,200 to 7,000 bales, and a British silk filature is working, appropriately enough in Paphos, the home of Aphrodite, employing local labour, paying a just price in cash to producers, and rapidy raising the quantity and quality of production throughout the Colony.

The amount and standard of tobacco cultivation, intensively assisted by Government, are going up by leaps and bounds, and I make bold to suggest to your cultivated palates a trial of the Cyprus cigarette.

Another source of wealth is the curious evergreen tree known as the Carob, or locust bean, which is exported in large quantities for manufacture into cattle food, and into a preparation for finishing the surface of linens. One of its by-products is a firm, opaque non-inflammable film; and the day that chemists can render the film transparent, the demands of Kodak and Cinema will not be satisfied by all the Carobs in the world. I am glad to say that a British firm has recently established a factory at Limassol for the treatment of Carobs in such a way as to be immediately saleable to the consumer, thus buying direct from the cultivator, besides employing skilled and unskilled labour on the spot.

The maritime climate of Cyprus seems peculiarly favourable to the production of fine flax. Native seeds already give uniform fibre, good strength and perfect colour, and it is our ambition by a rapid extension and improvement of cultivation to do something towards compensating Belfast for the defection of Russian flax by supplying a superior Imperial substitute. With development by water there is being elaborated a scheme for free provision of experimental fertilizers and, on conclusion of tests, delivery at the lowest prices against payment after carrying and sale of crops.

No aspect of the economic revival of Cyprus is more significant than the increase in numbers and size of Co-operative Credit Societies. At the end of 1926 there were 47, there are now 140, by the end of this year there should be more than 200; and it is by their interaction, with the developments I have outlined, that the peasants are gradually being freed from the stranglehold of the moneylender. Co-operative Credit Societies are not an obviously inspiring theme for eloquence, and I little thought that the day would ever come when one would "make these one's chief delight," "Preach them by day and meditate by night," yet I am convinced that they, fed by the Agricultural Bank, whose capital guarantee has just been raised for £50,000 to £300,000, are among the most sure and certain signs of better times.

The mining output of asbestos and copper vastly exceeds that of 1926, gives steadily increasing employment to thousands and, to judge by the number of visits of mining engineers and geologists and applications for Prospecting Licences, seems likely to extend much further.

Cyprus is the only British station in Europe and the Mediterranean which combines the advantages of a summer and winter resort. It is only twenty hours distant from Egypt, Palestine or Syria and four days from Brindisi, and possesses, though you would never guess as much from the average tourist agency, at least three comfortable and interesting ways of approach. There are hotels; small and simple, but decent and above all, though this is a consideration which would hardly affect such a gathering as this, almost absurdly cheap. You can live in the best hotel, *pension complète*, for eight or nine shillings a day and travel by car over thousands of miles of very tolerable roads for 6d. a mile. A larger and more modern hotel will be opened in Nicosia early this autumn, and another next spring with still greater accommodation on the western slopes of Mount Olympus. There is golf and tennis, shooting and racing. Cyprus is not yet prepared for the jazzing and peach-fed tourist in bulk, but she does receive and never disappoints the discerning lover of beauty, interest and romance of the ancient and the somehow still remoter medieval world.

A frequent and not altogether unjustified criticism of British rule in Cyprus has been the comparative lack of interest in her development evinced by British capital. The omission is, as we have seen, being repaired, and I need hardly add that, so long as there is reserved for Cypriots an equal chance to get in on the ground floor, British capital will continue to be no less welcome than necessary. Land values are beginning to rise and there are indications of a boom. Having been through booms in Egypt and Palestine, I cannot unreservedly commend them as invariable blessings. They start as booms, but sometimes return upon incautious projectors like boomerangs. But when such indications are, as here, firmly founded upon physical fact, a boom, properly and prudently guided, is to be devoutly and rightly hoped for Cyprus as for Manchester or anywhere else. She is at present too poor to afford publicity. Very soon she will not need it.

Cyprus is frequently cited by pitying wellwishers in the Press as the Cinderella of the British Empire. I accept the omen, for, although she started poorly, if ever there was a young woman who got there in the end, it was Cinderella. I firmly believe she is about to take her place as the latest but by no means the least and far from the least interesting, prosperous yet attractive, a contributor as well as a participant, at the Imperial Banquet.

Book Reviews

PALESTINE AND THE EMPIRE.

"THE SEVENTH DOMINION." By Josiah C. Wedgwood, D.S O., M.P. (London: The Labour Publishing Company. 2s. 6d. net.)

It is doubtful whether any Jew could, or would have written this book, the thesis of which is that Palestine should, in the interests of the Jews and of the British Empire, be made into a "Seventh Dominion." Colonel Wedgwood's honesty and disinterestedness are too well known for any suspicion to be cast on his motives in maintaining, in all its *naïveté*, this amazingly audacious thesis, which is, however, open to the very serious objection that he obviously cares more for the realisation of the Balfour Declaration than of the Mandate for Palestine.

Let us give a few extracts from this book, to show at once its temper, its concentrated purpose, and its one-sidedness. In his Preface, Colonel Wedgwood writes:—

> Whether officials or Jews like it or not, it is essential for the success of the Palestine adventure that Crown colony rule and the domination of the British Colonial Office should endure for at least a generation, till Western educated men and minds are there in sufficient numbers to ensure the safety of the settlers and of the natives.

He believes that there is a drifting-apart as between Englishman and Jew. This is, in his opinion, most notable among the officials in Palestine itself, but it exists in London also. For Colonel Wedgwood, without, as one imagines, Golder's Green or Hampstead in his mind, refers to "the anti-Semitism of the suburbs."

The problem of Palestine, as he sees it, is whether the Holy Land shall enter the League of Nations, or whether it shall become part of the British Empire. Anything or anybody that opposes the latter solution he attacks vehemently. Thus we find the "natives" of Palestine, whom he divides into *fellahin,* town workers, grazing Badawin, and middle or professional classes, dealt with summarily: either they will benefit directly by the Zionist immigration, or they ought not to be in Palestine at all.

Coming to the Secretariat of Palestine, the author lays about him vigorously, in matters of taxation, local government, labour legislation, agriculture, education, Crown lands, and so on. Sometimes Colonel Wedgwood is just in these criticisms, which then, however, amount mainly to a wish for the speedier realisation of reforms which are already schemed. Sometimes he is unjust, as in his criticism of communal representation. For he is convinced that the British authorities have a prejudice against the new and the educated in Palestine.

When he arrives at the steps which ought to be taken to reach the consummation of Palestine as a "Seventh Dominion," we find such amazing sentences as this:—

> . . . start co-operation with the Jews, Government and Zionist Executive, in order to secure the successful colonisation of Palestine by Jews. The Secretariat must try to imagine that they are settling British unemployed in Palestine—a patriotic task to be helped wholeheartedly.

Or this:—

> What is required is that the Secretariat should show active co-operation by taking on the work that in any other country is done by Government—work which, unfortunately both for Jews and English, they have hitherto left to the Zionists.

Is that quite fair? Is it quite true that the Zonists would be willing, for example, to allow their children to be educated in the Government schools in Palestine?

Perhaps the three most interesting chapters in this little book deal with the problems of Cyprus, of the Greek colonisation of Macedonia, and of the Jewish colonisation in Russia—from all of which countries there are, in the opinion of the author, lessons to be usefully learned by the authorities in Palestine.

We are at the end of our space. We conclude, therefore, in advising all interested in the problem of the Jews to read this work, the patently sincere product of an idealist and patriotic mind. Both in general and in many details we differ with Colonel Wedgwood—in particular we think most of his criticisms of the excellent Palestine Administration not only impolitic but also unfair; but his book is emphatically worth study, even although it may inspire, among those who take the trouble to remember that Palestine is, even after 1917, still part of Arabia, more provocation than praise.

TALES OF PERSIA.

"A PERSIAN CARAVAN." By A. Cecil Edwards. (London: Duckworth 8s. 6d.)

This book, which consists of stories concerning Persians and Europeans in Persia, is quite one of the best of the second-rate kind. It is interesting, it is true, in its entertaining; but it just misses that distinction of form and that subtlety of touch which mark surely the first-rate book. The tales that are told are excellent journalism, and decked out on good paper, in good print, and illustrated by some very attractive reproductions of Persian miniatures, they only just fail to reach the class of book for which a long life is ordained.

The oddities of the Persian, his cruelty, his humour, his ability to make the best of everything, his finality, his boastfulness, his fanaticism—these qualities and many others are described in yarns set in Persia from Kurdistan to Meshed. But it is rather for the content, the movement of the tales, than for their setting that they will gain readers. Mr. Edwards, although his style is not individual, does not waste words: he understands thoroughly the value of a quick *dénouement.* And most of his stories have a compactness which will certainly appeal to the unsophisticated student of Persia. The virtue is particularly notable in his stories, "The Convert," and "The Governor," which concern a Persian Christian and a Bahai.

In short, this is a very readable book, for which the publishers for their part have done much in endeavouring to make justified the eight shillings and six pence that are asked for it.

GERTRUDE BELL REPRINTED.

"PERSIAN PICTURES." By Gertrude Bell. With a preface by Sir E. Denison Ross (London: Benn. 10s. 6d.)

The reprinting of Gertrude Bell has begun, and there is every sign that it will, and every reason that it should, be thorough. Nor could a more excellent start have been made than with this book—"Safar Nameh," as it was called when it was first published by Bentley in 1894, and as it will probably always be cherished by lovers of

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.

the East who are also admirers of Gertrude Bell. For, this little book, the product of a journey to Persia when the authoress was but a gifted young graduate of twenty-four years, contains in overflowing measure the nice enchantment which constantly marked Gertrude Bell's attitude towards the East. This almost complete immersion in the ways of the East was a faculty which she retained to the end, although, as is to be expected, her earliest work professes statements which the Arabised manipulator of late years might have repudiated. Of such, a sentence from the first chapter, on modern Teheran, is an example:—

> Here in the desert and the sunshine is the epitome of the living East, and, standing unnoticed in such a doorway, you will admit that you have not travelled in vain. But as the wonderful procession of people files past you, too intent upon their own affairs to give you more than a contemptuous glance, you will realise what a gulf lies between you. The East looks to itself; it knows nothing of the greater world of which you are a citizen, asks nothing of you and of your civilisation.

The dear, dead 'nineties, when "Westernisation," "self-determination," and the rest of the hodiernal hotch-potch, were unknown and unsuspected!

This little book, to which Messrs. Benn have given a worthy resurrection, is, in fact, an uncommissioned exultation. Yet not quite; for, as Sir Denison Ross points out in his sympathetic Preface, the last six chapters were added in order that a book might be published, and in them it is the conscious writer, rather than the youthful impressionist, that is the more apparent. But quite certainly this reproduction was one which was necessary, for "Safar Nameh" is of a choiceness that is beyond controversy. There is no book of its pretensions which more surely conjures up the quality of the Persian character, the natural beauties of the country, the religious emotion of the Shiahs. It belongs, in short, to the literature of Travel—a classification too often referred to nowadays but here beyond dispute.

The examiners in the Honour School of Oriental Studies at Oxford University on June 21 issued the following class list. Class one: S. A. Rahman (Exeter), in Persian and Arabic. Class two: A. E. H. Paxton (Hertford), in Arabic and Persian; A. W. Shorter (Queen's), in Egyptian and Coptic. Class three: P. Malakul (Brasenose), in Sonscrit and Pali.

General Sir P. W. Chetwode, Bt., K.C.B., K.C.M.G., D.S.O., Aide-de-Camp General, who has been appointed Chief of the General Staff in India, in succession to Lieutenant-General Sir A. Skeen, K.C.B., K.C.I.E., C.M.G., Indian Army, Aide-de-Camp General (October 26, 1928), went to Egypt to command the Desert Mounted Corps in the summer of 1917.

THE GRECO-ALBANIAN FRONTIER.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—From visits to Southern Albania three years ago and to Greek Epirus one year ago I have convinced myself that most of the alleged frontier grievances discussed in your current issue's leading article are the creation of the Governments on either side, and do not represent any real feeling among the people themselves—such as exists among the races of Kossovo, Macedonia, etc. In proof whereof I would cite two symptons: it is difficult for a traveller to cross the frontier by road from Albania into Yugoslavia without a Legation *laissez-passer* in addition to his visas, whereas regular 'bus services cross the Greco-Albanian frontier with practically as little bother over passport formalities as one has in going say from Austria into Germany or *vice versa;* secondly, while King Alexander's Albanian, Montenegrin and Bulgar-Macedonian subjects tell the tale of their grievances in furtive, fearful whispers—and then only when assured of the hearer's discretion, Greeks and Albanians, on the other hand, talk quite openly on either side of the frontier.

I write as both phil-Hellene and pro-Albanian. The majority of the male populations of the frontier regions are bilingual, and no matter whether Mussulmans or Greeks by religion, whether Shqypetars or Hellenes by citizenship, they all refer to themselves as Northern Epirotes—a term which has none of the significance attached to it in Greek official propaganda! The Albanians of Yannina admit and accept the economic advantages and the greater individual liberty afforded them by Greek rule. The Greek semi-communistic system of land tenure is that which the land-owning begs prevented Mgr. Fan Noli from instituting in Central and Southern Albania, and its beneficiaries in Epirus probably belong to the least articulate but largest section of the population. Greek repressive activities against the Muslims are unforgivable as far as they have gone, but have been exaggerated, and the organisation mainly responsible for them was dissolved by General Pangalos, who was himself an Eleusinian Albanian. At the same time there is no evidence of any real repression of Hellenism by the Albanian Government, and such inevitable official discouragement as there may have been has certainly not been effective.

The Northern Epirotes have this in common: they regard themselves as superior in lineage and language to the Romaic Greeks; hence those of both religions and both nationalities have more trust in each other than they have in the chauvinistic representatives of the Greek Church, which may provide the people with their ikons and their superstitions, but can have no appeal to the intelligence of enlightened men. And the peasants of those mountains are apt to be quite enlightened men.

> Foul superstition! howsoe'er disguised,
> Idol, saint, virgin, prophet, crescent, cross,
> For whatsoever symbol thou are prized,
> Thou sacerdotal gain, but general loss!

Byron wrote those lines while in Epirus, but I fear there is no chance of the Greeks engraving them on the next statue they put up to their hero.

It is a typical result of European diplomacy's method of cartography that an Albanian main road should be intersected by the Greek frontier, or, if regarded as a Greek main road, it passes through Albanian territory; but these difficulties are better solved by fresh road-building than by the sterilities of propaganda. Meanwhile I should like to bear this personal testimony in the hope that no human busy-bodies may be persuaded by the dishonest official propaganda of either side into encouraging ill-feeling on one of the few Balkan frontiers where little in fact exists.—I am, etc.,

ARTHUR E. E. READE.

PERSONAL AND GENERAL

TO-DAY

June 28, 1928 (New Stye).
June 15, 1928 (Old Style).
Muharram 9, 1347 A.H., of the Muslim Calendar.
Tammuz 10, 5089, of the Jewish Calendar.

Sir Adam Ritchie left London on June 22 to join the s.s. Rajputana at Marseilles for Port Said.

Mrs. Richard Howard Vyse has arrived at 5, Calton House Terrance from Egypt.

Sir Maneckji and Lady Dadabhoy are among the visitors at Harrogate.

Lord and Lady Sinha are expected to arrive on July 1 at Queen Anne's Mansions, St. James's Park, from Switzerland.

Mr. M. T. Dawe, Director of Agriculture, has been made a Nominated Official Member of the Legislative Council of Cyprus.

Lieutenant-Commander the Hon. Walter Carson, R.N., who is on his way to Bombay, left London on June 22 to join the P. and O s.s. Rajputana at Marseilles.

Sir Ghulam Husain Hidayatallah has been appointed a member of the Executive Council of the Governor of Bombay in succession to Sir Cowasji Jehangir.

The Earl and Countess of Lytton arrived last week at 96, Cheyne Walk, which they have leased from Viscount Ednam for some weeks.

Sir John Maffey, Governor-General of the Sudan, arrived last week with Lady Maffey at 13, Elm Park Gardens, Chelsea.

Mr. and Mrs. C. A. Mackintosh have returned from Cairo, and are staying at 23, Chapel Street, Belgrave Square, S.W.

Field-Marshal Viscount Allenby and Viscountess Allenby returned last week from the country to 24, Wetherby Cardens.

Princess Andrew, of Greece, with her third daughter, Princess Cécile, arrived last week at Kensington Palace, where they are staying with the Dowager Marchioness of Milford Haven.

Field-Marshal Sir George Milne, Chief of the Imperial General Staff, was on June 22, at the Hotel Cecil, the guest of honour of officers, retired and other, of the Salonika Army and Black Sea Forces. The Chairman was Lieutenant-General Sir H. F. M. Wilson.

Sir Alfred Mond, on whom a barony has been conferred, will be known by the name, style and title of Baron Melchett, of Landford, in the county of Southampton. Lord Melchett was formally introduced in the House of Lords on June 20, and was the first of the three new Peers to take his seat.

In Convocation at Oxford University on June 19, decrees were passed to authorize grants of £20 from the Craven Fund and £10 from the Dean Ireland's Scholarships Fund to Mr. W. A. Heurtley, Assistant-Director of the British School at Athens, towards the exploration of prehistoric Macedonia.

Judge Villela is to act as President of the Mixed Court of Appeal at Alexandria during the summer vacation, and Judge W. H. Thorne will act as Procureur General. The sitting judges in Alexandria during the summer will be Judge Villela, Judge Thorne, and Judge Mahmoud Bey Sadek.

LORD PLUMER.

The Colonial Office announces that Field-Marshal Lord Plumer will vacate his appointment as High Commissioner for Palestine and Trans-Jordan in the autumn. He will leave Palestine at the end of July on three months' leave.

CYPRUS.

Sir Ronald Storrs, Governor of Cyprus, was the chief guest at a luncheon given by the Royal Colonial Institute on June 19, at the Cannon Street Hotel. The address on Cyprus that he delivered after the luncheon appears as a separate article on another page. Mr. Andrew Williamson presided, and among those present were :—

Lady Storrs, Miss Monica Storrs, Sir Edward and Lady Dawson, Lord Lamington, Lord Richard Nevill, Air Vice-Marshal Sir Sefton Brancker, Sir Gilbert Parker, Sir Trevredyn Wynne, Colonel Lewis Butler, Miss Mary Clowes, Sir Godfrey Lagden and Miss Lagden, Brigadier-General Sir Charles Delmé-Radcliffe, Sir George Boughey, Miss Richards, the Rev. Chancellor S. G. Ponsonby and Mrs. Ponsonby, the Bishop of Gibraltar and Mrs. Hicks, Sir Frederick Young, Lieutenant-Colonel Roy Truscott, Lady Goold-Adams, Lady Dickenson, Lieutenant-Colonel C. F. T. Blyth, Mr. and Mrs. W. D. Caroe, Mr. W. Bevan, Mr. F. A. Hook, Colonel H. Burchall, Mr. J. B. Couper, M.P., Sir Sydney Henn, M.P., Major W. H. Flinn, Archdeacon Beresford Potter, Mr. and Mrs. Montague Bell, Captain R. H. Croft Montague, Mr. and Mrs. Prothero Thomas, Mr. H. T. Thomas, Miss Montizambert, Mr. Geoffrey Holdsworth, and Mme. B. de Balan.

The Egyptian Chamber on June 20 after a short discussion passed the Bill abolishing the system of Cantonal Courts in Egypt and transferred their jurisdiction to the Summary Courts.

King Amanullah of Afghanistan arrived on June 24 at Herat from Meshed by motor-car, where His Majesty was given a cordial reception.

The fire which occurred at Damascus on June 20 has entirely destroyed the Sanjakdar Mosque in front of the Citadel, and much of the best part of the city, including some of the hotels, and the Wakf Building with its Museum. French troops used dynamite to stop the progress of the flames and prevented looting. It is estimated that 300 houses and 70 shops have been destroyed, and that the damage done amounts to £500,000.

Dr. Henry Pottinger Keatinge, C.M.G., who died at Jersey on June 21 at the age of 67, served from 1884 to 1890 with the Egyptian Army in the Nile and frontier campaigns of that period, obtaining three clasps to the medal, the bronze star, and the Osmanieh Order. In 1890 he was appointed to the Cairo School of Medicine, of which he was afterwards Director. He was made C.M.G. in 1913, and in the War was also director of the Kasr el Ainy Hospital, being mentioned in dispatches, and received the Medjidieh Order. In 1919 he retired from the Egyptian Government service, receiving the Order of the Nile.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

Labour's Theatrical Thunder.

Although considerable prominence has been given to the manifesto issued last week by Mr. A. J. Cook and Mr. James Maxton, M.P., to "The Workers of Britain," one cannot believe that the Labour Party as a whole will be much dismayed by it. That Mr. Cook has a fund of emotional power which is capable of swaying many people, and that Mr. Maxton has a reservoir of reasoned eloquence which may influence even more, is not to be denied; but the policy which they enunciate, a policy made up of "anti-Mondism" and of old-fashioned "I.L.P.'ism" can never attract more votes than the Labour Party itself attracts.

This revolt from the Left, then, will affect the fortunes of no one but the Labour Party—unless the indirect results upon the Conservative Party are considered. That is the dilemma of the Revolutionaries: the more they thunder, the higher becomes the ground, not of their late friends, the Labour Party, but of their mortal enemies, the Tories. One might have any amount of theoretical sympathy with their denunciation of the compromising methods of the orthodox politician—the process of being "gingered-up" is surely good for all parties; one might concur with the dictum that wealthy capitalists cannot be found in a Labour Party worthy of its name: but what then? Is there anything of practical politics in this denunciatory diagnosis?

Mr. Lloyd George's Diagnosis.

The possible future of Mr. Lloyd George, who, by the way, has just renounced journalism in order that he may devote his whose energies to the revival of the Liberal Party (which is at least a more worthy, though less lucrative task than that of ridiculing the Government of England in anti-British American journals), is now being eagerly canvassed; for it is the view of some observers that this ex-Premier may conceivably be found after the next General Election to be holding the balance of power.

But the British public as a whole still refuses to take his politics very seriously. It will flock in thousands to hear him; but who reads his reported speeches in the newspapers next morning?

When, however, he gets off party politics and allows his emotional genius full sway, it is another matter. For instance, an address that he delivered in a Welsh chapel in London on Sunday, on the Church's responsibility is being widely discussed. He believed that if the Churches of Christendom oppose war, war is impossible. Because there were more casualties in the Great War than in the Peninsular War, the Churches have failed for a century in their mission of bringing peace on earth. The signing by statesmen of peace pacts and their subsequent preparing for war would be impossible if the Churches took up the question of disarmament. Moreover, responsibility for poverty and social miseries rested with the Churches. And so on. The Devil, it would seem, is almost synonymous with the deficient Churches.

But the astonishing thing is that this sort of talk goes down very well. It is true that the Liberal leader has hold of a truth, namely, that all great uplifting measures derive from religious impulses. That, however, is not identical with charging the Churches with responsibility for our present ills.

Efficiency of the Police.

These are not the happiest days for the London Police, from the point of view of public esteem. But the truth is that the public is apt to be emotionally swayed by an odd incident or two, and to forget the really sterling work which is put in by the Police unostentatiously and as a matter of routine.

It is well, therefore, that prominence should have been given to the annual report presented by the Commissioner of the Metropolitan Police to the Home Secretary. For in that Report are contained statements which show that not a single murder case was left unsolved in the London police area last year, that drunkenness is on the decrease, and that, of 1,194 motor-cars stolen, 1,131 were recovered. The pertinent remark is made on the subject of night-clubs (which, by the way, are nearly all in the control of aliens) that for the sort of offence in which night-clubs commonly "figure," fines are no deterrent.

Really, the police are still the pride of London.

A Housing Experiment.

An interesting experiment, which illustrates the social nature of the Englishman, has been conducted at Becontree, in Essex. Not long ago a large estate was developed there. Now, however, some 700 houses are said to be lying vacant. What, in this time of shortage of houses, is the reason?

It appears to lie in the fact that the housing estate was an estate and nothing more. It belonged to no pre-existing town, had no commercial existence, enjoyed no civic organisation. The houses at Becontree have been described as "luxurious cantonments," and the free Englishmen cannot endure that kind of institution for long. Without doubt this experiment has unusual interest for the social historian.

Mid-Summer.

Mid-summer has come and gone, almost without our knowing that summer has been here. Yet there were last week one or two days when it seemed very good to be alive, when men and girls walked with a lighter step, feeling that it indeed was June.

At Ascot both the weather and the luck on the whole favoured the crowd; and at the first Test against the West Indians, who like their sun as they like their rum (or did like it at any rate during the War) hot and strong. A very attractive crowd, by the way, these West Indians, agile, buoyant, and emotional. Their hero, Constantine, has quite captured the country for the amazing exuberance and versatility of his game.

But it is in the country, by the hedges whereon are growing wild roses and the honeysuckle, that this June is to be appreciated. There is nothing like the English countryside under this time: it is an expanse of graceful ease and of coloured delight. Passing by some wheat-fields in Hertfordshire a day or two ago, I was seized afresh of Matthew Arnold's lines (which I suppose every reader of THE NEAR EAST AND INDIA will recognise):—

> As, in the country, on a moon in June,
> When the dew glistens on the pearled ears,
> A shiver runs through the deep corn for joy

To see the sun and breeze at play, or at work, in cornfields at this time of the year is to make the heart ache for the plight of our national agriculture. But who does not grow sentimental at the smell of new-mown hay, or at the very sight of its being cut and carried?

Controversial Broadcasting.

No sooner have the authorities agreed to permit controversy on the wireless than they have disagreed upon the broadcasting of political controversy. The Conservatives, it seems, claim that at election time they ought to be allowed to speak for twice as long as anyone else, and this the other parties, as might be expected, are not disposed to support. And so between the B.B.C. and the three parties there has arisen a deadlock.

Obviously the matter, in regard to the General Election, is not an easy one to solve. If the individual parties were to be allowed time in proportion to their existing strength, manifest injustice would be done; but if, say, the Communists were allowed as much time as the Labour Party, injustice would be done again. The only thing to do, therefore, appears to be to bar the wireless altogether as a means of political persuasion at times of elections. For if the possession of broadcasting is to be, so to speak, part of the spoils of victory at the polls, the obvious tendency would be to let the other fellow have no say at all.

ALTER EGO.

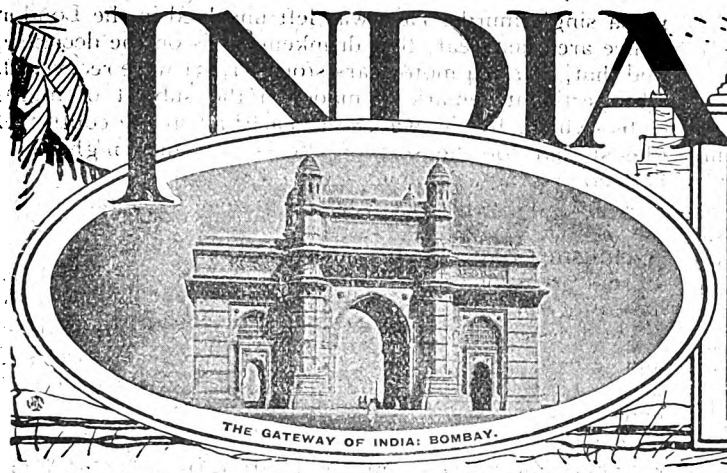
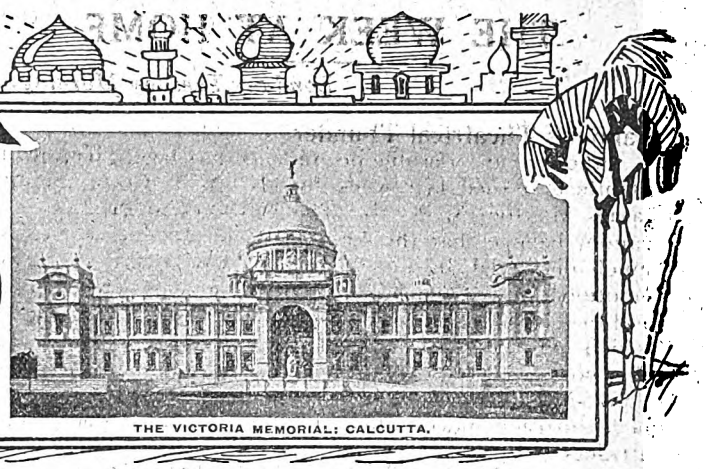
INDIA



THE GATEWAY OF INDIA: BOMBAY.



THE VICTORIA MEMORIAL: CALCUTTA.

THE SHIVAJI MEMORIAL.

The friends and admirers of the Maratha people and the Maratha soldier will have heard with great satisfaction of the completion of the Shivaji Memorial which commemorates that national hero and links him with the services of the Maratha Regiments in the Great War. The satisfaction is enhanced by the knowledge that the raising of the Memorial has not been without friction among the Maratha chiefs, which appears to have been happily overcome. The deeds of the Maratha soldiers certainly merited permanent recognition. It may be said with truth and without invidiousness that, with the possible exception of the Garhwalis, none of the Indian races behaved with more uniform credit and gallantry than the Marathas: and the credit is the greater when it is remembered that they were one of the "downcountry" military classes, whose merits had been somewhat forgotten, to put it mildly, by Army Headquarters.

It may be hoped, moreover, that the Shivaji Memorial may serve as a permanent symbol of unity to the Maratha people. The perfectly legitimate movement to commemorate their national hero has had to face the dangers of two extremes. In the first place, the Deccani Brahmans attempted to capture it and to convert it into an anti-British movement. This attempt has happily been defeated, but some of the Marathas have gone to the opposite extreme, and sought to confine the movement to the Marathas alone, and in particular to use it as an anti-Brahman organisation. While full sympathy must be given to the effort to overthrow the Brahman monopoly of office and education, the principle of exclusiveness cannot be supported from Shivaji's own practice and example. He honoured and employed Brahmans and gave full opportunity of service to all classes of his subjects, even the despised Mahars and Kolis. It is only by such unity and freedom of opportunity that the past greatness of Maharashtra can be revived. Maharashtra proper lies on the western shore of Central India. Its area is over 100,000 square miles and its population less than 30 millions. The race that goes by the generic term of Maratha varies just as Frenchmen of the South and, say, the Breton differ. But it has distinct characteristics which differentiate it from other Indian races. The people of Maharashtra, as a rule, lack the features of the Northern Indian. Their tempers, too, are usually less under control than those of the dwellers in the Gangetic plain. But their courage is at least as high as that of any other Indian nation, while their exquisitely keen sense of humour, the lofty intelligence of their educated classes, their blunt speech and frank bearing rarely fail to win the admiration and respect of all whose lot it is to serve in "the great country."

The national hero, Shivaji, has probably suffered more at the hands of historians than any character in history. With a few notable exceptions, as Mr. C. A. Kincaid reminds us in the first volume of his admirable "History of the Maratha People," "they have one and all accepted as final the opinion of Grant Duff, which again was based on that of Khafi Khan. They have at the same time rejected Orme's far more accurate conclusions. . . . It was reserved for an Indian of modern times, Mr. Justice Ranade, a man truly great, judged by no matter what standard, to see correctly the deep religious feeling, the many virtues, the chivalrous temper and the vast ability of the great Maratha King."

Although Mr. Kincaid's own enthusiasm, and that of his collaborator, the late Rao Bahadur D. B. Parasnis, whose unrivalled collection of Maratha papers is happily not to be lost, after all, to India, sometimes led them to err on the other side, we may safely agree with their contention that "it is difficult, without writing in a strain that may seem exaggerated to English readers, to give Shivaji the place in history to which he is rightly entitled." He has been compared, not unhappily, with Bruce. Nevertheless, the comparison does the Eastern Prince less than justice. Bruce, it is true, had to cheer the spirit of the Scottish nation, depressed by the defeat of Falkirk and the capture and death of Wallace. But the Scottish people had been free for centuries. Naturally high-spirited and brave, they were eager to gather round anyone who would help them to drive out the hated English. Shivaji had to create his victorious army from the half-savage hillmen of the Western Ghats, wholly ignorant of war, and from the Marathas of the plains broken by long years of servitude. "Brief as it is, the history of the Marathas," as the writer of the leading article in The *Times* observed on the occasion of last week's ceremony, "is more astonishing than that of any other Indian people. Three hundred years ago they were humble provincials, whose name was scarcely known at Delhi, the Hindu subjects now of the Muslim Sultan of Bijapur, now of his enemy the Great Mogul. Their origin was obscure; they enjoyed neither the respect which Hinduism gives to exalted caste, nor the fame of ancient prowess; they were a simple people of farmers, cowherds and shepherds. A century later they were famous through all the East as the rivals of the Moguls for the sovereignty of Hindustan, and the hardiest and most accomplished soldiers of India." Their rise to power was the work of one man, Shivaji, to whose warlike genius were joined civil talents of the highest order. While training troops, devising strategy, inventing tactics, scouring the Deccan in every direction, he yet found time to think out a system of administration which, as Mr. Ranade points out, is the basis of British success. "The curse of Indian Governments," Mr. Kincaid observes, "had always been the power of the feudal nobility, which grew dangerous directly the central authority weakened. Shivaji was wise enough not only to see the disease but to invent a remedy. He refused to make grants of land to his nobles. He governed his territories by means of paid agents, Kamavisdars, Mahalkaris and Subhedars. They could be dismissed at will and were so dismissed on proof of incapacity or insubordination. They collected the assessment due from the peasants and paid it into the royal treasury. From the treasury Shivaji paid his soldiers and officers regular salaries."

CURRENT TOPICS.

The Statutory Commission.

On Saturday last it was announced from Simla that a change had been made by the Statutory Commission with reference to the status of the Indian Legislative Committees. It will be remembered that Sir John Simon's letter of February 6 last to the Viceroy, offered to these Committees the same right of separate examination of witnesses and documents as had been reserved for the Commissioners themselves. Objection was raised to this provision on the ground that it might lead to separate reports, and that it might, in fact, create divisions which it was of course the object of the free conferences to avoid. The Legislative Committee constituted by the Punjab Legislative Council realised the difficulty, and they recently pointed out to the Commission that under such an arrangement it would not be easy for them to discharge their duties satisfactorily as there would be a distinction drawn between their members and the members of the Commission. They took exception to this distinction, and they made a representation accordingly to the Commission.

In reply, the Commission has now stated that it has decided to draw no distinction between its own members, and the members of the several Legislative Committees who will confer with it. That is to say that in the matter of the examination of witnesses and documents the Commission will treat each Indian Committee, within whose scope the material in questions falls, on equal terms with itself. The Commission adds that the reservation made by the Chairman in his letter of the 6th of February can be adequately secured by the power which rests with him to protect any witness, and by his discretionary power to exclude the Press from joint-sittings where necessary.

This important concession appears to have been received with satisfaction by Indians. It is certainly a wise measure, as the original proposal might well have led to difficulties. The idea of the joint free conference which was put forward in Sir John Simon's letter of February 6 was that there should be mutual and friendly discussion between the members of the Commission and the members of the several Committees. But if the Committees were to have separate sittings to examine witnesses and to inspect documents, the result would almost certainly be unsatisfactory. It seems to us therefore, that the Punjab Committee have done well to bring the matter to notice. Moreover, the readiness with which the Commission have acceded to a reasonable proposal should go far to strengthen the position of the rapidly increasing number of Indians who are anxious to co-operate with the Commission. It is too much to hope that the extremists will see any good in the concession, but, as we have repeatedly pointed out, they speak for themselves only; they are not truly representative of the people of India.

Sericulture in Kashmir.

Interesting particulars of the progress of the Kashmir silk industry are given in a recently published report. For many years past sericulture has been carried on under official control in the State of Kashmir. As far back as 1869 the State authorities tried to put the industry on to a large-scale basis, but without immediate success. Various experiments were subsequently made, but it was not until 1896 that the industry was firmly established. The factory, which is located at Srinagar, the State capital, was burned down in 1913 and could not be completely reconstructed until after the War. It is now the largest factory of its kind in the world. Mulberry trees are abundant in Kashmir, the climate, soil and elevation being all favourable to them. The tree is reserved to the State and may not be cut down without permission. Every effort is being made by the State Government to increase the number of trees, as the quantity of silk-worm eggs distributed to the rearers has almost reached the limit that the existing number of trees admit of. Thousands of trees have been distributed yearly from the mulberry nurseries for planting.

For the last thirty years or thereabouts silk-worm rearing has been carried on in Kashmir on scientific lines. There are now about 60,000 acres; and it is estimated that as many as 200,000 men, women and children are engaged in the industry. No less than 42,000 ounces of eggs are issued by the State authorities to the rearers yearly. Formerly it was necessary to bring pressure to bear upon the peasants to induce them to rear silkworms; but nowadays the industry has become so popular that it is difficult to limit their demands for eggs. The reeling of cocoons in a scientific way was introduced in 1898. It was then, of course, on a small scale, but at the present time the average annual output of the factory is about 175,000 lb. of No. 1 silk, and about 100,000 lb. of inferior and waste silk. Reeling basins of the most modern type are now being installed in the factory.

Smoke in Calcutta.

"There is one superficial feature of Calcutta that has greatly distressed me. It is a tribute to your enterprise; and I doubt not that it also ministers to your wealth. But it is neither necessary, nor beautiful, nor even sanitary. I allude to the Calcutta smoke which sometimes almost makes one forget that this is an Asiatic capital, which besmirches the midday sky with its vulgar tar brush, and turns our sunsets into a murky gloom." With this characteristic introduction Lord Curzon, the then Viceroy of India, announced at a public dinner in Calcutta in 1903, that he was bringing an expert from England "to advise us as to how we may combat this insidious and growing danger'.' The expert arrived in due course and, as a result of his investigation, an authority styled the Bengal Smoke Nuisance Commission was constituted by legislation, and empowered to take all necessary steps to combat the evil. The Commission got to work in 1906, and it has since been continuously engaged in reducing the volume of smoke emitted from factories, steamers, shops, dwelling houses, etc. To judge from its report for the year 1927, the Commission may rightly claim that it has been largely successful in this endeavour; for there has been an enormous curtailment of the nuisance. In 1906, when the Commission assumed control, the daily emission of black smoke was 200,000 minutes, while it is now less than 12,000 minutes. These figures are eminently satisfactory, but, as the Commissioners recognise, they do not mean that the work is finished. There is, in fact, a great deal more still to be done, and during the past year the Commissioners have been very active. They have devoted much time and attention to the study of modern developments in the scientific use of fuel, and the latest achievements in industrial and domestic smoke abatement. They have also considered the public health aspect of the smoke question, and in this they are assisted by the provincial Director of Public Health. The general diagram of deaths from respiratory diseases in Calcutta shows that as the pollution of the air increases so the death rate rises. For instance in July, August and September last, when the monsoon was in progress and the rain was washing the pollution from the atmosphere, the death rate from respiratory diseases fell to 77 per week. But towards the end of the year as the wind velocity dropped to about a mile an hour, the death rate rose until, in January 1928, it became as high as 233 per week. The Commission suggests that the only radical remedy is the extended use of smokeless gas appliances,, and this, of course depends on the price of gas. Unfortunately in Calcutta gas is not cheap. The Municipal Corporation is the largest consumer, and its contract with the manufacturing company requires the gas to be of the illumination or candle-power standard. It follows that all the gas in the city is manufactured to this standard. But this illuminative gas is of course needlessly expensive, and what is more it is practically obsolete. Heating, or calorific, gas is in general use nowadays, and Calcutta is one of the last of the large towns to keep to the old standard. The Smoke Nuisance Commission is rightly pressing for the change over to be made as soon as pos-

Digitized by Google

sible in the interests of the public health; and it is understood that the manufacturing company have put proposals before the Corporation.

It is of interest to see from the annual report of the Commission that no prosecutions for smoke nuisance have been instituted for the past two years. During the years 1927 as many as 7,433 offences were reported; but it is the general experience of the Commissioners that, in dealing with the work of efficient smoke prevention, an educational and co-operative policy yields better results than prosecutions.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, June 9.

The Country League.

A new organisation called "The Country League" has been formed by a number of zamindars and leading publicists of India with a view to offering a rallying-point to all those who seek the advancement of India on sane lines. The idea seems to be to protect the interests of landholders, businessmen and others having a stake in the country and to secure for them their legitimate rights in the future Constitution of India. The founders-signatories, who number 55, headed by the Maharajadhiraja of Darbhanga, appeal to all sober elements in the country, agricultural as well as commercial, to join the new League, in whose name a representation will be presented to the Simon Commission in due course. The League stands for, *inter alia*, the progressive realisation of responsible government in India and the provision of adequate safeguards for minorities and increased representation for commercial, landed, agricultural, ex-military and labour interests and the depressed classes.

Indian States.

A couple of weeks back there appeared in the Press a scheme prepared by Indian Princes for submission to the Butler Commission which has been appointed to report on the future relations between British India and the States. The scheme met with strong opposition in the Indian Press on the grounds that it betrayed a tendency to overlook public opinion in British India. I have reason to think, however, that the scheme published was a very rough draft and it has already undergone revision and is likely to be further revised in important particulars. Meanwhile the ruling Princes in India are naturally anxious that the Press in British India should not prematurely condemn the Indian rulers on the strength of this draft. The *Servant of India*, commenting on the published scheme, writes: "The whole basis of the scheme appears to us to be wrong. It seems to have as its basis the notion that Indian States are independent and autonomous units, owing allegiance to no higher power. Nothing can be further from the truth. No scheme which fails to take note of this fact . . . can be regarded with satisfaction by anybody but the Indian Princes."

The Bombay Textile Mills.

It is now nearly two months since the textile mill workers of Bombay went on strike. The strike has affected the millhands more than the mill owners, some of whom have cause to regard the mill strike as providential in so far as it enables them to dispose of the large supply which normally they were not able to sell. The strikers therefore are not in a position to prolong the strike. On the other hand, as time elapses, the stock in the hands of millowners is dwindling and it is no longer profitable for the millowners to keep their mills out of work. Both parties, therefore, are desirous of settling their differences, and pressure has been brought to bear on both of them by a high authority for an early settlement. It is generally expected that the strike will be over by the fifteenth of this month. Meanwhile Mr. Joshi and the millowners are engaged in a heated controversy on the subject of registered trade unions and the extremists are trying their best to persuade the workers not to come to terms.

THE PORT OF CALCUTTA.

A comprehensive account of the Port of Calcutta and of its post-War development was given on Friday, June 8, before the Royal Society of Arts by Mr. S. C. Stuart-Williams, the Chairman of the Calcutta Port Commissioners. In a recent issue of THE NEAR EAST AND INDIA a correspondent outlined the general history of the port, and this brief sketch may now be supplemented by Mr. Stuart-Williams' detailed description from which the following passages dealing with the post-War development of the port are cited:—

"The Engineering Committee of 1913 recommended the acceptance of a scheme of development already contemplated by the Administration, viz., the construction of a new dock system in Garden Reach, to be preceded—in order to meet urgent requirements—by five riverside berths along the river front, behind which the new dock system would lie. When the War broke out work on these berths had already commenced, but was interrupted by the great hiatus which lasted from 1915 to 1920. The five berths were completed in 1923, and have now for some time been fully utilised. They comprise a coaling berth, built in replacement of a privately-owned berth belonging to the British India Company, which it was necessary to acquire, and four general berths, capable of taking the largest vessels visiting the port. They consist of reinforced concrete and steel structures, provided with large double-storied transit sheds. The river at this point has a tidal range of 20 ft., but the bed has been dredged to allow from 35 to 40 ft. of water at the berths at low tide. On the wharf frontage, semi-portal electric cranes are provided, and electric cranes and lifts are also provided at the back of the sheds.

"The remaining, and more important, portion of the whole scheme is the King George's Dock. In its essentials, as already indicated, the scheme had been planned in the years which immediately preceded the war, that is to say, a scheme was contemplated with ample lock entrances placed obliquely in Garden Reach, just above the point known as Cumberbatches Point, and with a dock running more or less at right angles to the river. Land had been acquired and cleared, and a certain amount of reclamation work already done during the period from 1910 to 1913, when Sir Frederick Dumayne occupied the post of Vice-Chairman, which formed, at that time, with a Government Chairman, the head of the Executive, and Mr. Frederick Palmer was Chief Engineer. During the war the type of construction by large monoliths was more or less decided upon, and trial wells were sunk which gave valuable and, on the whole, reliable information as to the strata to be expected. In the years 1919-1920 and 1920-1921, the preliminaries were carried further, and detailed plans and estimates prepared by the Executive, with the valuable help and advice of Mr. J. Angus, the Commissioners' Consulting Engineer in London. During this preparatory stage the Commissioners decided, in view of the magnitude and importance of the scheme, to consult outside expert opinion, and were fortunate in obtaining the services of Sir John Wolfe Barry and Col. Cartwright Reid, in addition to those of Mr. J. Angus, to advise them on the methods of construction, and of Mr. Wentworth-Shields, of Southampton, to deal with the lay-out of transit sheds and warehouses, and the railway and road arrangements. The reports submitted by these gentlemen were of great value and assistance, and have played no small part in the final scheme. This comprises double entrances, viz., a lock and a double dry dock, capable of being used as an emergency entrance, and in the first stage, six berths in the wet dock. The lock is 90 ft. in width with a usable length of 700 ft. The dry dock alongside has a total usable length of 1,156 ft. and is 80 ft. in width. It is divided into two portions by means of a floating caisson, the two sections providing lengths of 554 ft. and 569 ft. respectively, and is designed so that ships can enter or leave from either end. The sill of the entrance lock will be at -24, i.e., 24 ft.. below the datum line which

Digitized by Google

is 2.5 ft. below lowest low water, so that at low water the depth on the sill will be 26½ ft. and at highest high water 46½ ft. The dry dock floor is being made at -21½ ft., giving a depth at lowest low water of 24 ft. and 36½ ft. at normal wet dock level, with 44 ft. at high water level. The wet dock is to be maintained at a level of +15 ft., with the bottom dredged to -21 ft. The water level has been designed with a view to minimize pumping, but would, however, have involved a double set of gates, and to avoid the expense of these, it has been decided to use box caissons. Within the wet dock itself there will be in this—the first stage of the work—six berths altogether, viz., a heavy lift yard, three import and one export berth for ocean-going ships, a special berth for river steamers—with which it is hoped a large transhipment traffic will be carried on.

"The information already available—coupled with that derived from the sinking of the three trial wells—pointed to the necessity for the utmost caution in constructing work of this magnitude, and at such depths, and for this reason the method decided upon—and endorsed by the consulting engineers—is monolithic, the wells being sunk independently until the outer ones rest on a stratum of stiff clay, and the remainder to a depth of about 52 ft. The main monoliths in the side walls of these entrances are 40 ft. square while the centre of the floor is made up of similar but smaller monoliths 36 ft. square with still smaller ones in the intervening spaces, and the walls of the wet dock have been constructed with wells of 44 ft. dimensions. All the masonry work has brought about an enormous demand for bricks which have been used literally by the million, and it is fortunate that almost all these could be made on the Commissioners' property at favourable rates. The blue bricks used on the facing of the web have also been of Indian make—a fact which appears worthy of note, as this is probably the first large work on which locally made blue bricks have been used. The granite for copings, and for the caisson grooves has all been imported, some from Cornwall, and some from Sweden. The cement work has been almost entirely made in India, and the result obtained is on the whole excellent. The machinery comprises three box-shaped caissons and two ship caissons—so designed as to provide at the minimum cost for any contingency at all probable, and of these the box caissons are moved by hydraulic hauling gear placed in a shallow pit on one side of the recess, while the ship caissons will be manipulated by tanks divided into two compartments by a watertight diaphragm which can be emptied by means of two electrically-driven centrifrugal pumps, the current being supplied by flexible cable from the dock side.

It will be realised that it is hardly possible in a paper of this kind to deal adequately with this scheme, the details of which will be described later in a technical paper, and I must now leave this part of my subject with the remark that it is now being pushed on to an early completion which we hope to see in the early months of next year.

"I would, however, like to say a word as to the future. The area taken up and prepared in connection with the King George's Dock scheme makes ample provision for any likely development in the trade of Calcutta for many years. Not only is the area demarcated for the extension of the wet dock itself capable of providing about twenty-five more berths—and the warehouse area of providing suitable sites for a corresponding tonnage of goods—but the additional area available for private trade depots, is calculated to be sufficient for any possible extensions, while the further area marked off for railway purposes, i.e., for a main marshalling yard, and for the subsidiary grids which will serve the different portions of the scheme as it develops, seem sufficient to deal with all likely demands on modern and economical lines.

. . . . . .

"I conclude with a few words as to the financial or economic side of this development work. Much money has been, and is being spent, and this fact carries with it a heavy financial responsibility. Our outlay has had to be incurred, moreover, partly in an abnormal period, both as regards the prices of material and plant, and as regards interest rates and exchange problems, and it is satisfactory to be able to point to the cordial support which the Administration has received from the Government of India, the Government of Bengal, the commercial community of Calcutta, and the banks in London and Calcutta, which have assisted in the arrangement of finance. I hope and sincerely believe that their confidence has not been misplaced. Although the effects of the War have been felt even up to the years 1924-1925, and 1925-1926, we may, I think, now feel a reasonable hope that we have got back to the pre-War position, and that the increases in tonnage which have marked the last two years are permanent. I will not worry you with a recital of many figures, but I can inform you that during the last five years ended March, 1928, there has been an increase of 38 per cent. in the gross tonnage of vessels entering the port, and of 46 per cent. in the tonnage of goods handled, and that both figures are the highest in our history. The revenue and expenditure have increased, the former by 27 per cent. and the latter by 16 per cent. The Reserve Funds have been substantially increased, and are more than double the amount they had reached two years ago, viz., Rs. 133 lakhs, as against Rs. 65 lakhs.

"While the opening of the dock will mean an increased burden on the revenue account, it is hoped that this burden will not exceed by a heavy amount the available margin of income, and if it should, that the substantial reserve available should be sufficient to meet any probable contingency.

"In conclusion, we believe that in spite of many difficulties, physical, economic, and now political, we have made, and are making, wise and adequate provision for a trade and commerce which is certain to expand and the limits of which it is difficult to foresee."

At the conclusion of the paper, the Chairman briefly thanked Mr. Stuart-Williams for his valuable contribution to the history of the port, and for his lucid description of the new Docks. There then followed an interesting discussion in which Mr. C. E. Buckland, Mr. C. H. Bompas, Sir Alexander Murray, and Mr J. Angus took part. Mr. Stuart-Williams briefly replied to the various points raised and the proceedings then terminated.

THE COUNTRY LEAGUE.

It is satisfactory to see that several of the leading Indian newspapers have welcomed the formation of the Country League. For instance, the *Statesman*, in commenting on the manifesto, says:—

"It is appropriate that Cawnpore as the headquarters of the Communist movement in India should now have given birth to the Country League, which stands for its political antithesis. The purpose of the new organisation is excellent, and if the influential signatories behind it are in earnest, as we believe them to be, and have no intention of allowing it to follow the melancholy precedent set by the countless new parties, leagues and societies with high sounding titles and objects, which politicians in this country are for ever forming and as quickly forgetting, then it is likely to play an important part in the coming time. We judge that its intention is to attract the solid men, without distinction of race or creed, who have everything to lose if they let the light weights seize political power. They are in favour of advance towards Indian self-government, but they are determined that they are going to have their share in that government, and they will not idly leave the field to those who make the most noise.

"In short they are the Conservatives and their creed is that 'the elements that make for stability in all countries are the landholders, the industrialists, the traders, large or small and the landed aristocracy.'"

Digitized by Google

The *Times of India* is also of the opinion that an organisation such as the League is wanted in India. It says:—

"The founding of the Country League, which we announce in our columns to-day, is as welcome to the supporters of the Simon Commission as it is disturbing to those who claim that a policy of abstention reflects the honour of an outraged India. The boycotters have forced a new party into the field. India, on their own showing, desperately needs reform, and the British Government, endeavouring to meet this need, appointed a Commission nearly two years earlier than it was bound to do. With many politicians, however, boycott came first and reform second; and now, in place of the Liberal party which threw away a great opportunity for embracing thousands of loyal and intelligent Indians, we are to have the Country League."

The paper continues:—"There is a danger that schemes which offer a temporary advantage may have ultimate results that are not desirable. Fortunately there is no real reason to doubt that the Country League will think nationally and imperially; and we confidently hope that the Government, accepting the critical support of its members, will not hesitate to revise duties or taxes which may affect the landed and commercial classes, if it sincerely believes that the revision should be made. There can be no question of an implied bargain with the Government. Meanwhile the Country League ought to be only a temporary expedient. We must pave the way for a party system which unites class with class and interest with interest.

"The programme itself is less significant than the determination of the signatories that commercial development and agricultural prosperity shall be the corner-stone of their policy. They pledge themselves to find and support candidates in the various Legislatures who will be like-minded. They also stress the political importance of the Provinces. The manifesto will, indeed, help to focus attention upon the autonomy of the Provinces, which is really the most pressing problem of Indian politics. Here their chief demands are for communal representation and the establishment of Second Chambers. Upon this the signatories are not unanimous. But the success of the Council of State in checking the excesses of the Legislative Assembly has made more feasible the introduction of Second Chambers into the Provinces, and it is well that the proposal has been given this prominence. It is one to which Sir John Simon and his colleagues will give every attention, as they will also to the recommendations which the members of the League proposed to submit to them.

The *Englishman* prints an article on the League by Mr. Bipin Chandra Pal, the veteran nationalist, who is, of course, antagonistic to the League. But he recognises its importance, as the following extract from his article shows:—

"It will be no child's play to save the country from the stupendous menace which this coalition clearly offers. The new party will have immense financial backing. It will have the patronage of official authority also. And it can only be fought by the combination of the masses and the educated middle class, both of whom are threatened to be wiped out of the political and industrial life of the country in the immediate future. The situation calls for the organisation of a People's Party, and the call offers an acid test to Indian patriotism and Indian Nationalism."

In remarking on the formation of the League, and on Mr. Pal's article, the *Englishman* says:—

"The organisers of the Country League may be congratulated both on their choice of title and their selection of headquarters. Despite the evident hostility and alarm which the new League has already inspired in the breast of Mr. Bipin Chandra Pal, and which, in proportion to its success, it is bound to inspire among the professional middle class politicians, there can be no gainsaying the fact that some such organisation as the Country League, representative of Europeans and Indians who really have a stake in the country, has for long been urgently needed, and has not been formed a day too soon. The great landowners and a very respectable minority of the biggest Indian businessmen have for too long been silent. The landowners, as we have repeatedly pointed out, have for the most part failed to place themselves at the head of the countryside and to identify their interests with those of their peasantry. Many of the biggest Indian businessmen have been content to let representation on political and commercial bodies go by default, or pass into the hands of men, comparatively speaking, of straw. Yet both classes, supposing the kingdom of unreason continues or ultimately triumphs, stand to suffer as diastrously as any European vested interest. It is surprising that this elementary fact has not hitherto received wider appreciation, nor does recognition of it by Europeans in anywise weaken the general policy upheld by the General Council of the European Association.

"Mr. Bipin Chandra Pal, whose weekly article appears in an adjoining column, strongly disapproves of the Country League. Mr. Pal asserts that the 'great educated middle classes of India are honestly pledged to work for the establishment of the most advanced type of modern democracy in India.' Mr. Pal himself is, no doubt, a sincere democrat, but on the subject of the enthusiasm of the middle classes for democracy we beg leave to differ. But if the middle classes were enthusiastic in the cause of democracy, as Mr. Pal alleges they are, that would not necessarily prove democracy to be best at present for India; nor will it affect the unfettered right of men with a real stake in India to take any constitutional steps they may think fit in defence of their interests. There is to-day a real future for a body such as the Country League, provided that its principal members honestly and sincerely recognise that their social and monied standing in the country connotes responsibilities and duties as well as rights."

CORRESPONDENCE

INDIAN DINNERS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In and around the month of June many Indian Provincial or Service dinners—the Calcutta, Bombay, Assam, Burma, Sind, I.C.S., Indian Cavalry, and Indian Political dinners may be mentioned—are held, and are chiefly supported by men whose careers in India are behind them. I have been asked in influential quarters to suggest that by means of the addition of a shilling to the dinner subscription the opportunity of these festive occasions should be taken to assist some philanthropic activity in India, such as the Lady Minto Nursing Association for Europeans and the National Association for Supplying Medical Aid to the Women of India (formerly known as the Countess of Dufferin's Fund).

While no one would feel or grudge this slight voluntary "entertainment tax,' it would afford substantial help (without cost of appeal or collection) to the funds selected for support. For instance, the two largest dinners, those of Calcutta and Assam, would bring in together about £40. The chairman and secretaries of the principal Indian dinner clubs might meet before the holiday season to formulate a scheme for consideration of their respective committees in due course, to take effect next year.—I am, etc.,

F. H. BROWN.
Hon. Secretary, East India Association.
3, Victoria Street, S.W.1.

[The suggestion is one deserving of the most earnest consideration by those responsible for the functions to which Mr. Brown refers.—ED., Indian Section.]

Volume XIII. of the minutes of the evidence taken by the Royal Commission on Agriculture in India, consisting of the evidence taken in Bihar and Orissa, has been published by H.M. Stationery Office, price 6s. 3d

Digitized by Google

REPORT OF THE ROYAL COMMISSION ON AGRICULTURE IN INDIA.

Few documents of comparative importance have been awaited with keener or more widespread interest than the Report of the Royal Commission on Agriculture in India, which is published to-day. With a view to enable the Commission's main conclusions to reach a wider public than is likely to be covered by the full Report, a bulky volume of over 600 pages, an abridged version of the complete record, has been prepared, which itself, while a notable piece of condensation, runs to nearly 100 pages.

Like the full Report itself, the abridged version is divided into three main divisions—technical agricultural improvement; agricultural research and education; and, thirdly, the promotion of the permanent welfare and prosperit yof the individual cultivator, including measures directly designed to improve his physical health and general well-being, factors to which the Commission attaches especial and primary importance.

The perspective from which the Commission, as befits the first body appointed specifically to examine and report on the conditions of agriculture and rural economy in India, has viewed its onerous and responsible task is clearly and succinctly stated in the concluding section of the abridged version, which is a summary of Chapter XXI. of the main Report.

After pointing out that the aim of their recommendations "has been to bring about greater efficiency throughout the whole field of agricultural production, and to render the business of farming more profitable to the cultivator," the Commissioners proceed: "Throughout our Report we have endeavoured to make plain our conviction that no substantial improvement in agriculture can be effected unless the cultivator has the will to achieve a better standard of living, and the capacity, in terms of mental equipment and of physical health, to take advantage of the opportunities which science place at his disposal. Of all the factors making for prosperous agriculture by far the most important is the outlook of the peasant himself.

"This, in the main, is determined by his environment and it follows, therefore, that the success of all measures designed for the advancement of agriculture must depend upon the creation of conditions favourable to progress. If this conclusion be accepted, the improvement of village life in all directions assumes at once a new importance as the first and essential step in a comprehensive policy designed to promote the prosperity of the whole population and to enhance the national income at the source. The demand for a better life can, in our opinion, be stimulated only by a deliberate and concentrated effort to improve the general conditions of the countryside, and we have no hesitation in affirming that the responsibility for initiating the steps required to effect the improvement rests with Government. . . .

"If the inertia of centuries is to be overcome, it is essential that all the resources at the disposal of the State should be brought to bear on the problem of rural uplift."

Under the main heading of technical agricultural improvement, the length and detail of the chapter devoted to animal husbandry reflect the importance which the Commission attaches to "the gigantic task of reversing the process of deterioration and of improving the livestock of the country." "Unless substantial changes in the existing management of cattle are introduced, a progressive deterioration in the quality of the cattle is to be feared. Four cardinal points in a policy of improvement must be (a) a reduction in the number of plough cattle; (b) an increase in the efficiency of plough cattle; (c) attention to all matters that would tend to decrease the number of bullocks required for cultivation; and (d) an effort to secure better treatment for dry cows and cows-in-calf."

A separate chapter is devoted to the no less important question of communications and marketing. In the latter connexion the attention of other provinces is particularly drawn to the desirability of the establishment of regulated markets on the Berar system as modified by the Bombay legislation, a further investigation into the possibility of the standardisation of weights and measures is recommended, and the attachment of an expert marketing authority to the staff of the agricultural departments in all the major provinces advocated. In view of the growing importance of Indian agricultural products in Europe the Commission considers that the Indian Trade Commissioner in London should be given the assistance of an officer with experience of agriculture and co-operation in India who shall work in liaison with an officer of similar standing and experience on the staff of the Director-General of Commercial Intelligence in Calcutta.

The outstanding feature of the section of the report relating to agricultural research and education is the proposal to constitute an Imperial Council of Agricultural Research, "the primary function of which would be to promote, guide and co-ordinate agricultural research throughout India." After considering and rejecting various other suggested means of providing in practice the requisite degree of co-ordination between the research work at Pusa and that in the provinces, the Commission arrives finally at the conclusion that "a new organisation is needed to connect Pusa and the provincial research institutes—an organisation to which both will stand in exactly the same relation."

"Our object in proposing that such a body should be constituted," the report states, "is to provide provincial Governments with an organisation embracing the whole research activities of the country, veterinary as well as agricultural, in which they can feel that they have a real and lively interest." Although the Council would not exercise any administrative control over the Imperial and provincial departments, "that interest," the Commissioners consider, "will undoubtedly be greatly accentuated if the Council is entrusted with the administration of funds with which it can supplement provincial activities in the matter of agricultural research." A minimum non-lapsing grant of Rs.50 lakhs is recommended as the nucleus of the Agricultural Research Fund, the position of the Council in relation to the administration of the fund being analogous to that of the Indian Central Cotton Committee under the provisions of the Indian Cotton Cess Act of 1923. At the same time, on the constitution of the new superior provincial agricultural services, dealt with in a separate chapter, "the functions of Pusa as a centre for higher agricultural education are likely to be extended, and it will be for the Council of Agricultural Research to suggest such alterations as are necessary to render Pusa a teaching institution of the highest standard. An approved course of post-graduate study should be regarded as an essential qualification for admission to the new superior provincial agricultural services." Throughout this section emphasis is laid upon the necessity of ensuring that the training should be of the most thorough and practical character, and the paramount need, particularly in the initial stages of the transfer of control to Indian hands, of engaging the services of the best possible technical experts in all branches, irrespective of their country of domicile.

Although throughout the report the Commissioners deal at length with the problem of improving the efficiency of the agricultural departments, and of extending their activities over the whole area of agricultural India, they observe at the outset that "we regard this as merely one aspect of the far wider problems of creating an environment to which the cultivator will be willing to receive and put to the best possible use the advice and help which the departments are in a position to place at his disposal."

In Chapter XIV (The Village) the report indicates some of the economic and administrative factors at work which may render the rural community more receptive to new ideas and facilitate the introduction of measures to improve rural conditions.

Tuesday Morning.

Development of Palestine.

Elsewhere in this issue will be found a summary of the recommendations of the Commission which has been examining the possibilities of Palestine with a view to the reorganisation of the work carried on there by the Zionist organisation. The general position with regard to Palestine has been dealt with so fully in these columns that it is unnecessary to refer in detail to the recent developments in that region which have rendered necessary much more comprehensive endeavours if the hopes based on the future of the country are to be realised. The experiences of the last few years have shown that the country, on its present economic basis, is peculiarly susceptible to the changes and chances of world trade. There have been at least two periods of severe economic depression which have served to bring home the point that there is only a limited scope in Palestine at present for certain classes of settlers. That the position will be appreciably modified when the developments now in train are completed is obvious, and it is satisfactory to know that the Commission take an optimistic view of the outlook for the development of the country, their conclusion being that the matter is mainly a question of finance. One point made in the report is that there is room for a great number of farms. At present, however, only a very small percentage of the land in question is in Jewish hands, and the problem with regard to the settlement of Jews in Palestine up to the present has been that a relatively small proportion desire, or are suited for, work on the land. Clearly in the initial stages of a country's development the scope of traders pure and simple must be restricted; their opportunity will only come when the foundations of the country are well and truly laid. It will be noted that special stress is laid on the orange industry as a field for colonisation. The Jaffa orange is at present the principal factor in the export trade of Palestine, and the undoubted scope which exists for the extension of the cultivation of this fruit makes it a particularly suitable industry for potential settlers.

Industries and Finance.

A feature of developments in Palestine in recent years has been the number of new industries which have been established, and there is no doubt that the extent to which the country was affected by the recent economic depression was due in some measure to the fact that these industries were not always wisely chosen. It goes without saying that no country has room for more than a certain number of the same type of commercial activities, and it is without question that this generalisation is particularly applicable to Palestine whose resources in the way of raw materials are somewhat limited. The Commission, it may be pointed out, in the main content themselves with pointing out that there is room in the country for a number of small industries mainly based on the local natural resources. They also suggest that there are possibilities in the development of the textile industry, and while Palestine does not possess the basic raw materials, supplies of Egyptian cotton are close at hand and it seems probable that in the near future Palestine will be able to look to the Near East for considerable supplies of American cotton so that as far as cotton is concerned there should be no insuperable difficulty in the development of this industry. The progress of Palestine in this and other directions largely resolves itself into the question of finance, and the Commission are of the opinion that it will be necessary if the country is to be developed for the provision of an annual amount of £1,000,000 by the Jews of the whole world. It is a substantial sum, but when the number of wealthy Jews is considered it is not an amount which should be impossible of attainment if the community as a whole are readily imbued with enthusiasm for the progress of the country with which they are indelibly associated.

Progress in Cyprus.

While to some extent the outlook for Palestine remains uncertain the position with regard to Cyprus, which is also in a transitional stage of development and is not so far removed from Palestine that it cannot be referred to as the neighbouring island, is distinctly promising, as Sir Ronald Storrs, the Governor, showed last week in his comprehensive address on the prospects of the island. The absence of water has been the root difficulty in the development of Cyprus, but that problem is now by way of being solved through the discovery of a large subterranean source the utilisation of which, it is no exaggeration to say, will change the face of the island. An interesting comparison is afforded with Palestine, by the way, in the fact that Cyprus is now devoting considerable attention to the cultivation of the orange. The fact that last year's exports totalled twenty-one million oranges and that the best of these were pronounced the finest in the world speaks for itself as to the success which is attending this cultivation and as to the prospects for the development of this important industry. Other industries of which much is hoped are the production of fine flax for the British market and cotton, the output of which has risen in five years from 2,200 bales to 7,000 bales. The established industries of the island it is unnecessary to refer to, but a new industry, if such it may be termed, which should hold out great promise for the island is the tourist traffic. As Sir Ronald Storrs suggested the island is not yet in a position to cater for the luxury passenger, but the average tourist is not of that class, and the attractions of the island, the beauty of its scenery, its history, and above all the peace that is to be found there only need to be made known to ensure that henceforward Cyprus will have its full measure of visitors in the season.

Sudan Trade.

The most interesting feature in the statistics of the commerce of the Sudan for the first three months of this year is the revival in the import trade. The value of the total trade at £E3,519,956 shows a decline of £E56,111 as compared with the corresponding period of 1927, which is due to the fall in the exports. The imports at £E1,537,532 have increased by £E76,984, for which the increase of £E110,838 in public imports is responsible, Government imports showing a fall of £E33,854. The value of the exports was £E1,865,532, a decline of £E155,071, while re-exports at £E44,440 are down by £E3,351, but the transit trade at £E72,452 shows an increase of £E25,327. The fall in the export trade was principally due to cotton, the quantity of which was far below the total for the same period last year though the unit value was considerably higher. The total cotton crop for 1927-28 is estimated at 130,500 bales as compared with 157,350 bales for 1926-27. Of this total the Gezira crop accounts for 85,000 bales as against 118,800, other Egyptian cotton for 29,100 bales as against 22,837, American irrigated for 11,500 bales as against 10,230, and American rain-grown for 4,900 bales as against 5,482. While this decline in production in the Gezira is disappointing it was too much to expect the indefinite maintenence of the very high yield per kantar recorded a year ago, and with the expansion of the area under cotton in that region it may be expected that the course of production will again resume an upward direction. As regards imports an important feature was the increase in cotton piece-goods, the value of which was £E276,644, an increase of £E104,663 or 61 per cent. above last year's imports. That is a very significant pointer to the gradual recovery of the Sudan from the economic depression from which it has been suffering, and it also suggests very plainly that money is now beginning to go into circulation much more freely. Dura, which, as I have had occasion to point out, has played such an important part in the import trade of late, has virtually disappeared from the list. It figures only for the negligible amount of £E119 as compared with £E60,015 for the same period of last year, while it reappears in the export list with a total of 522 tons and a value of £E3,676. In a sense it is not untrue to say that the position with regard to dura is one of the keys to the situation in the Sudan, as the abundance or scarcity of this crop has an immense bearing on the prosperity or otherwise of the country. Given another good dura harvest and satisfactory prices for cotton the immediate outlook for the Sudan will be very satisfactory.

Another Greek Loan.

Further evidence of the desire of America to find new fields for the utilisation of her surplus money is forthcoming in the report that Greece has been offered a loan of £20,000,000. As in the case of Bulgaria, the recent earthquakes caused considerable damage in Greece, notably at Corinth, and it is understood that a part of the loan, if it matures, as is probable, will be allocated to the necessary reconstruction works. The Corinth region, which was mainly affected by the earthquakes, is, of course, a very important factor in Greek agriculture, and it is very satisfactory to know that the vineyards and crops have suffered but slight damage. Incidentally, the projected American loan is understood to carry the proviso that a considerable portion of the amount must be spent in the purchase of machinery and material in the United States.

COMMENTATOR.

THE POSSIBILITIES OF PALESTINE.

Commission's Recommendations.

The Mandate for Palestine provides in Article 4 that the Zionist Organisation shall take steps in consultation with His Majesty's Government to secure the co-operation of all Jews who are willing to assist in the establishment of the Jewish National Home.

With a view to creating an enlarged Jewish Agency, a Commission consisting of Lord Melchett, Dr. Leo K. Frankel, Director of the Metropolitan Insurance Company of New York, Felix M. Warburg of New York, and Dr. Oscar Wassermann, Director of the Deutsche Bank, Berlin, was constituted in order to report on the possibilities of Palestine, and to make recommendations with regard to the reorganisation of the work now being carried on by the Zionist Organisation.

The Commission appointed a number of experts to inquire into the different problems. Among these experts there were :—Sir John Campbell, C.S.I., late Vice-Chairman, Greek Refugee Settlement Commission; Dr. Elwood Mead, United States Commissioner of Reclamation; Prof. J. G. Lipman, Director of the New Jersey State Agricultural Experiment Station; Prof. Frank Adams, of the University of California; Mr. Knowles Ryerson, Horticultural Adviser to the Government of Haiti; and Prof. Milton J. Rosenau, Director of the School of Public Health at Harvard University.

On the basis of the material supplied by the experts and on their personal knowledge of the country the Commission came to the general conclusion that there were good prospects for the development of Palestine and that the matter was mainly a question of finance. A summary of certain of the recommendations is given below.

On immigration, they recommend that the future Jewish Agency must be exceedingly cautious in formulating an immigration programme regarding persons who have no means of their own and who would depend for their absorption on the economic capacity of the country. They recommend that a special endeavour be made to secure immigrants with means and they suggest to the Government to form, in co-operation with the Jewish Agency, an information bureau which would be able to give to such immigrants advice concerning investment possibilities in industry and agriculture.

Agriculture.

On agriculture, they state, on the basis of the experts' conclusions, that there is room in the whole of Palestine for 50,000 non-irrigated farms and 33,000 irrigated farms. At present only 8 per cent. of this land is in Jewish hands. They recommend that the future colonisation programme should be based on business principles and that attention be paid to the possibilities of the orange industry in Palestine as a field for colonisation. They make it apparent that the time has arrived when such problems as picking, packing, and shipping of oranges and maintenance of proper grades should receive more attention, so that the Palestine orange should be able to maintain its reputation on the world markets. The Commission note with regret that the Government has not yet found it possible to take steps towards the facilitation of "close settlement of Jews on the land including State lands and waste lands not required for public purposes," as contemplated in Article 6 of the Mandate. They emphasise that a rational development of agriculture in Palestine is not possible until the present system of tithe is replaced by a tax on the unimproved value of the property. They also express the hope that the Government of Palestine will find it possible to stimulate the agricultural development of the country by exempting new agricultural enterprises from taxation for a limited number of years in conformity with the common practice obtaining in other parts of the world where the encouragement of agriculture is sought. They draw attention to the importance of introducing artificial fertilisers into Palestine in greater measure than has been done hitherto.

Room for Small Industries.

As regards industry, they have come to the conclusion that there is room in Palestine for the development of a number of small industries mainly based on the natural resources of the country. They see, however, the possibility of the development of the textile industry, although the country does not possess the basic raw materials. The East is a considerable consumer of textile goods and the Jews have a special aptitude for this industry with which they have been associated, particularly in Poland, for generations. They advocate the conclusion of special Customs treaties with neighbouring countries to which the Government of Palestine is entitled by special provision of the Mandate. They submit to the Government that the present railway tariffs are not sufficiently flexible and do not encourage the exporter as against the importer. They also advocate the establishment by the Government of a transport board and a tariff board, so that a well-planned tariff policy should take the place of the present inadequate system.

With regard to education and public health, they express the view that the Government should increase their grants-in-aid to non-governmental institutions so long as these maintain the standards considered by the authorities as satisfactory. They consider that the Government grant-in-aid in the case of education should be based on the proportion of children attending school, and in the case of hospitals upon the number of days of free treatment provided in them.

As regards labour, they advocate the establishment of conciliation machinery through the co-operation of employers and workers. A council under an impartial chairman with equal representatives of employers and workers should be established.

They consider that the future development of Palestine necessitates a minimum budget of £1,000,000 to be contributed by the Jews of the whole world. The principal items of this annual budget are:—Colonisation, £250,000; improvement of shipping and marketing facilities, £100,000; land purchases, £200,000; loans to farmers, £50,000; education, £120,000; training of immigrants, £50,000; public health, £100,000.

A special chapter of the report is devoted to what the Commission consider to be the functions of the Mandatory Government. Prominent among the desiderata is the request for the grant to Palestine of Imperial Preference. The power to grant such preference to Palestine has been questioned on the theory that the Most-Favoured-Nation-Clauses contained in various treaties of the Imperial Government stand in the way. The Commission consider that these Clauses are inapplicable to Palestine since they refer to "other foreign States or nations," but Palestine does not properly come within any of these designations. Palestine is administered through the Colonial Office. The Mandatory is made responsible for seeing that no Palestine territory shall be ceded or leased to the government of any foreign power. The Mandatory is entrusted with the control of the foreign relations of Palestine and the right to issue exequaturs to consuls appointed by foreign powers.

Imperial Preference.

These, among other provisions, demonstrate in the opinion of the Commission that with the existence of so close a relationship between Palestine and the Mandatory the idea that they are foreign to one another is inconceivable. They therefore submit that the Most-Favoured-Nation-Clause is inapplicable. On the other hand, Imperial Preference has, By Order in Council, been accorded to practically all the other mandated territories with the sole exception of Palestine and Iraq. Although there are differences between the three classes of mandates created by the Covenant of the League of Nations, the Commission consider that there differences are not material. The Mandates Commission at its session in July 1925 passed a resolution to the effect that the Council of the League of Nations "should recommend to the Mandatory Powers and also to all States . . . which have concluded special treaties or conventions with a mandatory power . . . to extend the benefits of such

The Postal Account

It is often supposed that to live a long way from the nearest branch of a bank, or to be constantly unable to go to the bank in person, is a handicap to the enjoyment of the full advantages which, it is admitted, a banking account offers. Perhaps it is assumed that to conduct an account by post involves 'more letter-writing', or is costly, or is not welcomed by the Bank. It is the aim of the Westminster Bank to dispel such misconceptions by a leaflet entitled *The Postal Account*, which explains the convenience of the method, and offers some clear suggestions.

A copy will be gladly sent on application to the Secretary

Digitized by Google

treaties or conventions to mandated territories. . . ." This would imply that in view of the Mandates Commission there is no distinction between various types of mandated territories. Examples are quoted of other nations which, in special circumstances, have granted to certain territories preferential tariffs; for instance, France to Tunis, although the latter belongs to the non-assimilated group of the French Protectorates; the United States to Hawaii before its annexation, and to Cuba in 1903. The Commission consider that the test of "extraordinary circumstances" as shaping the relations between two territories may be said to have full scope between the Mandatory and Palestine. They do not consider it likely that any other nation would view the allowance of Imperial Preference by the Mandatory to Palestine as the grant of a "favour" according to the fair intendment of that word. Even though such preference be not an absolute right, the conferring of it would be justified by considerations similar to those obtaining between a guardian and his ward.

The Commission appeal to the entire Jewish world to make the necessary sacrifices to establish an ideal which will be a just source of pride and satisfaction to all members of the community, to be regarded by the world as a worthy effort on behalf of Jewry for the re-establishment of the country of their origin. The Commissioners themselves undertake to use their own personal endeavours towards the success of the appeal which they are putting forward with a confident hope of success.

THE NEW P. & O. SHIP.

A Luxury Liner.

Details are now available of the passenger arrangements of the new P. and O. mail steamer Viceroy of India, which show a remarkable departure from precedent and an indication that the company has made an effort to meet the growing demand of their travelling public for exclusive berthing facilities. The new vessel will accommodate 415 first-class and 258 second-class passengers. The outstanding feature is that all the first-class saloon passengers will be berthed in single-berth cabins, provision being made for family arrangements by a system of intercommunication which will admit of neighbouring cabins being linked up into groups. The first saloon cabins include 20 cabines-de-luxe with bath, and 12 bedrooms with bathroom en suite. The general arrangements exceed any former idea of luxury in ocean travel.

Second saloon cabins are also planned on a generous scale as to space, fittings and furniture, and will include a number of single-berth cabins, the general arrangements of which will not be dissimilar from those of the first saloon.

The character and dimensions of the public rooms will be on the same generous scale as the berthing accommodation, and in the first saloon will consist of a lounge in 18th century design, a writing and card room (Adam) and a smoking room of unusually ample size, designed in the style of the Elizabethan period, abutting on which (aft) will be a spacious verandah in the Italian style. Twin, electrically driven lifts will connect the five first-saloon decks. A fine Pompeian swimming bath with specially designed dressing cubicles is to be provided, together with a large play-room on the boat deck for children, for whose recreation a portion of that deck will be railed off. There will be two spacious promenade decks, on the upper of which the first-class public rooms will be situated, while on the deck below there will be additional promenade space and an island deck-house enclosing first-saloon cabins fore and aft. The second class public rooms will consist of music, smoking and writing saloons of wide dimensions, a play-room for children, two promenade decks, besides which a portion of the upper promenade deck will be available for sports.

Ventilation on the punkah-louvre system will be installed throughout the vessel, ensuring in the tropics the coolest conditions in the cabins and public rooms. It will be recalled that the propelling power of the Viceroy of India is to be on the turbo-electric system which, as experience has shown, completely eliminates vibration at all speeds.

It is expected that the new ship will be ready for launching in September. She will leave London on her maiden voyage to Bombay on March 28, 1929, and is scheduled to leave the latter port for Marseilles and London on May 14, during the busiest period of the homeward Indian passenger season.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, June 26.

The Stock Markets continue to be influenced seriously by heavy liquidation from New York, Montreal, and Brussels, together with a certain amount of selling from Paris. It is not surprising, therefore, that the prices of some of the recent speculative favourites, especially those with an international flavour, continue to droop. Gilt-edged securities, on the other hand, keep very steady. owing to the strong monetary position. Thursday's Bank Return showed a record high total both for the Reserve, at £56½ millions, and for gold coin and bullion at over £171½, and although the accumulation of gold is doubtless being made in connexion with the amalgamation of the note issues, the strength of the Bank return precludes any possibility of a higher Bank rate at least until the autumn, and gives rise to hopes in some quarters of a lower rate. No detrimental effects either upon the stock markets or the money market are anticipated from the stabilisation of the franc, the rate at which it was done being very much in accordance with expectations.

The London Stores Fusion.

The tendency towards bigger units among the London stores has apparently not yet been exhausted. Official confirmation has been published of rumours regarding a fusion between Harrods and D. H. Evans. A provisional agreement has been signed under which each Evans' share will be exchanged for a Harrods' ordinary share, while in addition the holder will receive from Harrods 16s. cash per share. On the basis of the quotation for the Harrods' shares on the day on which the agreement was signed—namely 75s. 6d.—the offer is equivalent to about 91s. per share. On the same day the market price of Evans' shares was 95s., there having been a substantial rise during the past few weeks. The offer is conditional upon acceptance by 85 per cent. of Evans' shares; in the event of this failing, Harrods retain an option to purchase not less than 60 per cent. of the ordinary capital on the same terms. Harrods is a progressive undertaking which is in a strong financial position. Judging by its last balance-sheet, the company will easily be able to finance the purchase of Evans' shares, while at the same time the excellent records of both companies point to the probability of the fusion being to their mutual advantage. This is pre-eminently the age of amalgamation; but it remains to be seen whether any further combination between the larger companies—on the lines of the Selfridge-Whiteley merger—will be arranged.

The Tea Outlook.

By this time many of the tea-producing companies have published their reports for the past year. Generally speaking these have been distinctly satisfactory, earnings in many cases having shown an increase. A number of companies have allowed their shareholders direct and immediate participation in this greater prosperity. The meetings are now being held, and naturally attention is being focussed upon the outlook for the current year. The tea industry is subject to ups and downs, and it is not easy to make a long-term forecast with absolute confidence. There seems to be fairly general agreement, however, that the outlook, so far as it can be foreseen, is moderately satisfactory. "I see no reason for any pessimistic view of the future," said Sir Charles McLeod at the meeting of the Imperial Tea Company, "provided those who are concerned in the tea still keep constantly before them that quality is the main factor in obtaining remunerative terms for our investment in Indian tea, and also that they will co-operate in deciding the most advantageous way of dealing with our produce."

Reflections on the Rand Dividends.

The unexpected occurs in connexion with the dividend announcements of Witwatersrand gold mining companies as well as in other directions. The biggest producer of the Central Rand is the Crown Mines, whose profits during the current half year have only fallen a little short of those of the corresponding period of 1927. Accordingly it has come as a disagreeable surprise to shareholders to learn that they will receive only 2s. 6d. per share in place of the 3s. to 3s. 6d. paid each half year for some time past. Somewhat strangely, no explanation has been offered by the directors, but from unofficial sources it is learned that water has been encountered in a portion of the mine. Of course this may involve extra expenses as well as hindrance of operations; a neighbouring concern, the City Deep, continues to experience difficulties; in fact, work during recent months has resulted in losses instead of profits. Hence the company which fell out of the dividend list last December remains in that position. On the agreeable side we have the announcement by the Modder East Company of 8¾ per cent., as compared with the initial distribution of 5 per cent. paid in respect of the concluding portion of 1927.

The Slawax Timber Company, Zagreb, is to increase its capital from 6 to 12 million dinars.

The United States Government has decided to close the American Consulate at Damascus. The decision is to take effect on June 30.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended May 31 amounted to £E7,205, making the total from April 1 £E41,094.

A cable from the Roumanian manager of the Service Petroleum Co., Ltd., states that production from the company's Gura Ocnitei wells for the week ending June 17 was 3,653 tons (25,571 barrels).

At a Board meeting of the Sudan Plantations Syndicate, Ltd., held on June 21, Mr. Alexander MacIntyre was appointed Chairman in place of the retiring Chairman, Mr. F. Eckstein, who will in future act as Deputy Chairman of the company.

The traffic receipts of the South Indian Railway Company for the week ended May 26 amounted to Rs.13,22,581, making the total from April 1 Rs.1,00,65,862. For the corresponding periods of the previous year the totals were Rs.12,24,865 and Rs. 97,17,314.

The Crédit Foncier D'Algérie et de Tunisie has declared a gross dividend of 37.00 francs in respect of the year 1927, compared with 35.00 francs dividend for the previous year. The net dividend payable per registered share is 33.95 francs. As an interim dividend of 16.50 francs per share was paid in January, 1928, a final dividend of 17.45 francs per registered share and 14.95 francs per bearer share will be payable on July 2.

Motors and Motoring.

By G. B. B.

I note some revised regulations have been made regarding the luxury turnover tax on the sale of motor vehicles in Hungary, and as the information comes direct from Buda-Pest it is, no doubt, accurate. The tax amounts to 5 per cent. on motor cycles with or without sidecar and on motor cars of 14 h.p. and under. There is also 10 per cent. on passenger motor boats and yachts. Motor cars of over 14 h.p. and under 25 h.p. will also bear a tax of 10 per cent., whilst cars of that horse power and over will be charged 15 per cent. tax. Engines for the above vehicles will pay the same tax as that levied on the vehicles to which they belong. Chassis, open or closed, "all-weather" or combination bodies are to pay 10 per cent., and sidecars without motor cycles pay 5 per cent. Tyres for motor cycles and cars, and certain other accessories are also subject to the 10 per cent. tax. This luxury tax is not to be levied on motor lorries or light vans for goods transport and commercial purposes generally, and tyres for motor lorries and omnibuses are also not subject to this luxury tax.

I hear from Wolseley Motors (1927) Ltd., that H.H. the Jam Sahib of Nawanager, whom most of us know as "Ranji," has just ordered for his personal use a Wolseley 16-45 h.p. "Silent Six." The car, which is of the touring type, is finished in white, with black wheels and mud wings, and upholstered in red leather. Wolseley and Rolls Royce productions are rapidly increasing their popularity in India, where British cars would find a ready market, as I have always said in these columns, if makers cared to let prospective buyers know what the cars can do and at what prices they could be obtained.

Loading and unloading.

A time limit for loading and unloading vehicles in certain parts of London and other towns is drawing attention to existing methods with a view to seeing whether some improvement cannot be made. There are, as all my readers are aware, many streets where a private car cannot be left even for a brief period. There are other streets, apparently no less crowded, where commercial vehicles can stand for some time taking in or discharging goods. There are other streets which occupiers of business premises seem to regard as their own property and small fleets of their vehicles stand there hour after hour. It is surely unfair that some commercial undertakings should have to construct loading and unloading docks for their lorries and vans, at great expense, not only in upkeep, but in rent and rates, whilst others in an adjacent locality should be allowed to use the public streets for a similar purpose at no cost. With many classes of goods a quarter of an hour should be quite sufficient time to load or unload, provided everything be ready for the reception of the goods or for their dispatch, but it would be as well to be prepared, for time losses are always of importance as they greatly increase the cost of transport and, if reduced to the minimum, do much to increase efficiency. It is not only the vehicle or the type of body which is responsible for the time taken in loading or unloading, particularly in view of the fact that it will no longer be permissible to dump goods on the road or pavement. It is often in the methods of dealing with goods in the premises from which they are being removed or to which they are being taken. In many the arrangements of the dispatch and reception departments are most antiquated, and the handling of big loads rapidly would be quite impossible in them and here we see considerable scope for the greater employment of suitable hoists, runways, rapidly-working lifts, power-propelled trucks and the like. I agree with the *Commercial Motor* when it says that it would appear that not very much more can be done with the vehicle itself, but the tilt or cover could be made, as an improvement to slide over the engine and cab. A careful rearrangement of labour, so that more assistance is available at the points of delivery or collection, would also help materially in cutting down the time taken in loading the vehicle or in removing the goods that it has brought.

The Morris Minor.

The great amount of interest which is being shown in the Morris Minor is significant in many ways. Naturally the name of the maker alone is sufficient to draw national attention to the new baby, but even this would fail to transmit interest into £ s. d. unless the public accepted seriously this type of car. As it is, everyone is talking about it and in terms that reveal a marked desire for possession. Of course, the new Ford aroused just about as much attention, but there were certain outside reasons for that. There is nothing novel in a light car, in itself, and certainly nothing that is revolutionary is promised in the Morris venture. What has created the stir, according to the *Light Car*, is that Morris has stepped boldly into the light car arena and has taken the interest of a million present and prospective owners with him.

Step Towards Quieter Cities.

A quieter London for pedestrians and a smoother London for travellers may result if the experiment, now being carried out, of running London's mammoth buses on pneumatic tyres proves successful. Following the Government's decision to allow a tax rebate to commercial

users of pneumatic tyres, the London General Omnibus Company are to put into service before the end of the year 75 new double-deck 'buses weighing eight tons, seating fifty passengers, and fitted with giant pneumatic tyres made specially at Fort Dunlop. A hundred of the existing 'buses are being altered so that they can also be mounted on pneumatics and careful notes are being taken by the technical staff of the performance of these new tyres. If the experiment is successful, pneumatic tyres are likely to be used throughout the company's fleet of over 5,000 buses.

MARKET FOR MARINE ENGINES IN BAHREIN ISLANDS.

The Bahrein Islands, in the Persian Gulf, are the centre of the world's greatest pearl fisheries and are also an important entrepôt for trade with the eastern coast and central regions of Arabia. While the chief industry is pearl fishing, trade and shipbuilding also are important occupations. Dhows and other Arab sailboats are used for pearl fishing and for the trade between Bahrein and the Arabian inland. There are now twenty launches at Bahrein (says an American Consular report) where four years ago there was but one, and more are being built all the time. The hulls for these launches are built locally but are equipped with an imported marine engine. As the pearl fisheries are very profitable and the trade important, Bahrein promises to be a growing market for engines for locally built motor boats. These launches are coming into use also to meet the mail steamers and to carry passengers and freight about the islands. English engines are now the only ones in use, as English firms have branches or representatives at Bahrein through whom the orders are placed.

COMPANY NOTES AND REPORTS.

EGYPTIAN HOTELS.

The report of the Egyptian Hotels, Ltd., for the year ending April 30, 1928, states that after providing for the charges payable in London and Cairo, the accounts show a profit of £100,908; the balance of undivided profit brought forward from last account is £6,905—£107,813. From this has to be deducted depreciation of plant, fixtures, and fittings at hotel, £6,936, leaving an available balance of £100,877. The directors recommend: (1) The payment of a dividend of 5 per cent. on the preference shares for the year to April 30, 1928, absorbing £5,750; (2) the payment of a dividend on the ordinary shares of 35 per cent. for the year, £43,750, and a bonus of 4s. per share, £25,000, which will absorb £68,750; (3) to place to special reserve, £20,000—£94,500; leaving a balance to be carried forward of £6,377. The company has now absorbed the whole of the business of the Société Suisse Egyptiennes des Hotels, and has taken over the whole of the assets of that company in extinction of the advance which had been made and the debentures and shares previously held. The assets mainly comprise the hotel building known as "The Semiramis Hotel," and the plant, fixtures, and fittings therein and are included in the additions to the items freehold and leasehold land and buildings and plant, fixtures and fittings in the balance-sheet.

ATTOCK OIL COMPANY.

The report of the Attock Oil Company for the year ended December 31, 1927, states that the profit, before providing for depreciation, amounts to £123,705. There has been written off as depreciation on field and refinery plant £80,000, and prospecting expenditure on outfield incurred in 1926 and 1927, £6,091, leaving £37,614, to which falls to be added the unappropriated balance of profits from 1926, £25,858, giving a balance for disposal of £63,472, which the directors have decided to be carried forward. The profits figure is arrived at after charging up all expenditure on well boring. The production of crude oil amounted to 266,360 barrels, against 154,614 barrels for 1926. The increase has been obtained mainly from new sands at about 3,100 ft. and 3,300 ft. developed during the year, the distribution of oil in which has proved more consistent than in any of the shallower oil zones. The increased crude production and refinery throughput has resulted in a considerable reduction in the cost of refined products. The prices obtained for products during the first nine months of the year were at a remunerative level, but the profits were seriously affected during the last quarter of the year by severe cutting of selling rates of kerosene to well below world values by larger oil distributing companies in India, as a result of a dispute between non-indigenous distributing companies. The Indian Tariff Board, at the instance of the Government of India, has been investigating the question of the desirability and possibility of protecting indigenous producers against such conditions, and it is expected that the Tariff Board's recommendations to Government will be made in July. Kerosene selling rates towards the end of June, 1928, have shown some recovery, but the directors deem it prudent to continue a conservative policy in dealing with the profits of the business, and have decided that for the present it is necessary that the cash position should be conserved. They regret, therefore, that they are unable to recommend a dividend at this time. No drilling operations were undertaken at Dhulian field during the year.

ASSAM-BENGAL RAILWAY.

The interim report of the Assam-Bengal Railway Company states that the surplus profits for the six months ended September 30, 1927, as provisionally ascertained and remitted home, after allowing for Indian taxation, amounted to £9,320, which, together with £16,442 brought forward, £6,304 additional surplus profits earned from April, 1923, to March, 1927, due to recalculation in accordance with the company's agreement with the Secretary of State, referred to in the last report, £1,120 refund of Indian income-tax, and £371 interest on deposits in India and England, makes a total of £33,558. From this amount must be deducted £13,494 net dividend of 1 per cent. paid on January 1, 1928, £1,720 United Kingdom income-tax for year 1927-28, £7 sundries, and £6 outstanding dividend warrants, leaving an available balance of £18,330. The Board have declared an interim dividend in respect of the surplus profits for the half-year ended September 30, 1927, at the rate of 10s. per cent., payable, less income-tax (after deduction of Dominion income-tax relief) at 2s. 0½d. in the £, on June 30, 1928, together with the guaranteed interest, less income-tax at 4s. in the £, due at that date, leaving £10,830 on account of surplus profits to be carried forward.

NATIONAL BANK OF EGYPT.

Position at March 31, 1928, published in conformity with Article 8 of the Statutes:—Banking Department.—Liabilities: Share capital (300,000 fully-paid shares of £10 each), £E2,925,000. Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended June 20:—

Egyptian Futures.—Sakel Contract.—Quiet and rather featureless markets have been experienced through the past week; values immediately after our last report showed a hardening tendency, this being partly in the nature of a normal reaction following the recent heavy liquidation and also due in some measure to a firmer tone in the American departments. The improvement, however, enlisted little support, and some spasmodic selling by trade interests during the past two or three days has resulted in much of the earlier gains being wiped out, to-night's close registering advances of 33 to 35 points for near and 22 to 27 points for new crop months.

Trade reports both from Manchester and abroad continue to reveal a very poor business transacting in fine yarns, consequently spinners are only operating in actual when absolutely forced to do so; this state of affairs, coupled with very satisfactory crop accounts, is beginning to cause holders of stocks a certain amount of uneasiness and neutralising for the time being the strength of the statistical position. With regard to the latter, it is to be marked that exports from Alexandria keep up surprisingly well in face of the existing poor trade demand, Sakel receipts to the end of May totalling 2,408,000 kantars and shipments 2,291,000 kantars. No features of particular interest in trading have transpired, except that near positions, after a weak spell, have shown signs of recovery, and closed in slightly with new crop months. At present differences, tenders are unprofitable and it would certainly appear advisable for those with July hedges out to transfer them on, at what is after all practically a carrying premium. A limited amount of straddle purchases of Novembers against sales of the corresponding month in Alexandria at 30 to 40 points discount have been affected, but operations against the Upper and American contracts appear to have gone out of favour for the time being. For the immediate future, we cannot perceive anything eventuating to cause a decided or permanent movement either way; the position appears too open to speculative "bullish" manipulation to encourage short sales. On the other hand, trade and crop reports do not furnish grounds for anticipating, for the time being at any rate, higher prices.

Upper Contract.—Quite a fair amount of activity has taken place in this contract during the past week, and under the influence of higher American markets and consistent trade support, values have shown a steady undertone. Egypt reports some commercial buying of new crops with spot premiums hardening. Crop accounts continue satisfactory. We still prefer to advise moderate purchases of old crop months on easy markets.

Egyptian Spot.—Business on the spot has been rather quieter during the past week, but the local demand has, nevertheless, displayed one or two encouraging features. The improved inquiry for F.G.F. Sakel, to which we recently drew attention, has been well maintained; in fact, "25 to 150 on contracts" has been one of the most popular inquiries of the week, although the tangible results have left a good deal to be desired. Low Sakel at from 9d. to 13½d. has been in fair request and Fair Sakel at from 16d. to 18d. has also met with some support. The Good and Fine grades have moved off very slowly. Uppers have been in fair request and the usual quality (pass to 30 on contracts) has attracted what business there has been, to the detriment of the better cotton, which still continues to suffer largely from neglect. Inferior cotton at from 10½d. to 12½d. has met with buyers here and there in small quantities. Pilion has been in improved request, particularly at from 15½d. to 16½d. per lb.

Sudan Sakel has moved off steadily and the basis has remained very firm. C.i.f. business has been officially reported as "quiet," and sellers have had to be very reasonable in their offer to meet with any success. Forwardings to spinners for the week ending the 15th inst. were returned as 8,227 Egyptian and 1,469 Sudan, figures which must be considered as very satisfactory when the present difficult conditions are taken into consideration. At the moment the trade on this side appears to be passing through a period of severe depression, owing to the poor off-take experienced for yarn and the uncertainty engendered by the disputes which have recently occurred in various textile centres. Trade views as expressed here have a distinctly "bearish" flavour. On the whole, it is somewhat remarkable that prices have not only withstood the general atmosphere which exists to-day, but have even registered a small advance on the week. Estimated sales, 1,800 bales Egyptian and 1,700 bales Sudan. Quotations have been advanced 20 points all round. F.G.F. Sakel to-day, 20.50d. F.G.F. Upper to-day, 14.40d F.G.F. Pilion to-day, 15.00d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended June 14, state:—

Since our last report the futures market has been active at the decline; the tone at the close to-day was fairly steady. The week's summary of price movements is as follows:—Sakellaridis: July, 40.40 dollars, 2.15 dollars down; November, 41.50 dollars, 1,89 dollars down; January, 41.30 dollars, 1.91 dollars down. Ashmouni: June, 26.35 dollars, 1.11 dollars down; August, 26.70 dollars, 0.97 dollars down; October, 27.07 dollars, 1.03 dollars down.

Sakellaridis.—After a long period of firm markets, a wave of liquidation started on Friday last. Selling orders came into the market from Cairo in the first place, and this quickly induced general selling; prices were carried down to 41 dollars for November at the lowest, but the close to-day is 50 points higher. It is difficult to find any real reason for this sudden change of front; no new factors have developed and the general situation now is the same as it has been for weeks. The decline is another example of those things which happen without any real reason, although in effect it is probably nothing more than a realisation that the April rise was likewise without reason.

The demand from abroad has been poor, spinners, as usual, not buying in a falling market. The spot market, however, has kept quite firm and the turnover has been good. It is difficult to reconcile the good spot sales with the poor trade demand, and it looks as if some of the commercial houses have been taking into stock any desirable lots forced out by the decline. There is nothing new concerning the Government stock. The rumours of last week have not been confirmed, and the position remains as obscure as ever.

The Sakel-Ashmouni straddle is now 14.43 dollars, against 15.29 dollars a week ago. The July-November straddle, on the other hand, has widened out to 1.10 dollars.

The market has steadied up, and is healthier as a result of the liquidation of a good number of the weak position, but sentiment is not now so bullish as it was, and it would not be surprising to see further selling out in the not far distant future.

Uppers.—This market has shared in the decline, but the drop is not so pronounced as that of Sakel. There has been an enormous amount of selling, but Octobers are only down a dollar on the week. Where the selling has come from it is hard to say; local operators were, generally speaking, straddle short of October against Sakel and Americans and it rather look as if a lot of the selling is nothing more than the conversion of Sakel long positions into straddles. The June-October straddle is now 72 points.

The positions of Ashmouni must now be very different from Sakel. The sales of the last few days must have considerably increased the short interest in Octobers, and these shorts have, sooner or later, to be bought back. The sellers are, of course, looking for the movement of the crop to help them to cover, but with Uppers now standing at about 650 points over American against 750 points a week ago, there is rather more inquiry for this variety.

Uppers at the present price do not seem unreasonable compared to American, and providing American keeps steady we do not think that we shall see much further decline.

General.—The statistical position shows a further improvement on the week. The arrivals have not quite touched the 6,000,000 kantars figure and practically no old crop cotton now remains up-country.

The stock stands at 2,300,000 kantars, and there are still 11 weeks to go to the end of the season; if takings are on the same scale as last year, the stock will be reduced to about 1,100,000 kantars at August 31 (allowing for about 100,000 kantars new crop arrivals), including about 400,000 kantars Government cotton.

Spot: The spot market, in general, has shown a fairly steady tone throughout the week. Sales amount to about 10,600 bales, of which we estimate 4,100 bales Sakel, 5,800 bales Ashmouni and Zagora, 500 bales Pilion, and 200 bales other varieties.

Sakellaridis: The demand for this variety has considerably diminished, the bulk of the inquiry being for the medium grades, which, as we have mentioned in previous reports, are not easily found. A small business has been done in high-grade cotton at about last week's premiums. Low grades have been more or less neglected, but the remaining stocks are not large and good style cotton is very scarce.

Ashmouni and Zagora: There has been a very good market for these varieties, all grades being dealt in. Spot differences have stiffened considerably.

Pilion: All grades from Fully Good Fair upwards have been in demand. Spot differences are slightly dearer.

Other Varieties: Some lots of Fouadi, Maarad, and White have changed hands during the week, but the market for these cottons is very restricted.

Crop, 1928: The crop news this week is, in general, good. The plant is progressing normally, but there has been some wilting in the Delta districts. Temperature has been about normal, with considerable dampness. Leaf worm has spread, but no serious damage by this pest is reported. Flowering is becoming general in the South and Central Delta. In Upper Egypt the plants are fruiting nicely and carrying a good crop of bolls. Water is plentiful everywhere.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Water Filters.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply and erection of four mechanical water filters at Gira and Gezira Water Works at Giza. August 2.

Soap.—The Egyptian State Railways, Telegraphs, and Telephones, invites tenders for 30 tons of soft soap to specification.

Various.—The Chief Inspector, Direction General, Customs Administration, Alexandria, invites tenders for the supply of sundry articles required for the workshop during 1928-1929. July 16.

Fire Float.—The Director-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of a fire float for Suez Harbour as per conditions of tender and specification. August 31.

Flat Mild Steel.—The General Management, Egyptian State Railways, Telegraphs, and Telephones invites tenders for the supply of 472,800 kilos flat mild steel. August 29.

Steel Plates.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of 58 steel plates for renewals of four swing bridges. August 23.

Rails.—Tenders are invited by the Ministry of Finance, Survey of Egypt, for the supply of any quantity of rails up to 14,050 tons (8,300 tons light, 5,750 tons heavy). Offers for any portion will be taken into consideration. Offers may be for either new or second-hand rails. July 25. (D.O.T.)

Spare Parts for Machines, Etc.—The Financial Secretary, War Office, Cairo, invites tenders for the supply of spare parts for machines, leather, belts, iron goods, paints powder, nails, files, etc., to Tura Mills. July 28.

INDIA.

Pumping Sets.—The Indian Stores Department are inviting tenders for two oil engine driven three-throw ram pumping sets. July 3. (D.O.T.)

Tool Steel.—The Agent of a railway company in India invites tenders for the supply of tool steels, cast and high speed, for consumption during the period September 1, 1928, to March 31, 1929. July 16. (D.O.T.)

Equipment for Pumping and Power Supply Scheme.—The Indian Stores Department at Simla invites tenders for generating sets, transformers, generating and transformer station auxiliary plant and accessories, E.H.T. transmission line equipment, and telephone equipment in connexion with the Sumera Hydro Electric Pumping and Power Supply Scheme of the Public Works Department, United Provinces. July 2. (D.O.T.)

ROUMANIA.

Machine Tools.—A new company has recently been registered in Bucharest with the object of the purchase and sale of motor cars and accessories, the construction and "exploitation" of garages, and repair workshops, and any other operations in connexion with the industry and commerce for motor cars and agricultural machinery. The British Commercial Secretary at Bucharest suggests that machine tool firms may care to forward copies of catalogues and price lists of machines and equipment suitable for motor car repair work and garage use. (D.O.T.)
